New York City is now considering a stricter smoking ban, extending it to public parks, beaches and malls. So is this a violation of rights or is it protecting the general public? Sure smoking is an individual's personal lifestyle choice, and they have the right to do as they please with their own health, but what about those around them?

Is it fair to endanger the lives of others because you decide you want to intoxicate your lungs to relieve stress? If we take a look at the cancer fact sheet we can see that lung cancer is clearly the leading cause of death in the United States. In 2010, 157,300 men and women died from lung cancer.

In addition, every year 3,400 non-smokers die from lung cancer and second-hand smoke inhalation is identified as the cause in many of these cases. There were also 46,000 deaths of non-smokers who had heart disease in part or entirely because of their breathing in of second-hand smoke. So while banning smoking in public places may seem like a ridiculous notion, the ban would reduce these death rates considerably. Is it wrong for the government to attempt to ban a personal decision that inflicts harm on the public?

The proposed New York City smoking ban could be the start of a movement nationwide that would decrease health risks of our public environment. With the tobacco industry being a major source of income for the government, is it possible for them to hinder their sales? Issuing bans would most likely affect tobacco sales, making the issues surrounding such bans, not only moral ones, but also financial ones.

With smoking bans gaining popularity, this trend could mean a possible ban on campus as well. How would our local smokers consisting of students and professors, some of whom smoke, feel about a possible smoking ban? They probably would not be the least bit happy, but is it fair to ban a person's personal lifestyle choice? On the other hand is it fair to put another's health at risk?

Only time will tell what the decision on the potential bans will be, and it is sure to cause an uproar and division of our campus community. This could be the start of a nationwide tobacco ban fiasco.

Curtis Bloomfield is a Collegian columnist. He can be reached at chloomf@student.umass.edu.

'The Great Internship Disaster' avoided

Naychelle Lucas

If anyone has the impression that because it's your senior year, it will be the easiest, here's you're first lesson: you're seriously mistaken.

The first semester of my last year at the University of Massachusetts was by far the busiest, most challenging and stressful semester I've endured as a college student.

I, like many, didn't come to school in September thinking it was going to be a breeze, but I did think, "Classes, exams, extracurriculars. Been there. Done that. How hard could it be?" Since then, I've learned that senior year is like a cumulative exam on everything you have learned in class, at home and in life so far.

Since freshman orientation, we've all been taught the importance behind decision-making, preparation, networking and communication. At UMass, we're bombarded with messages of success and how to achieve it. At times, it almost feels like Survivor at UMass, where only the strong will be praised, while the weak are voted off the island.

And unfortunately, as stressful as that can be, that lesson is absolutely right. I should know, as last semester I had to use those skills to overcome what I now call "The Great Internship Disaster of 2010."

My three years as a journalism student at UMass have taught me that if you want to be a journalist, the one thing more important than having a byline in your school paper is having an internship.

Coming into senior year I was a little discouraged I had waited so long but thought, "Better late than never." I wanted a position that would allow me to write, but also do some video filming, editing and producing. That is how I became an intern at a film company in Northampton, Mass.

From the very beginning my relationship with the owner of the film company was unorthodox. After applying to the position on the Career Services e-recruiting site, I spoke with him on the phone a couple of times late in the evening. He continuously expressed interests in my interning for him but never officially offered me a position. Meanwhile, I had gone on several interviews with other organizations and within a couple of days, two had offered me an internship.

I knew working for an established filmmaker could gain me great networking opportunities and access to a lot of resources, but I didn't exactly have the position yet. In fact, I was told it could be a couple more weeks until I could even get a face-to-face interview.

With the other offers on the table and time running out, I was put to my first test. Do I let the other offers go and wait for a possible position in the film company, or do I pass on the maybe and accept a definite position?

My internship supervisor and journalism professor B.J. Roche had always told me that persistence was the key to any successful career. So, I decided to send an e-mail to the filmmaker explaining to him my situation and urging him to let me know the status of my application. My persistence paid off, and I was offered the position as an intern right away.

I was eager to get started and even though it was late September, I was unable to begin my internship for another few weeks because the company was deep into their latest project. When I did get into the office, the meeting with the owner, my now on-site supervisor, was brief and overwhelming, to say the least.

He told me that the only other intern would not be available this semester and that I would be working in the office alone much of the time. There were thousands of hours of video to go through, but I was assured that I would be taught everything I needed to know, be introduced to people and get some hands on experience. Eventually.

I did learn how to log tapes, but after that, I was pretty much on my own. In addition to classes, I dedicated 25 hours a week to the position, which was mostly spent in the office by myself, watching old tapes. Before I knew it, it was October and time was running out. I was discouraged about the lack of opportunities I was receiving and was honestly a little tired of eating lunch alone.

So, I did what I had to get the internship in the first place and told my on-site supervisor how I felt. He guaranteed me that he would try to make time for me but in between shooting, editing, creating budgets, hiring staff members and meeting with producers, that never happened.

At this point, I'm frustrated. However, I'm afraid to just drop this internship, because I'm a senior, the time left to build my resume has shortened, and I don't want to be seen as a quitter. Plus, who is to say that I will even get another internship opportunity by the end of the already-dwindling semester.

Then came another set of questions I tested myself on. Do I stick with my current internship and hope I get recognized as a team player who deserves some time and attention, or do I quit now and hope I can get another position before the semester is over?

I lost a lot of sleep stressing over this dilemma.

And finally, I decided to end my abusive relationship with the film company's internship.

After digging up some old contacts and sending a few well thought out e-mails, I started a healthier bond with one of my original internship choices at Amherst Community Television.

Within the first week of my new internship, I was completing work I had been hoping to do all semester. I attended a camera workshop, a Final Cut Pro workshop and met different people who I will most likely work with in the future.

Disastrous, though it may have been for half a semester, my internship experience luckily panned out. And in some ways, I feel very lucky, but in other ways, I know that things will always work out as long as you take action when situations are not meeting your expectations.

"Inconceivable!" - Vizzini

ARTS@DAILYCOLLEGIAN.COM

Cage's 'Witch' should be burned at stake

COURTESY RELATIVITY MEDIA

Nicolas Cage's most recent film, "Season of the Witch," is a box office bomb. The dialogue lacks consistency, switching back and forth from language of the Middle Ages to contemporary speak. Some historical context is also inaccurate.

By Matthew M. Robare
Collegian Staff

You know what song "Ugly Duckling" by Dio? It has more plot than Nicolas Cage's latest effort, "Season of the Witch."

It's a toss-up whether the last one was as bad this reviewer saw in theaters was "Date Movie" or "Malibu's Most Wanted." Something went wrong with the film that it's difficult to pick one place to start.

The screenplay was by Bragi F. Schut, who first started pitching it back in 2000. Unfortunately for the viewer, the delays in getting produced, as Schut couldn't decide on the shape and content of the movie sounds remarkably familiar, seem to have translate previous film and TV, the Middle Ages and the remaining half seems to be a vaguely contemporary "The Lord of the Rings" setting with a switches constantly, so one moment a character is saying something very 20th century like "I've got the Hell out of here" and the next moment something like "I're darkness and [illegible] the blood and the cries of the dying men" and it is as numerous as the songs of die birds.

It doesn't help that the actors are dropped in the most boring manner possible. Many of them hurt Cage that much to give a damn. He is outacted by the computer generated [illegible].

The plot of the film is that Behman and two knights are assigned to transport a suspected witch to an abbey for trial. After seeing from the prologue that the witch is real and responsible for all manner of mischief and evil.

Unfortunately, nobody – like, not director Dominic Sena knows anything about the Medieval period. Perhaps the most glaring example of this comes at the beginning of the film where the Crusader army is about to attack the Muslim army and the knights are not [illegible]. Both armies are entirely on foot, as cavalry was invented for stereotypical westerns and not thousands of years before the film takes place.

Probably the worst part of the entire film takes place during the [illegible] monologue for five-ish minutes Behman, played by Nicolas Cage and his friend Felson (Ron Perlman), enjoy killing the Muslims, with the agreement that whoever kills the fewest during the battle buys the drinks afterwards. Then they attack a castle full of women and children and Behman runs his sword through a woman's chest, leading him to question the Crusade and not want any more part in it.

However, the Muslims are supposed to be Arabs (it really wouldn't be surprising if it came as a shock to the filmmakers that the major Islamic powers in the Middle East during the 13th century were Turkish peoples – and therefore Caucasian) and the innocent women and children in the castle are white.

Once they return to Europe, specifically to a region identified as the "coast of Styria," a region of Austria that has never, ever, ever had a coast, Behman and Felson discover that there's been a huge plague and the Church believes a witch (Claire Foy) is responsible, so they have to take her to an abbey where the monks have a book called "The Key of Solomon" that they'll use to defeat the witch and end the plague. In the movie the book contains rituals for exorcism and that kind of thing.

Now, "The Key of Solomon" is a real book. It dates back to the 14th or 15th centuries – some 200 years after the film takes place – and it does contain rituals, only they're for summoning demons and forcing them to do your bidding and generally doing the things people accused of witchcraft were supposed to have done.

The Catholic Church does have a book for exorcisms. It's called "The Roman Ritual" and by far the vast majority of it consists of prayers and blessings for the blessed sacraments and just about everything under the sun, including cheese, butter, bread and beer.

And it's going to take a lot of beer to wash the foul taste of "Season of the Witch" out of your mouth, so you'd best get started.

Matthew M. Robare can be reached at mrobare@student.umass.edu.

'Tron' sequel a flashy, formulaic Disney flick

By Tappan Parker
Collegian Staff

Disney's first major venture into the 3D world of cinema was with the 1982 blockbuster, TRON. At the time, TRON's use of computer graphics was cutting-edge, and amazing spectacle for audiences at the time.

TRON follows Kevin Flynn (Jeff Bridges), a computer hacker and arcade owner who gets transported into a virtual world he has created. Although things go wrong, with the help of the program TRON, Flynn saves the day and returns home to live happily ever after.

TRON: Legacy, in theaters now, is the sequel to the original TRON and takes place 20 years later. Since his father's disappearance 20 years ago, Sam Flynn (Garrett Hedlund) has inherited the company his father built. After Sam gets into trouble with both the law and his own company, he begins to look into his father's disappearance, eventually stumbling across the virtual world his father created.

As Sam is pulled inside this world, he discovers that his father has been trapped in the virtual world. Sam finds the virtual world has been evolving and growing as his father stayed trapped within it, and he and his father resolve to escape. They begin a journey across the highly-advanced cyber reality in order to get back home.

Unsurprisingly, the plot of TRON: Legacy gives audiences a standard Disney movie plot. Seasoned with a little deceit here, a quick plot twist there, and, of course, your typical bad boy–gone–good hero and you have a story that lacks a punch. While the film is by no means even close to Oscar worthy, it is a well packaged product of the formula Disney has perfect over the years.

What really stands out about the film – and may even win it some awards – is its visual mastery and musical score. Just like the original TRON, the sequel manages to make impressive use of visual technology. Blending the line between fiction and reality, the special effects used make it seem as though son and father are trapped in a real virtual world.

The movie is very flashy, making use of science fiction-like technology at almost every turn. A lot of the technology is really cool, such as the lightcycles and the disks that programs use in the world to fight. The action scenes are always interesting and fun to watch, especially with some of the new elements added in by Disney.

Some of the most impressive visuals come from Disney though. Disney managed to use graphics to de-age Jeff Bridges face for certain scenes, and the effect works wonderfully. His face, although a little too stiff at times, looks 20 years younger and moves with the fluidity and grace of a man much younger than he actually is. It's almost worth the ticket price alone just to see what they have done there.

The musical score was composed entirely by the electronica duo known as Daft Punk, known for their hits "One More Time" and "Around The World." However, this doesn't mean that the entire soundtrack is littered with awesome catchy techno songs; only one song, "Derezzed," could really be considered worthy of a club setting. Rather, the score is an intricately composed orchestral piece with central musical themes that manage to set the mood quite nicely for the virtual world.

TRON: Legacy, above all else, is a flashy film that is meant to impress the eyes and the ears. It may get you thinking about how cool the technology is, but it will not get you thinking about how deep the story was. TRON is an enjoyable film, and if you go into it expecting that much, you will come out very pleased with the TRON experience.

Tappan Parker can be reached at rtparker@student.umass.edu.

COURTESY WALT DISNEY PICTURES

"TRON: Legacy" is the sequel to Disney's first foray into 3D filmmaking. Though the movie uses ample amounts of technology and has impressive special effects, its plot is typical of a Disney film.

UMass utilizes Twitter as tool

By Justin Gagnon
Collegian Staff

Most people find themselves on Facebook and Twitter when they are supposed to be doing work. For Lisa Perlbinder, that's a typical day in the office, but she, unlike everyone else, isn't procrastinating.

Perlbinder is the Executive Director of Strategic Planning and Analysis for University Relations at the University of Massachusetts. In layman's terms, she is in charge of regulating all of UMass' social media accounts on Facebook, Flickr, LinkedIn, YouTube and most recently, Twitter.

The Twitter phenomenon launched in 2006 and its popularity is still growing rapidly everyday. The social media website gives its members a place to post "microblogs" that are 140 characters (letters, symbols, etc.) or less in length about whatever is on their mind.

As Perlbinder pointed out, the website began as a log of peoples' "stream of consciousness. There was a lot of, 'I'm waiting in line at Starbucks.'" And while this is still one of the main uses for it, the website has become a medium for all sorts of information.

Among the many functions of a tweet are the dissemination of news, quasi-journalistic action, sports news, up-to-the-millisecond information about anything and everything and following someone's tweets simply because of they're unique or a well-known "personality," she explained.

"If Justin Bieber has the most fans on Twitter, it's not because he's necessarily asking for world peace or saying anything relevant," she said. "People are just interested in what the different personalities are doing."

One of the most recent revolutions on the site is its use as a marketing tool. On "a cold winter day" in February of 2009, UMass posted its first ever tweet, which read, "@Randi! We hope you enjoy the tour. It's cold here so bring your winter gear." Initially, its page was very simple, but with the help of former student and cofounder of CampusLive.com Boris Revsin, Perlbinder literally became a professional tweeter and social media extraordinaire.

Throughout a typical day, there are roughly 10 to 20 @UMassAmherst tweets to its more than 3,350 followers about anything from rapper Wiz Khalifa to Chancellor Holub.

"It's a combination of making people aware of events as well as responding and answering questions," she said.

Recruiting prospective students and alumni relations also have an impact on her tweets. By monitoring who is mentioning UMass, she can see what people are saying about the University and respond to their concerns.

"It's international, it's free and it's an easy source to have a question answered," she said. "I see it having a big relevance in student recruitment in the future."

Students have different opinions about UMass's social media efforts, however. "I think it's interesting that a school would use a method of advertisement that pertains to us," said UMass student Andrew Stewart. "I would think a school willing to do that would seem to understand how our generation works a bit."

While another student believes marketing on Twitter is ineffective, he said that it's a necessity. "If other schools are marketing [through Twitter] to prospective students, then UMass should too," student Adam Kenney said. "We need to keep up with the competition. I recently read a Boston Globe article about how Massachusetts residents have begun to look at neighboring state schools. If UConn or UNH are marketing for example, UMass should too just to keep its name out there."

Perlbinder, on the other hand, thinks it's both a great place to interact with those talking about the University and an effective way of promoting events and UMass as an educational institution.

But, is tweeting and updating Facebook all day really as fun as it seems?

"Yes," she said quickly with a chuckle. "But don't tell my kids that."

Justin Gagnon can be reached at jgagnon@dailycollegian.com.

Tumblr: microblogs made easy

By Alicia LaRosa
Collegian Correspondent

Tumblr, founded by David Karp in 2007, is a microblogging platform that allows users to post text, images, videos, links, quotes and audio to their tumblelog, a short-form blog. The average Tumblr user "creates 14 original posts each month, and reblogs 3," quotes the website. "Half of those posts are photos. The rest are split between text, links, quotes, music, and video." Users can follow other users, or choose to make their tumblelog private. The service is promoted to be extremely easy to manage.

Once an account is made, the homepage of the website becomes what is termed a "dashboard." Any person you follow and any post you reblog appear on this page for your viewing pleasure. There is a separate page for media that is "liked" (which is possible by clicking a heart-shaped icon by the post, reminiscent of Apple's "favoriting" system), as well as a page solely dedicated to the posts you choose to reblog.

The idea of a built-in reblogging option is unique to Tumblr. It encourages users of the site to essentially "borrow" content from other posters. Rather than cheapening one's blog, it ends up serving the purpose of increasing the sense of community on the site.

Along with the ease of reblogging to your tastes, there are different layout interfaces to choose from in order to have your profile reflect your aesthetic. Layouts range from the free and easy to the complicated and pricey (highest priced at $45). Like many blogging websites, Tumblr's interface is customizable to your liking. Uploading music is as easy to upload your own background as it is on Twitter.

Before signing up, Tumblr encourages you to view hopefuls to view "30 reasons we'll love [your]

in order to entice them into taking part of this growing phenomenon. What did they decide would have you loving Tumblr enough to add it to your bookmarks toolbar? Besides the vast multitude of themes and ease of functionality of the website, this list boasts "mobileability," which is having the ability, "in addition to offering the best iPhone publishing app in existence (for free)," to email or text posts from any mobile phone.

In addition to those alluring features, there are also the options of having a custom domain name and high-resolution photography at your fingertips. The ability to hook into any other existing social networking site and post simultaneous entries serves the rather fun need to annoy your friends by announcing your every, single move on the internet. Multiple people can post to one blog, and posts can be queued and timed in accordance to when you want them to be seen by the public. Finally – the whole service is free (besides the layouts). You don't have to pay a single penny for hosting fees.

The only real downside of Tumblr is its frequent server crashes. Just when you're ready to spend countless hours perusing the website, procrastinating like you have a ten page paper due in the morning, you receive the message: "We'll be back shortly." There is more demand for the supply; servers are overloaded by the amount of users, which have grown exponentially over time.

With a whopping eighteen employees at their New York headquarters, it's unsurprising to see these crashes occurring so frequently. Hopefully, in the future, the Tumblr team will increase the manpower backing their microblogging platform.

Alicia LaRosa can be reached at alarosa@student.umass.edu.

W.HOOPS from page 8

the arc. The senior guard logged her 100th career 3-pointer at Richmond on Jan. 12, becoming the eighth player in program history to reach the mark. Zullo has also scored her 400th career point at UMass at Harvard.

Another strong part of their game comes from their performance at the Mullins Center.

The Minutewomen are 5-4 at home this season (4-4 at the Mullins Center and 1-0 at Curry Hicks Cage) and are shooting 42.7 percent (191-for-447) while averaging 68.1 points per-game.

One of the strongest aspects of their game plan lies, not surprisingly, with their success from beyond the arc.

The Maroon and White have built upon their reputation as one of the best 3-point shooting teams in the A-10. UMass is ranked sixth in 3-point field goal percentage and 18th in 3-point field goals per-game in a recent NCAA statistics report.

As far as keeping the strong play moving, Coach Dawley knows that her players need to successfully read and react to what the opposition throws their way.

"For us to be successful, we need to take what they give us and work with it," Dawley said. "If they try to limit [Shakia Robinson] throughout the game, for instance, we need to be able to pass the ball to our girls around the perimeter and have them reduce the pressure. We need to work well as a team, and we're doing that right now."

As the A-10 schedule continues, the Minutewomen hope they can continue playing their best basketball of the season.

David Martin can be reached at dmmartin@student.umass.edu.

Riley sparks UMass in win

By Jay Asser
Collegian Staff

The Massachusetts men's basketball team wrapped up its three-game road trip with a 73-54 win over Atlantic 10 opponent Charlotte to improve its conference record to 3-1 and overall record to 11-6.

Guards Freddie Riley, Anthony Gurley and Javorn Farrell led the way on offense, while the big men controlled the point to help the Minutemen end Charlotte's (9-9, 1-3 A-10) six-game home winning streak.

The last time UMass began A-10 play with a 3-1 record, it finished 13-3, winning the conference regular-season title in the 2006-07 season.

"I thought that was one of our best games of the season," UMass coach Derek Kellogg said after the win.

"The team played really good defense, rebounded the basketball, we shared it on the offensive end of the floor, we made some tough shots … and Freddie Riley did what he's done a couple times this year – make some crazy 3's to give us a boost in the first half."

Riley had his best outing in over a month as he scored a game-high 18 points, including 15 in the first half, to reach double-figures for the first time since Dec. 11. The sophomore finished the contest shooting 4-of-8 from 3-point range and 7-of-12 from the field.

UMass	73
Charlotte	54

"It was a matter of me just getting into the gym," Riley said. "I was getting into the gym a lot, getting shots up before this game so I could have a good game and it worked out well for me."

Riley, however, was playing with a heavy heart. The night before the game, Riley had received a phone call via Skype from his brother that their friend, Antonio Gordon, had passed away. Nevertheless, Riley managed to have one of his finer performances of the season.

"The whole game, I was just trying to keep my mind off that and just have fun and play hard because I dedicated this game to him," Riley said.

Gurley and Farrell also added double-digit points. Gurley scored 17 while Farrell dropped 11 in the second half. It was the second-straight game Farrell reached double-figures and the sixth time this year.

In the post, forward Terrell Vinson grabbed a game-high 10 rebounds alongside center Sean Carter, who had six boards. The Minutemen held a commanding 40-32 edge on the glass for the contest.

For Charlotte, guard Derrio Green, who leads the team in scoring for the season, led the 49ers with 12 points despite struggling from the field with 2-of-10 shooting. Center Chris Braswell was the only other Charlotte player to score double-digits, adding 11 points to go along with a team-high seven rebounds.

Kellogg was pleased with the team defense, but particularly satisfied with the containment on Green, who did a number on UMass last season.

"We just wanted to make sure Green didn't do what he did against us at UMass last year, which was go for 30 and hit shots from all over the floor," Kellogg said. "I thought we stayed connected and did a good job on him."

The UMass defense held the 49ers to 32 percent shooting in both halves while forcing 11 turnovers, not allowing the Charlotte offense to get in rhythm in the contest.

After heading into intermission up 35-27, UMass extended its lead to 10 points on a 3-pointer by Vinson two minutes into the second period. The 49ers, however, came up charging back with seven straight points to cut the deficit to 39-36.

The Minutemen again went on a run as Gurley made a long-range connection and Farrell scored on a drive to give UMass an 11-point lead with less than nine minutes remaining in the game. From there, the Minutemen kept Charlotte at bay and cruised to the victory.

The Minutemen will continue conference play when they return home on Saturday to take on Richmond at noon.

HANNAH COHEN/COLLEGIAN

UMass guard Freddie Riley (24) drives to the lane in a game earlier this season. Riley is second on the team in scoring, with 9.5 points per game.

Mosgrove helps UM trounce SLU

By Michael Wood
Collegian Staff

After suffering crushing defeats in back-to-back games to end winter break, the Massachusetts women's basketball team started the new semester off right, defeating Saint Louis, 77-53, Wednesday night at the Mullins Center.

"I loved our efforts tonight," UMass head coach Sharon Dawley said. "There was one point tonight where we had five girls who had never played on the same floor together and we were looking around for people and people were feeling it. I think it was our best night of mixing things up and it put a lot of confidence in us. A game like that will help everybody."

Four Minutewomen recorded double-digits in points and assists in the matchup as UMass took the lead early on and never looked back. Jasmine Watson, Megan Zullo and Cerie Mosgrove combined for 49 of UMass's 77 points, 15 rebounds and eight assists.

"They played solid tonight," Dawley said. "[Watson has to stop] getting into foul trouble. For her to play only 24 minutes, that's only half a game and that's not okay. But Cerie is on a tear right now and Megan hit some great shots tonight to help us out and give us a spark."

After a sloppy start to the game, the Minutewomen found their form at the end of the first half. Watson, last season's Atlantic 10 Rookie of the Year, got things started for UMass with six consecutive points despite playing for only six minutes. Point guard Dee Montgomery also paced the offense and tallied four early points.

As effective as the Minutewomen were as the game progressed, the Billikens did just as much to hurt themselves. Saint Louis went to the free throw line eight times in the first half alone, but only managed to convert two of those chances into points. Inconsistent ball movement and sloppy passing caused eight turnovers and the squad shot only 35 percent from the floor in the first half, compared to 58 percent for the Minutewomen.

UMass	77
SLU	53

Mosgrove contributed 11 points and seven rebounds to carry UMass, and Zullo hit two late 3-pointers to put the Minutewomen ahead, 40-25, going into the break.

"I felt good about the lead, but I always had it in the back of my mind that we've come back from more, so we can't let up," Dawley said. "We burned a timeout there just to remind the girls that they can't let up because they needed to stay sharp and keep things up because you never know when that team can put something together and come back."

The Billikens continued to struggle in the second half, going almost six minutes before scoring a point after the break. They shot only 25 percent from the floor and 29 percent for the game. Jacy Bradley was the high scorer for Saint Louis, netting 17 points and also recording a steal on the night. The Maroon and White used the inconsistencies to their advantage, ripping off a 9-0 run as the half began.

Consistent play from players off the bench also added to the UMass attack. Sarah English tallied four points, Shakia Robinson added 11 and Montgomery netted six.

"I loved [the bench] tonight," Dawley said. "I loved that Sarah [English] was the hero in the first half. Things weren't rolling for us at that time and she did a great job coming in and stabilizing that for us. I thought Steph Lawrence did a great job for us too, and Dee [Montgomery] gave us a spark early on as well."

"We have to keep getting better," Dawley added. "As good as we are we keep taking steps forward then steps back, and we need to stop going back. We have to turn the corner and we're in good position to do that and our focus now is to come out with game mentality and dominate from the start."

Michael Wood can be reached at mcwood@student.umass.edu.

JEFF BURSTEIN/COLLEGIAN

Sophomore guard Dee Montgomery (25) looks for a passing lane in the Minutewomen's game against Saint Louis. Montgomery registered six points, five rebounds and five assists in the 77-53 victory.

Minutewomen hit their stride

By David Martin
Collegian Staff

As the temperature and snow begin to fall, the Massachusetts women's basketball team is seeing several players heat up the court as the Atlantic 10 schedule is well underway.

The Minutewomen (6-13, 2-2 A-10) have seen strong performances from Cerie Mosgrove, Megan Zullo and Jasmine Watson as they work to increase their position in the A-10 standings.

"We did a decent job staying in shape over break, and we have stayed sharp as a result," UMass coach Sharon Dawley said. "We've been strong on rebounding and have kept turnovers low throughout our games."

The most important part of maintaining a winning atmosphere lies in the team's ability to keep faith in their play.

"Our strongest influence so far is the confident play," Dawley said. "Great performances by Cerie and Meg have been critical in keeping our game up throughout the break.

"Cerie has been playing well and has been pivotal in a lot of games," Dawley added. "Meg has been our go-to player game after game, and [Watson] has been getting better every day. They've been key game in and game out."

Their work on the floor has been nothing less than impressive throughout the winter break. For instance, both Watson and Mosgrove have registered three double-doubles apiece over the winter session. In one game against Holy Cross, both Watson and Mosgrove recorded double-doubles, marking the first time two Minutewomen accomplished the feat in the same game since 2007.

In addition, Zullo has been clutch from beyond

Additional players contribute, UMass tries for 3rd straight

By Dan Gigliotti
Collegian Staff

The Massachusetts hockey team started the New Year with a five-game losing streak over winter break, but bounced back this weekend with a series sweep of UMass Lowell.

Following its first winning streak of the season, the Minutemen (5-11-3, 4-6-3 Hockey East) lost back-to-back games for the first time since Nov. 5, dropping consecutive contests at No. 15 Wisconsin. UMass then lost home games to Northeastern, 5-3, and No. 4 New Hampshire, 3-1.

However, the Minutemen rebounded with a home-and-home sweep against UMass Lowell last weekend.

Last weekend against UMass Lowell

Friday marked the first contest of the home-and-home weekend series between UMass and UMass Lowell in Lowell. The Minutemen won, 5-4, as they used a last-minute goal to win their first road game of the season.

Danny Hobbs scored a goal with 11.6 seconds left in regulation to give UMass its first win in six games. The Minutemen's previous win also came against the Riverhawks in a 5-2 win at the Mullins Center, on Dec. 4.

While his team did relinquish a two-goal lead, UMass coach Don Cahoon was pleased to come away with a win.

"We found out what happens when two young teams play each other – anything can happen," Cahoon said. "We're just happy to come out with one more [goal] than they had."

The game-winning goal came on a three-on-two rush into the attacking zone as T.J. Syner led Hobbs with a pass over the blue line. Hobbs skated towards the left of the net and attempted to center a pass from the faceoff circle when the puck deflected off a defender's skate and past River Hawk goalie Doug Carr in goal.

Senior Paul Dainton started in net and made 33 saves as UMass held a 4-1 advantage midway through the second period before UMass Lowell tied the game with two goals in the third.

Although Cahoon was not happy with the way his team gave up a three-goal lead, Cahoon liked the resiliency his team showed and was happy with the result.

"I was really pleased with the way that we came back and took the game over," Cahoon said. "Was I satisfied? No, but I'll take the 'W' and feel pretty good about it."

Other UMass goal-scorers included Chase Langeraap, Michael Lecomte, Brendan Gracel and Michael Pereira.

The relieved Minutemen then returned back to the Mullins Center on Saturday, eventually defeating the River Hawks, 4-1, to complete the weekend sweep.

The Minutemen led 4-0 before giving up a goal halfway through the third period to spoil what would have been their first shutout of the season.

Freshman defenseman Adam Phillips had the first multi-goal game of his career with two power play goals to lead UMass to its second victory in seven games. Freshman Colin Shea scored his first career goal while juniors Syner and Hobbs each added two assists for the Minutemen.

Cahoon was pleased with his team's overall performance and execution.

"I thought we played pretty well in the first and second period when we needed to most, to get the commanding lead," Cahoon said. "We moved the puck well, we had lots of scoring chances, we executed on the power play and we did a great job of killing penalties, so that's a big step forward."

Dainton made 28 saves in net for UMass, as the Minutemen killed six River Hawk penalties in the game.

Just over four minutes into the game, Syner evaded a River Hawk defender and passed the puck to Phillips at the point. Phillips one-timed a slap shot to score his sixth goal of the season.

UMass scored again 34 seconds later, when Conor Sheary took a Michael Lecomte pass and fired it past Carr.

The Minutemen converted two of its three power play chances and now have a 5-5-2 record this season when scoring three or more goals in a game.

"I think our speed factor really showed itself early in the game," Cahoon said. "We counter-attacked and really created some odd-man situations around the net. We drew penalties that way and I thought that we controlled the tempo more as the game went on."

American opportunities: Secs. highlight tax breaks

By Sam Butterfield
Collegian Staff

Treasury Secretary Tim Geithner and Secretary of Education Arne Duncan met Thursday with a group of Washington, D.C., students, parents and educators at Woodrow Wilson Senior High School to discuss initiatives the Obama Administration has undertaken to help make a college education more affordable, highlighting the American Opportunity Tax Credit (AOTC), according to a release from the Treasury Department's Office of Public Affairs.

"America's prosperity depends on the economic policies we pursue to strengthen our nation's competitiveness," Geithner told the town hall-style crowd. "And the strength and competitiveness of our nation will depend largely on continuing to have the best educated students in the world."

According to the two policymakers, the AOTC gives parents and students a tax credit of up to $2,500 for college expenses. The two claim the credit can give millions of Americans a leg up in financing a college education, as a recent Treasury Department analysis found up to 9.4 million families with college students will benefit from the credit this year. The same analysis concluded the AOTC will provide $18.2 billion in tax relief this year, with families expected to receive an average credit of $1,900.

"We cannot underestimate the impact of the American Opportunity Tax Credit on 9.4 million students nationwide," said Duncan, the former CEO of the Chicago Public Schools.

The AOTC, which began as a part of the American Recovery and Reinvestment Act (ARRA), better known as the stimulus bill, was extended by the Obama Administration by two more years as a part of Congress' year-end tax cut package signed by President Obama in December. The credit replaces a previous college relief break, the Hope credit, for the years 2009 and 2010, and will now remain in place through 2012. Students claiming the full break for all four years can receive a total credit of up to $10,000 to finance their higher education, which would cover 80 percent of tuition and fees at the nation's average two-year school, or about 33 percent of tuition and fees at an average public four-year institution, according to Treasury Department figures.

The Treasury Department's analysis finds the AOTC improves on the Hope credit by providing a larger break for nearly all students to whom it applies, covering all four years of college, rather than just two, and applying to text books, as well, which the Hope break did not. Further, the AOTC is partially refundable, meaning families with no federal income tax liability can receive the credit as well. Such families will receive roughly $4 billion in refunds this year, according to the Treasury's analysis, titled "The American Opportunity Tax Credit: Making College More Affordable for Students and Their Families."

In Thursday's meeting, Geithner and Duncan also focused on other college-affordability measures the Obama Administration has tackled, such as working to simplify the Free Application for Federal Student Aid (FAFSA), and broadening and increasing the value of Pell grants, the main source of federal aid for low-income students.

In a blog post authored by the two lawmakers posted on the Treasury Department's website, both emphasized the exploding cost of higher education, the widening divide between the rich and poor in the U.S. and steps the president and his cabinet have taken to put college within reach for lower-income families.

Treasury Secretary Tim Geithner said he believes more college graduates will help the economy.

Secretary of Education Arne Duncan said he is working to make higher education more affordable.

"We're pushing to make this tax credit permanent so that college students and their families can know with certainty that they can get up to $10,000 over four years of college," they wrote. "Fifteen years ago, America's young adults were more likely to earn a college degree than in any other country. Today, young adults in the U.S. are tied for ninth in the world in college attainment."

The two also touted the financial benefits of earning a bachelor's degree.

"On average, college graduates with a bachelor's degree earn nearly twice as much over the course of their lifetime as workers with only a high school diploma. And the unemployment rate for college graduates with a bachelor's degree (about five percent) is currently about half that of all workers."

"The United States has a long way to go before it lives up to the promise of education as a great equalizer," Geithner and Duncan concluded. "But to achieve that quintessential American promise, college must be within reach for hard-working families who want their children to pursue higher education to prepare for a globally competitive job market."

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

In-vest-ing in our police force

UMPD K9 Diezel receives donated bulletproof vest

By Katie Landeck
Collegian Staff

When Diezel, a Dutch Shepherd police dog at the University of Massachusetts, went to visit Santa this holiday season, he was outfitted with a bulletproof and stab-resistant vest by Vested Interest in K-9s, Inc. (VIK).

The gift was part of the Helping Paws for the Holidays fundraiser sponsored by VIK, where people and animals could have their picture taken with Santa and the Grinch at the Pet Food Shoppe in Lakeville, Mass. The event was held every weekend in December and raised enough money to outfit 10 dogs with vests.

UMPD Officer Liana Varosky, who handles Diezel, was relieved and thankful to receive the vest. Her previous dog, Zeke, had one, but it did not fit Diezel properly.

"Having this extra protection gives me a little more peace of mind when deploying on high-risk canine calls," said Varosky. "It would be unwise to not wear my bulletproof vest to pursue a fleeing suspect that is armed with a gun," she continued.

"When the UMass officers respond in number to the various civil disorder events that have been prevalent in this area over the last decade, we are provided extra equipment to protect us from projectiles and sharp objects. The same should be true for K9 Diezel."

Diezel is certified by the North American Police Work Dog Association (NAPWDA) for narcotics and patrol work, which means he can find narcotics in buildings, vehicles and open areas, as well as helping to track missing people. He also works crowd control and demonstrations for the public.

"K9 Diezel is a resource for not only the UMass police officers, but also the local communities," said Varosky, noting that

Diezel has worked in Hadley, Amherst, Northampton, Hatfield, Easthampton and South Hadley. She also believes that "having a police dog also helps break the ice between us and the community with their approachable nature."

Varosky pointed out, however, that many UMass students and community members may not be too familiar with Diezel "because K9 Diezel and I work overnights."

The UMPD K9 unit started in 2003, and currently hosts two dogs, Varosky said, adding that such a donation from VIK is quite rare.

"Our department does not receive many donations for this specialized unit," she said. "Having a protective vest will most importantly ensure the safety of my patrol partner, but it also safeguards the significant investment the University has made to purchase, train and maintain K9 Diezel."

The average canine vest costs $735 and includes a five year warranty, but since Diezel works in crowd control, his vests offers more protection and, according to Varosky, costs closer to $1000.

In order to make this possible, Richard and Desiree Scully, a couple from Taunton, Mass., and Judee Harrington, another Bay Stater, stepped forward and made a donation through VIK.

The Scullys donated in honor of their nephew, who died at age 12. "He really liked dogs, and he just died too young, so we did this in honor of him," said Richard. "Some of the money also went to help a dog out here in Taunton."

VIK services dogs throughout Massachusetts and is run by Sandy Marcal. Marcal started the organization two years ago after having spent eight years volunteering at similar organizations. During 2010, the first full year of operation, VIK was able to purchase 26 vests. Currently, there are 15 dogs on the waiting list, but according to Marcal, the list changes almost daily. For more information go to vik9s.org or call 508 824-6978.

"It is important to give these dogs vests, because they are also officers," said Marcal. "They are the first ones sent into dangerous situations, so they should also be given protection."

On Jan. 29, the UMass Police Department will be hosting a vesting ceremony for Diezel. During the ceremony, police dogs from Wilbraham and Westfield and possibly Bosco, the other UMass K9, will be presented wearing their vests.

Katie Landeck can be reached at klandeck@student.umass.edu

Diezel and Officer Varosky were presented the vest at a Nov. 27 ceremony in Lakeville, Mass.

UMPD, APD reaccredited

By Sam Butterfield
Collegian Staff

The University of Massachusetts Police Department and the Amherst Police Department have both received state accreditation for 2011, according to releases from UMass' Office of News and Media Relations and APD Lieutenant Ronald Young.

UMPD received its accreditation at a Jan. 13 ceremony in Hopkinton, Mass., west of Boston, according to Chief Johnny C. Whitehead. The Department received the recognition from the Massachusetts Police Accreditation Commission (MPAC), which gives such standing to "departments that meet and maintain professional public safety standards," according to the Thursday release.

According to Whitehead, the accredited status has only been granted to 33 of the more than 300 police departments in the Commonwealth.

"Achieving accreditation from the Massachusetts Police Accreditation Commission is considered a very significant accomplishment, and is a recognition that is highly regarded by the law enforcement community," said the Commission's executive director, Donna Taylor Mooers, in the Jan. 20 statement.

The release explains that the accreditation process is voluntary in nature, and that to achieve such recognition, participating departments must work to meet and uphold standards established "for the profession and by the profession." Areas in which participating departments must strive for excellence include policy development, emergency response planning, training, communications, use of force, vehicular pursuit and the care and treatment of prisoners, according to the release.

Earlier this month, the UMPD was assessed by a team of "commission-appointed assessors," who found UMass' police force to be compliant with all standards required for accreditation. The Commission is composed of representatives of the Massachusetts Chiefs of Police Association, the Massachusetts Municipal Association, Coalition of Accreditation Managers of Massachusetts and the Massachusetts Police Association. It offers two different program awards: certification and accreditation. Accreditation is the more prestigious award.

UMPD's accreditation will run for three years.

"Our mission is to provide a safe environment in which to live, learn and grow," said Whitehead in the release. "Accreditation says a lot about the quality of the people who work for the department and the quality of service we provide the campus community."

Several other Massachusetts colleges and universities have accredited police departments, including Tufts, Northeastern and Mount Holyoke, according to the release.

"If we don't believe in free expression for people we despise, we don't believe in it at all." - Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Imagine her as president

Last week Sarah Palin released a seven-and-a-half minute video. Rather than respectfully taking the opportunity to offer brief and sincere compassion for the victims of the tragedy unleashed in Tucson, Palin took the low road. Denunciating critics, Palin sought to absolve herself of any responsibility for any possible influence her oft-heated rhetoric might have had over Jared L. Lougher prior to his attempted assassination of Arizona Congresswoman Gabrielle Giffords, murder of six bystanders, and wounding of 13 others.

Emily Felder

Palin stated that any rush to blame her for the violent acts of one individual in purported conjunction with her supposedly fierce political rhetoric was an example of a media-issued "blood libel." Such word choice continues to showcase Palin's distinct lack of historical understanding and a disregard for clear misuse of language.

Seated before her stone fireplace – an American flag draped in the corner – she recounted the tragic events and cast her sympathy on the victims and their families. After about 30 seconds, her tone changed and I couldn't help but feel as though I was beginning to watch something along the lines of an extended campaign ad. Thus began the list of "exceptional" American values that Palin holds dear, namely: freedom of speech and peaceful assembly.

She refers to Lougher as an "evil man" and a "deranged gunman," though it has not been determined whether Lougher's actions were premeditated and or whether he is psychologically insane.

She expressed concern over how people are making "irresponsible statements" by casting blame for this devastating tragedy on her rhetoric. She quoted President Reagan and his sentiment that each American individual is responsible for his or her actions. Aligning herself with conservative America's favorite former president's position, she displayed herself as the passive victim in this blame game,.

"Acts of monstrous criminality stand on their own," said Palin. "They begin and end with the criminals who commit them."

The video should have ended at one minute, but Palin wanted it to be known that just because she had a website with cross hairs over swing districts – including Gifford's – it was her constitutional right to do so. She then, unfortunately, continued her exercise of said right.

"Journalists and pundits should not manufacture a blood-libel that serves only to incite the very hatred and violence that they purport to condemn. That is reprehensible."

(MCT)

For those of you unfamiliar with the term "blood-libel" here's a quick history lesson. "Blood-libel" originated as a phrase coined in Medieval Europe as a deliberately false accusation that Jews would kill Christian children, and use their blood to make ceremonial Matzoh bread. This hateful and despicable charge was used to rationalize brutal violence and incite anti-Semitism against Jews during the Middle-Ages. The term is associated with a very specific and painful part of Jewish history. In trying to explain away the accusations that have been directed at her behavior's irresponsible statements, she committed herself to one of the most irresponsible metaphors uttered in recent memory.

As to whether her use of the term has any correlation to Congresswoman Gifford's Jewish affiliation – I find it merely coincidental – though it certainly doesn't help Palin's case.

Her words will undoubtedly cause certain groups of Jews and Americans to call her anti-Semetic. As a Jewish American, I do not feel personally victimized by her words. I do not think Palin was inciting hatred or expressing contempt towards Jews. Rather, her words demonstrate a poor tact, adding self-interested insult to those who suffered on January, 8. The focus of the argument shouldn't be on how Jews world-wide are responding to it, but rather on a more disconcerting issue: In the aftermath of the Tuscon shooting, why would Sarah Palin even take a victimized stance?

Most shocking about her statements was that they were a six minute defense of her own political rhetoric.

"When we say 'take up our arms,' we're talking about our vote."

You can think what you'd like about Palin and her political agenda, but I think everyone can agree that words matter. If Palin is so quick to say that individuals stand alone for their crimes, shouldn't they also be held accountable for their words?

Palin had even much to say about "foundational freedoms," "peaceful dissent," "civil discourse," and the Constitution as a "sacred charter of liberty." She reiterated the importance of these American values, and how 9/11 is a constant reminder. Five-and-a-half minutes into the video, I'm no longer watching a memorial for those who were viciously murdered, but a checklist of all the things that Sarah Palin thinks are important and the values that she feels she represents – stunningly inappropriate. It was insulting to those affected by this tragic event and it was certainly not the time or place for her to take such a political stance.

"In times like these we need God's guidance and the peace He provides ... We are better than the mindless finger-pointing we endured in the wake of the tragedy."

In times like these, perhaps prayer will provide some solace for certain individuals, but as far as overcoming mindless violence, my faith dwindles.

POINT-COUNTER-POINT

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

Cloudy with a chance of partisanship

It's all nasty, brutish and short

Matthew M. Robare

In the wake of Tuscon, there's been a lot of talk about violent rhetoric in politics. Trust me: Divorcing politics and violence is impossible – politics is violence. It's been that way ever since some dude in Babylonia thousands of years ago said to his buddies – probably after a really long day made worse because brewing beer back then was a crapshoot so it sucked much of the time – said, "I hate being an early agriculturist, let's make some weapons and get these chumps to do all the work for us."

That's how government got started, and that's pretty much how it is today. Back then, of course, the services provided by the government were more along the lines of "Hand over your bushel of grain or the king will be upset. If the king gets upset the gods get angry and if the gods get angry everyone will suffer – especially you." There was also some defense provided, although this was occasionally more of an inherent obligation to the community. In some ancient societies, armies were medieval Halliburtons.

The really strange thing, though, is not that politicians want to tone down violent rhetoric, they really want to water-down anti-government rhetoric. Politicians love militaristic metaphors – that's why we have wars on drugs, poverty, terrorism, cancer and crime. Presumably we'll get a "War on Violence" in the near future, because I honestly doubt anyone in government is intelligent enough to appreciate the irony.

We in the news media love those kinds of metaphors, too. So reformers are always "crusading," rivals are always "rattling their sabres" and headlines about contested probate judge elections will always be some variation on "battle of wills."

More importantly, the talk about rhetoric is always directed squarely at one group: conservatives. Take this editorial from The Boston Phoenix, "Desert Storm: How the GOP and the Sunset State nurture the lunatic fringe." The title alone should make it clear just what writer David Bernstein wants to get across, namely that conservatives are insane. The article was written soon after the Tuscon shootings, so it would be unfair to criticize him for things that subsequent information rendered moot.

Nevertheless, his article is packed with turns of phrase such as, "This is typical of how ever-deeper levels of lunacy get introduced to conservatives." One section is headed "Rally 'round the nutjobs." Honestly, it's not surprising that conservatives feel threatened with liberals saying they're insane all the time. It might even be a self-fulfilling prophecy, where liberals have told each other that conservatives are crazy so often that they've convinced themselves it's true. But the worst thing Bernstein wrote is this: "Comparisons of dangerous rhetoric of the left and right miss the underlying fact that, in today's American landscape ... there is little or no extreme-left equivalent to the gun-fetishizing, government-hating, racist, anti-Semitic extremes of the right."

In general, it's just not true. Although the most violent acts have been carried out by far-right supporters, the extreme left is just as violent and has been for longer than the right. In fact, the very first leftists, led by Maximilien Robespierre, orchestrated the Reign of Terror during the French Revolution. Anarchists carried out bombing campaigns in 1919 and an anarchist is believed to have thrown the bomb that led to the Haymarket Riot in 1886. "Today's American landscape" has been shaped by these events in ways we don't recognize.

More recently, the Weather Underground actually issued a declaration of war on the United States government while radical leftists such as Sam Melville and Jane Alpert lobbed bombs around the country. Then there was the famous "Battle of Seattle." G-20 protests always result in riots elsewhere; we've been fortunate in the United States that they haven't been as bad here. Just last year UMass prevented United Freedom Front leader, Ray Levasseur from speaking at the university.

Also last year, Joseph Stack flew a plane into an IRS office in Austin, Texas and decried capitalism in his suicide note. Later on, a man named Jamie Lee took hostages at Discovery Channel headquarters in Maryland because he thought the channel was anti-environment.

It's true that Timothy McVeigh killed more people in a few minutes than all the far left groups of the 1970s combined, but that only means that he was convicted and executed while Levasseur was merely exiled to Maine. I know I wouldn't want to be executed, but I've never been to Maine so I can't say whether permanent residency there would be agreeable to me or not.

Ignoring leftist violence, like Bernstein does, is irresponsible. We live in an age when political violence is more visible than at any other time in history and there is no indication that this will change anytime soon. Ignoring any of it will only convince its perpetrators that more is needed to get our attention.

Schizophrenic posturing

Mike Fox

The tragedy in Tucson was committed by a mentally disturbed individual whose true motivations might never be known. His motive might not even be coherent. However, in light of the political tone of the event and the resultant analysis, our country has a unique opportunity for navel-gazing at what has become a toxic political culture with rhetoric that has begun to invoke violence to an often absurd degree.

Both sides of the political spectrum are guilty of extremism. At different points in history, and at different levels, people's passions can overflow into evoking extremism.

It's an undeniable fact and widely accepted element in politics. However, other than times of great revolution or distress, extremism has been reserved for the fringe. Moderation has been the path to making as many people happy as possible while maintaining stability. In their recent attempts to gun up more support, the political establishment of the right has made a show of embracing extremist and dramatically violent rhetoric.

The details have been repeated ad nauseum: Glenn Beck's conspiracy theory chalkboard's historical quest to brand anyone remotely liberal as evil, Sarah Palin's hunting fetishes, the absolutist arguments during the health care debate; all of the evidence is obvious.

The opposition is also outspoken. The talking heads of MSNBC show their fair share of bias and the numerous comparisons of Bush and Hitler by extremist liberals show that extremism has reared its head on the left.

But, when the Republican speaker of the house refuses to acknowledge how ridiculous the accusation that Obama wasn't born in the United States is, it means the political climate has become mind-blowingly paranoid.

Politics necessitates delivering the simplest message possible in order to get the most support possible as quickly as possible.

Politics of fear are broadly appealing due to natural instincts towards survival. The messages of Beck, Palin and others have found popularity through this principle and they have been picked up and carried, somewhat understandingly, by the Republican party for support.

However, the endorsement of these philosophies has begun to infect coherent political thought. Extremist candidates were supported during the mid-term elections due to divisive beliefs now being accepted by the mainstream. Now, the ones that have been elected have even greater perches to popularize extremist beliefs and lend apparent legitimacy to their opinions through the virtue of their positions.

It's almost a perfect example of a group selling its soul for power. By embracing the politics of fear as part of its central platform – witness the original title of the current attempt to repeal health care reform, "the Repealing the Job-Killing Health Care Law Act" – the establishment of the right has shown a willingness to embrace fluff and demagoguery over policies with true substance.

Understandably, not everyone can concern themselves with such issues of political morals. However, the entire tone of conversation has still become clogged by divisive posturing.

What has developed isn't the understanding that people of opposing political beliefs have different but equally good-hearted views for the country. What's developed is a kind of zero-sum game/mutually exclusive attitude where, if someone has different political beliefs, they are out for your destruction. The United States has seen this attitude rear its head before. In the 1950s, due to fear of Soviet infiltration in the United States, the senator from Wisconsin, Eugene McCarthy carried out a campaign of terror against members of the government and establishment as well as some well-known actors and actresses. Anyone who had any inkling of leaning left in his views was considered to be aligned with the Soviet Union. Lives and reputations were destroyed. The entire business of government suffered as it ate itself from the inside out.

We are on the verge of a new era of McCarthyism if the extremist rhetoric continues to be embraced by the mainstream elements of any political movement in our country. However, the right, due to circumstances and possibly desperation, has more recently embraced it wholeheartedly. The disturbed and divided brain of the Tucson shooter, who considered "Mein Kampf" and the "Communist Manifesto" as two of his favorite books, could only prove to be a microcosm of the destructive divisionism if politics continues on this course.

A 'Grit'ty remake

By Jake Hachey
Collegian Correspondent

"True Grit" by the Coen brothers (Fargo, "No Country for Old Men") has brought us something that isn't exactly a hot topic of our generation – a western. "No Country For Old Men" had the look and feel of a western, but was missing some major parts to fit it as the category. After testing the waters of the country style, the Coens decided to stick their noses in the dirt and make a full-fledged western. With it, the directing tandum brought a fresh feeling to cowboys and outlaws, and new advances in film made the violence more prominent.

Mattie Ross (Hailee Steinfeld), a stubborn teenage girl, searches for the U.S. Marshall that bares the most "grit" to aid her in her quest to capture her father's killer, Tom Chaney (Josh Brolin). Ross finds Reuben J. "Rooster" Cogburn (Jeff Bridges), a fat, old drunk that lives for bounty one way or another. After much haggling, Cogburn accepts her proposal. His reward: the job without Ross because he can't watch a baby's butt.

Racing to the river, Ross finds Cogburn accompanied by Texas Ranger LaBoeuf (Matt Damon), who's also out for Chaney's blood for his own purposes. Against their wishes, Ross joins the men on a treacherous journey into Indian Nation, where thieves and degenerates run wild. Cogburn and LaBoeuf butt heads along the way, as LaBoeuf's book-learned and pride don't mix so nicely with Rooster's careless and lazy attitude.

It was a smart choice to modernize a dying genre like the western, but the movie of choice was a bold decision on the Coen's part. "True Grit" is a remake of the John Wayne classic which was an adaptation of a book of the same name by Charles Portis.

The Coen brothers needed to find someone to replace the legendary John Wayne in a role that brought him his first and only Academy Award. They came up with Bridges ("The Big Lebowski," "Crazy Heart") – a man also with an Oscar under his belt. Bridges is the epitome of a western figure with his unshaved look. Even still, his performance was reminiscent of the performance of Steinfeld, an unknown 13-year-old actress who had only starred in TV series and made-for-TV movies.

"True Grit" was snubbed at the Golden Globes and wasn't nominated for a single award. The Coen brothers have been in the spot light for the past couple of years with nominations at Cannes and the Academy Awards for their work in "A Serious Man" and "No Country for Old Men."

They could have contended for best picture or best director, but wouldn't have stood a chance against "Black Swan" and "The Fighter." Bridges is the only person to put Wayne to shame, and should deserved to be nominated for best actor in a drama or at least best supporting actor. She mesmerized the audience in her role as Ross showing more grit than anyone else in the movie showed. She undoubtedly has a bright future ahead of her. The Golden Globes might have slighted "True Grit," but the Oscars won't be able to ignore the Coen brothers, Bridges, Steinfeld, Damon and Brolin.

Critics 'Speech'less

By Shane Cronin
Collegian Staff

With a second world war on the verge of breaking out in Europe and the proliferation of radio in the early 20th century, Great Britain's royal family can't avoid the public eyewave after the elderly King George V (Michael Gambon) passes and his oldest son – the dashing King Edward VIII (Guy Pearce) – abdicates the throne ensnared in scandal, it is up to the stammering Duke of York/George VI (Colin Firth) to steer England through tumultuous times with thoughtful words.

Firth's nervous stammer was so convincing that when he won the Golden Globe for Best Actor on Sunday, I was biting my nails – anxious that he would flub his acceptance speech. To maintain the character's speech impediment for two hours was absolutely impressive. Jaw clenched, neck tense, and tongue-tied, the Duke displayed nearly as much difficulty telling his daughters a private bedtime story as he did formally addressing his subjects. All the while, you can't help but to think, "Spit it out!" as his father put it.

The story picks up with the introduction of Lionel Logue (Geoffrey Rush), who plays an unorthodox speech therapist who helps the Duke gain control of his tight lips. Everyday, Logue's oft-expressed flippant regard for royalty deeply resonates with American audiences. The first taste of his clever wit, and sometimes playful condescension, takes place at the beginning of his and the Duke's first meeting. Logue asks the Duke not to smoke in his office. The Duke pompously stammers, "My physicians say it (smoking) relaxes the throat."

Logue matter-of-factly replies, "They're idiots." The Duke: "They've all been knighted." Logue: "Makes it official then."

Although a certain level of movie-magical production must occupy every screenplay, the film can sometimes be hung up on royal titles and court melodrama. Although an important symbol, the British monarchy was a figurehead at this point in history. Still, the majestic couple frequently reminds us "It's Your Royal Highness, first. Then 'Sir Ma'am' thereafter." Paying no mind to this, Logue insists on referring to the soon-to-be-King of England as "Bertie," his family moniker.

On the whole the film is perfectly charming. I'll admit, the English accents may have something to do with it – particularly the young Queen "Mum" Elizabeth, played by Helena Bonham Carter. (This is one of few films in which I find the British accent charming.) It would have been rewarding as a viewer to witness richer development of Carter's character, as her presence provides a freshness in every scene in which she appears.

Plot wise, this period piece offers few surprises. It's a classic underdog tale with the right amount of awkward-innocent swearing to keep the average movie-goer amused. Although interesting and endearing, the relationship between Logue and George VI is formulaic.

Timothy Spall also makes a small, yet well-acted cameo as Winston Churchill. When George VI is required to address or entertain Britain's nobles and politicians, as Churchill alone who seems to have faith in the stuttering king – either by disregarding his stammer altogether or by providing words of encouragement. Irony is not lost on the stout historical giant. His curled lips are as much their own person as Michael Jackson's nose was.

Don't let the new 'Fockers' fool you

By Acacia DiCiacco
Collegian Staff

From "Meet the Parents" to "Meet the Fockers," Gaylord Focker and his quirky family have been cherished by Americans for the past decade. However, Ben Stiller has sold out in the name of money-making, and his latest movie "Little Fockers" is a flop.

Since the release of "Meet the Parents" in 2000, the family antics of the Byrnes and the Fockers have brought laughter to the souls of many fans of comedy. In 2004, director Jay Roach released the sequel to his first hit, entitled "Meet the Fockers," which was arguably even funnier than its predecessor. Roach chose to limit these cherished films to a duo, but director Paul Weitz sprung to create a third. This cinematic adventure has become a cinematic blunder.

"Little Fockers" outlines the current life of Gaylord "Greg" Focker, played by Stiller ("Zoolander," "Dodgeball") as a parent of a pair of twins who are about to turn 5-years-old. His father-in-law, Jack Byrnes, played by Robert De Niro ("Goodfellas") has heart problems and decides to pass on the torch of family leader to Greg, who accepts with surprising confidence.

The rift between Greg and his father-in-law reaches new lows and paints an uncomfortably tense backdrop that hinders many of the jokes. While the series always had an over-the-top influx of bad situations, "Little Fockers" still has all that ridiculousness, yet the desire to laugh at it has disappeared. The plot is driven by conflicts that had been assumed to be resolved during the previous two movies. The rehashing of old arguments causes the entire film to be predictable. In terms of plot, it seems as if the first two movies were a waste to the characters since none of them have learned anything.

Meanwhile, the obnoxious Andi Garcia, played by Jessica Alba ("Sin City") attempts to seduce Greg in order to give the aging cast and its audience something to look at. Andi's character has little importance other than the testing of Greg's allegiance to his family, which had already been thoroughly tested in the previous two movies, making each turn of the plot insipidly predictable. Although audience members do get to see Alba run around in her lacy underwear, it would be much cheaper to merely Google images of her with SafeSearch off. It's obvious that her casting was not for the advancement of plot, but as a last resort to entice moviegoers into paying the 10 bucks to watch this atrocity.

The jokes in the movie include overdramatic blood and vomit, penis jokes and bathroom humor. A lot of the comedy tends to present itself more like an inappropriate child's movie.

One may wonder if Stiller's age has caused him to worry that his prime acting days are coming to a close. This star-studded movie, also including Owen Wilson, Barbara Streisand and Dustin Hoffman, feels like everyone sold out in the name of cash.

Save your time and your money and avoid seeing this disaster.

Acacia DiCiaccio can be reached at adiciacc@student.umass.edu.

Ben Stiller and Barbara Streisand play two Fockers in the latest installment of the "Meet the Parents" series. Unlike the first two, the third is less than impressive.

UMass goes for streak against UVM

By Steve Levine
Collegian Staff

A tumultuous winter recess is in the rearview mirror for the Massachusetts men's hockey team.

After dropping five straight throughout the break, which UMass coach Don Cahoon attributed to shoddy special teams play, the Minutemen swept UMass Lowell in a home-and-home series last weekend, taking them to seventh in the Hockey East.

"It's always a relief when you win," Cahoon said. "The anxiety associated with losing is far greater than the thrill of winning."

The UMass (5-11-3, 4-6-3 Hockey East) power play and penalty kill heated up against the River Hawks, and should that continue, the Minutemen have a good chance for two victories this weekend when they travel to Vermont for games on Friday and Saturday.

The Catamounts (4-12-4, 2-8-3 Hockey East) are coming off a 2-0 defeat against Northeastern and currently rank ninth in the conference. The strongest aspect of their game is during even strength play, where Vermont does not easily allow goals.

"Trying to crack their 5-on-5 defense is going to be a challenge," Cahoon said. "It could be one of the tell-tales over the course of the weekend if we can score a few even strength goals."

Scoring power play goals and killing off penalties could also determine how the weekend fares for the Minutemen. For the season, UMass' conversion rate on the power play stands at 16 percent, but it has done much better recently, scoring a power play goal in each of its last five games. The Minutemen's penalty kill has also been more effective of late, killing 15 straight penalties.

With a roster comprised mostly of freshmen, UMass' special teams needed time to gel.

"[Gaining] experience, the constant practice at a high level, the comprehension of young players in both groups have [made for improvement] on special teams," Cahoon said. "The players are beginning to conceptualize and [execute]."

The weekend was also made much easier as the Burlington Free Press announced on Wednesday that Vermont's leading scorer, senior Wahsantiio Stacey, quit the team. Stacey led the team in goals and points, with nine and 15, respectively, in 17 games.

The Minutemen, on the other hand, are happy to see one of their main cogs, senior Michael Lecomte, back from injury. Lecomte has played in just five games this season, scoring two goals and adding an assist. Cahoon has been placing him on the same line with talented freshmen Michael Pereira and Conor Sheary. Pereira leads the team with eight goals and 17 points in 18 games, while Sheary has three goals and four assists.

"Michael [Lecomte] is a guy that has a wealth of experience and he's played in a lot of big-time situations," Cahoon said. "I've put him with two talented freshmen that have great potential and [Lecomte] settles them down and gives them assurance about positionally where they need to be."

Cahoon is well aware of the talent his team possesses and he knows that success will come with more experience and maturation. With things seemingly beginning to click for the Minutemen, the rest of the season could produce more wins than losses.

"[The players] are gaining experience and learning to play together," Cahoon said. "When these kids first start off they're all individuals, and as much as you try to get them to work together, all they have to reference is their own individual game. As we practice and act as a unit, they begin to make themselves part of the whole system."

Steve Levine can be reached at slevine@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Forward TJ Syner controls the puck in the offensive zone against UNH earlier this season. Syner has five goals and 10 assists in 19 games.

Special teams coming together for UM

By Pete Vasquez
Collegian Staff

Call it what it is, the Massachusetts hockey team has been a streaky team all season. Currently on a two-game winning streak, UMass looks to harness a sense of consistency for the remainder of the season as it travels to Vermont this Friday for a two-game set.

Prior to their string of wins against UMass Lowell last weekend, the Minutemen (5-11-3, 4-6-3 Hockey East) were in the midst of a five-game losing streak, four of which came after the winter recess. Granted, all but one of those games featured an opponent ranked No. 15 or better in the country.

JEFF BERNSTEIN/COLLEGIAN

Forward Kevin Czepiel controls the puck along the sideboards earlier this season.

"We played great in a couple of those games in individual periods," UMass coach Don Cahoon said. "But we weren't able to sustain it, and that's been one of my big missions, to get us to sustain high levels of play and not [have such] peaks and valleys within the course of the game."

Cahoon attributed part of the team's inconsistency to the sporadic play of special teams during that stretch.

"We would go out certain nights and just be horrific in penalty kill and then go out the next night and shut the opponent down," he said. "It could be that the opponent that was shut down had the better power play, but our ability to lock in and focus has been a piece of the growth and development that we're trying to put in place."

The play during that five-game stretch reflected the peaks and valleys shown in their schedule at the time.

Before the losing streak, UMass had created its first winning streak of the season, with three consecutive victories over Vermont, Quinnipiac and UMass Lowell from Nov. 23 to Dec. 4.

However, of late, the Minutemen have proved steadfast on special teams. The penalty kill is 14-of-14 over the last four games since allowing its last power play goal against Northeastern on Jan. 7.

So how can the team sustain the current streak and find some stability within those peaks and valleys?

"Practice hard every day, keep a positive outlook, try to give attention to detail and make everybody accountable on that front," Cahoon said. "That's what teachers do when you go out every day to rehearse. You drill, encourage and reprimand when you need to. Do all the things that try to get these [players] to hone in on each and every exercise."

The Minutemen will get the next opportunity to implement these exercises on game day when they take on Vermont, which is also struggling to find consistency.

The Catamounts (4-12-4, 2-8-3 HEA) haven't had a streak of any sort since they lost three in a row from Nov. 28 to Dec. 8 against Boston College, New Hampshire and Yale. Instead, it has alternated wins and losses for eight straight games.

The recent Achilles' heel for the Catamounts has been the play of special teams.

"They have only given up one five-on-five goal in almost five games and they have been a real shut-down defensive team [over their last five games]," Cahoon said. "Any goals that they have given up have been on special teams or [with] an odd man lineup."

None of Vermont's losses within the last month have been by more than two goals.

As both of these teams continue to stabilize their weaknesses with their strengths, this weekend's series could tell who is further along in their venture for consistency.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

UMass hosts Richmond in Atlantic 10 matchup

By Herb Scribner
Collegian Staff

On Saturday, the Massachusetts men's basketball team will have another opportunity to knock off a top Atlantic 10 opponent when it returns to the Mullins Center for a contest against Richmond.

The Minutemen (11-6, 3-1 A-10) return to their home court to take on the Spiders (14-5, 3-1 A-10) after winning three of their last four contests. With a heavy amount of momentum behind them, UMass will take on a Richmond team that isn't going to offer the Maroon and White an easy battle.

"I think it's a big game," senior guard Gary Correia said. "[Wednesday's] game was huge for us, but going into this game being 3-1 instead of 2-2. I mean, we have a chance to knock off someone that's been at the top o our league year-in and year-out. I think it's going to be a tough one."

The Spiders haven't had an easy schedule on their way to the Mullins Center, but have done well through their first 19 games of the season with wins against No. 11 Purdue, Wake Forest, Seton Hall (who defeated UMass, 104-79 earlier in the season) and George Washington. With wins against these top teams, a close game is surely on the horizon for these two squads.

While the Minutemen are coming off a 73-54 victory over Charlotte, which showcased Freddie Riley scoring 18 points and Anthony Gurley scoring 17 of his own, Richmond is coming off its own high-scoring affair against GW.

Prolific scorers Justin Harper and Kevin Anderson combined for 50 points against the Colonials (10-8, 3-1 A-10), with Harper's 30 points being a career-high. With these two players on the Minutemen's radar, Correia explained that UMass needs to do what it has done with recent A-10 opponents - adjust to its opponent's offense.

"I think we adjusted to who we were playing and how we were going to play," Correia said. "We need to defend as a group and not try to defend as individuals."

While the Minutemen defense will try to have adopted a style of play that allows Gurley to play within the team rather than be the driving force. This gameplay style allows players like Riley, Correia and Javorn Farrell to raise their game and score for the Minutemen.

These aforementioned players have found ways to the hoop off the dribble-drive offense, and even more so by speeding up their transition.

Correia, who leads the team from the point contest coming on Saturday.

"We're going to listen to our coaches and figure out the best way to get a win," Correia said.

The Spiders arrived in Amherst on Thursday night because of upcoming weather conditions. The two sides will compete on Saturday at noon at the Mullins Center.

Herb Scribner can be reached at hscribne@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Sophomore forward Javorn Farrell (left) looks for a rebound against Dayton earlier this season. Farrell is averaging 9.3 points in 15 games this season.

UM goes to Philly, aims for 2 straight

By Michael Counos
Collegian Staff

The Massachusetts women's basketball team will look to pick up its second consecutive Atlantic 10 conference victory on Saturday when it travels to the Hagan Arena in Philadelphia to take on Saint Joseph's.

The Hawks (11-7, 1-3 A-10) are coming off a 53-43 loss to Temple on Wednesday. With an undefeated conference record, the Owls (12-6, 4-0 A-10) currently rank third in the A-10, while handing the Hawks their third consecutive loss. Michelle Baker and Katie Kuester lead the offensive attack for the Hawks. Both are averaging double-digits in scoring per game. The Minutewomen defense will be intent on guarding Kuester from the perimeter. The junior leads the team with a 43 pervent 3-point shooting on 89 attempts this season. Kelly Cavallo is third on the team in scoring and will be a challenge for UMass in the paint, averaging 7.1 rebounds and 1.5 blocks per game.

UMass (6-13, 2-2 A-10) is coming off a 77-53 win over Saint Louis on Wednesday, which is ranked at the bottom of the conference. UMass went on a 15-0 run midway through the first half to take a 32-17 advantage early.

"We felt this game was huge to get to .500 in the conference, so I personally never felt comfortable with the large lead but we maintained good play and got the win," UMass coach Sharon Dawley said.

Senior Cerie Mosgrove led the Minutewomen with 18 points and 11 rebounds for her fourth double-double in her last five contests. Senior Megan Zullo chipped in with 14 points, going 4-for-4 from beyond the arc. Sophomore Jasmine Watson had 17 points and Shakia Robinson had 11, representing the fourth Minutewoman in double-figures. Junior Emilie Teuscher distributed a career-high five assists.

"[Zullo] has been our go-to player game after game, Jasmine has been getting better every day," Dawley said. "They've been key game in and game out."

Last season, the Minutewomen cruised to a 75-62 win over the Hawks on Feb. 25 at the Mullins Center. Notables in the victory included Watson scoring 17 points and grabbing seven boards. Mosgrove and Stephanie Lawrence each chipped in with nine points, with Lawrence taking down five boards.

UMass will need to continue its quality team play during their conference schedule, as it goes on to face the undefeated Owls on Jan. 26 at the Mullins Center "We're just going to continue to get better and be able to change up on the fly," Dawley said. "We are going to build on our successes by having good practices throughout the week."

Michael Counos can be reached at mcounos@student.umass.edu.

Seniors set to finish home schedule against Eagles Fri.

By Jackson Alexander
Collegian Staff

The Massachusetts swimming and diving team will host Boston College this weekend in a meet that will see 13 UMass swimmers and divers compete in the confines of Joseph Rogers Pool for the final time.

The meet represents Senior Day for UMass, and the Minutemen and Minutewomen will look to keep the momentum going after wins from both teams in last week's meet, the Rhode Island Invitational.

Success is nothing new on the men's side of things. Since 1996, the men's team has been one of the most dominant among all other UMass teams. The Minutemen have won 12 Atlantic 10 Championships over that span, including the last four. UMass also currently sits at No. 12 in the mid-major top 25 rankings.

Max Butler, Dan Backler, Christopher Howard, Brian Schmidt and Trevor Ziegler highlight a star-studded senior swimming class, while John Clark and Adam Duffield are the two senior divers on the team.

Russ Yarworth, head coach of the team for 32 years, has been a part of all 12 championships since 1996, yet he praised this senior class in particular for their efforts.

"Anytime the kids make it through their senior year in my program means they've been really dedicated and worked hard," Yarworth said. "They all have a special spot in my heart and in the program."

On the women's side, Gillian Bank, Jennifer Corriveau, Kaitie English, Meghan Nowak, Tavis Potter and Jessica Starosielec are the five senior swimmers on the team.

The Minutewomen are coached by Bob Newcomb, who has been with the team for 27 years. Newcomb recognized each senior's contributions to the program and understood that this year's senior class was special.

"This group is very good, they are my captains and they do a very good job with that and [they will be a] huge loss."

Newcomb is thankful for the time spent with the seniors but wishes he had more.

"That's maybe the worst thing about college athletics, you only get a finite amount of time with them until they have to head out and find something else to do," Newcomb said.Individual accomplishments have not been hard to come by for Newcomb's senior class. Starosielec holds school records in the 100 breast stroke and 200 and 400 medley relays while Nowak and Potter are second and fifth in school history for the 100 breast. Potter also holds the school record in the 800 medley relay.

Newcomb also praised sprinters Corriveau and Bank for their performance this season. He also spoke of English's contributions, despite being hampered with injuries throughout her career.

Although Senior Day is very important to everyone in the program, coming away with a win is paramount for the UMass swimming and diving teams. The 16-event meet will take place at 4:00 p.m. on Friday. The meet can go a long way in preparing both teams for the most important tournament on their schedule, the A-10 Tournament.

Regarding the meet, senior Max Butler expressed the team's overall goal best:

"As a team we would love to just blow BC out of the water."

Jackson Alexander can be reached at jfalexan@student.umass.edu.

Amherst sees spate of burglaries over break

Police encourage residents to lock doors, stay on the lookout for suspicious persons, activity

By Amy Brennan
Collegian Staff

Apartment break-ins during the long summer and winter breaks are no longer news to some University of Massachusetts students. According to the Daily Hampshire Gazette, between July 1 and mid-September, there were 32 break-ins in Amherst. The burglary hasn't stopped at just apartment break-ins. Car break-ins have occurred, although, according to police statistics, they are much less frequent.

Also according to the Gazette, on Dec. 23, one vehicle that parked in a lot off University Drive had its windows broken and a pocketbook containing $60 stolen from inside.

Many burglaries occurred over the recent winter break, when it is common knowledge the UMass campus and surrounding apartments become a ghost town.

According to the Amherst Police Department's blog, the number of burglaries which occur during summer and winter breaks rises considerably. Most of the entries are made through unlocked doors and windows, and often occur in areas with large student populations.

Amherst Police Department Sergeant David Knightly, reached via telephone, said the most commonly stolen items have been laptops.

"That seems to be the item that [burglars] are taking," he said. "Pocket books have been taken out of houses. It's small, carriable items being taken. They're not taking everything they possibly can."

Sergeant Knightly relayed that there are steps one can take to protect laptops in case of a burglary.

"Different companies offer tracking devices for when the computer isn't even on," he said., "If more people have those installed, it would be easier to be tracked and a good avenue to better protect yourself."

However, most people do not utilize such devices, making stolen items extremely difficult to retrieve.

"We have recovered some property," said Knightly. "We do the normal stuff that anyone can do. We can check pawn shops, Craigslist, eBay."

The Amherst Police Department's blog maintains that they have been distributing door holders to apartment buildings and homes throughout the area, as well as patrolling more often around the neighborhoods where student apartments are located. In addition, some of the officers that patrol these areas have been wearing regular clothes to facilitate in thwarting the break-ins.

Since students have returned from break to their respective apartments, there has been a significant decrease in entries.

Arielle Maiman, a senior, had three televisions stolen from her Hobart Lane apartment during the summer break.

"I was the first one back to the apartment after the summer, and noticed right when I walked in that our flat screen [television] was missing," she said. "I checked the rest of the house and two other flat screen TV's from my roommates bedrooms were also gone."

Maiman said she believes the burglar got in through her basement sliding window that was often kept unlocked, and left through the back door that was unlocked when she arrived but locked when she left for summer break. Knightly also offered some advice for the community at large on keeping their belongings safe.

"When going away, notify a neighbor so that they can be aware of checking the property out, keeping an eye out," he said. "Also be more vigilant as a resident of Amherst when you see things that don't look right, and be sure to relay those messages to the police department. Installing motion sensor lights is also a good deterrent".

According to Knightly, some of the protective power has also been put in the hands of regular citizens.

"Several communities and neighborhoods have organized community watch groups," he said. "They consist of neighbors throughout respective areas and talk about ways to deter and prevent break-ins. They have been vigilant in not just the breaking-and-enterings, but [in] other community aspects, and they have been extremely helpful in doing so."

By following a few steps prior to leaving for long breaks, one can dissuade a thief from targeting one's home. The Amherst Police Department recommends the S.T.O.P. Initiative, an acronym advising citizens to secure all doors and windows, carry valuables on one when one leaves Amherst, leave all non-transportable belongings out of sight, and that the APD will be directing patrols in and around student housing. For more helpful tips on how to protect belongings, citizens are encouraged to visit www.amherstpd.org.

Amy Brennan can be reached at brennan@student.umass.edu.

UMass professor has new book published

By Sahar Ashraf
Collegian Correspondent

Linda Tropp, a social psychologist at University of Massachusetts, and Robyn Mallett of Loyola University of Chicago, co-edited a book about positive relations among different ethnic groups published last week on Martin Luther King, Jr.'s birthday.

The book, titled "Moving Beyond Prejudice Reduction: Pathways to Positive Intergroup Relations," explores new methods to improve interactions and promote empathy between racial minority and majority groups. Traditionally, social scientists have tried to understand why discrimination is prominent between members of different cultural groups and have worked to lessen it. Tropp and Mallet, however, believed research should go beyond simply diminishing intolerance in order to find what motivates people to interact with other races.

"We were trying to address what we saw as a gap in the goal that people usually have when they think about trying to improve racial and ethnic relations," said Tropp.

While prejudice reduction is important, the authors essentially saw two things missing from prior work. First, they believed peoples' anxiety over interacting with other races and ethnicities needs to be addressed so it can eventually be overcome. Second, Tropp and Mallet were unsatisfied with simply reducing prejudice and wanted to understand and encourage what stimulates peoples' interest in other groups.

"When we approach members of different racial or ethnic groups, we get so nervous about what they will think of us and whether the interaction will go well that we pay less attention to learning about the person we're interacting with," said Tropp.

Tropp and Mallet initially decided to undertake the editing and organizing of the book when they organized a symposium a couple of years ago. They invited a panel of speakers to discuss this topic and a publisher from the American Psychological Association approached them to suggest they make the topic into a book. The professors then asked other authors to join them in developing the volume and, after a two-year editing process, the book was published.

The volume is divided into four sections: Reconceptualising Intergroup Attitudes, Motivations and Expectations Across Group Boundaries, Closeness and Inclusion in Cross-Group Relationships and Applications to Post-Conflict Conciliation.

The first part explores how people can change the way they measure and think about attitudes between different groups. The second section suggests people sometimes avoid interactions because they expect a negative outcome and awkwardness and offers ways to encourage positive relations. Part three examines how the dynamics of a group change when it is penetrated by a member of a different group. Finally, the fourth section contains insight from scholars from different parts of the world, who were asked to apply these psychological processes in regions that have ethnic, religious, or political conflict.

Tropp also suggests inclusive norms should be created in order to make everyone feel welcome.

"This is really more at the institutional level," she said. "It oftentimes depends on policies or statements from authorities or administrators to send the message to everybody in that environment that everybody belongs here."

Another strategy discussed involves setting an example for the others to follow. For example, observing a friend who successfully interacts with a different racial group influences the viewer to do the same.

Tropp became personally interested in race and ethnic relations because of her background. Growing up in a town that was 80 percent African-American and majoring in both psychology and Spanish introduced her to other cultures.

"I happen to be white, but I think a lot of people took me for South American when I was at college," she said. "I could see how people would respond differently to me and to other people depending on whether they thought I was white or a person of color. There were differences in what I would perceive to be anxiety. When people thought I was a member of the same group as them, they became

Worth the cost? Study finds alums pleased with degrees

By Ashley Berger
Collegian Staff

Despite troubling economic times, a recent survey conducted by the American Council of Education (ACE) found college alumni are, all variables considered, satisfied with their college experience and believe the amount of time and money they put into their degree was worthwhile.

400 students from 22 two and four-year colleges and universities were surveyed and, of the randomly selected students, 89 percent said the time and money required to achieve a degree was worth it.

Respondents were broken up into two groups based on age; one group consisted of 35 to 39-year-olds, the other more recent graduates running from 25 to 34-year-olds. The survey however, had its flaws as it failed to ask the respondents' majors.

The study found that, on a national level, 62 percent of alumni thought that, in general, colleges were preparing students well for the workforce. 31 percent of alumni, a plurality, believed the most important role of colleges and universities was to teach students to learn and think critically, while 28 percent believed the role was to prepare student for employment.

Despite the increasing cost of attending college, 76 percent of the surveyed alumni thought the price of their institution was fair.

"Students should prepare in advance for their entrance into the job market after graduation," said Jeff Silver, the director of Career Services at the University of Massachusetts in an email interview.

Silver explained UMass students should take advantage of the internship and co-op programs at the University.

"Students at UMass are very fortunate that the University has a vibrant internship and co-op program," said Silver. "UMass students are also very fortunate that most arts and science majors can earn up to 18 credits of internship credit during their undergraduate years. Students can also accept full time paid positions during the semester and maintain their student status by having their position classified as a co-op."

UMass does a great deal to help students network and place them in internships which will make graduates more competitive and ultimately, more hirable. Career Services puts on career fairs throughout the year and offers walk-in advising weekly, Silver mentioned.

Silver also explained that UMass surveys its graduates in a way simi-

Smith acquires work from artist barred from Smithsonian exhibit

By Sara Jackson
Collegian Staff

Over the past few months, a film by artist David Wojnarowicz at the National Portrait Gallery has caused controversy over its presence in an exhibit. The film, titled "A Fire in My Belly" was installed in the "Hide/Seek: Difference in American Portraiture" exhibit in October, and was meant to run with the exhibit until mid-February.

However, the four-minute film was pulled from the exhibit on November 30. The film drew criticism from the Catholic League and current Speaker of the House John Boehner and House Majority Leader Eric Cantor for including what they saw as anti-Christian imagery. Boehner and Cantor threatened to cut the Smithsonian's budget unless the museum removed the film from the exhibit.

The Catholic League, who brought the issue of the film to the attention of those in the House and Senate, found particular offense with an 11-second clip during the 4-minute film installed in the museum. The clip showed ants crawling over a crucifix, a religious symbol used in the Christian church as a visual reminder of Jesus' sacrifice and death.

"We felt that this image of a crucifix covered in ants was a direct and public attack on Christians," said Jeff Field, director of communications at the Catholic League.Acting on this disagreement with the exhibit, the Catholic League wrote to the House and Senate Appropriations Committees, asking for reconsideration of funds for the museum based on the inclusion of this exhibit. Boehner and Cantor, neither of whom sat on the House committee, caught wind of the controversy.

Commenting publicly on the Ohio Republican's distaste for the exhibit, Boehner's spokesperson acknowledged that he wanted the entire exhibit to be "canceled." Cantor claimed it was "an outrageous use of taxpayer money." On Nov. 30, the date the artwork was pulled from the museum, both politicians threatened the museum's funding following review in the next budget cycle.

However, various private donors privately funded the Hide/Seek exhibit, as with most exhibits in the National Portrait, with federal funding paying instead for operational costs. The museum's website describes the exhibit as exploring "...such themes as the role of sexual difference in depicting modern America; how major themes in modern art – especially abstraction – were influenced by social marginalization; and how art reflected society's evolving and changing attitudes toward sexuality, desire, and romantic attachment."Opposition to the removal of Wojnarowicz's film from the exhibit sparked immediate controversy, especially in the art world, with the Association of Art Museum Directors labeling it an act of censorship.

Friends for real? Study finds race plays little role making friends on Facebook

By Sahar Ashraf
Collegian Correspondent

Two months after disembarking from a transatlantic flight bound for the University of Massachusetts, Maheen Iqbal had an attack of feelings of alienation.

As an incoming international student from Dubai, U.A.E., she was a novelty at the public university, which sports an in-state student population of 77 percent. That status, combined with her incredibly easygoing personality, served to make her quick friends with almost everyone she interacted with.

But the community which she was now immersed in was very different from the one she left back at home. She had been displaced from a country populated with people of the same culture and creed as her to a predominantly Caucasian-American society.

"I felt like I was the only 'desi,' brown person here," she said, using a term South Asians use to denote themselves. "I'm a practicing Muslim, and I do have conservative values. I love my white friends, but at the same time there are some parts of me that they just don't understand."

The findings of a recent study conducted by two sociologists were in line with Iqbal's attitude towards building friendships. Kevin Lewis, a doctoral student at Harvard, and Andreas Wimmer, a professor at UCLA, studied the activity of students on Facebook to determine what factors influenced their interaction with others the most.

The study's subjects were freshmen graduating in 2009 from a highly selective and very diverse university who were also heavily involved with the social networking site. Moreover, the university itself was committed to promoting interracial communication and placed students with different backgrounds in the same dorm room at a higher frequency than would be possible if the selection process was random.

Ultimately, the researchers decided not to track the use of Facebook's popular "friend" feature to influence their conclusions.

"The meaning of Facebook friendship can be so ambiguous," said Lewis. "We were looking for a stronger measure of friendship.

"Our dataset was compiled based on picture-posting because it indicated that they actually spent time together in person," he went on.

Although Facebook approved of the study being done, it did not grant any special privileges to the researchers. Wimmer and Lewis, who joined the university's network, could only see the information available to students from the same university. They observed 15 pictures per student, making sure that each was different from the others with respect to the people tagged in them. Students often have their own concerns about showcasing their personal life online through pictures.

Coming to UMass as a freshmen, current sophomore Sidrah Khan confessed that her image and identity was at least in the back of her mind. She concluded that a lot of students enter as freshmen wanting to reinvent themselves.

"Kids that display all their photos on Facebook want to look like they have more of a social life than they actually do," she said.

Iqbal shared a view similar to that of Khan's.

"I don't think Facebook is an accurate depiction of my social life at all," she said. "Facebook pictures generally show 'hanging out' friends. There are a lot of people you hang out wth, but most of them are superficial friends. Meanwhile, there are some friends with whom you share a deep friendship, but have no pictures with on Facebook."

Much of Lewis' and Wimmer's findings seemed to reflect aged-old assumptions. Social pressure to reciprocate others' friendliness greatly factored into maintaining relations. They said that such a relation may begin on the basis of similar interests, a relatable status in terms of wealth, as well as a shared ethnicity.

However, their main conclusion was controversial at worst and groundbreaking at best.

"Our results are not necessarily generalizable, but the importance of race has been exaggerated; we just don't know to what extent," said Lewis. "Our study is not representative of all Americans. We looked at a specific population of students from specific backgrounds, but the general point will pertain to any other setting."

When asked about what traits most sway their decision to be friends with someone, Iqbal, Khan and Diderot Guillaume, a senior, did not even think of race as a factor. Even so, Khan, despite being intimate with her white friends, still considers them in some ways different from her.

"I feel like Caucasians hang out a lot together," she said. "I don't think it's me." Guillaume admitted that most of his friends were minorities, but could not himself understand why that was so.

"I don't consider race or ethnicity when making friends," he said.

After taking a moment to think, he concluded that it must be because he could relate to their struggles.

"We come from similar financial backgrounds and we're the first generation to complete school and get a better education," he said.

Iqbal echoed the study's conclusions, stating that race to her is socially structured, not biologically created, and its impacts are only felt because society accepts it as a reality.

"People actually fall for the stereotypes based on someone's color, when that makes no sense," she said. "Stereotypes about ethnicity are generally true because ethnicity gives you your values. Although obviously that's also a generalization."

Enobong Branch, an assistant professor of sociology at UMass, was in agreement with the researchers when they said the dynamics of friendship-making are complicated and that several factors and currents impact the process. Although she thought the research was interesting, however, she found the conclusions to be slightly off-putting.

"The initial finding was that race matters a lot," she said. "They unpacked the things that correlated to race, like ethnic backgrounds or countries of origin, [and] they separated those factors from race, when they're still racial qualities.

"The fact that social pressure matters a lot is very true, but to say that race matters less is not accurate," she said.

Setting was a point of contention for students and professor alike. Branch said that interactions in professional environments, such as schools and workplaces, were much more receptive to interracial communication. Different locations, like bars, force such exchanges to be more superficial and lead to race having a more significant impact. Iqbal said she feels one's racial preferences come out more openly in such settings as clubs.

"How people form networks is complicated," said Lewis. "All we're saying is that just because someone has the same skin color as you is not strong enough a reason to become friends."

Neither Iqbal, Khan nor Guillame could not explain why most of their friends were of their same ethnicity, if not minorities, like themselves. All three of them sincerely held that neither race nor ethnicity is a factor when they make friends. Though it cannot be debunked by one study, research like the study by Lewis and Wimmer is moving towards an explanation of the role of race in social interactions.

A new academic study from a Harvard doctoral student and a UCLA professor has concluded people make friends on Facebook for personal, non-racial reasons.

Anti-substance abuse organization honored

Members of CCC give presentations at annual NASPA conference in Miami, Linowski, Maroulis to receive awards at March convention in Philadelphia

By Sam Butterfield
Collegian Staff

Amherst's Campus and Community Coalition to Reduce High-Risk Drinking (CCC) was recently given silver honoree recognition at the annual NASPA Excellence Awards competition. The Washington-based university administration organization NASPA – Student Affairs Administrators in Higher Education – gives out the awards in a variety of categories for outstanding administrative work at colleges across the country.

Co-chairs of the Coalition Sally A. Linowski, the director of the Center for Health Promotion at the University of Massachusetts' University Health Services (UHS), and Tony Maroulis, executive director of the Amherst Area Chamber of Commerce, were informed of the award earlier in January. They will be formally recognized at NASPA's annual conference, to be held in Philadelphia this March.

The CCC uses what it calls "environmental management strategies" to help create community dynamics where opportunities for binge drinking are reduced. The Coalition has lobbied hard for some of Amherst's stringent bylaws against kegs, open containers, and houses which host frequent large parties, and has also worked with UMass administration to toughen on-campus sanctions for alcohol policy violations. Since 2005, the Coalition states frequent binge drinking by underage UMass students is down 30 percent, while regular binge drinking among people of all ages is down 21 percent.

UMass and UHS administrators were also singled out by NASPA for their expertise in substance abuse prevention to speak at a national conference of administrators held in Miami earlier this month.

Linowski, Diane Fedorchak, project director of UHS' BASICS (Brief Alcohol Screening and Intervention for College Students) alcohol screening and intervention program, and Commonwealth Honors College assistant professor Gloria DiFulvio were among featured presenters at NASPA's Alcohol and Other Drug Abuse Prevention and Intervention Conference, which took place Jan. 13 to 15 in South Florida.

Linowski prepared a presentation titled "Campus and Community Coalitions: Maintaining Momentum in Changing Times," which emphasized the work of CCC in affecting changes to campus and town policy regarding binge drinking.

She and Fedorchak together gave the conference a presentation called "Virtual BMIs: Motivational Interviewing Techniques within a Stepped Care BASICS Program," a multimedia package which provided attendees with an inside glance at UMass' BASICS program. They focused on how BASICS prevention specialists "employ brief motivational interviewing to help change the behaviors of high-risk student drinkers."

Linowski, Fedorchak and DiFulvio gave a third talk along with colleagues from the University at Albany and University of Arizona titled "Emerging Trends in Screening and Brief Motivational Interventions for High Risk Alcohol Abuse: Experiences of Three Universities." The UMass trio and its counterparts at the other two schools have all been recognized by the Department of Education as model programs for their employment of what is called "evidence-based intervention," as well as for contouring their specific screening and intervention programs to campus-specific dynamics.

Study shows grads feel college degrees worth the investment

ALUMS from page 1

lar to that of the ACE.

"Students are surveyed at the time of graduation, three months after graduation, and six months after graduation," he said. "Students who have done several top quality internships or co-ops do feel that they were well prepared to enter the job market and are happier with their career choice."

"Obviously students in high-demand majors such as computer science and accounting have an easier time finding jobs after graduation," Silver explained.

However, Silver also attributed students' success in other majors to the opportunities available at UMass.

"I have found that students who have networked, had high-quality internships and have good grades have an easier time finding employment after graduation than the student who has just gone to classes and had the usual summer jobs," he said. Communication disorders major and 2010 UMass graduate Courtney Duffy echoed the idea that internships are an invaluable piece of completing a well-rounded college experience.

"UMass taught a lot of theories which are useful to my current occupation, but without hands-on learning and the internship I had last summer, it would have been much more difficult. Theories are great, but I am a hands-on learner," she added.

Fellow 2010 UMass graduate and resource economics major Randy Swank expressed regret he had not utilized Career Services while at the University.

"I really recommend using Career Services and any other help that the university offers," he said. "Myself, my peers, and my friends, did not utilize this as much as we should have,"

"I wish UMass had been more persistent on mandating internships and working more hands on with companies to reserve internships and working more hands on with companies to reserve internships," he went on. "I really like how Northeastern University does this, because internships are important to getting jobs and are very difficult to get at the same time."

Duffy had a similar perspective on the idea of potentially mandating internships. "I think that the most important role a school could provide is hands-on learning and opportunities for internships," he said. "You learn a ton while working and they provide great references and opportunities for employment upon graduation."

Though Swank wishes he had utilized some of the available opportunities at UMass, his opinion falls in line with the respondents of the ACE survey.

"UMass was definitely worth the time and the money," he said. "During these tough economic times, UMass is one of, if not the best, schools for the price."

Swank also disagreed with Silver's opinion that students with more demanding degrees typically find it easier to get a job after graduation.

"To be honest, I haven't noticed any majors having an easier or more difficult time getting jobs," he said. "Finding a job right now takes a lot of patience and can be very frustrating, no matter what you graduated with."

Duffy is satisfied working at the Franciscan Hospital for Children's Kennedy Day School Program and is also working towards her master's degree in special education at Framingham State University, yet she said she wishes her UMass degree would allow her to gain access to higher-salaried positions.

"These days, I feel that to get a higher-paying job (especially in Massachusetts with a degree in liberal arts and education), a master's is required and would urge people to get the degree as soon as possible," she said.

Republicans protest Wojnarowicz's work; Smith Art Museum acquires his pieces

TITLE from page 1

The Smith College Museum of Art installed another piece of Wojnarowicz's, "Untitled (One Day this Kid)," to "serve as a reminder of our society's obligation to confront the injustices of the past and to ensure that the discourse of the future is unfettered by inappropriate political pressure."

The artist, who passed away in 1992 due to an AIDS-related illness after being diagnosed in the late 1980s, was no stranger to controversy, explains Jessica Nicoll, director of Smith's art museum.

"Wojnarowicz was at the center of a series of controversies and public debates in the 1980s and 90s now remembered as 'the culture wars,' about what is appropriate for museums to display, particularly when federal funding is a source of support," she said. "As much as any controversial content in the contested video, I suspect that this past history informed recent events."

Wojnarowicz was included in the exhibit as his art addresses the suffering of an AIDS victim, which disproportionately affected homosexual men at the time but was an issue that was often ignored in public policy debates. Wojnarowicz's biographers, Dan Cameron and Dennis Szakacs, explain he was "…the product of an extremely difficult childhood brought on by an abusive family life and an emerging sense of his own homosexuality, [he] dropped out of high school and was living on the streets by the age of 16."

However, Wojnarowicz was an extremely prolific artist, and wrote five books in his lifetime. He also took on issues such as "medical research and funding, morality and censorship in the arts, and the legal rights of artists".

The Museum of Modern Art in New York recently acquired another of his works, "Fire in My Belly," where it is currently being displayed with other works made during the AIDS crisis.

Police arrested Vuk N. Whallon, 20, of Putney, Vt. last Thursday for possession of marijuana and Adderall.

Police arrest student on Adderall, intent to distribute charges

At approximately 6:32 p.m. last Thursday, officers from the Amherst Police Department (APD) arrested a University of Massachusetts student on several drug charges.

According to a Jan. 21 APD press release from Lieutenant Ronald Young, officers pulled over a vehicle traveling on Farmington Road, in which the suspect, Vuk N. Whallon, 20, of 172 Tavern Hill Road in Putney, Vt., was a passenger.

As the traffic stop was being conducted, the officers allegedly discovered Whallon was in possession of a large amount of marijuana which had already been portioned and packaged for sale. In addition, the presence of a digital scale and several hundred dollars in cash in the vehicle led the officers to believe the marijuana was in the process of being distributed.

Subsequently, Whallon, whose Facebook profile lists him as a resident of Ann Arbor, Mich., was arrested for possession of marijuana with intent to distribute and illegal possession of a Class B substance (Adderall). He was arraigned in Eastern Hampshire District Court on Friday.

America's users abused

According to many, the United States government is marked by waste, with money spent on programs that simply don't achieve results. With the current rhetorical focus on cutting such pointless costs, it is time to examine a series of programs that cost the American taxpayers over $15 billion a year, with few positive results – namely drug enforcement policies. The current system does little in terms of changing the behavior of drug users, is continually expanding in its budget and mandate and is a misallocation of public funds.

Yaroslav Mikhaylov

Drug use and abuse fall into three categories – medicinal, recreational and addictive. People who use drugs for medicinal reasons are prescribed them or need to have them prescribed. They need a proper diagnosis of their illness and the prescription of a legal narcotic. Recreational users are often aware that they do is illegal, but prosecution for their high is an accepted risk, and fines or imprisonment are unlikely to change their habits. Finally, addicts are not rational regarding their drug use. No legal threat will have an effect on them because they need their substance of choice to survive. In short – criminal penalties for drug use don't change users' behavior.

Drugs, like terrorism, are considered an existential threat and no expense is spared to combat them – even if the efforts are misguided.

The American war on drugs is also an ever-expanding enterprise costing more and more every year. Just between 2010 and 2011, $500 million has been added to the National Drug Control Budget. The Drug Enforcement Administration (DEA) now maintains five international task forces – essentially paramilitary units – to enforce American drug laws abroad. One of those is currently deployed in Afghanistan. Drugs, like terrorism, are considered an existential threat and no expense is spared to combat them – even if the efforts are misguided. None of the above costs include the cost of incarceration, either. The United States has a prison population of over two million inmates who each cost the government $22,000 annually, a large portion of which are non-violent offenders doing time for drug charges.

There are, however, alternatives. In 2000, Portugal decriminalized most drug use. Instead of being prosecuted criminally, drug users are referred to panels which send them to treatment and drug education programs. The money and manpower freed up from prosecuting drug users was instead used to target drug smugglers and cartels. British Journal of Criminology research showed this approach bore clear results: a 63 percent increase in the amount of drug users seeking treatment and a six-fold increase in drug shipments seized as a result of reallocated law enforcement priorities. More Portuguese drug users are being treated and counseled through their drug addictions and more drugs are being seized before they can make it to market. Similarly, 21 percent of the Dutch population - with their lax attitudes toward certain drugs - has reported trying controlled substances at least once in their life, compared to the United States' 34 percent.

Drugs are such a large problem because our society makes them so. The drug war is very lucrative for companies that provide equipment, training and consultation to agencies such as the DEA and the Office of National Drug Control Policy. The criminalization of drug use drives it underground and treats drug addiction as a crime, rather than a health problem. Absolved of our social responsibility to treat addiction, we can simply lock addicts away in dark prison cells for the bargain price of $60 a day.

From both a social view and an economic one, it makes sense to look at national drug policy and see how it can be reformed for the better. Our primary way of dealing with drug abuse – incarceration – is neither effective nor efficient. It rarely changes the behaviors of drug users and it costs a fortune even when it does. The approaches used by Portugal and the Netherlands may not be the right answer for the American drug problem, but it is clear that the current system is not working. Massachusetts took the first step two years ago by decriminalizing marijuana and allocating law enforcement resources to more important duties. This could be the groundwork for a new American drug policy, but wherever it originates, one thing is clear – we need a new drug policy.

Yaroslav Mikhaylov is a Collegian columnist. He can be reached at ymikhay@student.umass.edu.

The S.U.P.R. manifesto

The problem at the University of Massachusetts is that our political spectrum has broken into two parties and a ragtag team of far-left radical groups. We actually have a whole lot of political action groups pushing hard on important single issues, but students who haven't taken a particular interest in a particular issue don't really have an umbrella under which to push progressive politics in general. Sure, the UMass Democrats conduct electioneering when it's election season, but it's all along party lines. The Amherst area votes almost uniformly Democratic, anyway, so shouldn't we build on that to push the Democrats and the country further towards progressivism?

Eli Gottlieb

What if there was an organization for people who hold strongly progressive beliefs and want to get involved, but don't want to constrain themselves to the program set by a party structure? In effect, isn't it about time we had a left-wing Tea Party? I propose to you: S.U.P.R., Students United for Progress.

We need to answer not merely the challenge of this recession and this radically reactionary epoch but of the gradual reactionary turn America has taken over the past three decades. We need to admit that the American social covenant has broken down into what Thomas Hobbes called "the war of all against all."

Many of our nation's large companies now make their money by suing and counter-suing citizens and each other, rather than producing any real products or services. Our vital public services and institutions are starved for funding. Budget cuts over the last several decades have driven our public universities in particular to operate like for-profit businesses, shed entire departments and rely on ever-increasing student fees to stay afloat. Politics has become a vicious gladiatorial contest between the radically reactionary Republicans and the moderately conservative Democrats. At the same time, political parties have gained more influence over the elections, debates and media, narrowing the spectrum of opinion heard in public discourse. In short, right-wing political influences have largely succeeded in their campaign to privatize everything, leaving them to watch from privileged private balconies while the rest of the nation fights for the scraps.

We call ourselves progressive in the sense of Theodore Roosevelt and his Progressive Party, who said that "to destroy this invisible Government, to dissolve the unholy alliance between corrupt business and corrupt politics is the first task of the statesmanship of the day."

We – S.U.P.R. – must address not only the obvious tasks but the subtleties of fundamental issues. We must reverse the ruling of Citizens United, which deemed any limit or reporting requirement on campaign donations from corporations unconstitutional. We need a true universal health care system. We have to cut defense spending by dismantling the costly American empire and bringing home the troops from free countries like Germany and Japan, if not ending our current wars.

We call ourselves progressive in the sense of Theodore Roosevelt and his Progressive Party.

We owe it to our youth to bring funding for public universities to a level that can finally curb the exponential growth of tuition and fees, while the ecosystems of our nation and our world demand our efforts at conservation and revivification.

We cannot, however, consider obvious measures enough.

Our project is a positive and coherent project to rejuvenate the American public spirit and to rebuild the American public sphere. America is not merely a collection of conflicting individuals, an enforcer of property rights, or the Death Star of neoliberal economics. It is a nation built by the contributions of its individuals' bodies to the common good, with a social contract binding to a form of liberal democracy. We believe that in order to maintain our democracy, a measure of socialism is inevitable and necessary. However, social democracy is the truest liberal democracy.

At the campus level, we demand fair wages for all UMass students, staff and faculty. We demand equal access to all University services for every student, regardless of status. Specifically, we need to address exorbitant gym fees for graduate students and the limitation of the new Commonwealth College living quad to honors students, since all students pay fees that contribute to these facilities.

Locally, we support livable, equitable urban planning and policy, to create thriving human and natural environments. We are for sustainable and local agriculture, as well as enforcement of fair labor practices. We will investigate alternative methods for taxing real-estate, such as Georgian site-value taxation in an attempt to combat unwanted gentrification and slum conditions. We believe a community has a responsibility to all of its members, and that the good of the members is the good of the community.

From states, we demand a permanent, workable budget for the entire Massachusetts public education system, including state universities and community colleges, ensuring the right to free, public education for all Massachusetts citizens. We support the resurrection of organized labor and workers' cooperatives and new legislation to reinforce workers' rights.

Nationally, we support creating additional income brackets at the upper income spectra and restoring the progressive income tax. We intend to push for genuinely universal public health care, and the improvement of our agricultural regulations to promote Earth-healthy and human-healthy farming. We aim to end corporate personhood and the precedent of capital over community it has engendered. We intend to replace the entrenchment of lobbying with publicly-funded candidacies and strong ethics laws. We demand that the two-party system enforced by the first-past-the-post voting system be replaced by a multi-party one.

In the international arena, we aim for the United States to act as an ideologically neutral promoter of peace, liberal social democracy and environmental stewardship all across the Earth.

Right now, we are all students. Many of us believe in progress. We ought to unite for it.

Eli Gottlieb is a Collegian columnist. He can be reached at egottlie@student.umass.edu.

To the person who invented the story about the dead dog in a suitcase on a New York subway

I first would like to say "Congratulations" on crafting a piece so perfectly on the fence that it changes its listener's ideas about what is possible and impossible.

Zachary Fischer

There are currently thousands of English undergrads around the country playing pantomime with the idea of "creative non-fiction" and all of the silliness that entails as an art form and you blew all of them out of the water with your tact and anonymity.

Everybody's heard about the girl house sitting for a friend in Brooklyn, usually visiting the city for the first time from the Midwest. She has the time of her life, romping through Williamsburg, having enticing coffee shop flings and the like. Then, inevitably, the scariest and most-expected tragedy occurs. The family's golden retriever dies suddenly (whether from illness, choking on an oversized bone, or getting into the girl's chocolate is never really asked) and she's left with the unfortunate responsibility of telling the family and bringing the corpse to the vet incineration chamber.

The family takes the news well, but she still has to find some way of bringing an 80-pound dog to Manhattan. Since she's visiting, she has no other real option than to put the dog in her suitcase and take the subway - which she does with hesitant disdain but resolve. After dragging the dog three blocks to the nearest subway, she gets on the J-train with no little amount of anxiety.

A few stops in, she is asked by a young man about the contents of her suitcase. Not about to give away her awkward secret, she tells him she is just moving into the city and has in the suitcase everything she owns. Any New Yorker knows this is a bad idea, but she's from out of town and isn't as familiar with the enterprising nature of New Yorkers.

She is therefore surprised when the train stops and the man punches her in the face, stealing the bag and all of its contents in a rush to run from the subway car. The girl, after her head stops spinning, is relieved and confused.

One can imagine she was planning on buying a new suitcase anyway.

Not many people can admit to being underwhelmed by sharing their clothing space with a dead dog.

This story was first told to me by an ex-girlfriend on New Years, about a friend of a friend from Madison, Wis. I tend to be a skeptic, but the detail and just-ludicrous-enough aspects of the story suspended my disbelief. I am the kind of person who lacks all tact and is energized by conversation, so I told the story at every opportunity I had.

It was always met with the same enthusiastic incredulity. Everyone was charmed by it, and whether they believed it or not, were at least interested. This went on for some months (maybe years?) until the story was told back to me for the first time.

Maybe your story was a real story once, but unlike James Frey, you can't be looked up, and your story only ever seems to be spread by rational people. Maybe that means, at its very base, the story is true.

But I cannot express the heartbreak I felt that faithful day I told your story and had a friend (who has never even visited New York City) from Massachusetts tell me his brother had told him the same story months before. We had no names to compare or even landmarks in common. I think his brother had told him she'd been coming from the Bronx. This was amazingly disappointing for me.

I had internalized your story as a hopeful piece of reality, a kernel of absurdity, among the thousands of impossibly boring kernels that already exist in the realm of real thinking. Like others of my generation, I spend most of my time on the Internet, reading, or in a dream world, where I can conceive of everything society's left my imagination. The world of pretend is a great place to hang out, but it gets immensely lonely and removed. Its existence almost proves that reality cannot be as pretty and free, and therefore - unless you're locked in emotionally with another person - you cannot escape to the fields of impossibility with a guest.

So, your story was a way for perfect strangers and I to embark on a journey through the absurd, a tale of justice and cosmic meaning that so often is forgotten in the average, skeptical and angrily post-miraculous existence of the Peter Pan generation. To learn that, in fact, your story is just another piece of fiction that lets us escape our own realities, is immensely disappointing and serves only to remind me how grey, jobless, and structured my own reality is. Thanks.

If, however, you happen to be the girl this happened to, please write me back. You will have reinvigorated my faith in the absurd - or at least temporarily suspended my disbelief in the inane.

Sincerely,
Zach

Zachary Fischer is a Collegian contributor. He can be reached at zfischer@student.umass.edu.

Fabolous returns the hustle to UM

By Dan Gigliotti
Collegian Staff

The University of Massachusetts University Programming Council welcomed hip-hop artist Fabolous to the Fine Arts Center on Friday for its annual Welcome Back Concert.

The acclaimed rapper captivated a rambunctious sold-out crowd of 2,500 students with his unique swagger and long list of hit songs. Fabolous, now referred to as "Loso," enamored the crowd and demonstrated he hasn't lost his talent for performing over his nearly two decades in the game.

North Carolina-natives Mercy Mercedes opened the show by playing a short set of songs from their new full-length album "Believe it."

Featuring a trio of energetic guitarists, an enthusiastic front-man, and a brand new drummer, the lively group entertained the audience with a well-executed performance that was indistinct, yet fairly enjoyable.

Its sound resembled late-nineties popular-alternative rock with driving guitar riffs set behind the lead-singer's impassioned melodies.

Two effervescent electric guitarists bounced around stage, employing power chords with some theatrics. One, a Keanu Reeves look-alike donning a winter cap and straight-legged jeans, hopped in place with a quizzical look on his face, as if surprised by the sounds coming from his instrument. The other, rocking a leather jacket and a graphic tee, held a constipated look on his face during most of the show, wailing away at his strings with one foot hoisted on a speaker, banging the whammy bar with indiscretion like a true Guitar Hero champion.

The crowd responded moderately when urged to dance during the song "The Perfect Scene," but seemed to be more eager to hear the house music that came on following the group's 30-minute performance.

The hip-hop enthusiasts became increasingly excited and eventually unruly with every contemporary rap hit that filled the mezzanine. The students displayed their best "Dougie" and nearly everyone knew the proper cadence to the song "Shots."

In the 50 minutes that led up to Fabolous' appearance, fans were so giddy with anticipation they could barely control themselves. A scuffle broke out in one of the front rows when UPC staff ordered fans to curb their enthusiasm by remaining in their seats. The crowd responded unwelcomingly with a rain of boos and middle fingers before eventually obliging.

Fabolous graced the stage at 9:20 p.m. accompanied by DJ Paul Cain and an unnamed hype man. From the second the 33-year old rapper muttered his voice over the microphone, the unquestionable scent of marijuana crept towards the front of the stage - from whose flavored cigar or plastic baggie that smell came remains undetermined – at which point the previously humbled crowd could not be held in its seats any longer. The antsy crowd showered the veteran MC with cheers as he crept steadfastly to the front of the stage, imploring fans to cheer with a menacing stare.

The Brooklyn-born artist wore a letter jacket with the distinctive "NY" logo on its front-left chest and the words Flight School scrolled on the back. His sagged-down drab khakis fell onto a pair of red Jordan sneakers and a flat-brimmed cap sat neatly on top of his head with a word written in capital letters likely to signify his rhyming prowess – "NICE."

He performed his own version of the Wiz Khalifa song "Black & Yellow," supplanting the Pittsburgh colors for white and navy, in no particular effort to appease the majority of Massachusetts natives in the crowd.

Fabolous, having been in the rap industry for 17 years, has a certain air that exudes confidence in his performing abilities. He moseys back and forth to either side of the stage with intent, compelling the audience to recite lyrics to his past hits with an hypnotic look. If it wasn't his posturing that produced these mesmerizing effects, it was his jewelry. Between his gleaming wristwatch and the two crucifixes hanging from his neck, the rapper was wearing more diamonds than a deck of cards.

He performed older hits and he went into a medley of his most popular songs from the last decade. The famous Tupac song "Ambitionaz as a Ridah" provided a segue into his debut single "Can't Deny it," which sampled the Shakur track. He then urged everyone to "Holla Back" before performing his portion of the Lil' Mo hit "Superman." He finished his throwback segment with "Into You," the Ashanti duet off of 2003's "Street Dreams," and "Can't Let You Go" off of the same album.

Fab seemed to have an increased enthusiasm during the song "Beamer, Benz, or Bentley," and it continued into the next song, an ode to gold-digging women, "For the Money." It seemed that, like most mainstream rap artists today, the more he rhymed about money, the more animated he became.

The song "Breathe" tested the academic skills of the college audience (one-and-then-a-two, two-and-then-a-three, three-and-then-a-four) and was undoubtedly one of the most popular of the night. He finished that track a capella and began a slow chant of "B..ooklyn" that was received with mocking chants of "Boston."

Following the song "Start it Up," Fab must have been pooped, because he announced he was taking a bathroom break before finishing out his set. After his short trip to the head, he played a handful of songs, including "U Make Me Better" and then wished everyone a happy New Year.

He played two more songs, a denunciation of failed relationships, "Put Two Fingers Up" and another tune about expensive toys "Throw it in the Bank."

Fabolous arguably received his most commercial success earlier last decade, but, as his performance on Friday indicates, he is still thriving in the rap game. He debuted at No. 1 on Billboard's 200 with the 2009 album "Loso's Way" and he plans to release the sequel, "Loso's Way 2: Rise to Power" in March 2011.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Rapper Fabolous strutted his talent Friday in the Fine Arts Center nearly two decades after arriving on the scene. Fabolous is touring prior to the release of his newest album, "Loso's Way 2: Rise to Power."

'Hornet' a stinging comedy

By Lindsay Orlov
Collegian Staff

If "The Green Hornet" were to be separated into its basic elements, it would boil down to a manageable dose of slapstick action, a sprinkling of impressive martial arts, and an overly large helping of classic Seth Rogen comedy. That last part ends up being the driving force behind a movie that descends from the mildly believable tale of a rich, bored playboy with tons of money and his genius sidekick into a no-holds-barred, city-wide shootout interspersed with witty one-liners from both the good guys and the bad guys.

While predictability is not particularly avoidable for a hero-and-sidekick duo - a combination which has been a part of American media since the 1930s - it is difficult to find aspects of this film that stand out from the formulaic superhero movie theme. Fortunately, this is where Rogen's humor, scripted into the movie by Rogen himself, comes in handy.

"The Green Hornet" makes several respectable stabs at keeping to a consistent plotline. The theme of integrity versus success appears in the beginning of the movie, in the form of main character Britt Reid's father, James, who emphasizes the importance of both integrity and success to his young, pudgy son.

The elder Reid's heavy-handed parenting style signals early on that daddy issues are going to have a starring role in the development of the story - and sure enough, the Green Hornet rises almost entirely from James Reid's ashes.

Luckily, Rogen's sense of humor, recognizable from such films as "Knocked Up" and "Pineapple Express," keeps the tone of the film silly enough to support an otherwise anemic plot. Even the Green Hornet himself doesn't know where to take the plot next and must rely on the somewhat deus ex machina appearance of Lenore Case (Cameron Diaz). Case just happens to have been not only a journalism major with a minor in criminology, but one with an exceptionally good memory - or, at least, enough of a memory to recall what she learned in college fourteen years after graduating.

Despite the movie's shortcomings, "Hornet" has some shining moments. Jay Chou reprises the character Kato, a genius engineer and martial artist originally played on television by the renowned Bruce Lee. Chou's martial arts ability is matched by a surprisingly impressive sense of humor onscreen; his delivery of one-liners raised almost as many laughs as Rogen's. The repartee between Chou and Rogen remains strong through comedic scenes and through more dramatic scenes - which, to be fair, are also pretty comedic.

The special effects and filming also serve to enhance the experience of the movie, with a number of imaginatively filmed cut scenes as a reminder of Michel Gondry's direction. Gondry, who directed "Eternal Sunshine of the Spotless Mind" and "The Science of Sleep," imbues an offbeat quality into an otherwise spoofy film.

While nothing can take away from the goofy effect of sushi-shaped USB drives and an antagonist who changes his name from Chudnofsky to Bloodnofsky, Gondry makes the silliness seem streamlined and intentional, instead of awkward and out of place.

Special effects are used, almost shockingly, in moderation, except when it comes to the Green Hornet's main ride: a retro-looking, impressively tricked-out car named Black Beauty. Thanks to Kato's genius engineering skills, Black Beauty is outfitted with everything from door guns to green headlights to a beanbag shooter.

Overall, the characters in "The Green Hornet" are simple: a rich boy who wants to prove his jerk of a father wrong, an underappreciated sidekick who wants respect, and a bad guy who wants to be scary. With a set up like that, "The Green Hornet" could have gone anywhere; the choice to take the movie deep into the realm of goofy, offbeat comedy, supported by the efforts of Rogen and Gondry, made the film ultimately more loveable (and forgivable) than it otherwise might have been.

Lindsay Orlov may be reached at lorlov@student.umass.edu.

Seth Rogen and Jay Chou star as rich playboy Britt Reid and his genius sidekick Kato in the 2011 comedy, "The Green Hornet." Despite a trite plot, Rogen and Chou deliver stinging one-liners that leave audiences laughing and buzzing about the film.

'Phillip Morris' proves better late than never

By Margaret Clayton
Collegian Correspondent

Two years after its premiere at the Sundance Film Festival, "I Love You, Phillip Morris" has finally made it to our local theaters. The question is, why the delay?

Two years since "Milk" and another three since "Brokeback Mountain," one would think American movie-goers have grown in their acceptance of homosexual relationships on the big screen. Although the romantic plot-line is between two men, Steven Russell (Jim Carrey) and Phillip Morris (Ewan McGregor), the driving force of this film is the conman heists put on by Russell to successfully lead the perfect life with his partner.

Russell's character is brutally honest about his life choices, starting the film with a voice-over while he lies in his deathbed about what got him there. As he recounts his tale, Russell's schemes are so outrageous that one gets sucked into the film, eager to see where it will blow up in his face or how he will manage to escape the law once more. A more controversial element of the film arises when former cop Russell dupes the authorities time and again, manipulating the system in the name of love.

The love he is trying to protect begins in prison, Russell's typical residence, in the library where blond-haired, blue-eyed Morris is trying to find some law information to help his friend with a healthcare problem. This calm, sweet, sensitive act draws Russell to him, ready to take on the role of protector and lover. There is the high school, sticky-sweet passing notes image of courtship, but inside prison walls there is always a layer of something more serious, a window into how real the characters' desperation is to be free from the yard, free to live together.

Throughout the film, stereotypes are being reinforced and crushed all the time. A gay man who cannot help but buy everything he sees (Russell). A devoted Texan housewife, Debbie (the overlooked Leslie Mann), who prays to Jesus every night for the loving man in her life. Favors are done in prison for the right amount of cash, or an equivalent sexual favor. Gay men can't play golf. The legal system is filled with jargon that even the lawyers do not understand, but cases are won or lost anyway.

The most disappointing aspect of the film is that there are several loose ends left undeveloped. The audience is left in suspense as Russell's daughter is left to deal with her father's homosexuality as he moves to Miami to pursue a happy, sunny, dog hairdresser lifestyle. Additionally, the audience is presented with Russell's insecurity about being unable to keep those he loves from leaving him, stemming from his mother's abandonment of him. These side plots are left to the side to make room for the unbelievable chain of events, comedic and sad, whose real power is their truth.

Maybe theatergoers expected to see an offbeat romantic comedy with Carrey (The Mask) as the masterful caper once again, and McGregor (Moulin Rouge) as the enchanted lover, but many may be shocked to find such an outrageous story can be true! Russell and Morris are real people whose jamms took them in and out of hospitals and prisons throughout the 1980s and 90s. Surprisingly, Russell can keep up these escapades that break the law and hurt a number of people, yet still manage to win over the audience with the charm and belief that it is all for the romance.

Margaret Clayton can be reached at mclaytonx@student.umass.edu.

Vitamin D and exercise help combat SAD

By Kate Evans
Collegian Staff

Cold? Hungry? Bored? Tired? With a lack of vitamin D it's no wonder many suffer from Seasonal Affective Disorder (SAD) this time of year. It's important to learn the signs and treatment of this disorder in order to have a happy and healthy new year.

SAD is a condition that comes seasonally and causes symptoms much like depression, such as loss of interest in activities once enjoyed, fatigue, hopelessness or worthlessness, and even thoughts of death or suicide.

The website eMedicineHealth goes on to categorize symptoms specific to Winter SAD, which can include excess sleeping, irritability, sugar and alcohol cravings, weight gain and conflicts with others. SAD can occur in the spring and summer, but is most common in late fall and winter, according to the website.

Winter Seasonal Affective Disorder, often shortened to "winter depression," is believed to be caused by hormonal changes in the brain, according to Web MD.

The site goes on to suggest a second reason: minimal sunlight exposure causes a lack of production of serotonin in the brain. Serotonin is somewhat of a natural soother, and without it depression seems like an easy development. Web MD explains the reason your body may crave carbohydrates during this time is because carbs are essential in regulating serotonin, so your body tries to obtain that calming effect elsewhere.

With heavy barometric pressure, frigid temperatures and cramped living quarters, it's no wonder college students may be feeling depressed. Although seeing a doctor about these symptoms is always the first step, several natural ways to treat winter depression may be useful, too.

Go outside to soak up some vitamin D. It may not be enough to achieve a golden glow, but a little natural sunlight each day should help rejuvenate the body. Not enthused by Southwest's urban environment and chilling wind tunnels? Taking a vitamin D supplement each day may be the easiest way to trick your body.

Hitting the gym will release some feel-good endorphins. Sure, it was easy to skip your workouts when the packed sweatbox in the basement of Boyden Gym was all the University of Massachusetts had to offer students, but now, with the mammoth new Recreation Center in the heart of campus with endless cardio machines, nonstop pickup basketball games, and even ZUMBA classes, how can a person opt out? Bring a buddy and sweat out those liquor toxins.

It is also important to steer clear of sugary foods and excess carbohydrates. Not only will these foods literally weigh a person down, they'll also lead you to crash. Since white flour turns to sugar and is stored as fat, stick to wheat breads and whole grains for your carb cravings.

In the World of Psychology's "12 Winter Depression Busters," author Therese J. Borchard warns, "the addiction to sugar and white-flour products is very real and physiological, affecting the same biochemical systems in your body as other drugs like heroin."

In place of potentially dangerous sugary treats, opt for a small portion of soft serve ice cream or one cup of hot chocolate. The soft serve ice cream at UMass' Dining Commons is under 200 calories per serving and is low in fat. Hot chocolate, on the other hand, is a great way to indulge while staying warm.

If you think you might suffer from Seasonal Affective Disorder or depression, it's important to get help immediately. Contact your doctor, confide in a friend, or seek out a therapist. Depression can cause suicidal thoughts or urges, so if you or someone you know displays potential signs, call the National Suicide Prevention Hotline at 1-800-SUICIDE.

Kate Evans can be reached at kvevans@student.umass.edu.

WRITE FOR ARTS

UM falls to Richmond despite 11-to-1 run, Gurley leads Minutemen in rebounds

M.HOOPS from page 10

The pairing of Gurley and Farrell wasn't able to muster enough energy to put off Richmond's four double-digit scorers in Dan Geriot (24), Justin Harper (21), Darien Brothers (17) and Kevin Smith (11).

"Their starting five really played well tonight," Kellogg said.

Richmond opened up the second half with a 7-0 run in just over a minute and a half to pull away from UMass. This run was enough insurance that the Spiders never had to look back.

"They came out on fire and they were hitting [and] contesting shots," Farrell said.

"It was an uphill battle for the rest of the half, and we weren't able to withstand it," Gurley said.

The dominance by the Spiders in the early part of the second half was seen clearly when Kevin Smith lifted high above the Minutemen defense to dunk away a putback opportunity.

The Spiders' high level of play continued throughout the rest of the half with 17-for-27 shooting, including 5-for-7 from Brothers and 8-for-12 from Geriot.

"The continuity of their offense is kind of tough to defend," Gurley said. "It puts you in a lot of spots where you're forced to help."

The game kicked off with an odd first half, with neither team finding a rhythm. Similar to recent UMass games, the Minutemen held off the Spiders from making any scoring runs or fluid offensive possessions.

For the first 20 minutes, the affair was a hard-nosed battle, with missed shots and failed scoring opportunities on both sides. While UMass failed to convert on its tip-in chances off missed shots, Richmond couldn't find a way to put away 3-point shots, going just 4-for-14 from beyond the arc.

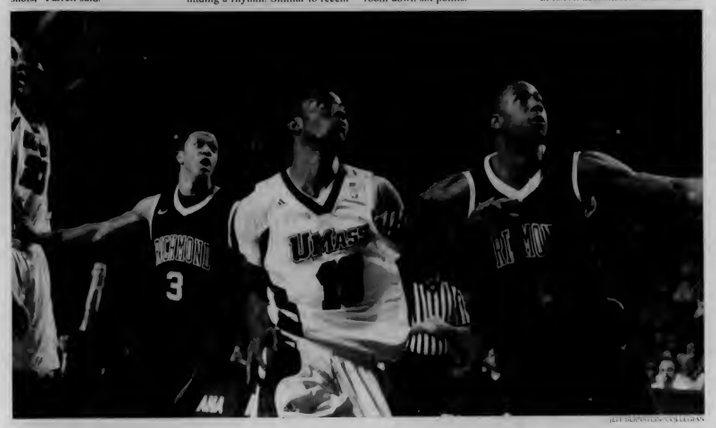
Gurley kept the Minutemen (and the crowd) alive in the first half with 13 points, which included four scores from outside. He drained his final 3-pointer of the first half with little time remaining to send UMass into the locker room down six points.

Gurley also led the team in rebounds at the half with four. UMass had a slight edge over the Spiders with an 18-17 advantage, with seven of its rebounds coming on offense. These boards aided the Minutemen in continuing to score from the paint (10 points).0

Despite suffering its second loss in five games, the Minutemen remain hopeful that its upcoming schedule, including Wednesday's tilt at Saint Bonaventure, can provide them relief.

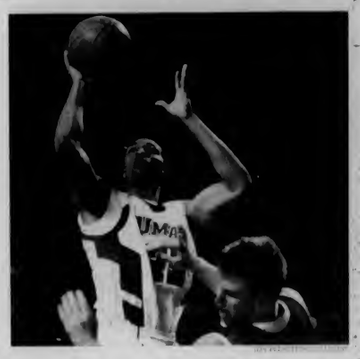
"I honestly think we can play anybody in our league," Farrell said. "I think on any given night we can beat anyone in our conference."

Herb Scribner can be reached at hscribner@student.umass.edu.



Jeff Bernstein Collegian

Javorn Farrell goes up for a rebound against the Spiders on Saturday. Farrell was second to Gurley on the night with 16 points and added six rebounds and four assists. The loss was the Minutemen's second in five games.



Sampson Carter floats a shot up towards the basket against the Spiders Saturday, as the Minutemen lost, 84-68.

UR offense produces double-digit scorers

DEFENSE from page 10

"We saw their offense earlier in the year against Boston College and they had trouble defending them like we did today."

The loss marked the third most points allowed by UMass this season, behind 104 to Seton Hall and 92 to Central Connecticut.

Against the Pirates, the Minuteman defense allowed a record for points in a game at the Mullins Center behind 11-of-22 shooting from long range. Similar to the loss against Richmond, UMass had to deal with a run by the opposition which extended the lead from six points to 17 points midway through the second half.

Central Connecticut was also propelled by a run which allowed them to defeat the Minutemen. In the first nine minutes of that contest, the Blue Devils outscored UMass, 33-9, including 17 consecutive points. Central Connecticut was on fire from deep, converting 8-of-13 shots from 3-point land. The early run put the Minutemen in hole which they couldn't climb out of, as they went to lose, 92-63.

Overall, UMass has struggled against offenses which put a lot of pressure on perimeter defenses. Gurley saw that problem in the loss to the Spiders.

"The continuity of [Richmond's] offense, it's kind of tough to defend," Gurley said. "They put you in a lot of spots where you're forced to help, which creates matchup problems and stuff like that... That still doesn't make an excuse for us. We have to come out with more defensive effort and more intensity."

Jay Asser can be reached at jasser@student.umass.edu

Syner nets two, adds assist as Mass Attack scores 6 on UVM

UMASS from page 10

The UMass penalty kill unit regained its form on Saturday, stopping all five Catamount opportunities on Saturday after allowing its first goal in 14 consecutive opportunities on Friday.

The Minutemen, ranked eight in the conference in the penalty kill (79.7 percent), halted 6-of-7 power-play chances on the weekend.

"I thought the defense as a core… battled, competed and pressured them so that we could break the puck out of the zone and curtail their offensive effort," Cahoon said.

Less than five minutes into the first period, Hobbs scored his sixth goal of the season off a pass from Syner. Hobbs advanced the puck past the neutral zone and into the attacking zone, then laid the puck off to Brenden Gracel, who flicked a back-handed pass to Syner who, with a defender draped on his back, sped towards net and centered the puck to the waiting Hobbs.

The Minutemen went up 2-0 later in the period when Syner gained a breakaway and rifled a wrist shot from the left-wing circle past Rob Medore (13 saves), who was replaced in the second period.

Senior Chase Langeraap (one goal, one assist) capped the scoring with a nifty backhander through the legs of backup Vermont goalie Alex Vazzano, for his seventh point in as many games.

Six goals is the largest margin of victory against Vermont in UMass history and the most goals the Minutemen have scored in a game this season.

The Minutemen have now outscored opponents 17-6 in its past four games and 10-1 in its last two wins. However, they did not muster much on the attack in the series opener on Friday.

Freshman Conor Sheary scored the lone goal for UMass, his fourth on the season, set up by freshman Michael Pereira and Langeraap.

Vermont's Dan Lawson and Sebast Stalberg had two assists apiece as the Catamounts were outshot 29-28, going 1-for-2 on the power-play.

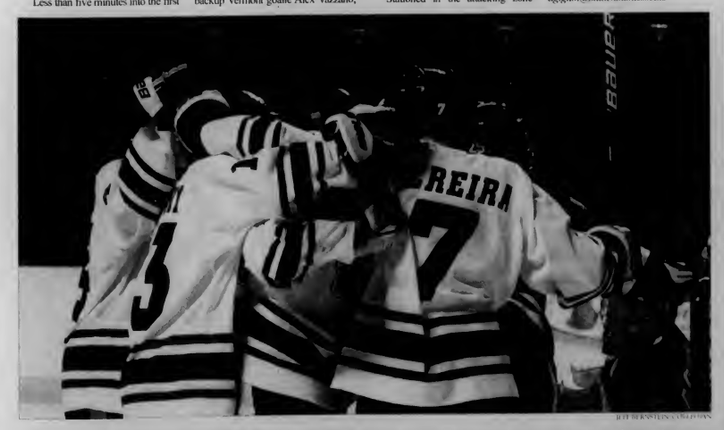
Stationed in the attacking zone during its first power-play opportunity, UVM scored when Stalberg set Lawson up for a one-timer just beneath the blue line that was tipped in by Josh Burrows for the 1-0 lead with 10:38 to play in the opening frame.

With about four minutes to play in the first period, Stalberg threw a pass from the end line across ice to an awaiting Lawson who slapped a shot from the top of the faceoff circle that was again tipped in, this time by Jack Downing.

Sheary answered back 30 seconds later, taking a centering pass from Pereira behind the net and firing past Medore through the one-hole.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

TJ Syner makes a play on the puck against UNH earlier this year. Syner found the back of the net twice for UMass this weekend.



Jeff Bernstein Collegian

Members of the Mass Attack celebrate a goal scored against UNH earlier this year. UMass put up six unanswered goals in a shutout victory over the Catamounts this weekend, but also dropped a 2-1 game on Friday.

JEFF BERNSTEIN/COLLEGIAN

A member of the UMass swim team competes earlier this season. The Minutewomen competed the Rhode Island Invitational last weekend.

Starosielec, Kanellas and Meho help relay team earn No.1 finish in Rhode Island

SWIMMING from page 10

The Minutewomen began the second day of the competition by taking part in the 200-yard medley relay. With the talent of Jessica Starosielec, Sarah Kanellas and Amina Meho, the relay team captured a first place victory, picking up where they left off the day before.

When it came time for the divers, Minutewoman Molly Elkins took first place in the one-meter dive, helping the Minutewomen capture three first place finishes in diving events.

The Minutemen followed in the women's footsteps by picking up a win in the 200-yard medley relay to begin the second day of competition. The team efforts in the relay meets coupled with the individual performances set the stage for an impressive day for both teams.

Joey Sbordon, a junior and Franklin, Mass. native carried over his success from the first day and placed first in the 400-yard IM, and third in the 1000-yard freestyle. It was not only upperclassmen, it was also freshman Derek Hursch who continued to impress by placing first in the 200-yard freestyle and second in the 100-yard freestyle.

The men's diving team is also showing practice can truly make perfect, as Jason Cook and Alex Merkulov placed first and second in the one-meter dive, respectively.

Before winter break, UMass coach Bob Newcomb reflected on his team's time off from the pool.

We have a large gap of time between now and when we are back in our pool training and getting ready for the weekend meets. Right after the Rhode Island Invitational everybody comes back and we are back into the academic world again."

That large gap of time Newcomb mentioned has now concluded, and both teams have hit the ground running, and by doing so were able to sweep the Rhode Island Invitational.

Over the winter break the men's team made a big announcement, welcoming transfers Ted Millett and Colin Mulcahy, who transferred to UMass and joined the team for the second semester. Millett transferred from Ohio State, while Mulcahy transferred from Connecticut.

The two new swimmers are gifted with different talents and can add to the teams' breaststroke competitions as well as sprint competitions. Millett is a sophomor, and Mulcahy is only a freshman, giving the team not only depth for the second half of this season, but also for years to come. Both swimmers were eligible to compete immediately after completing the transfer process, and Mulcahy took full advantage of the opportunity.

Mulcahy, who has been eligible since early January participated at the Rhode Island Invitational and was part of the 200-yard medley relay team that took first place to start the second day of competition.

With only a little over a month before the Minutemen and Minutewomen take place in the Atlantic 10 tournaments, it is important they continue to build on a successful winter break

Both the Minutemen and Minutewomen were back in the pool on Jan. 21 for senior night.

Nicholas Bellofatto can be reached at nbellofa@student.umass.edu.

Robinson has 25 points, Zullo adds 10 in loss at Mullins Sat.

W. HOOPS from page 10

advantage with under two minutes to play.

The Minutewomen appeared to have the game in hand until Samira Van Grinsven made a jumper with 45 seconds remaining to give the Hawks the lead. They went on to make three more free throws in the last 15 seconds and secure the win.

"I think that sometimes when we have a lead, we've got to learn to continue to be aggressive," Lanpher said. "We were tentative in those last few minutes and we were settling for contested jumpers rather than attacking the rim."

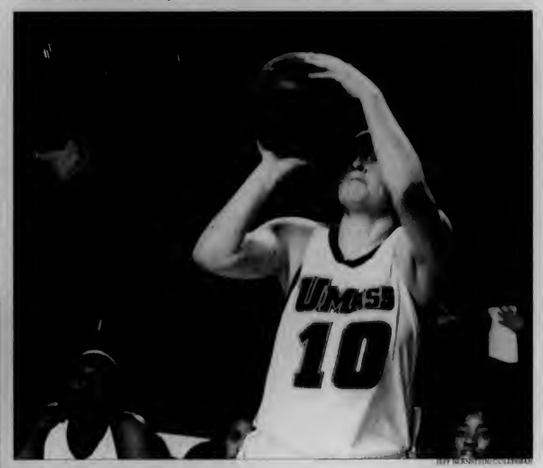
Mosgrove contributed her ninth consecutive game in double-figures, scoring 11 points and tallying six rebounds, and Zullo tallied 10 points and five assists.

Michelle Baker led the offense for Saint Joseph's with 21 points, and Kelly Cavano added a double-double with 16 points and 14 boards.

"We've just got to grow from this and learn from this," Lanpher said.

"We need to learn how to do what we do," Lanpher added. "We always want to be that fast-breaking team and once we start slowing it up we feel like we're at a disadvantage. So I think we can learn from that and in these situations we've got to learn how to execute under duress and come out with the victories."

Michael Wood can be reached at mcwood@student.umass.edu.



JEFF BERNSTEIN/COLLEGIAN

Guard Megan Zullo shoots against the Billikens in a victory last week. Zullo netted 10 points, but it wasn't enough, as the Minutewomen fell to St. Joseph's, 72–68, last Saturday.

Spiders crawl past Minutemen

Gurley scores 30 points in loss, team faces Bonnies on Weds.

By Herb Scribner
Collegian Staff

Since Atlantic 10 play began last month, the Massachusetts men's basketball team has adopted a style of play which has seen its most prolific scorer, Anthony Gurley, work with the rest of the team in a pass-oriented offense. This was not the case on Saturday afternoon against Richmond.

On Saturday at the Mullins Center, the Minutemen (11-7, 3-2 A-10) could not get their new offensive structure going, falling to the Spiders, 84-68.

"They're a good team, very disciplined and have a very good indication of what they want to do on the floor," University of Massachusetts coach Derek Kellogg said.

"We felt like we didn't do a lot of things we should have done offensively," sophomore guard Javorn Farrell said.

Gurley, contrary to earlier A-10 games this season, towered over the Minutemen offensively, netting 30 points, exploding for six scores from beyond the arc on 9-for-22 shooting and acting as the driving force behind much of UMass' points in the second half.

UMass	68
Spiders	84

At one point in the game, Richmond (14-5, 3-1 A-10) had a 23-point advantage over the Minutemen until the Maroon and White caught fire and stormed out with an 11-1 run to bring the game closer. It was as close as the Minutemen could get, however, with the Spiders mustering points off heavy fouling by UMass late in the game.

"We thought we could still come back and win," Farrell said. "We could have brought it to single digits … We always thought that we were in it."

Farrell was second on the team in scoring behind Gurley with 16 points. Not only did Farrell display highly-skilled offensive moves (four assists), but on the defensive side he made an impact with a thunderous block and five rebounds.

Richmond makes second-half run, stretches UMass' defense

By Jay Asser
Collegian Staff

In its loss to Atlantic 10 foe Richmond, the Massachusetts men's basketball team had the tough task of defending a Spiders' offense which went off for 51 of its 84 points in the second half.

After an Anthony Gurley 3-pointer with time expiring in the opening period, the Minutemen (11-7, 3-2 A-10) were down six points heading into halftime.

Following intermission, however, Richmond connected on eight of its first nine shots from the field, including a putback dunk by Kevin Smith on its only misfire in that stretch. The run increased the Spiders' lead to 19 points as they went on to a comfortable win, 84-68.

While allowing an offense to get into a rhythm would be detrimental against any opponent, UMass coach Derek Kellogg knows it hurts even more when it's against an experienced and well-coached squad.

"It was a combination of them going, like I said, 9-of-10 from the floor and us giving away some opportunities were key when they went up in a short period of time," Kellogg said after the loss. "They scored seven straight to go up 13, against a good team, a good senior-laden team, you can't have that happen."

The style of offense Richmond ran relied on cutting, coming off of picks and a disciplined passing attack, which requires patience. That style gave the Minutemen problems and often led to open shooters on the perimeter, which the Spiders took advantage of.

Even when Kellogg tried to throw off Richmond's offense by switching to a press, the Spiders had little trouble beating it with quick passes.

"That's a very untraditional offense, one that, when you have guys that have been in it for four and five years, it's very effective," Kellogg said. "When they're cutting hard and they're making 3's, it's almost impossible to defend."

"They run their set offense, but they can do a lot of stuff off [of] their offense," Javorn Farrell said.

UM, Cahoon bounce back, earn shutout win

By Dan Giglotti
Collegian Staff

Two weeks ago, after a 5-3 loss at home to Northeastern, Massachusetts hockey coach Don Cahoon had plenty to say about his team's disappointing performance.

On Saturday, the outspoken coach was at a loss for words.

UMass	6
UVM	0

The Minutemen (5-14-4, 3-9-3 Hockey East) shut out Vermont (6-12-3, 5-7-3 HE) 6-0, earning a two-game split at Gutterson Fieldhouse to maintain possession of seventh place in conference standings.

UMass allowed four second-period goals against the Huskies on Jan. 7 in a come-from-behind loss, which prompted Cahoon to openly question his team's toughness, saying their lack of discipline made him "sick to his stomach."

The typically verbose Cahoon was uncharacteristically curt after his team's dominant performance last weekend.

UMass	1
UVM	2

"I'm a little bit speechless because we haven't had too many nights like this," Cahoon said. "This league doesn't afford you nights like this very often."

With Vermont playing for a tie in the conference standings at eighth place, the Minutemen overcame a 2-1 loss Friday to earn its first shutout of the season and its third win in four games.

Junior TJ Syner scored three points (two goals, one assist) and fellow third-year Danny Hobbs (two assists, +5 rating) led the Minutemen, who had 11 point-scorers, including four with multiple points.

Senior Paul Dainton recorded his second career shutout, making 26 saves for the second straight night.

"He was a closed door tonight," Cahoon said of Dainton's performance. "He made some great saves, [he was] really sharp."

The captain net-minder had help from a young group of defenders, especially on the power-play.

See UMASS on page 7

JEFF BERNSTEIN/COLLEGIAN

TJ Syner makes a move around the net against UNH earlier this season. Syner had two goals for the Minutemen and added an assist, as UMass shut out UVM, 6–0, in a two–game split.

JEFF BERNSTEIN/COLLEGIAN

Sophomore Dee Montgomery makes a cut to the basket in a victory against Saint Louis last week. The guard added eight points and four rebounds, as the Minutewomen lost their 14th game this year on Saturday.

Plays late push home Hawks past Minutewomen Saturday

By Michael Wood
Collegian Staff

After a convincing victory against Saint Louis last Wednesday, the Massachusetts women's basketball team blew a double-digit lead and dropped its latest game against Saint Joseph's, 72-68, on Saturday.

UMass	68
SJU	72

"We've just got to learn to finish games," UMass assistant head coach Steve Lanpher said in a UMassathletics.com interview. "Obviously in the last few minutes we turned the ball over, didn't execute the way we wanted to, and a great opportunity to win on the road obviously ends up being a loss."

The Minutewomen led by as many as 13 points in the first half, but could not maintain it against a gritty Hawks squad. The loss drops UMass to 6-14 overall and 2-3 in Atlantic 10 play. Saint Joseph's improved to 12-7 overall and 2-3 in the A-10.

The one bright spot for UMass in the loss was the play of sophomore forward Shakia Robinson. She led the Minutewomen in nearly every offensive category in the game and capitalized on defensive mismatches in the paint. Robinson, who showed flashes of her abilities earlier in the season, netted 25 points, four assists and eight rebounds.

"I thought we competed very hard and we had great individual efforts," Lanpher said. "Obviously Shakia played a tremendous game inside."

After trading baskets to start the game, senior Cerie Mosgrove hit a 3-pointer sparking the offense to a 15-2 run and giving UMass a 13 point lead. Megan Zullo made the team's seventh 3-pointer of the half as well, and gave the Maroon and White a 45-38 lead at the half.

"I'm really proud of our effort," Lanpher said. "I think we came out in a hostile environment on the road and played really well. For 30 minutes we really gave them everything they wanted."

The Hawks rallied in the second half as they went on a 16-5 run and took their first lead since the opening minutes of the game. In the next six minutes both teams traded leads until Zullo hit a jumper to give UMass a one-point

JEFF BERNSTEIN/COLLEGIAN

A member of the swim team competes in a butterfly event earlier this season. After returning from Puerto Rico, the Minutemen will finish their season with the Atlantic 10 championships.

Swimming, diving teams return from P.R. for spring competition

By Nicholas Belloiatto
Collegian Staff

The Massachusetts men's and women's swimming and diving teams had a very busy winter break. The athletes left UMass after finals week, headed to Puerto Rico in late December for their annual trip and ended it all in Rhode Island for an Invitational Tournament to compete with Rhode Island, La Salle and George Washington.

The trip began after the team had its last practice of the fall semester and headed home for an abridged winter recess. After a 10 day layoff and just three days after Christmas, the team practiced for four days and then flew to Puerto Rico for training and dual meet competitions.

The trip to Puerto Rico is an annual training trip that allows the team to train, compete and prepare for other upcoming events.

Both the Minutemen and Minutewomen are not short on events, and just two days after they returned from Puerto Rico, they headed to Rhode Island on Jan. 14 to take part in their second invitational tournament of the season.

At the tournament, both the Minutemen and Minutewomen won first place.

After the first day of competition, the men and women were in first place, but it was the women's team that was in a tight race between the three other colleges competing. La Salle was only six points behind, while URI and George Washington were also right in the mix.

The Minutewomen showed a genuine team effort can really be a difference-maker in such a close tournament and all team members involved in all the competitions showed up to compete.

Professors urge Americans to "give back" tax cuts for jobs

By Sam Hayes and Sam Butterfield
Collegian Staff

Frustrated by Congress' Dec. 17 extension of Bush-era tax cuts across all income brackets, three Cornell and Yale professors created a new website, GiveItBackForJobs.org, to urge wealthy Americans to give their tax cuts to charities promoting social welfare and economic equality.

"We have two aims for the site," said one of the site's founders, Yale Law professor Daniel Markovits.

"The first is to raise money for worthy causes," he explained, as the site provides links for viewers to donate to the Children's Aid Society and the Nurse Family Partnership, among others. "Our second aim is to promote the idea of economic equality and emphasize the dangers faced by the American middle class."

Yale Law Professor Daniel Markovits is among three founders of GiveItBackForJobs.org, a site encouraging Americans to donate tax cuts to charity.

The site asks anyone who benefited from the tax cuts to give their rebates "back to the public, by supporting organizations that promote fairness and economic growth."

The site includes two steps enabling users determine what to give; a calculator which estimates the size of the tax cut the user received, and then links to organizations to which they encourage users to donate, like Goodwill and Habitat for Humanity.

In its mission statement, the site explains that the professors believe that by continuing to gut taxes, the federal government has undercut the infrastructural supports it needs to maintain a healthy middle class.

"The government has, by extending the cuts, deprived itself of the resources required to support the policies that will secure a vibrant middle class," the professors write.

The professors also hold that the neoliberal policies which begat the Bush tax cuts, so-called trickle down theory, have created "dire" consequences for America's economy, producing "dramatic growth for the richest but stagnant incomes for most Americans."

As for why they selected the charities the site asks user to consider donating to, the professors write that "contributions to the charities linked to below will allow these charities to expand their work, creating new jobs and promoting justice."

In an almost ironic twist, such donations are, of course, tax deductible, meaning "they will draft the government as a partner in funding the projects that they support," the professors argue on the site.

As for how the site determines the amount individuals received, its authors explain that "our tax cut calculations are estimates only," and that they are based on "the Urban Institute and Brookings Institution Tax Policy Center Microsimulation Model."

Markovits said he and his partners have titled the project "political philanthropy," as they believe the venture illustrates the political system is operating in an unjust, inequitable manner.

"We call the project political philanthropy because we want to make clear that private charity is no substitute for a just and fair fiscal policy," said Markovits by email earlier this month.

Comm. Coll. grants $67K to undergrads

The Commonwealth Honors College at the University of Massachusetts has funded over $67,000 in undergraduate research projects this year, according to a Monday release from UMass Office of News and Media Relations.

Twenty-five Research Assistant Fellowships were given out to sophomores and juniors this year, aiding them in garnering experience in their academic fields and giving them a hands-on foundation for future research. In addition, 46 students received Honors Research Grants to cover the cost of materials and events pertaining to their final Capstone Experience research projects. For their Capstones, which count for six credits, Comlt of students engage in research on a given question, then generate a thesis or project, or take part in community activities. According to the news office release, students' Capstones ultimately yield a "substantive scholarly document and a public presentation."

The release highlights two students in particular, junior Katerina Shaikouskaya, an animal science and pre-veterinary major working with associate professor Janice Telfer on proteins found in chickens, duck-billed platypuses and humans, and Kasey Duclos, a psychology major working with assistant professor Rebecca Spencer on research related to whether afternoon naps help learning and memory formation in preschoolers.

The Honors College awarded Shaikouskaya, a Milford, Mass. native, a $1,000 grant, which she said in the release she plans to use for lab equipment and supplies.

"What's great about having these funds is that now we can try different things, like a different method for a certain procedure," she said in the release.

Duclos, a senior and a local from Greenfield who is treasurer of the University's neuroscience club, according to its website, believes her work could generate some new findings in research on children's brain development.

"There has been research on nap benefits on anther age groups, but preschool-age children have yet to be studied," she told News and Media Relations. "It will be interesting to find out if napping will be beneficial toward preschoolers' learning at this stage of life."

Shaikouskaya's work deals with analyzing why the three animals all maintained one common protein.

"As unrelated as they are, all three animals retain the scavenger receptor cysteine-rich protein domain that we are studying, suggesting that the proteins are very important to those animals' survival," she said.

Internship search 101: New site helps students find job opportunities

By Sam Butterfield
Collegian Staff

Although the subzero temperatures and feet-high snow banks might not belie it, the second semester has crept up on us, and with the transition to a new semester, students across the Five Colleges and the country must begin thinking about their summer plans.

Some will return to their hometowns, while others will seek prestigious internships in their desired future fields. For those looking to land a top-notch gig, a new website has debuted, Internships.com, advising students on where to find quality internships and how to woo potential employers.

The site's parent company, Internships LLC, is based jointly in Los Angeles and Boston, and offers students the opportunity to post their resumes, employers the chance to offer up internship openings, and career placement professionals at various colleges a leg up on finding elite jobs for students and developing relations with employers.

Internships.com assists students in finding dream internships, like this youngster, who worked for the Florida Marlins.

The site works as something of a LinkedIn for internships, as students can search for internships across a variety of categories, including field of business, city or state, for specific companies, as well as refining the search to include for-profit or non-profit-only companies, paid or unpaid internships, or for full or part-time opportunities. Further, the site offers a unique feature for applicants on the fence about the qualities they want in a job, its "Internship Predictor."

The predictor prompts job-seekers through a variety of questions regarding personal values and tastes, asking applicants questions like whether they prefer to help others or be given lots of responsibility, and then asks interns-in-waiting to agree or disagree with several statements pertaining to preferences in interpersonal situations, like whether an applicant prefers competition or time alone. The predictor also refines the search by querying users as to whether they prefer hands-on physical work, arts-related activities, or more pragmatic, directed work. Last, the predictor asks users a final series of questions about their preferences in social settings, like whether they are generally participative in groups or more observant, or whether they are self-motivated to embark on projects or perform better under pressure.

The predictor then sets users up with a list of potential fields and links to companies hiring in the areas the user seems suited for. In addition to predicting up where a student might most like to work, the site offers job seekers wide-eyed at the competitive nature of the internship search a "resources" page, giving young job hunters the lowdown on the basics of internships, how to structure resumes, how to prepare for interviews, how to behave and perform in an office setting, and other tips, like sending thank you notes to interviewers.

Further, the site sports an "ask Internships.com" box on its home page where users can write in and receive feedback from the page's staff. Finally, the site features an "intern coach" blog from staffer Colleen Sabatino, who posts on a variety of topics including personal organization, networking, and the fine points of accepting internships or job offers.

In a Monday e-mail, Internships.com staffer Stacey Levy explained the importance of internships for students seeking a way to get ahead in a cutthroat job market.

"Internships play a vital role for college students' success in job acquisition and retention," she said. "A new era of internships is being ushered in, where this real-world experience has become less of an option and more of a necessity for students to land entry-level jobs when they graduate."

Levy added that, curiously enough, many employers actually recruit interns, rather than waiting for student to come to them.

"Almost half of the employers [in an Internships.com survey] revealed that they've searched for interns," she said.

Brrr: freeze blankets UM

By William Perkins
Collegian Staff

A powerful cold snap delivered a fierce punch to much of the Northeast through the weekend, leaving students throughout the University of Massachusetts' campus looking for a place to stay warm.

Temperatures reached into the double digits below zero Monday, making many in the area loathe going outside.

Ed Carroll, the chief meteorologist at Springfield-based WGGB-TV abc40, said records were shattered throughout the region.

"They hit 21 [degrees] below zero at Westover," Carroll said of the temperatures in a phone interview last night, referencing Westover Joint Air Reserve Base in Chicopee, where all official records for the region are calculated. "The old record was minus 13."

Carroll noted that those values reflect the actual air temperature, saying there was almost no wind yesterday.

"This is as cold as it's been," added Carroll, a longtime meteorologist in the region. He noted that, in his many years of forecasting, he has never seen temperatures dip as low as they did yesterday.

On and around campus, students lamented those temperatures and tried to bundle up as best as they could.

"It was frigid," said Jessica Stern, a junior communications major, who lives off campus. Stern noted another side effect of the frigid weather was the high cost of heating her home to stay free from the freezing temperatures.

"When you can see your breath, you know it's bad," she quipped.

Allison Sacks, a junior psychology major and a companion of Stern who also lives off campus, said her car died yesterday morning, forcing her to take the bus to get to classes. When she arrived at the bus stop, she said, she had just missed the bus that would have taken her to campus, forcing her to wait out in the cold for 15 minutes for another bus to arrive.

See CHILL on page 3

Marcy Nighsonger-Stevens

Frigid temperatures and snow have enveloped the UMass campus and the Pioneer Valley for the last week, and the winter weather does not seem to be going away anytime soon, as snow is forecast for Tuesday.

Amherst Brewing Company may soon be moving from its location on North Pleasant Street to a new home on University Drive.

ABC may move to Newmarket Center

BY MICHELLE WILLIAMS
COLLEGIAN STAFF

A staple in downtown Amherst for over a decade may be moving.

Amherst Brewing Co., currently located in the center of town on North Pleasant St., may be relocating its restaurant and bar to University Drive.

Senior Planner Jeffrey Bagg confirmed recently to the Daily Hampshire Gazette that the company submitted plans to the Zoning Board of Appeals of Amherst for a special permit to move the business.

On Feb. 10, the owners will seek a special permit during a hearing with the Zoning Board.

If approved, the owners intend to relocate the restaurant to a 20,000 square foot space in the Newmarket Center shopping complex. The space was formerly home to the fitness center Leading Edge, which closed in the fall of 2009.

Current businesses in the Newmarket Center include Golden Booty Tanning Resort, University Liquors and The Laundry Club.

The North Pleasant St. location is currently able to hold 213 customers and employees between the main restaurant and bar, an upstairs bar and lounge room, and an outdoor patio. Amherst Brewing Co. opened its doors at this location in 1997, after renovating the space that was formerly a part of the First National Bank.

According to the Gazette's report, a restaurant and bar attempted to open in this location in 2002, but was not granted a special permit. The business, called H2O, was marketed towards college students, and failed to receive enough votes at its hearing due to concerns from citizens living nearby.

Michelle Williams can be reached at mawilli@student.umass.edu.

New site matches jobs with students' interests

DM | TJ

This Boise State University student interned as a painter last summer.

INTERNSHIPS from page 1

Levy said opportunities are opening up all the time.

"Almost 42 percent of employers on Internships.com say their internship program is new, which means brand new opportunities are available that didn't exist last year."

Although some believe a prestigious degree from a school with a devoted alumni base is the ticket to job success, Levy said the site's employers generally beg to differ.

"Relevant experience and interview performance were the biggest factors in choosing an intern, and less than nine percent of employers said the college an intern attended mattered," she said.

What about that one lingering hang-up, that little potential black mark, those nasty solo cup pictures on Facebook?

"Fifty-four percent of employers say they check an internship candidate's social Web presence (i.e. Facebook, Twitter, MySpace, LinkedIn) during the hiring process."

Levy explained that for students to counter possibly seeming like an immature, unruly youngster, professionalism is paramount.

"As you enter the professional world, the code of conduct is important," she said. "Be aware that what you say and pictures you post may come back to bite you. Even if they're a tad impressed that you can continually drink liquid upside down for 38 seconds, chances are good it won't do great things for your career."

Whatever you ultimately decide to do with your summer, an internship may be a great way to get a jumpstart on the career of your dreams. Just be prepared to do some serious un-tagging!

Markovits created the site in late December with Cornell Law School's Bob Hockett, Yale Political Science Professor Jacob Hacker, Yale Law student Will Gaybrick, and Web design help from the San Francisco-based Lukasz Lysakowski in order to bridge the gap between what he calls "private giving [and] the shortfall in public policy."

Markovits said he hopes the new site will contribute to discourse on economic inequality in the America.

The site will help to "revisit basic questions of economic fairness and fiscal prudence," he said. "We'd like to do whatever we can to urge legislators to do more to promote equality and protect the middle class."

Amherst may emerge from chill with snow

CHILL from page 1

"It's hard to go to class" in this weather, Sacks said, noting her ideal weather would be a more Mediterranean clime somewhere in the 70s.

Dinah Gorelik, a junior public health major, expressed a similar disdain for the cold temperatures.

"Staying dressed is the only thing that you can do in this weather," said Gorelik, who trotted over from the Southwest residential area to munch on dinner at the Blue Wall.

Despite the fierce coldness, it doesn't appear that any major weather-related emergencies occurred yesterday beyond pipes freezing in some areas. Attempts to reach the Amherst Fire Department were unsuccessful last night, but there were no reports in local media of any mishaps directly related to the weather.

A bit of relief from the frigid weather, though, is in sight. Carroll said temperatures could reach into the 30s today.

"It'll get better," Carroll said.

However, Carroll noted the region will see a bit snowfall in the next few days. But, he said, any storms that do hit the area will not be of any major significance.

William Perkins can be reached at wperkins@student.umass.edu.

UMass has been subdued by subfreezing temperatures for much of the last week, but that may change Tuesday.

APD nets cocaine cache in car over break; one charged

COURTESY AMHERST POLICE DEPARTMENT

The Amherst Police Department arrested Jyhong Chea, 26, for possession of cocaine

Over winter break, the Amherst Police Department made a major drug bust on North Pleasant Street. On Dec. 30 around 1 a.m., APD officers arrested 26-year-old Jyhong Chea after pulling over the vehicle in which he was a passenger for speeding.

Officers took Chea into custody on charges of possession of a Class B substance (cocaine) with intent to distribute, after discovering he was in possession of a large amount of cocaine packaged for sale. The Amherst resident was held in lieu of $5,000 cash bail at the Hampshire County of House of Corrections in Northampton and was arraigned on New Year's Eve at Eastern Hampshire District Court in Belchertown.

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Walking: A love letter

Tim Cheplick

Before fire, early homosapiens discovered something even more useful. About four million years ago, and over a long period of time, our ancestors and their big brains got up off their four limbs and began to stand upright. By doing this, they were able to free up an additional, and precious, two limbs to use for such tasks as carrying food, weapons or tools.

Though giving up some speed, I think our early ancestors were right to stand up tall. But today the proliferation of the automobile, that ghastly hunk of pollution-spewing metal, has all but rendered our legs and feet moot.

Nonetheless, we as a species can surely find other uses for these almost archaic branches of flesh and bone. I do all the time. Call me old-fashioned, but I like to use my legs, and I can think of plenty of things for them to do.

I'll never forget the first time I made the move from automobile to legs. It was a whole new world out there. I used them to walk into Amherst to run some errands. I put one foot in front of the other, and continued to do so until I reached my destination. Instead of using my foot to press a pedal to propel a car, I was able to cut out the middle man and do it all myself. I was empowered.

I'll never forget the first time I made the move from automobile to legs.

Lots of personally-operated vehicles whizzed by me as I made the trek, but these machines seemed to have a lot of filth associated with them. When they went by, I noticed a peculiar stench and a cloud of smoke.

As I continued to walk, I realized that the path for myself was quite treacherous, being both slippery and slushy from the copious amounts of snow we've been getting. The path for the automobiles, however, was clear of any such hazards, and I wondered how this could be. Were these hunks of metal being preferentially treated over myself, a warm-blooded, oxygen-loving human, whose species govern this land?

I continued, perplexed by the issue. Though my legs moved slowly in comparison to the vehicles racing by next to me, I didn't feel like I was moving slowly at all. In fact, I took the extra time to notice the scenery around me. The snow still hung on to the otherwise bare tree branches in a most beautiful way, I recall.

Some people might be cold using their legs to get around during the winter in a state at this latitude, but not me. This is because I wore several layers and a hat and gloves. These can be purchased rather easily at many stores, and I have found that they can insulate the body against the cold weather. They can be quite useful when not traveling by motor vehicle and the warmth that one can provide.

The modern invention of the mp3 player also has a place in this tale of re-learning the usefulness of the human legs. The device is portable, and I have found it to be a welcomed comrade on many a walks since. One must be careful when crossing streets though, for ears can be very dangerous indeed, and may sneak up on you.

When I reached my destination, I found it pleasant to not have to search for a parking space, and was appreciative of the time and frustration that this saved. I dropped myself off right in front of the store to which I was traveling.

Upon buying my items, I initially panicked because I was unsure of where I was to put my bags without a personal automobile to carry them for me.

The cashier looked at me a bit strange. But soon enough, I recalled my ancestors and the way they ingeniously freed up my two upper limbs, and this realization prompted me to grasp the bags with my hands, bring the bags to my body with my arms, and then walk back to my residence with the bags in my hands. Boy, was I glad my ancestors had such foresight!

There are two conclusions one can make from my miraculous tale of walking. First, it may seem logical for us to one day evolve into a species that uses only one leg to walk. This would free up yet another limb and with it a world of possibilities!

But until then, I think we can all find ways to use our legs, if for no other reason than to keep us from losing them to evolutionary progress. Walking has many benefits including a slower approach to life that allows more time for appreciation and self-reflection. It's also great exercise. Walking with purpose, like I did to run errands, will incorporate a healthy, fun, and sustainable aspect into your lifestyle.

It is easy to find excuses to take a car rather than walk, but it is hard to find an excuse that does not include laziness or selfishness.

From the starter home to a bigger house

Matthew M. Robare

Last week the Massachusetts Senate voted down a proposal to appoint an independent commission to oversee the Congressional redistricting that must take place as a result of last year's census. Massachusetts loses one seat, meaning that either one of the 10 congressmen will retire, challenge Senator Scott Brown or two of them will face off in a primary battle. For what it's worth, my money is on the first and second districts being merged to take up all of western Massachusetts.

Of course, the really interesting thing about redistricting is that Massachusetts' population didn't decline over the last decade. Only Michigan lost residents between 2000 and 2010, and most states saw modest growth, although Texas and California increased the most. Congress uses a mathematical formula called the method of equal proportions to determine apportionment in order to make sure that every Congressional district has a roughly equal population.

You take the population of all the states and divide it by the number of representatives to get the average district size. Then you give each state the one representative it's entitled to under the Constitution and then you divvy up the rest based on the average. There's nothing wrong with this method of apportionment.

That's not democracy, that's oligarchy.

Unfortunately, there's one number that has remained constant for 100 years: the number of representatives. In 1911, Public Law 62-5 raised the total membership of the House to 433, with provisions to increase to 435 when New Mexico and Arizona joined the Union the following year.

There have been 435 members of the House of Representatives ever since, with the exception of 1959-1963, when there were two extras after Alaska and Hawaii were admitted. What this means is that the average district size keeps going up and up, from a little over 30,000 people per district to a little over 700,000 people per district by the 2010 census.

That's not democracy; that's oligarchy. As the same number of people represent more and more, democracy breaks down. Consider Massachusetts.

There are a lot of divisions along class, geographic and racial/ethnic lines. Each grouping is a political constituency – people who live in Springfield have different concerns than people who live in Hadley, and both have different concerns than people who live in Amherst.

When districts are small, the Hadley, Amherst and Springfield people all get a say in government. While Springfield and Amherst have more votes than Hadley, Hadley's voice is still there, calling the big guys' attention to issues that are important, but that they don't always notice. On the other hand, when Amherst, Hadley and Springfield all belong to the same district, Springfield's voice dominates due to its larger population.

But it's not just the dominance of major urban areas over less urban and rural areas that result in oligarchy. There is also the problem of incumbency. Congress has the lowest approval rating of any American institution. Even multinational corporations that are blamed for everything from pollution to the economic crisis to mass unemployment are viewed in a better light than Congress.

But it's almost impossible for incumbents to lose reelection. That's why the elections of 1980, 1994 and 2010 are sometimes referred to as "revolutions" – because a lot of incumbents lost. Part of the paradox is that we view other people's representatives with contempt, but prefer our own. And part of it because of large congressional districts.

Think about it. If the majority of people in Springfield prefer Candidate A, but the majority of people in the hill towns prefer Candidate B, then Candidate A will most likely win and stick around for a long time. Three Congressmen from Michigan, John Dingell, John Conyers and Dale Kildee, were born in the 1920s and most representatives are baby boomers (for that matter, most elected officials period are baby boomers). So we have ended up with a government composed largely of people born during the Truman administration, who grew up with "Duck and Cover" as a strategy to avoid being nuked. They grew up with the threat of nuclear war, and they remember where they were when they heard about JFK, MLK and RFK.

They saw Neil Armstrong walk on the moon, watched Elvis on TV, listened to The Beatles on the radio. Now, they have moments where they wonder about Guam capsizing, think that the Internet is a series of tubes and dump trucks, and occasionally forget what century it is. Thanks to the dual advantages of incumbency and large districts we young people – the future of America – can enjoy being governed by its distant past.

It is true that if young Americans voted more we would at least force politicians to pay attention to us, but I also think it's true that if legislative districts were more numerous and contained fewer people, more people would vote. If congressional districts today were the size they were in 1790, we'd have much closer relationships with our representatives, because they would be our neighbors.

They would probably also reflect a greater demographic cross-section by economic class, race and gender, and they could stay in-touch with their districts by being there instead of requiring pollsters and lobbyists to get them constituent information.

It's the difference between going to Amherst Books versus Barnes & Noble, the difference between democracy and oligarchy and the difference between a government of the people and a government that rules the people.

The mission of student governance

Dan Stratford

The Student Government Association of the University of Massachusetts possesses a formidable list of responsibilities as enumerated by its Constitution & By-Laws. These vary from dispensing funds to Registered Student Organizations, agencies and area governments, to policing and regulating itself through its bylaws, to acting in an advisory role to the Administration in matters of academic and university policy. In these rather mundane, humdrum matters, the SGA's capabilities are rather well-known. However, no one has ever really delved into the more cerebral, philosophical causes of and reasons for the SGA's existence.

If one asks anybody endowed with a leadership role within the SGA as to what he thinks its purpose is, he will inevitably respond, first and foremost, to "help students" in any way it can.

After all, all undergraduate students are technically SGA members, as elucidated by Article II of its Constitution. Being a senator myself, I would have to say that this assertion as to the SGA's purpose is indisputably true. It is made evident by the myriad committees, task forces, cabinet positions and ex-officio members that the SGA is equipped to handle the bread-and-butter issues that most students concern themselves with, from bike racks, to cheaper textbooks, to RSO funding allocations.

However, in the eyes of this humble senator, the SGA serves a purpose that many know, but that only a precious few are willing to admit – to bestow political experience upon those that have the ambition and motivation to seek it.

This is a perfectly valid conception of the purpose of the SGA. Many people who enter student government at universities across the country harbor political ambitions for later in life.

Many people who enter student government at universities across the country harbor political ambitions for later in life.

Many famous political figures have used their student government experiences as a springboard into local, state and national politics, such as President Richard Nixon, who served as the Student Body President at Whittier College in California. As a conduit of political participation and leadership, it is at least partly the responsibility of student government to afford its participants the experience to wield the reins of power with prudence and efficacy.

Many people view politics as an unseemly, sordid thing – one that attracts the worst that humanity has to offer. This thesis, I would argue, is a patently unfair stereotype. Politics exists wherever resources are scarce or want is prevalent, be it want of money, property or adequate policy. The beauty of the republican system in which we live is that such conflicting desires for material and social betterment can be resolved peacefully and in an orderly fashion, rather than by constant revolution or civil war. This theory of government as an arbiter over scarcity can be seen in practice in our own SGA, which is charged with, amongst other things, allocating money from the Student Activities Trust Fund (SATF) to RSOs and Agencies.

Aside from allocating resources that are, in the long run, quite scarce, the SGA's budget allocation process also educates its executors in the fine art of balancing a checkbook, a skill our politicians desperately need to employ today.

The essential political education that the SGA provides extends beyond mere abstractions and speculative theories of government, however. For those looking to get involved in politics later in life, the SGA provides crucial experience in managing a campaign. This is especially true in the oft-contested spring presidential election.

These skills include forging alliances to facilitate the passage of bills, legal analysis through the scrutiny of debate, and amendment of the constitution and by-laws as well as a vital dose of the sometimes-baffling realm of parliamentary procedure.

In this capacity, the SGA functions not just as a part of the great chain of governmental being at UMass, but also as a direct and vital method of civic engagement that is an essential conduit to participation in the politics of a republic.

However, the SGA also serves to politically educate in a fashion at least partially removed from parliamentary politics. It serves in a concurrent role as a lobbying group for undergraduate students – a guarantor of their welfare and representation in the confusing bureauearacy that often characterizes the UMass student experience.

It is in this capacity that the SGA lobbies for and acquires internal improvements such as the ongoing reevaluation of the Student Code of Conduct, increased numbers of bike racks and cheaper textbooks. These programs have proven immensely popular with most students.

It is imperative to note, however, that when the term "advocacy" is unearthed, student advocacy is often unfairly conflated with issue advocacy, such as the support or denigration of a piece of legislation. The unchecked excesses of the latter variety of advocacy have, in the past, led to the emaciation of the SGA, with its members crusading for legislation in such an idealistically abstract manner that its very legitimacy was oftentimes compromised.

Otto von Bismarck, Prussian Prime Minister and First Chancellor of the German Empire, once stated that "romanticism is no basis for politics," and nowhere is this quote made more evident than in the efforts of the current leadership of the SGA. Instead of adhering to a rigid doctrine of purging politics from the SGA and lobbying for vaguely pertinent legislation, the SGA has made a concerted effort to focus on issues and goals that have positive effects on student life, while at the same time affording a future generation of leaders the political experience necessary to guide the destiny of our great republic.

'Strings' doesn't strike the right chord

By Kate MacDonald
Collegian Staff

The concept of a "friends with benefits" relationship isn't uncommon these days. So, hasn't everyone tried to have a simple, purely sexual relationship with their best friend while dealing with the joy of everyone else finding love, including your dad, who's now dating your ex?

This is what Adam Franklin (Ashton Kutcher) has to face everyday in the new Ivan Reitman film, "No Strings Attached." Because neither wants a serious relationship, Adam and friend Dr. Emma Kurtzman (Natalie Portman) decide to have a liaison based on sex. They decide to stop only when someone starts getting deeper feelings. When an inkling of something more starts to grow, will the two become a couple?

Unfortunately, like most other romantic comedies, the plot is extremely predictable. The audience is blatantly aware of how the entire story will play out just by watching the trailers. Whether there's some sort of formula movie makers go by now or whether film producers underestimate the intelligence of their viewers, "No Strings Attached" requires no thought while viewing it.

Yet, like all movies, "No Strings Attached" is full of both ups and downs. The supporting cast, for instance, greatly adds to the draw of the film. While debating the true meaning of their relationship, Emma and Adam are surrounded by hilarious friends who are the unacknowledged stars of the film. Emma's posse includes "Chelsea Lately" comedian Guy Branum and "The Office" star Mindy Kaling, while Adam gets advice from the likes of musician Ludacris's character, Wallace, and Eli, portrayed by Jake Johnson ("Paper Heart").

Kevin Kline and Cary Elwes, as Adam's father and Dr. Metzner respectively, also bring the laughs. The supporting cast definitely succeeds in keeping the audience laughing the majority of the time.

Not all of the jokes in "No Strings Attached" go over well, however. While the jokes, more than the plot line, keep the movie going, sometimes they come across as overly vulgar and unnecessary. The gags seem to try too hard to hold the modern viewer's interest. Between excessive pop culture references and one too many sex jokes, they don't always work.

Portman's Emma seems out of place at times too, with an awkwardly uncaring demeanor. That is not to say that Portman did a bad job. After her award-winning work in "Black Swan," "No Strings Attached" seems too pale in comparison. While the films are not of the same caliber, Portman does succeed in portraying the no-nonsense doctor who proposes the relationship with a hardened exterior.

Known for his work in comedies such as "Dude, Where's My Car?" and "That 70's Show," Ashton Kutcher, too, delivers. Though Adam comes off as overly attached and emotional, Kutcher communicates to the viewers that he's just a regular, nice guy who just wants to be happy at the end of the day.

The stars and costars of "No Strings Attached" form a stellar cast, but they are marred by a mediocre plotline. Maybe Ivan Reitman, director of the famed "Ghostbusters," doesn't have the experience in directing successful romantic comedies. He's been at the helm of flops like "My Super Ex-Girlfriend" and "Six Days Seven Nights."

"No Strings Attached" has solid cinematography, with clean shots and safe sequences, and its soundtrack is quite good.

Clearly, the story is nothing new. This summer, the film "Friends with Benefits," based on Elizabeth Meriwether's screenplay of the same title, will be released. The film features a similar plotline to "No Strings Attached" and stars Mila Kunis, Justin Timberlake and Emma Stone.

"No Strings Attached" is simply an alright movie. Its cast and some jokes help, but the bland, dragging plot and predictability scar the film. At least there is some good news- if the audience is disappointed with "No Strings Attached," "Friends with Benefits" sounds like it may be a hit.

Kate MacDonald can be reached at kaitlynm@student.umass.edu.

Natalie Portman and Ashton Kutcher star in "No Strings Attached," a romantic comedy from "Ghostbusters" director, Ivan Reitman. The film is now playing in theaters everywhere.

Vermont's scenic gem

By Jeff Mitchell
Collegian Correspondent

Entering Vermont from Massachusetts is like entering a whole new state of being. The drive is a sight within itself. As you move north, the advertisements and billboards begin to melt away and, before you realize it, you are careening down roads surrounded only by nature. The highway flows, curves and is a welcome change from the static background of the MassPike. As you make your way down the highway, you can gaze at the tall flowing mountain vistas covered in the assortment of white pine, birch and maple trees glazed by snowfall.

Burlington is to Vermont what New York City is to New York. This city has many areas worth checking out and a very relaxed feeling that is inviting to people that simply want to visit. This humble Vermont metropolitan houses the University of Vermont, Burlington College, as well as Champlain College. To truly appreciate the scenery and beauty of Burlington, you must walk the streets to pick up on the minute aspects that create its ambiance, combining a growing city with a rustic temperament. The cold is definitely something to be aware of in the months of January and February; if you are not prepared to bundle up in warm clothes, it could ruin your whole trip.

As you travel through the North End of Burlington, an area filled with off-campus college kids, you will notice that most of the houses have been around for a while and still have an authentic, vintage architecture and design. These buildings contain unfinished basements, low hanging ceilings and hard wood floors. It is almost picturesque in the simplicity and the uniqueness is welcome. This section of the city isn't filled with wild frat houses. Most of the students in this section are fairly mellow and the houses are in relatively good condition.

The University of Vermont is a nice compliment to Burlington as it brings many young people to the area. The buildings are not congested, so the campus is very sprawling and allows for much exploring. It contains an outdoor amphitheater, "victorian-esque" dorm buildings, stone fences, and an environmentally friendly student center whose elevators operate on vegetable oil. It is not an amazingly beautiful school in the winter, but it does contain some gems that are worth checking out if you find the time.

The Church Street Marketplace can draw comparisons to the center of Northampton. It is located within the heart of Burlington and hosts many stores and restaurants. The paved steps cover the plaza streets that are only accessible on foot. It is filled with many small shops that are run locally and contribute to its laid back atmosphere. Due to the city's close proximity, everything is very accessible and you do not have to fear cars barreling down the roads. It has contains the typical old school music shop and coffee places, but it also houses a tobacco shop, used outdoor gear shop, and free art exhibits that give it a clever twist. For those shoppers who like the big chains, there is also a mall located in the area. The part that makes this mall unique is that is built underground rather than above.

The culmination of the trip is Lake Champlain, located west of the Church Street Marketplace. Crackling sheets of ice cover the freezing blue waters. Gulls and loons sit atop the masses of frost. Rocky juts careen across the lake and a lighthouse sits at the epicenter. If you decided to bring a camera, then this is the time to use it. This scenic area can definitely be the highlight of the trip as it is free, easily accessible, and beautiful year round.

Trying to absorb the tone and intricate feel of Burlington in a matter of days can be extremely challenging if you don't know where to go, but it is definitely a trek worth making. The city has many sights that are not commercialized. Since these subtle landmarks are not heavily advertised, it might be a smart move to look up a map before you leave. If you can deal with the frigid cold and are willing to make the three and a half hour drive, then Burlington, Vt. is definitely a place to head for the weekend.

Jeff Mitchell can be reached at jjmitche@student.umass.edu.

COURTESY FLICKR USER SVEN

Surrounded by colleges, Burlington, Vt. is nestled near Lake Champlain and boasts a number of shops and scenic landmarks to suit any visitor's tastes.

'Company Men' hits home

By Margaret Clayton
Collegian Correspondent

When you walk into the theater for a screening of "The Company Men," you might temporarily forget that you are not watching an extended media broadcast. Beginning with a news montage detailing the economic recession, the film tackles the same problem award-winning "Up In The Air" did last year. This time however, the tale is told from the perspective of the fired, not the firers.

Filmed entirely in Massachusetts, as proven by the Lahey Clinic, framed Bruins jersey and highly coveted Patriots season tickets, "The Company Men" could be the life-story of any state resident who was laid off recently. The all-too-real storyline is shared by a range of Hollywood male leads, including Bobby Walker (Ben Affleck) a 37 year-old husband and father of two, who is put on the chopping block, along with his six-figure salary. Gene McClary (Tommy Lee Jones) is Bobby's boss, a father and grandfather in his own right who started the company GTX alongside his cold best friend, James Salinger (Craig T. Nelson). Phil Woodward (Chris Cooper) started his career on the factory floor and, 30 years later, he is almost 60 years old with two college tuitions to pay for a his job in jeopardy. Last but not least is the blue-collar carpenter, Jack Dolan (Kevin Costner), Bobby's brother-in-law who proudly wears his University of Massachusetts t-shirt while renovating a house in Roxbury.

This movie takes us through the fear, anger and mixture of positive and negative coping skills that go along with losing a job. It is a film for anyone who has asked, selfishly, "What about me? Am I next?" or thought that their entire life is reflected in the cardboard box given to them when they are told, usually without warning, to pack up their desk. It is interesting that the filmmakers have the blue-collar worker coming from a state school and the big-time executives built from years of experience or a private-school (Boston University) education, when this dilemma affects everyone on the spectrum.

The soundtrack is very deliberate. When there is a potential change of circumstance, such as an interview or a business lunch, the music is uplifting. However, that scene is followed by silence as another door (sometimes literally) is slammed in the character's face. There are also intentionally-placed reminders of what is important in light of all the job negativity. Life does not stop – there are still birthdays to celebrate with family and friends.

The audience is expected to be well informed on the subject matter, so that he or she knows to laugh when Walker explains how he only expects his recovery to take a few days, the length of his severance package. The movie is emotional in that you want to grab some of the characters and strangle them, or shake some feeling back into the others. There is one scene specifically that is a bit of a tearjerker. The moment is so true to reality, many people may be desensitized to the crisis, allowing the scene to slide into the background.

The theme, consciously stated a couple of times in the film, surrounds what is legal versus what is ethical. How do we help a friend through a recommendation or resume without patronizing them? When do we work for ourselves and not the stockholders or fiscal year budgets that make everyone a number?

If you want to see real life in stadium seating with surround sound and a famous actor playing your friend/father/uncle/boss with a not-so-great Boston accent, take a couple hours and see "The Company Men."

Margaret Clayton can be reached at melaytou@student.umass.edu.

Decemberists still going strong

By Acacia DiCiaccio
Collegian Staff

The Decemberists are so influential in the independent music scene because, while they maintain a distinct sound, none of their albums ever sound the same. From the sea shanties of their first album, "Castaways and Cutouts," to the rock riffs of 2009's "The Hazards of Love," The Decemberists display great versatility. Their latest album, "The King is Dead," which was released on Jan. 18, maintains a very folksy sound.

The Decemberists are known for their utilization of many different, often obscure instruments, including accordion, melodica, organ, harpsichord and upright bass. The prominent use of harmonica gives this new album its distinction.

"The King is Dead" begins with a joyful burst of song that cannot help but bring a similar joy to its listeners. Even at first listen, "Don't Carry it All" can be considered one of The Decemberists' top songs. The lyrics from the chorus, "beneath this bold and brilliant sun," accurately depict the song's blissful sound.

The second track, "Calamity Song" is nearly as addictive as its predecessor, with an equally sprightly beat.

Those who attended The Decemberists' concert at Amherst College in 2009 may remember a beautiful acoustic song they debuted, entitled "Rise to Me." This passionate song is included on "The King is Dead" as the third track and displays a more rare, emotive side of the band that can only been glimpsed in older songs, such as "Red Right Ankle."

The culmination of the old-world, folksong sound manifests itself in the fourth track, "Rox in the Box." However, The Decemberists bring a modern view to a style of music that could otherwise be too old school for some people's taste.

The song "All Arise!" is infused with country roots, while "June Hymn" is reminiscent of Bob Dylan.

Though The Decemberists often write lyrics with diction inspired by traditional folklore and historical references, the themes of the album span across all eras and culture. This album holds less narrative and more universal themes.

Lead singer Colin Meloy is known for his unique but shaky lead vocals. This time around, his voice carries a bit more cleanliness while still preserving his signature sound. Those who love his distinct voice will not be disappointed, yet the music may be more enjoyable to those who would have previously considered it annoying. His vocals, though cleaner, are somehow freer as well. "The King is Dead" celebrates the beauty of personal freedom.

Acacia DiCiaccio can be reached at adiciacc@student.umass.edu.

Hayes leads BC past River Hawks

By Stephen Sellner
Collegian Staff

Jimmy Hayes notched two goals for the Boston College men's hockey team to help defeat UMass Lowell 5-3 on Saturday night at Kelley Rink.

The contest was knotted at two entering the final frame, however, BC (17-6, 13-5 Hockey East) broke the tie with back-to-back scores by Paul Carey and Joe Whitney to give the Eagles the lead for good, earning their second win in as many days.

Patrick Cey trimmed the deficit to one for UML (3-19-2, 3-15 HEA) before Hayes cashed in on an empty net to seal the victory for the home team.

The River Hawks struck first as Shayne Thompson found the back of the net 7:49 into the game for his third goal of the season. Boston College evened the score less than four minutes later on a Hayes power-play goal. BC was 3-for-3 on power-play opportunities for the night.

UML would not go away, however, as Chris Iekert beat BC goalkeeper Parker Milner at the 10:32 mark of the second period for the River Hawks' second lead of the night. The Eagles again responded on Tommy Cross' third goal of the season with less than two minutes remaining in the second.

The teams meet again this Saturday at 7:00 p.m. at UML.

Maine, Northeastern draw

Maine overcame a two-goal deficit to Northeastern to earn a 3-3 tie on Saturday night at Matthews Arena in Boston.

Hockey East

The Black Bears (11-6-5, 8-4-3 HEA) took their first lead of the back-and-forth affair after three unanswered goals, digging themselves out of a 2-0 hole. Tanner House scored twice, including the game-tying goal at the 17:10 mark of the second frame and the go-ahead strike at 5:50 in the third.

The Huskies (7-10-5, 6-7-4 HEA) forced overtime after Wade MacLeod's shot took an improbable bounce past UM goalkeeper Shawn Sirman.

Maine outshot the home team in the extra period, 3-0, but could not beat NU goalkeeper Chris Rawlings. The sophomore had his shutout streak snapped at an astounding 167:12 minutes of play.

Northeastern appeared to have taken command in the second with consecutive goals to take a 2-0 advantage. Anthony Bitetto finished a rebound less than a minute into the second for his second score of the season. Mike McLaughlin zipped a wrist shot past Sirman at 1:59 in the second for his second goal in as many games.

NU hosts Massachusetts on Friday at 7:30 p.m. to close out a six-game homestand while Maine hosts Boston University at 7:00 p.m.

BU edges UNH

Boston University snapped New Hampshire's seven-game HEA winning streak with a 2-1 victory Saturday night at the Whittemore Center.

The Terriers (11-7-6, 8-5-4 HEA) broke a 1-1 tie at the 12:43 mark in the second period on Ross Gaudet's back-handed score. The sophomore picked off a UNH (13-5-4, 11-2-2 HEA) pass in the defensive zone, cashing in from close range to give BU the lead.

Kieran Millan was superb between the pipes, tallying 38 saves on the night against the No. 7-ranked Wildcats.

UNH began the scoring five minutes into the second period as Greg Burke corralled the loose puck just in front of the crease for the easy finish. Millan had stopped the two shots prior, but was caught out of position for Burke's first goal of the season.

BU knotted the score at 8:24 in the middle frame on a power-play. Charlie Coyle put home a rebound off of Adam Clendening's post-rattling shot for the freshman's seventh goal of the year.

Less than a minute after the Terriers took the lead, Millan stoned a pair of equalizer attempts by Stevie Moses and Burke to preserve the lead and the game.

BU returns to action on Friday night at Maine while New Hampshire visits Providence.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Young players impact UMass

UMASS from page 8

injury over the past few weeks while sophomore Darren Rowe has also missed five games. In the meantime, freshman Joel Hanley leads the defense with a quiet 10 points on one goal and nine assists, while fellow rookie Adam Phillips has garnered more attention with his nine points on six goals (in addition to his six-foot, seven-inch frame).

The bulk of the freshmen made a disaster out of the first half the season. That much was expected. As it stands, though, hockey is 6-12-3 and more importantly, the Minutemen are 5-7-3 in Hockey East play and are sitting in a respectable seventh place, considering their youth.

At the time, going winless until Nov. 23 was essentially the worst-case scenario, a short-term tragedy. What it did, though, is put the team in the best position for the long run, putting younger players in key positions and having them contribute, including freshman goalie Jeff Teglia.

The Mass Attack isn't winning the Hockey East this year. That was pretty much a given heading into the season. But in a season that was sacrificed for a better one down the road, this is about as good as it gets.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

San Diego State pulled out its 20th victory of the season against Air Force behind 20 points and six 3-pointers from guard D.J. Gay.

OSU, SDSU only unbeatens remaining

By Jackson Alexander
Collegian Staff

The Ohio State and San Diego State men's basketball teams both picked up conference victories this week and became the final undefeated teams in the nation.

Ohio State, the top ranked team in the nation, needed a fierce rally to knock off No. 22 Illinois and improve to 20-0.

Top 25 Basketball

The Buckeyes fell behind by eight points with just under 13 minutes remaining, but freshman Jared Sullinger put the team on his back and guided them to a 73-68 victory. The freshman finished the game with 27 points and 16 rebounds while Jon Diebler tossed in 15 for OSU.

Sullinger, a candidate for national player of the year, is averaging 17.9 points and 10.2 rebounds a game.

The Buckeyes will host No. 13 Purdue on Tuesday.

Meanwhile, San Diego State continued their dominance out west by beating Air Force, 68-55. The Aztecs improved to 20-0 behind the stellar play of senior point guard D.J. Gay.

Gay finished the contest with 20 points and drained six 3-pointers. The senior has been on fire from behind the arc, making 13 long-distance shots in his last two games.

Sophomore Kawhi Leonard also scored 10 points and grabbed 10 rebounds, while Billy White chipped in 12 points.

SDSU will play perhaps their biggest game of the year on Wednesday when they square off against Jimmer Fredette and No. 9 Brigham Young.

Texas ends Kansas' streak

No. 11 Texas shook off a poor start to beat previously undefeated Kansas. The victory snapped the Jayhawks' home game-winning streak, which had reached 69 games.

The Longhorns (16-3) fell into a 12-point hole in the first half but rallied to defeat the Kansas (18-1) by a score of 74-63.

Texas clamped down on the Jayhawks normally effective offense, forcing them into 15 turnovers and 36 percent shooting. Kansas struggled in the second half, converting only 8-of-30 shots from the field.

J'Covan Brown came off the bench and poured in 23 points, while Jordan Hamilton (17 points), Tristan Thompson (12 points) and Cory Joseph (10 points) paced Texas.

Tyrel Reed scored 17 points, Marcus Morris added 16 points, and Markieff Morris pitched in 10 points to lead the No. 2 Jayhawks in the loss.

Kansas' last loss at home came against Texas A&M on Feb. 3, 2007.

Tragedy struck for KU the night before the game. Sophomore forward Thomas Robinson lost his mother to an apparent heart attack. Robinson decided to still play and scored two points in eight minutes of action.

Fredette torches CSU

Senior guard Jimmer Fredette led No. 9 Brigham Young past Colorado State on Saturday night.

Fredette piled up 42 points, his second 40-point outburst of the season, en route to a 94-85 victory. The senior out of Glens Falls, N.Y. went 11-of-24 from the field, 4-of-9 from 3-point range and 16-of-17 from the free throw line. He also added four assists and four rebounds.

BYU also received 16 points from Kyle Collinsworth and Jackson Emery, while Brandon Davies added 12 points.

Colorado State (13-6) was led by Wes Eikmeier who tallied 25 points for the Rams.

The win was BYU's ninth in a row with the Cougars (19-1) only loss of the season coming at the hands of UCLA.

Fredette leads the nation in scoring this season with 26.7 points per game and will be a legitimate candidate for national player of the year. He has scored 40 or more points three other times in his career. Last year, he burst onto the scene with 49 points versus Arizona and then late in the season went for 45 against Texas Christian. Fredette ran up 47 points two weeks ago against Utah.

The Cougars will play host to San Diego State, then travel to New Mexico this week.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

THE MASSACHUSETTS DAILY COLLEGIAN

SPORTSTUESDAY

TUESDAY, JANUARY 25, 2011

SPORTS@DAILYCOLLEGIAN.COM

JEFF BERNSTEIN/COLLEGIAN

Javorn Farrell goes up for a layup earlier this season. Farrell is second on UMass in scoring this year.

Two different teams, two different seasons

Nick O'Malley

Both the Massachusetts men's basketball and hockey team have come back to Earth. Whether or not that's a good or bad thing depends on which team you're talking about.

For men's basketball, preseason expectations were overcome with the team's 7-0 record to start the year and suddenly, everyone was talking NCAA tournament. However, 7-0 became 7-4 while a loss to Central Connecticut (who?) made it 8-5 and the men's hoops bandwagon was in full evacuation mode.

Hockey, meanwhile, has been a mirror image. In mid-November, there was nowhere to go but up for UMass coach Don Cahoon's team. The Minutemen were 0-7-3 with 13 freshmen on the roster and were far removed from the days of Casey Wellman and Justin Braun. But then a tie with New Hampshire was followed up with three straight wins and suddenly, a glimmer of hope appeared.

But then hockey lost five straight before winning three of four while basketball when 3-2. So with both teams in the thick of conference play, where do they really stand?

SETTLING, NOT SINKING

While it was happening, there were two theories as to how basketball got off to its 7-0 start. One, the young talent that coach Derek Kellogg had accrued on the recruiting trail had blossomed into its potential, while Anthony Gurley led the team with experience and scoring. Two, their early schedule was weak and they overachieved.

The ensuing four-game losing streak answered that question.

That's not to say that the early success was an aberration instead of an exaggeration. The young talent has indeed developed and Anthony Gurley is a solid centerpiece for Kellogg's team.

While the seven-game winning streak and four-game losing streak are the glaring points of the team's schedule so far, the most important stretch has been the previous five – all in conference play.

UMass currently sits in a five-way tie for fourth in the conference with a 3-2 record. The Minutemen surprised many with their win against Dayton to open the conference slate, but couldn't do it again against Xavier and Richmond. Both those teams, though, are really good ones that the Minutemen weren't supposed to beat.

And that's alright.

The Minutemen, as they stand, are going to make the Atlantic 10 tournament with a decent seed and if they get hot at the end of the season, they'll feasibly have a chance to win the conference.

There's a natural tendency, particularly in the Boston sports market, to label a team as awful and a load of bums, or wicked sweet. Often times, it doesn't have much to do with the record, like with a Red Sox team that wins 90 games, but misses the playoffs.

So far this season, the Minutemen don't fit either label, and have been wavering back and forth between them. They started with a wafer-thin 7-0 record, but have worked their way to a beefy 3-2 record in the A-10, which makes them, for lack of a better word, good. Just good.

THE BEST WORST-CASE SCENARIO

Going into the season, expectations for the hockey team were mild at best. The reality ended up being as cold as it was outside of my apartment last night, which was very cold.

The team didn't live up to early expectations, largely because the Minutemen did not become the team they were expected to be.

In the face of a baker's dozen freshmen, the workload was anticipated to be placed on the shoulders of seniors Danny Hobbs, T.J. Syner and Michael Marcou, in addition to the team's captain, goalkeeper Paul Dainton.

There's no question that Dainton and the seniors are the leaders of the team, as expected. What wasn't expected was the early emergence of the team's freshmen, particularly on the offensive end with heavy contributions.

To little surprise, Hobbs and Syner rank second and third, respectively, in points scored for the Minutemen. What is surprising, though, is that freshman Michael Pereira has scored a team-high nine goals and is tied with Hobbs for the team-lead in points at 19.

Marcou, who was expected to be the team's biggest offensive threat from the blue line, has been out with an

JEFF BERNSTEIN/COLLEGIAN

Despite an inexperienced roster, the Minutemen have reeled off wins after a slow start to the season.

Dukes extend winning streak

Monteiro scores game-high to lead Duquesne past Charlotte

By Scott Cournoyer
Collegian Staff

B.J. Monteiro scored a game-high 20 points to lead the Duquesne men's basketball team past Charlotte, 83-67, on Saturday to remain undefeated in the Atlantic 10 conference this season.

The Dukes (13-5, 5-0 A-10) are currently riding an eight-game winning streak, the longest in 39 years by a Duquesne team dating back to the 1971-72 season.

Senior Damian Saunders recorded 15 points and five steals for DU, while freshman T.J. McConnell contributed seven points and six steals, backing up his conference Rookie of the Week honor from the week before.

The Dukes racked up 16 steals on the night, coming up one short of tying the school record of 17, which was set in a victory over La Salle last Wednesday. The entire squad seemed to be clicking on all cylinders, as five players recorded three-or-more assists, as well as outscoring the 49ers 31-2 off transition turnovers. The Dukes will look to increase the winning streak when they head to New York on Wednesday to face Fordham.

XU rides A-10 streak

Like Duquesne, Xavier is putting together an impressive steak of performances in conference play. XU's Tu Holloway and Mark Lyons paved the way to an 88-77 victory for the squad as they rolled past Temple at home Saturday.

A–10 Basketball

The Musketeers (13-5, 5-0 A-10) secured their fifth A-10 win this season with four players scoring in double figures, shooting nearly 53 percent from the floor for the game.

Holloway and Lyons scored 21 and 19 respectively, with Holloway also racking up a game-high nine rebounds and seven assists. Although only leading 41-39 at half, XU stepped up the effort, shooting over 55 percent in the second half.

Xavier's victory over Temple was their 35th consecutive home win against an A-10 opponent, which is now an all-time conference record. The record was previously held by Temple, who won 34 in a row from 1987 to 1991. The Musketeers will be back in action Wednesday as they take on George Washington at home, trying to make it 36 in a row against A-10 opponents.

MURRAY HITS GAME-WINNER

La Salle captured its first conference victory in a thriller Saturday against Rhode Island, when sophomore Aaric Murray scored the game-winning 3-pointer with 28 seconds remaining in the game. The 3-point shot capped a 76-75 victory for the Explorers (9-11, 1-4 A-10), who faced an 11-point deficit with just over 10 minutes remaining in the game.

Murray finished the game with 20 points to lead all scorers. Junior Earl Pettis contributed 14 points for La Salle, including the game-tying 3-point score with one minute, 43 seconds left in the contest. The Explorers will look to make it back-to-back conference wins on Wednesday when Saint Joseph's comes to town.

A-10 HONORS

Xavier's Tu Holloway took home this week's A-10 Player of the Week award for his performances in victories against St. Bonaventure and Temple last week. Holloway averaged 21.5 points, five rebounds and assists and two steals over the week, which included the junior's game-high 22 points against the Bonnies.

Duquesne's T.J. McConnell continues his spectacular freshman campaign by claiming his third consecutive conference Rookie of the Week honor, and fourth overall this season. The local Pittsburgh, Penn. product played a combined 56 minutes in two contests last week, scoring 13 points to go along with five rebounds and four assists in a win against La Salle.

Freshman guard Matthew Wright scored career-highs in points in back-to-back contest last week for the Bonnies, earning himself a co-share for this week's conference Rookie of the Week award. Against Xavier and George Washington, Wright shot 75 percent (9-of-12) from the floor, including 5-of-7 from beyond the arch. The Toronto native's effort helped his team capture their first victory against GW in over 20 years, with their last one coming in 1989.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

(MCT)

Sam Mills goes up for a shot in La Salle's win over Rhode Island. The victory marked the first for the Explorers in the conference this year.

JEFF BERNSTEIN/COLLEGIAN

Along with improving to 5-0 in the A-10, the Musketeers earned coach Kevin McGuff his 200th victory of his career with wins over St. Bonaventure and Charlotte.

Xavier continues A-10 dominance

By Stephen Hewitt
Collegian Staff

The Xavier women's basketball team continued its conference dominance last week, blowing out St. Bonaventure and Charlotte to improve its Atlantic 10 record to 5-0 and overall record to 16-2.

The week's work began at home with a convincing 76-56 victory over the Bonnies in which head coach Kevin McGuff notched his 200th career victory patrolling the sidelines for the No. 7-ranked Musketeers.

A–10 Basketball

Senior guard Amber Harris paced Xavier with her 10th double-double of the season, pouring in 20 points on 9-of-16 shooting while grabbing 12 rebounds. It was more of the same on Saturday as the Musketeers traveled to Charlotte, N.C. to defeat Charlotte, 82-61.

Leading the way once again was Harris, who scored 27 points and recorded 12 rebounds. She was named the Atlantic 10 Player of the Week for her efforts against the 49ers and Bonnies.

The victories now make Xavier 33-1 in its last 34 conference matchups, a mark that began in 2008 against SBU.

TEMPLE REMAINS UNDEFEATED

Perhaps the one team stopping Xavier from running the table in the A-10 this year is Temple.

The Owls kept their perfect conference record intact this week with a dominating defensive effort against Saint Joseph's, defeating the Hawks 53-43 at The Liacouras Center on Wednesday.

Junior forward Kristen McCarthy recorded the 1,000th point of her career in the victory to become the 18th player to do so in program history.

The 2009-10 Atlantic 10 First Team selectee scored 14 points and tied her career-high by corralling 11 rebounds to spark the Owls to their 4-0 conference mark.

Junior guard Shey Peddy led all scorers with 19 points and also recorded five steals to pace Temple.

The Owls will look to keep their undefeated conference record this week as they travel to Massachusetts on Wednesday before hosting Richmond on Saturday afternoon.

WOES CONTINUE FOR GW

With just over eight minutes remaining in the game on Saturday afternoon, George Washington held a commanding 51-41 lead against Fordham and seemed well on its way to not only notch its first conference win, but also its first road victory of the season.

It wasn't in the cards, however, as Rams senior Tiffany Stokes completed a three-point play shortly after, followed by Becky Peters and Kristina Bell knocking down back-to-back 3-pointers to bring Fordham within one.

Brooke Nilson nailed a jumper to make it 53-50 before Peters hit another shot from long range to tie things up at 53.

After some back-and-forth scoring, it was Fordham's Arielle Collins who sank a desperation jumper to beat the shot clock late in the game and the Rams would not look back as they went on for the 59-56 victory.

The victory marked the first time Fordham has ever beaten the Colonials in 17 meetings.

It was also a career day for Peters as she scored a personal-best 27 points to lead the Rams to the win.

Next up for Fordham is a matchup with Saint Louis on Tuesday night while GW will host Duquesne on Wednesday before heading to Philadelphia to try and notch its first conference and road victory of the season against La Salle.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

UM unveils new campus plans

By Nancy Pierce
Collegian Staff

Dennis Swinford, who was appointed director of campus planning in September of this academic year, lead an open forum meeting to discuss the campus master plan and future modifications for the University of Massachusetts in the Campus Center Reading Room on Tuesday, Jan. 25, 6 p.m.

Swinford compared the master plan to "a family heirloom that gets handed down." He added that the "plan is not the goal. The plan is the product which comes out of an ongoing process, that lives beyond chancellors."

The event was attended by various members of the campus planning team, faculty, students, alumni, and community members who vocalized what they believed the university needs for improvements in the future.

Adam Gross, an architect planner affiliated with Ayers Saint Gross in Baltimore who was chosen to help develop the changes for the university, assisted Swinford with the presentation. The master plan process covers a span of approximately 30 years. Gross said, "short term decisions are part of the long term vision for the campus," and that the main goal for the planners in this master planning process is "to ensure the look, feel and function of our campus is reciprocal with our academic mission."

Gross said planning for campus development "begins with quality of open space." With a map of the university on display,

MATTHEW HARRINGTON/COLLEGIAN

UMass reached out to students Tuesday night to hear their thoughts on the campus master plan.

Emergency landing

Flight's cockpit fills with smoke; none hurt

By Herb Scribner
Collegian Staff

The Massachusetts men's basketball team made an emergency landing on Tuesday during its flight to Saint Bonaventure out of Westover Air Reserve Base in Chicopee, Mass. No one was injured.

According to UMass Athletics spokesperson Jason Yellin, about 20 minutes into the flight those on board believed they smelled smoke. Within seconds, the flight attendant said they had to make an emergency exit because there was smoke in the cockpit.

At about 8:30 pm, UMass coach Derek Kellogg posted a Youtube video explaining the situation to all the fans, friends and family wondering about them.

"For all our UMass fans, family and friends, your team, coaching staff and all our support staff are safe and sound after an interesting day here," Kellogg said.

"Happily everybody is safe and we're looking forward to a big time game tomorrow night," Kellogg continued. "Just know that the team and

Obama pledges spending cuts in State of Union

By Christi Parsons and Peter Nicholas
McClatchy Newspapers

WASHINGTON - Confronting a divided government, President Barack Obama struck notes of conciliation and challenge in his State of the Union speech, suggesting new spending cuts while advocating increased outlays for education, mass transit and infrastructure.

Obama's hour-long address Tuesday night sought to repel anticipated Republican efforts to roll back his party's signature legislative achievements, including the health care overhaul, during the next two years.

He emphasized the need for bipartisanship, calling on Democrats and Republicans to work together to create new jobs. "We will move forward together, or not at all ... for the challenges we face are bigger than party, and bigger than politics," Obama said.

Obama called for a five-year freeze on nonmilitary discretionary spending in a bid to help reduce the deficit and said he would veto any bill containing pet projects known as "earmarks." He also endorsed $78 billion in Pentagon cuts and said he would consider other reductions.

But he defended his record thus far and warned that

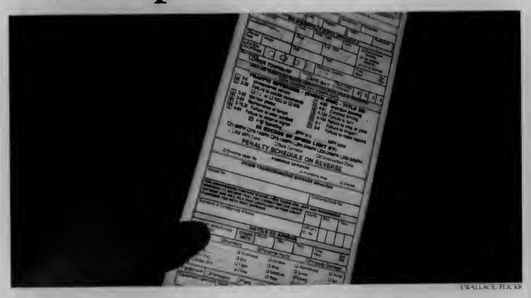
Obama addressed the nation on Tuesday, during the presidential State of the Union speech.

Alcohol related fines add up for Amherst



LWALLACE PHOTOS

130 fines were issued to young adults since September of 2010, and have added up to nearly $40,000 in fines for violations including noise complaints, and keg violations.

By Brian Canova and Michelle Williams
Collegian Staff

Since the start of the new school year, nearly $40,000 worth of fines have been issued by the Amherst Police Department to young, college-age individuals.

Last May, an amendment was added to the Town of Amherst bylaws which increased alcohol related violations to a mandatory $300 fine. Violations include open containers of alcohol, noise violations and keg violations. The Amherst police have issued 329 citations, as compared to 263 during the same period in the previous year.

The Daily Hampshire Gazette reports that 130 fines totaling $39,000 have been issued since Sept. 1. The most common violations were open container violations, a fine that was raised $250, from $50.

"Today a $50 fine is just not a deterrent it once was. Meaningful fines offer law enforcement an additional strategy for addressing undesirable situations without causing the recipient to have a criminal record," said BASICS Program Director Diane Fedorchak. "Current research maintains that consistent, strict enforcement of policies, coupled with meaningful deterrents, is proven to reduce negative behaviors and creates environmental change."

Between Sept. 1 and Dec. 31 of 2010, 154 open container fines were issued, 135 for unlawful noise violations and 41 fines for nuisance house citations were issued.

During that same period in 2009, 174 fines were issued for open container violations, 78 for unlawful noise complaints and 11 nuisance house citations were doled out. The nuisance house bylaw was added during the 2009 fall semester.

Amherst Police Captain Christopher Pronovost said that it was too early to tell if the fines have decreased disruptions to the town peace. "The fall was the first semester and we actually had an increase in citations. Now that we've gotten through the fall and a few people have been zinged the spring will be better."

Provonost emphasized that the police department recognizes that students will have parties, but that they must be calmer than in the past, citing an incident last spring when riot squads were dispatched to Hobart Lane.

"We all know people are going to party, that's okay," Provonost said. "But safety is our main concern. Nobody likes negative publicity. Beatings, stabbings, rocks being thrown, nobody wants to see that."

"The goal is to deter bad behavior," said Town

See FINES on page 2

Dividing the nation

By David Lightman
McClatchy Newspapers

WASHINGTON - American attitudes toward changes in health care laws are "all over the map," a Kaiser Family Foundation/Harvard School of Public Health survey reported Tuesday.

While 28 percent want the 2010 health insurance law expanded, 19 percent said leave it alone, 23 percent backed repealing it and replacing with Republican ideas and 20 percent said repeal it, but don't replace it.

Views fell largely along partisan lines, with 77 percent of Republicans supporting some sort of repeal, while 51 percent of Democrats said they wanted the law expanded.

The findings are similar to those of a Jan. 6-10 McClatchy-Marist poll, which found that 49 percent of Americans favored keeping the law the same or expanding it, while 43 percent favored repealing it or reducing its reach.

In the Kaiser survey, people were eager for Congress to keep working on health care.

"The fact that the public is largely split on what should happen next with regards to the health reform law does not mean that they want Congress to stop working on health care," the survey found.

In fact, health care topped all issues people wanted Congress and President Barack Obama to address this year, at 46 percent. The economy and jobs were second at 40 percent, according to the poll.

Of those who mentioned health care as one of the country's top two issues, 30 percent were Republicans, 29 percent Democrats and 36 percent independents.

The study coincides with a renewed effort by congressional Republicans to challenge the 2010 health care law. That Democratic-authored law requires most people to get insurance coverage by 2014 and requires most employers to offer it.

The House of Representatives voted last week to repeal the act, but that effort is likely to die in the Democratic-run Senate.

Instead, GOP lawmakers are expected to try to build alliances with like-minded Democrats to change parts of the law.

The Kaiser poll suggested that while that bid will be difficult, it's not impossible. In all, 1,502 people were surveyed Jan. 4-14 on land-line and cell phones. The margin of error was plus or minus 3 percentage points.

As has been the case in poll after poll, people like certain parts of the law.

Some 85 percent liked the discount on brand-name prescription drugs for certain Medicare recipients, while 79 percent backed subsidies for low- and middle-income people to buy coverage. The law's voluntary long-term care insurance program and expanding Medicaid, the joint state-federal health care program for lower-income people, got the support of more than two-thirds.

There's strong opposition to a favorite Republican tactic: not providing funds to implement the legislation. Sixty-two percent disapproved of that strategy.

However, Republicans have strong support for one of their major targets: Only 23 percent back the mandate that most people must buy coverage by 2014.

When respondents were asked about state lawsuits challenging the mandate, which are moving through the courts, the poll found that "Americans have mixed views as to their (the

Fine increases give town over $40,000 so far

FINES from page 1

Manager John Musante, "The real test is whether police have to go back and there has been a decrease. I think that is the net positive."

Fedorchak added, "I just saw a student this week in BASICS who got mad over the $300 fine. He said he and his roommates totally toned it down this semester after the $900 fine between them. I think it's having the desired effect on our community."

Captain Provonost explained that the increase in noisy parties (which have nearly doubled since 2009) has gone hand-in-hand with a particularly violent semester, which saw an increase in assaults, serious injuries, and medical care for drinking related accidents.

Provonost has met on multiple occasions with Fedorchak and the Campus and Community Coalition to Reduce High-Risk Drinking to address the issue of increased violence.

"Blame it on Four Loko's, that was one idea that we batted around, but that may not be. We've seen an increase in highly intoxicated individuals, what their choice of beverage is I don't know. We are starting to see more non-students, and that seems to be when trouble starts," Pronovost said.

"There's just not data to support why [the increase in violence] is happening," said Fedorchak. "I do know increased drinking does perpetuate more violence. Being a big university, non-students come here and when there's not a sense of community and less sense of ownership, it leads to more destructive behavior."

With nearly $40,000 in fines issued, the Daily Hampshire Gazette reports that $13,800, just over one-third of these fines, have been collected.

Waiting on a plane

While waiting for a charter plane to take them to their final destination, the basketball team practiced in an airport terminal with a shoe of one of the players.

EMERGENCY from page 1

everybody's safe and sound."

Yellin said that he never had an experience where the plane landed as quickly as this flight.

The team landed on the ground in Albany where firemen and fire engines greeted them. From there, the Minutemen went to a terminal at Million Air, a private aviation operator, to charter a plane.

The plane they are chartering is dropping the Villanova men's basketball team off at Providence before heading back to pick up the Maroon and White. According to Kellogg, an expected arrival time at SBU is around 11 pm tonight.

The plane will take them to Bradford, Pa., which was there original destination and is just south of Olean, N.Y., which the Bonnies call home.

Following the diverted landing, UMass coach Derek Kellogg posted on Twitter that the team was "all safe and sound in Albany."

According to another post by Kellogg on Twitter, the team began practice a little early by using a shoe instead of a ball.

UM maps out campus plan

Campus planners, students, faculty, and community members met on Tuesday, Jan. 25, to discuss a master plan for the campus that involves renovating old buildings, and making the campus more beautiful.

MASTER PLAN from page 1

Gross pointed out that the space quality at the Amherst campus is not as well laid out as other institutions. The campus map was compared with other large universities, including University of North Carolina-Chapel Hill, and Ohio State University, both of which he pointed out, had more condensed buildings and efficiently used space.

One of the first issues brought to the floor was parking. A map of the campus with the parking spaces highlighted displayed 96 acres of surface parking scattered around the land. The planning team emphasized the need for a more sophisticated means of dealing with parking and additional bus routes.

Gautam Nagar, a Graduate student studying green building at UMass, suggested underground parking as a way to allow for more space and less cars on campus. The campus planning team pointed out that this below ground parking would not be economically feasible, as it is $50,000 per space while above ground parking is $25,000 per space.

The declining condition of many buildings on campus was a point raised during the discussion. The presentation explained that one-third of buildings are in poor condition, according to a survey done by the university. The planners stressed the importance for renovation, and suggested ways to preserve certain buildings with historical value.

Gross said that the pedestrian-automobile dynamic is, "currently not working as well as it should be." There was a suggestion by an audience member that North Pleasant St. should be closed to everyone except buses.

Another issue raised was how to make the campus more inviting and welcoming. The planning team agreed that the Haigis Mall area in front of the Fine Arts Center was the "front door" of the campus. They deemed this area of campus as a "wasteland" with what they said had a lack of livelihood. The solutions the team brought up were a repair of the campus focusing on more memorable and enjoyable outdoor spaces with a possible implementation for curbs in the quads.

There was also an expressed need for more publicity. Nagar was unsatisfied with the absence of a large entrance sign welcoming people into the campus, "You don't feel that you're at UMass." Nagar suggested a large arch-like or flat structure with the university's name.

Another graduate student mentioned the necessity of using of renewable energy sources such as constructing a wind mill or using solar energy. The planners agreed with the importance of UMass becoming an innovator in sustainable building technology.

Along with harnessing renewable energy sources for the campus, there was an agreement among the participants of the forum for better lighting for the campus at night to alleviate what they thought made the campus "dead" after a certain time of day. Nagar suggested LED lighting as an environmentally friendly solution.

The campus planning team mentioned landscape as a way to "soften up the modern buildings," and better ground-to-building architecture. Gross mentioned that landscape would not only serve as a way to give some of the buildings better aesthetic value but also could be utilized educationally with what he said could show the importance of water.

When speaking with Swinford, he stressed that he and his team want what the community of the University want in terms of changes and improvements. "I would like to have more of these," he said about the open forum event, "Great ideas come from the students."

Swinford also explained that a larger goal that the university has is to be seen as a premier public research institution.

At this point in the process Swinford said that they have built a team of campus planners, got professionals together and made coordination's for events and now they are trying to figure out a process to go forward, noting that his team is "just now starting to collect ideas."

Swinford was pleased with the overall tone of the open forum discussion, saying "It was a positive dialogue. There's a lot of great things happening here that a lot of people don't know about."

Nancy Pierce can be reached at npierce@student.umass.edu.

Addressing the nation

UNION from page 1

while he may agree to tweaks to his legislative record, his top priority in the next two years will be to preserve that work. Especially on his landmark health care law, he called for changes where needed, but warned he would oppose repeal.

"Instead of refighting the battles of the last two years, let's fix what needs fixing and move forward," he said.

Instead of the fractious reception he received in his previous State of the Union speech, Obama encountered a more somber welcome in which most lawmakers wore black and white ribbons in honor of Rep. Gabrielle Giffords, D-Ariz., and the other victims of the Tucson shooting rampage Republicans and Democrats sat side by side in a show of unity.

Nonetheless, to Republican critics, his call for government investment sounded like another spending package at a time when deep cuts are needed. "That's the real secret to job creation, not borrowing and spending more money in Washington," said Rep. Paul Ryan, R-Wis., who delivered the GOP response.

Rather than promising a near-term solution to chronic unemployment, Obama devoted much of the speech to the threat of competition for jobs from overseas, urging programs to "out-innovate, out-educate and outbuild" the rest of the world.

Obama outlined an agenda for the second half of his term in office that tracks closely with his re-election strategy, in which he is staking out a middle ground politically.

With several promises, Obama sought to address perceptions that he spent too freely during his first two years in power and is unconcerned by a budget deficit that now stands at more than $1.4 trillion. His proposals include freezing federal spending not devoted to national security, which aides said would reduce the deficit by more than $400 billion over 10 years.

Obama said he would be reasonable in any negotiations. Waste and inefficiencies are rampant in government, he said.

But he warned that, as with the health care law, certain steps were off-limits.

Obama signaled that he would protect his signature education program, called "Race to the Top," which offers grant money to schools that make strides in educating students.

He drew a protective barrier around the basic social safety net, cautioning that he would not slash spending at the expense of "our most vulnerable citizens."

He added: "Cutting the deficit by gutting our investments in innovation and education is like lightening an overloaded airplane by removing its engine."

That message is rooted in a hard-eyed calculation by White House aides. Grand new spending programs and initiatives are unrealistic given the political realignment on Capitol Hill. Instead, the White House wants to preserve programs that resurgent Republicans see as targets ripe for elimination.

In some ways, the speech was in keeping with Obama's move to the center following the Democrats' midterm election losses. He called for reducing the corporate tax rate, freezing nondefense discretionary spending and approval of free trade agreements that might expand U.S. exports.

Obama showed a willingness to buck members of his party. He said he would veto any bill carrying an "earmark" – a special spending project that lawmakers pass with little scrutiny or discussion. That stand sets up a potential showdown with one of Obama's closest allies, Senate Majority Leader Harry Reid, D-Nev., who defends earmarks.

Equally revealing was what Obama did not say. He said very little new or different about the war in Afghanistan, the effort to halt the Iranian nuclear programs or other foreign policy hot spots. As he has before, he claimed U.S. troops were making progress at stabilizing Afghanistan and at shrinking sanctuaries used by al-Qaida and other militant groups in Pakistan.

He made no mention of climate change legislation, which business interests oppose and which stands little chance of passing in any case. Since his midterm election setback, Obama has tried to repair his relationship with the corporate world.

Obama also sought to reassure members of his liberal base, who've bristled over some of his post-midterm moves. He said he was committed to overhauling the nation's immigration laws and finding a pathway to legal status for the millions of people living in the U.S. illegally. The odds of that happening are low, as Obama essentially conceded.

Obama, in his State of the Union address, outlined an agenda for the second half of his term in office that tracks closely with his re-election strategy, in which he is staking out a middle ground politically.

House passes resolution to cut financial aid for students

On Tuesday, the House of Representatives passed Resolution 38, a piece of "legislation directing spending cuts to the fiscal year 2008 levels or less on the floor of the House today," according a press release from the Commitee on Appropriations.

House Appropriations Chairman Harold Dallas "Hal" Rogers said in support of the resolution, "This resolution will help our effort to reduce discretionary spending to fiscal year 2008 levels, and show the American people today that we are serious about reducing the out-of-control government spending that is hampering our economic growth." He is a Republican representative from Kentucky.

Cutting the federal funding to the levels of 2008 would cause a 24 percent reduction of the funding for the Pell Grant.

According to The United States Student Association, the Pell Grant award helps approximately nine million low-income students attend universities every year.

Additionally, there will be a 17 percent reduction in federal student financial aid, decreasing the federal funding from $19.3 billion to 16.1 billion, if the resolution is passed in the Senate.

Of the far reaching cuts, Congressman Rogers said "Let there be no mistake: The cuts that are coming will not be easy to make. They will not represent 'low-hanging fruit.'"

Jake Stillwell, Communications Director of United States Students Association said "The United States Student Association (USSA) vehemently opposes this resolution as an irresponsible and shortsighted way to deal with the country's deficit," of Resolution 38 in a press release. He added that the recession has depleted state governments of their higher education funding, making these federal investments "increasingly vital to our nation's college students."

EDITORIAL OPINION

WEDNESDAY, JANUARY 26, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Rhetoric and violence

The horrific massacre in Arizona is well-known to everyone: A madman, Jared Loughner, tried to assassinate Democratic Congresswoman Mike Tudoreanu Gabrielle Giffords. In the process, he killed six other people – including a nine-year-old girl – and injured 14. Loughner's motives are unclear. He seems to hate government in general and Giffords in particular, but without any coherent reason. As it just so happens, Giffords was one of the Democrats whose districts were marked by Sarah Palin with crosshairs on a map she published before last year's midterm elections. This has led to a debate about heated political rhetoric and its possible connections to real life violence.

The rhetoric of the far-right these days isn't just heated – that alone would be harmless – it's actually full of references to guns and violence. The crosshairs are one example. Last year, Palin and Sharon Angle also made veiled references to murder in their speeches. That's what it means to say "don't retreat, reload" or talk about "exercising 2nd Amendment rights." They were talking about shooting people. They were suggesting that their political opponents deserved to be murdered – but only implicitly, so they can never be accused of saying it outright. Now, I am sure that all they wanted to do was whip up anger and energy in their listeners to help with the campaign.

There is an important line between saying that those who disagree with you are wrong, and saying that those who disagree with you are guilty of a crime.

Let's be clear here: No one other than the shooter himself is responsible for the murders. However, that doesn't mean that no one else has done anything wrong; that we can just shrug and move on as if nothing has happened. It seems that political violence has been on the rise recently. It's not just Loughner that we should be talking about, but also Joseph Andrew Stack, who flew a plane into an IRS building last year. These people were very angry at the government and mentally unstable. That's nothing new. There is a long history of crazy conspiracy theories in the United States accusing the federal government of being run by communists, working with evil space aliens, using microwaves to mind control people and many other oddball notions.

A couple of things are new, though. First of all, we now have a conspiracy-theorist-in-chief who goes on air every weekday on Fox News to tell the nation how the President and the Democratic Party and all left-wing people in general are in league with dark forces who want to destroy America. Glenn Beck has brought conspiracy theories to the mainstream and he certainly strengthened the delusions of thousands of mentally unstable individuals. It's not difficult to imagine the thought process of such a person. "I'm not crazy! See, even TV show hosts have started to discover the truth! I knew it! The government is after me!" So we should not be surprised if more of these people decide to take matters into their own hands.

There is, however, a second and more dangerous trend. It is more dangerous because it is embraced by a huge number of Republican politicians and practically the entire Tea Party – not just by a lone pundit and his followers. I am talking about the trend of refusing to accept the legitimacy of opposing views. The problem with Palin, Angle and others like them is not that they use harsh or inflammatory language.

There is nothing wrong or new about insulting your opponents, calling them stupid, or saying they are after personal gain and don't care about the country. There is something wrong with suggesting that their beliefs are not merely false, but unacceptable. There is something wrong with saying that they are not merely idiots or liars, but traitors. There is an important line between saying that those who disagree with you are wrong and saying that those who disagree with you are guilty of a crime. Ann Coulter was the first to cross that line explicitly, with her books accusing liberals of things like slander and treason. These are crimes. To say that all people who hold a certain political opinion are guilty of a crime is to say that the opinion itself is a crime. A version of this can be seen among members of the Tea Party, many of whom believe that any non-conservative government is unconstitutional.

If certain political opinions are illegitimate, if the people who hold such opinions or try to enact laws based on them are like criminals, then violence against them is justified. By using language that implies that being on the left is sort of like committing a crime, some right-wing politicians and pundits are encouraging political violence. And they are playing with fire. Once you make it acceptable to accuse your opponents of treason, you risk someone else using the same trick on you. Once you let the genie of ultra-nationalism out of the bottle, thinking that you can control it and use it to bludgeon your enemies, you run the risk that a more skilled charismatic leader might rise to the occasion and use the same genie to destroy you. A particularly cunning leader may even use it to destroy democracy itself. The power of mere words should never be underestimated.

Mike Tudoreanu is a Collegian columnist. He can be reached at mtudoreanu@econs.umass.edu.

Dump your toilet shame

Monday morning, I walked into the women's bathroom in the Campus Center, one of the larger bathrooms on campus with 12 or 15 stalls and it was dead silent. This on its own is not out of the ordinary, but as I walked around looking for Victoria Knobloch a stall I found four pairs of feet frozen behind four locked stall doors. But still the room was silent. It did not take me long to guess what was probably happening here. These four poor women knew there was someone else in the bathroom and were patiently waiting for this anonymous other person to leave so that they could poop in peace. Unfortunately, they would all be sitting there for some time. Perhaps after a while some would leave without having pooped, seeking more private bathrooms. Others might become overwhelmed by bowel pressure and shamefully fill the space with sounds of farts and splash-back, then continue to wait until they believed they could leave without anyone else seeing their face and knowing that they, like every other human being on this planet, had pooped.

I have done no scientific study on gender and floating a log. All my experience is personal or anecdotal, so it is possible that there are many men out there who are also stealth poopers, but as far as I know it is essentially a female phenomenon. I have had many conversations with women of many ages discussing their fecal rituals. Common themes are not pooping in public bathrooms, not pooping in front of significant others, and holding it until you're constipated because you are so against the idea of someone else knowing that you have to poop. Heaven forbid diarrhea should come into the picture. The horror of this noisy, smelly, and sudden infliction is enough to make some women never want to leave the house. We are trapped by our own bodily function.

At some point in time, most children read "Everyone Poops" by Taro Gomi, and the sentiment never leaves us. It is not as if anyone believes that women do not defecate.

It is a joke that women fart roses and rainbows. And yet there still seems to be this stigma around the act. Perhaps it is in the vulgarity of it all, that pooping is not "ladylike" or dainty. But if you look around you there are very few modern women still clinging to the ideals of proper lady etiquette. Many women burp or eat ribs off the bone with their hands, smearing barbeque sauce all over their faces, or scream obscenities at the television during a sporting event.

People of the world: Your poop is a beautiful thing.

It often labels them as something of a "tom boy" or "guy's girl" and to a certain extent the cool factor of such behavior could have something to do with internalized misogyny. Gender roles are complex and dangerous things, to say the least.

But something about the idea of me walking into a mixed gender room and saying, "Man, I just took the biggest, smelliest dump. It must have been all that chili I ate," it might not be the most socially acceptable thing.

Granted, a man saying the same thing could be regarded as equally vulgar depending on the audience, but men get something of a obscene free pass just on the basis of being men.

I must admit, I myself have been a stealth pooper for many years. Even through extended backpacking trips filled with "number twos" in the woods and extended food poisoning on squat toilets for three months in Southeast Asia, I've harbored an admittedly irrational shame around the issue. Sometime in high school someone taught me that if you lined the water of the toilet bowl with a layer of toilet paper you could reduce the splashing noise and it's a technique I've employed ever since. But there are days, like that morning in the Campus Center, where I just want to yell to all the women paralyzed with fear in their stalls, "Just s**t already! Move on with your lives."

So I've been making the effort to be a more public pooper. I crap in all bathrooms, no matter how easily the sound may carry to places where many people may hear. I sit down and have the runs when I feel the need and I make a strong effort not to care who grimaces at the sounds of my obvious mild illness. In the war against sexism, it may seem like a small battle, but it is an easy enough one to win. And I do not advocate that all women must immediately disregard their shame about their supersonic sewer sauce. You do what makes you feel comfortable with your own body, period.

But it might be worth thinking about why you doo-doo the way you do, because changing your attitude a bit might make your life easier in a very practical way. Imagine being able to poop any time, anywhere, with anyone around, caution to the wind, toilet paper fluttering in the breeze. People of the world, your poops are a beautiful thing. Let's work to eliminate all shame about bodies and the things they do, even if those things are smelly and brown.

Victoria Knobloch is a Collegian columnist. She can be reached at vknobloc@student.umass.edu.

Five Reasons Why

...the Men's Basketball team survived yesterday's plane malfunction

1) In a pinch, a jersey makes a great parachute.

2) Coach Kellogg's mad Twitter skills.

3) Raphiel Putney's arms.

4) They were cushioned by all the NBA scouts there to watch Anthony Gurley.

5) Death is a Minuteman fan.

Ed/Op

Can't live with them or without them

Once again, Amherst has been named one of the best college towns by yet another university-ranking magazine. Students may rest assured: Yevgeniya Lomakina They are spending the "best years of their life" in a well-qualified location. Some in the unrelated-to-the-academia segment of Amherst's population are willing to challenge that statement, or at least rephrase it: Students are having too much of a good time, occasionally at others' expense.

It is commonly known that Amherst residents and students have often been at odds when it comes to their living conditions. Crowded together in a small area, tensions between the two parties can run high. Amherst is home to 27,000 students attending University of Massachusetts alone. The community could not have anticipated such a rapid expansion. The university continues to increase in size, admitting a larger amount of students who must be accommodated..

Students and residents are forced to cooperate, somehow. The latter complain about the excess of students, noise and numerous bylaw violations. The former will admit to none of the above accusations, defending their innocence until proven guilty or until caught with an open container of alcohol in the street. Are the residents viewing the town as being besieged by students? Or are the people simply asking for peaceful collaboration?

Students and residents are forced to cooperate, somehow.

Many events that ratchet up this tension start with a noise complaint, and end with the arrival of the police. Other issues of tension include the disregard for housing bylaw regulations, multiple cars parked on lawns and cleanliness concerns (piles of empty beer cans and crumpled pizza boxes are the certifying credentials of off-campus college housing).

The town decided to fight back. It passed multiple laws to limit the students' activities, such as the famous town bylaw which forbids more than four unrelated individuals from sharing a household. Additional rules and fines soon followed. Unlawful alcohol consumption fees increased; open container violation charges were raised from $50 to $300 (this was partly sponsored by the Campus and Community Coalition to Reduce High Risk Drinking). Noise violation fines have similarly augmented from $100 to $300. Open container violations are most common, followed by those of excessive noise. It is unfortunate that students are forced to settle down not out of respect for themselves or the community but out of fear of financial penalty.

In addition, Amherst police introduced various other initiatives to control students' behavior; some of them include mailing warning letters to the parents or guardians of exceedingly vigorous offenders. However, residents do not rely on these measures, as they often prove to be unsuccessful. Every fall, the town is swarmed with an increasing number of students who believe it is their obligation to make their presence known.

This is not to say that all UMass students, by courtesy, should have a period of lights-out at eleven o'clock. Everyone has their respective schedule and one's desire to start drinking on Thursday should not have priority over someone else's desire to sleep.

However, when one chooses to resort to violence to defend their right of drinking, there is a problem. At the same time, the infrastructure of Amherst is in part dependent on the presence of students. When they leave, the effect on the town is significantly more profound than simply an empty campus.

Amherst becomes deserted and the pace of living changes. Buses run on a different schedule, forcing residents to accommodate. All the job openings filled by students are seasonal; only a selected few are willing to stay in the area during breaks to continue working. Crime rate is increasingly higher during school breaks, among the residents and among the students, who often leave valuables unsecured, making them easy targets.

Such a process of influx and efflux in population does not have a positive effect. The town should consider implementing policies which accommodate not only the undergraduate population, but also the residents. The students, in turn, need to be more respectful toward the community in which they live, even if their presence is temporary.

"You know what the difference is between you and me? I make this look good." - Agent J

ARTS@DAILYCOLLEGIAN.COM

"Dread and Alive" is a series of comic books by Nicholas Da Silva that features a Jamaican superhero. It is accompanied by a reggae-driven soundtrack.

'Dread and Alive' is a find for comic fans

By Ellie Rulon-Miller
Collegian Staff

There's a new superhero in San Francisco, and his creator has some research to do if he wants his story to start making more sense.

Nicholas Da Silva is the creative mastermind behind the comic "Dread and Alive." The first installation of the series was published and released in February of 2010. According to the comic's website, Da Silva is the founder of a media agency called ZOOLOOK, which allows him to "[develop] intellectual properties that promote a multicultural experience." While "Dread and Alive" certainly melds together several cultures, it does so in a fairly inaccurate way.

To start, the back story of the comic is a little fuzzy. It is told on the website (www.dreadandlive.com) from the perspective of protagonist Drew McIntosh, who is from Kingston, Jamaica and speaks with a heavy accent in the comic (his character features the typical clichés of a Jamaican superhero). However, in his online narration, he speaks like an entirely different person. For whatever reason, Drew is unable to correctly form many complete sentences in the comic, but conveys his story with perfect clarity online. It's a major disconnect; there is a difference between giving a character a heavy accent and using that accent as the reason for his inability to speak correctly.

Drew's story as it relates to the story arc of the "Dread and Alive" series begins when he is a child, moving from Kingston to Accompong, where his father is doing anthropological work. In the comic as well as in reality, Accompong is the home of the Jamaican Maroons, descendants of runaway slaves who settled in the area in the 1600s. Drew's father is a descendant of these people and moves his family to the village so he can work to preserve the culture.

In the comic, the Jamaican Maroons are led by Cudjoe. There are two inaccuracies which stem from this character. The first is that Cudjoe actually was the leader of the Maroons in the 1700s, rather than modern times. He is depicted in clearly factually-inaccurate way, wearing almost nothing aside from the skin and head of a lion. Note to the author: Lions do not exist outside of zoos in Jamaica.

Drew's backstory indicates that while living in Accompong with his parents, he became very close with Cudjoe, who later gives him the responsibility of protecting an important relic. It is this very relic that gives him his superhero powers. Drew turns into a human-lion creature, with fangs, claws and a mane of dreadlocks. The end of his narrative on the website says, "My name is Drew McIntosh and I am the Roaring Lion, protector of the animal world, to which all humans belong."

While Cudjoe's lion headdress does not make much sense, Drew's lion's mane-like appearance does simply because the Maroons are African in origin (and the amulet he draws his powers from is a reflection of their former culture).

Drew's foes are those who commit injustices to animals – particularly one evildoer known as Gryphon. Gryphon illegally sneaks five major endangered animals – elephants, lions, et cetera – from Africa into the United States for rich sportsmen to hunt on a confined property. In this way, Drew is not unlike an adult, male, Rastafarian version of Eliza Thornberry. He works with his mother and his romantic interest, Brandy Savage, to protect animals and he uses his powers undercover for the same purpose.

The character of Drew is perhaps most interesting because of the melding of cultures and beliefs by which he was raised. His father was from Accompong, a culture which combines those of the various places the original runaway slaves came from with that of Jamaica and his mother is American. While there are some historical errors and anachronisms, his character is nicely crafted. Consequently, his power seems to make perfect sense in the world of the comic.

Because a lot of exposition was covered in the fourth issue of "Dread and Alive," things likely will start to get more exciting as the series goes on. Number four saw no action at all, but instead spent nine of its pages in a coffee shop discussion, introducing Gryphon and painting the picture for Drew's struggle to defeat him.

Despite the little problems in the back story of "Dread and Alive," the comic has the potential to pick up a lot of speed in coming issues. The scene has been set, and as long as there are injustices being committed against animals, Drew McIntosh will always have evil to squash. There are more aspects of his character to be explored and different avenues to take in telling about them – perhaps Drew's relationship with Brandy Savage will be more of a focus, or the story behind Gryphon and his animal smuggling will grow more complex.

"Dread and Alive" also has an accompanying soundtrack available. It contains primarily reggae and dancehall music, and along with the comic series, is available online at dreadandalive.com.

Road trip rules for all excited college students

By Ellie Rulon-Miller
Collegian Staff

It may be time to buckle down for a new semester yet again, but Spring Break 2011 is less than two months away. Not everyone can make it to sunny Cancun for the famed and highly-televised MTV Spring Break Experience, but that doesn't mean there isn't any hope for a classic, memorable vacation. The only things that are really needed to create your own truly awesome trip are four wheels, a budget and a friend – but before hitting the road there are a few things that must be considered to avoid screwing up your plans.

Funds

The budget for any vacation will be the deciding factor on every single thing that happens during the trip. It's important to set a budget before leaving to avoid over-drafting and winding up stuck in the middle of nowhere. Set a budget for gas to determine exactly how far away you can go, and be sure to account for food and lodgings if you don't have anyone to crash with along the way. A useful website to use for budgeting a trip (and for choosing a destination based on distance) is tripbase.com, which allows you to plug in the number of travelers you have, each person's budget, and even how many hours you wish to drive. It gives you a list of potential destinations based on what you have to work with and even gives suggestions for things to do in each location.

Weather

Spring Break is roughly one week long. Most weather reporting websites offer a 10-day forecast which should be looked at for each destination along the way. The month of March typically shows a temperature increase, but it also maintains the potential for winter storms. Should a storm be approaching, it may be a good idea to choose a different place to visit.

Packing

Packing light is a crucial move, especially with a crowded car. Forcing everything but the kitchen sink into the trunk is not only frivolous and stupid – it also weighs down the car, which actually affects its gas mileage. Aside from the standard carry-ons, pack a camera of some sort. Photojojo.com sells a number of affordable, pocket-sized cameras in both film and digital models, including a digital camera in the form of a keychain. A good road trip begs for evidence that it ever happened and a lot of the cameras for sale at Photojojo add an optional nostalgic tinge to their photos.

In addition to regular toiletries, a box of baby wipes can be extremely useful to freshen up with, especially after a day behind the wheel with no shower in sight.

Lodgings

Unless you have family or friends willing to offer up their sofa for a night or two during your trip, it's crucial to find a place to stay. Perhaps the easiest way to find cheap hotels is to do a Google search of the word "hotels" and the zip code of the place you're visiting. If the trip includes a visit to a major city, a hotel just outside its perimeter will typically be much cheaper than one within city limits.

Transportation

Because car repairs are always pricey, it's imperative that your vehicle doesn't break down in the middle of the trip. Prior to departure, bring it to a trustworthy garage for a check-up. Key word: Trustworthy. Ask your parents or a friend so you don't get overcharged or ripped off for any work needed. If it's been a while, an oil change may be a good idea. Anything can go wrong with a car on a long trip, but the chances are much slimmer if you take good care of it. A mechanic will know better than you if it will survive a long drive. If the car isn't exactly new or is in questionable shape, don't be afraid to be straightforward with the mechanic: "Will this car be able to make it this far and then back again?" After dealing with the logistics of planning a trip, it's time to have some fun.

Along the Way

A lot of the fun of a road trip lies in the process of getting to the final destination. Unplanned stops can be made along the way, playlists can be created on an iPod to enhance the driving experience and there is always even the chance of stumbling upon an obscure roadside attraction. It is possible to plan these little stops, though, using websites such as roadsideamerica.com. Search for the towns and cities along the route you're taking and it will provide side trips to take within a certain mile-wide radius.

Food

The famed experiences of Adam Richman on the Travel Channel's "Man v. Food" have given travelers a whole new reason to hit the road. Some plan entire trips around the destinations on the show. While it is not necessary to see every restaurant Richman has devoured copious amounts of calories at, good food has the ability to make a road trip perfect (whether it means stopping at a random diner on the highway and stumbling upon the greatest cheese fries on the planet, or splurging at a high-end place).

With a few simple pointers in mind, having the perfect, most memorable road trip is a breeze. Buckle up, drive safe and get going.

Swans releases best of 2010

By Mark Schiffer
Collegian Staff

The 2010 release "My Father Will Guide Me Up a Rope to the Sky," by catharsis-rock pioneers Swans begins with the harshly beautiful sound of chimes segueing into the ever-reliable pounding guitars of old; horns blow and cymbals ride. Frontman M. Gira certainly takes his time bringing his vocals into the album opener "No Words/No Thoughts," but the instrumental introduction provided by the first four minutes of the new album perfectly re-introduces listeners to the legendary band that has been on hiatus since their last tour in 1997.

M. Gira has had a busy 15 or so years since Swans broke up. With the formation of Young God Records, the personal overseeing of all things Devendra Banhart-related, and his "side-project" The Angels of Light, one would expect some kind of dip in quality in some respect. But one of the curious, wonderful things about this ever-engaging performer is that every piece of music he has put out or been somehow involved in has managed to feel at least partially like a part of his personal vision. This vision has stretched back to the 1982 formation of Swans and includes such themes and emotions as religious exaltation, lust, depression and joy. These are always extremes, at both ends of the spectrum. Consequently it is no surprise that with the return of Swans, we see a fantastic continuation of the man's poetry of despair and catharsis.

Fans of this band may note that the name Jarboe has not been mentioned yet. Unfortunately, Jarboe, the female singer-songwriter who has contributed her talents to previous albums by this band, did not rejoin Swans. Whether this is for the better or worse is not up for discussion. Certainly her past contributions have been essential parts of the albums she's worked on, but with "My Father Will Guide Me Up a Rope to the Sky," her presence is not especially missed.

With this work, Swans may have released simultaneously their most diverse and focused album yet. The album runs for barely 45 minutes, which is a bit surprising when one considers that the last studio release by the band "Soundtracks for the Blind" runs for over two hours. And yet, "My Father..." still manages to contain some of the most compromising and bizarre sounds they have produced.

Admittedly, some of the band's more abrasive tendencies have been reigned in. It is unlikely that the days of onstage nudity and endless industrial rants will ever return. But, with the new sounds the band is exploring, one can hardly accuse them of repeating themselves. The mandolin-led swirl of "You F*cking People Make Me Sick," featuring guest vocals from Devendra Banhart and M. Gira's 3-year-old daughter feels as much at home on this album and in the canon of this band's work as the pounding blues-based sound of "Jim," which was previously released on M. Gira's solo album "I Am Not Insane."

Despite the fact that this album easily has received the most critical acclaim the band has yet received, Swans will likely continue to keep their status as cult act. There is nothing wrong with this, and family man M. Gira is unlikely to be looking for much more at this point. With this release, he will garner a whole new generation of fans. The stylistic shift the album presents fits in with the musical arc of the band thus far, and new listeners would be well-advised to explore the rest of their discography. With the lack of Jarboe, fans of the band's previous work may be a bit hesitant. But don't be silly: Swans are back; every bit as angry, joyful and cathartic as they were before.

Mark Schiffer can be reached at mschiffe@student.umass.edu.

For college students in search of an exciting spring, try a road trip. All you need are some friends, a car, and the money necessary to pay for lodging and food. The rest is up to chance, although you would be smart to plan your trip carefully.

Minutemen compete despite travel issues

M HOOPS from page 8

post and he can make a play for them," Kellogg said. "We're going to have to do something to maybe double-team him, maybe play some zone to make it a little more difficult for him to dominate the game."

Nicholson, however, won't be the only player UMass will have to worry about making an impact in the contest. Junior guard Michael Davenport will bring his 13.4-scoring average and pesky perimeter defense (1.4 steal per game).

In the last meeting between the Minutemen and Bonnies, Davenport recorded his first career double-double with 26 points and 10 rebounds, while Nicholson also scored 26 to help SBU win, 70-69.

This time around, Kellogg will look for his team to do a better job defensively on both players, but that doesn't mean the rest of the Bonnies aren't capable.

"They're starting five at one point was averaging all in double digits and all 40 minutes per game," Kellogg said. "They've had a few kids come off the bench to make some plays for them that have been, I guess a pleasant surprise if your coach Smith."

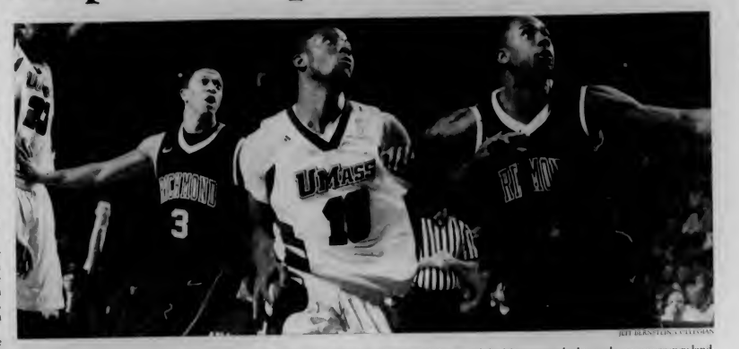
This season, SBU opened up A-10 play with a win over Charlotte at home before dropping three consecutive conference games to Temple, Rhode Island and Xavier.

"Let's not forget their losses have been by one at [Rhode Island], which they should have won the game," Kellogg said. "They lost to Temple and to Xavier, so they're losses have come to the heavy weights in the conference."

The Bonnies did, however, far better against the Musketeers than the Minutemen. St. Bonaventure dropped the matchup, 79-65, a 14-point margin, on the road, while UMass was handled by a score of 79-50.

Tip-off for the game will be tonight at 7 p.m. at the Reilly Center.

Jay Asser can be reached at jasser@student.umass.edu.



Guard Javorn Farrell prepares to box out against Richmond on Saturday. Farrell and the rest of the Minutemen had to make an emergency landing during their flight to Olean, N.Y., as there was smoke in the cockpit, according to UMass Media Relations spokesperson Jason Yellin.

Guard Javorn Farrell dribbles the ball against Richmond on Saturday. The offensive side of the Maroon and White have had issues putting away second-chance opportunities.

Kellogg calls for more time in the gym before playing games

GYM from page 8

nabbed 35 rebounds, which is slightly above the Bonnies' average allowed. Furthermore, UMass was one rebound shy of having as many offensively as they did defensively (18-17).

"You have to offensive rebound against [Richmond's] matchup zone," Kellogg said on the Men's Basketball Radio Show.

The offensive rebounds did not seem to work though, as the team suffered from a 23-for-61 shooting throughout the game.

Other than its rebounding skill, SBU recently shut down George Washington with high defensive stops, holding the Colonials (10-9, 3-2 A-10) to 49 points. The lowest total UMass had conjured this far in the season was 55 in its win against Dayton.

Kellogg isn't hiding from these numbers either.

Right after the Richmond game, he acknowledged that his team needs to put away second-chance opportunities.

"We've had a couple occasions, even in the last couple of games, where we're just missing too many easy baskets," Kellogg said.

Extra Time for UMass

With rebounding and low-post moves becoming a focus for the Minutemen, Kellogg is calling for his team to spend some more time in the gym.

"I think you just have to stay on course, push the guys, get them in the gym and get them working," Kellogg said. "Some of it is confidence. Freddie had gotten into the gym before Charlotte on a consistent basis, getting extra shots up."

The 19-point victory against the 49ers showcased Riley putting on an offensive clinic, as he scored 18 points to lead the team. Riley's total was one point ahead of usual top-scorer Anthony Gurley (17 points).

Gurley is a player that Kellogg cites as being the role model for the rest of the team, however, when it comes to extra time spent in the gym.

"He's a guy in there working at his game," Kellogg said. With Gurley headlining the scoring against the Spiders (30 points), the Springfield-native coach explained that if the entire team gets into the gym and puts in the extra hours, Gurley's totals may change.

"If we can get a group of guys that are going into the gym and working, I think you'll see more balanced scoring on our team," Kellogg.

"I respect their time, we're not in the gym 180-hours-a-day," Kellogg continued. "If you want to be a player, you have to get in and do some individual work."

Herb Scribner can be reached at hscribne@student.umass.edu.

Duke keeps winning

By Stephen Sellner
Collegian Staff

The Duke women's basketball team is at it again as the Lady Blue Devils stand at 19-0, holding a No.3 spot in the Associated Press' Top 25 poll.

Senior Jasmine Thomas and the rest of the squad appear poised for another deep run into the postseason tournament, standing as the lone remaining unbeaten team in the nation.

Nothing has come easy for Duke. Wins over Top 25 teams No. 6 Texas A&M, No. 7 Xavier, No. 14 Maryland, No. 17 Kentucky and No. 21 Florida State served as tests to the toughness and resiliency of the Lady Blue Devils.

In a heated ACC showdown, the Lady Wolfpack gave Duke everything it could handle.

Facing a 20-point deficit, having never trailed by more than four at halftime, the Lady Blue Devils strung together a comeback. Freshman Chelsea Gray's layup with 12 seconds remaining capped the comeback, keeping the undefeated season alive.

Duke takes on Atlantic Coast Conference foe Clemson on Wednesday and travels north on Monday for a clash with No. 2 Connecticut.

W.Hoops Top 25

UConn still a force

The winning streak may be gone, but UConn is not letting that disrupt its run at another national championship.

The Lady Huskies are 18-1 and hold the No. 2 spot in the AP Top 25 behind Baylor.

Since the record 90-game winning streak was snapped at Stanford on Dec. 30, UConn has reeled off six-straight wins, proving that its first loss since April 2008 will not deter its quest at another national title.

During their new streak, the Lady Huskies have won by an average of 25 points per contest.

Maya Moore continues to have a strong season, receiving Big East Player of the Week honors for the sixth time this season. The senior averaged 27 points, 10.5 rebounds and three assists per game in wins over North Carolina and Pittsburgh.

Meanwhile, Bria Hartley was chosen as the Big East Freshman of the Week for the fifth time in her rookie season. The North Babylon, N.Y.-native averaged 12 points, four rebounds and six assists per contest during the week, including a career-high eight assists in UConn's beat down of the Lady Tarheels.

The Lady Huskies face road tests at Rutgers on Wednesday and Cincinnati on Saturday before hosting No. 3 Duke on Monday in an epic showdown on top title contenders.

Baylor First Again

Brittney Griner and the Baylor Bears sit atop the rankings for the fourth consecutive week, ahead of UConn, Duke, Stanford and Tennessee.

The Bears (18-1) handled Big 12 opponents Kansas and Texas Tech to stretch their winning streak to 15 games.

Stanford (16-2) and Tennessee (19-2) also had undefeated weeks. The Cardinals had no problem taking care of UCLA and Southern California, while the Lady Volunteers emerged victorious in two Southeastern Conference road tests at Auburn and South Carolina.

Texas A&M (17-1), Xavier (16-2), West Virginia (19-1), Notre Dame (17-4) and Michigan State (18-2) complete the top 10 teams in the nation. The Fighting Irish and Spartans jumped from 11 and 12, respectively, over UCLA and UNC.

The Bruins (16-2) dropped three spots to No. 11, followed by DePaul (19-2), Oklahoma (15-3) and Maryland (16-3). The Tar Heels (17-3) dropped five spots to No. 15 after falling to Maryland, 88-65, on Sunday.

Miami (FL) finds itself at No. 16, posting an 18-1 record to start off the 2011 season. Kentucky (15-4), Iowa (15-4), Georgetown (15-5) and Georgia (16-3) finish off the top 20.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Duke celebrates against North Carolina State earlier this season. The Lady Blue Devils remain the only undefeated team, and are ranked No. 3 in the Associated Press poll behind UConn and Baylor.

Minutemen land at Bonnies on Wednesday

Atlantic 10 competition continues against SBU

By Jay Asser
Collegian Staff

The schedule doesn't get any easier for the Massachusetts men's basketball team as they get set to take on another formidable Atlantic 10 opponent in Saint Bonaventure on the road tonight after an emergency exit delayed its arrival to SBU.

Despite dropping its last conference matchup to Richmond at the Mullins Center, UMass (11-7, 3-2 A-10) is sitting in a tie for third place in the A-10 standings with four other teams. After defeating Charlotte last week, the Minutemen will look to make it two straight road conference victories for the first time in coach Derek Kellogg's time at UMass when it faces the Bonnies (10-8, 2-3 A-10).

While the Minutemen have a big-time scorer in senior Anthony Gurley, SBU has its own impact player in Andrew Nicholson. The junior forward is averaging 20.1 points per game this season, which sandwiches him between Gurley and the A-10's leading scorer, Tu Holloway of Xavier.

Nicholson's talent is not lost on Kellogg, who knows his team will have a difficult task on defense.

"He's one of the better big guys I've seen, not only in our conference, but maybe on a national level for juniors," Kellogg said in his weekly radio show. "If he catches the ball in a tight position, he's almost impossible to stop."

Not only is Nicholson a scoring threat, but he commands attention in the low post as witnessed by his 7.4 rebounds per game and near 55 percent field goal percentage, good for third in the conference.

Nicholson's size could cause problems for the Minutemen, who have had difficulties in defending scoring big men this season. To counter, Kellogg admitted he might have to switch to a zone defense or throw double teams at Nicholson.

"He gives them a weapon that not a lot of teams in the conference have – a guy that pretty much every time down they're looking to throw the ball into the

Guard Anthony Gurley takes a shot against Richmond last Saturday. Gurley led the Minutemen with 30 points as the rest of the side struggled to put back second-chance opportunities.

2nd–chance attempts hurt team against UR

By Herb Scribner
Collegian Staff

On Jan. 22 at the Mullins Center, the Massachusetts men's basketball team had a slew of chances to put away easy points and continue to pressure Atlantic 10-rival Richmond.

These chances were ill-fated, however, as the ball either bounced off of the rim, off of the backboard or just completely fell out of the hands whichever Minuteman tried to put it away for points.

Following the 84-68 loss to the Spiders, the Minutemen (11-7, 3-2 A-10) displayed a bit of regret towards not being able to put away these easy points.

"We missed a couple layups … from where we are as a team we can't have those mistakes," UMass coach Derek Kellogg said.

Right out of the gate, UMass displayed a preview of the missed shots to come later in the game, as Sean Carter missed a relatively easy layup following a back-in, post play. Three out of the first four Minutemen possessions against the Spiders (15-5, 4-1 A-10) resulted in missed layup opportunities.

"We felt like we didn't do a lot of things we should have done offensively," Javorn Farrell said after the game.

Farrell and the rest of the UMass lineup head to Saint Bonaventure on Wednesday night for a game that'll put the Maroon and White against a Bonnies side that knows how to rebound the ball successfully and not allow easy second-chance points.

SBU (10-8, 2-3 A-10) sits fourth in the A-10 in rebounding defense, with Andrew Nicholson leading the charge. Nicholson stands as the third-best defensive rebounder in the conference with 108 (six per-game).

Additionally, the Bonnies rank second in the conference in rebounding margin, as they total 36.8 rebounds a game and allow 33.3 rebounds by their opponents.

Against the Spiders on Saturday, the Minutemen

Struggling offense prepares for A–10 foe, undefeated Temple

By David Martin
Collegian Staff

The Massachusetts women's basketball team will look to climb back up in the Atlantic 10 on Wednesday evening against a Temple team that has yet to lose against a conference opponent.

The Minutewomen (6-14, 2-3 A-10) hope to regain their footing after suffering a heartbreaking 72-68 loss to Saint Joseph's, a game in which they led 45-38 at the end of the first half.

"We outplayed a great team for 39 minutes," UMass coach Sharon Dawley said. "We had 19 turnovers, and with the timing of some of them, it felt like we had 30. We had a great effort, we competed and now we just have to learn how to finish."

That, however, is just one of several keys that they have to utilize in order to defeat a roaring hot TU squad.

The Owls (13-6, 4-0 A-10) are perfect against conference opponents and are competing well on their six-game win streak, in which they have won by margins of over 40 points in two consecutive games. In those two games, TU beat Rhode Island, 81-34, and Fordham, 71-28, respectively.

In addition to a sparkling 7-1 home performance, TU boasts a 7-6 road record. A top road record is often the difference maker as to whether or not a team will advance to postseason play.

Dawley explained that to be successful against such a tough offensive squad, the Maroon and White are going to need to start strong right out of the gate, keep the game close throughout and dig deep in the final minutes of the game.

Luckily, the team will not be walking on the court unprepared.

"Our biggest strength going into this game is the good performance we had getting here," Dawley said. "That and the fact that we are at home really gives us confidence going up against a tough team."

Unfortunately, TU is a team that consistently brings a plethora of weapons that often leave opponents stumbling in their wake.

"[The Owls] are a very challenging and athletic team," Dawley said. "They always play great basketball and they bring a lot of maturity everywhere they go. Great teams do it on the road, and they're one of them."

The biggest key to the Minutewomen's game plan is to contain the Owls' scoring bursts will undoubtedly lie in their defense.

"We can't be lax, or else they'll roll all over us," Dawley said. "We have to stand strong, have the ability to play and the ability to change on the fly."

Another point that Dawley brought to light is that the team has to be able to limit their misplays.

"Every team is going to make mistakes, but they can't be all in a row," Dawley said. "We can't be dry offensively like we were in that stretch against Saint Joseph's."

In addition to the team's resilience, their veteran leadership helps make for great attitudes across the board.

And it's exactly those attitudes that lead to the team's strong sense of confidence and hope that they will carry throughout the remainder of the season.

Dave Martin can be reached at dmmartin@student.umass.edu.

UMass searches for consistent play despite recent outcomes

Stephanie Lawrence drives to the hoop against Saint Louis. Lawrence and the rest of the Minutewomen look to build off their return to the Mullins Center this weekend against Temple.

By Michael Wood
Collegian Staff

There has been one fundamental problem plaguing the Massachusetts women's basketball team in games that it has lost.

Unfortunately, it is something that is difficult to play through and even harder to fix.

The Minutewomen (6-14, 2-3 Atlantic 10) do not play well during the crucial times in the game that matter most, and in close games they seem to lack the consistency needed to take a lead and close out a game.

"You're going to make mistakes, everybody does," UMass coach Sharon Dawley said. "Our problem at Saint Joe's was that we had a lead and we came out in the second half and had about six dry trips [down the floor]."

"If you can come down and score on two of those six, pretty much you hide your sins from earlier in the game," Dawley added.

One of, if not the most important time in a game, is the opening minutes and for UMass, getting off to a fast start. When it's not able to do that, the team struggles and fails to assert itself and falls behind early in the contest.

In a game against Richmond earlier in the season, the Minutewomen didn't score a basket until four minutes into play, and were down, 23-4, after seven minutes. The team didn't reach double-digits in points until midway through the first half. They went on to lose that game by almost 30 points.

Compare that to a game against Brown, where UMass came out and led, 14-2, after five minute and it's easy to see the effect a quick start has on this team. The Minutewomen won that game, defeating the Brown Bears, 78-55.

"We've had that problem of coming out of the gate a little slow," Dawley said. "I think we've remedied that now. We've come out of the gate a little better in the last few games and hopefully we've solved that problem. And if we've remedied the start of the game, now we have to remedy the end of the game."

Last weekend against Saint Joseph's, the Minutewomen demonstrated their other major flaw. They were ahead with less than two minutes left in the game, but bad defense lead to an easy shot and a one-point lead for the Hawks. Three foul shots later, the game was entered into the loss column on UMass' schedule.

In every game there are moments which define what the outcome will be. A simple turnover or bad foul at one of these times can change how a game finishes. Those final seconds of play were the most important of the game and unfortunately for the Maroon and White, they were not quite able to gain the upper hand.

"Sometimes we push it too hard," Dawley said. "And when we make a mistake we try too hard after to make up for that mistake and we end up worsening things and not letting the game come to us so we can close it out."

While they are not tallying many wins, Dawley and her players believe they will compete at the end of the regular season schedule and take some late momentum into the A-10 conference tournament.

"I hate to go back and look at things that way," Dawley said. "If we don't have [Jasmine Watson's] injury, some foul trouble and some minor things, we're probably looking at 12 wins instead of six wins."

Michael Wood can be reached at mcwood@student.umass.edu.

Guard Dee Montgomery battles to the rim against Saint Louis. Along with Montgomery, the rest of the Minutewomen offense has failed to find consistency through the first 20 games of the season.

UMass develop program to direct the blind

By Michelle Altman
Collegian Staff

University of Massachusetts Professor Aura Ganz is perfecting a program to advance the visually impaired's quality of life.

Ganz's new technology will provide a blind person with audio directions to destinations via a Bluetooth headset. The audio directions will begin as a blind person enters an unfamiliar building.

"In total, I will have received a total of $400,000 from the National Eye Institute, which is part of the National Health Institute," said Ganz.

Professor Ganz said, "We place RFID devices in the environment. In addition to that we have kiosks, which also have RFID tags, raised letters and Braille to help the client."

According to Josh Pearson, a visually impaired UMass freshman, navigation is a difficult task for someone like him.

"The time you spend walking around aimlessly in a new building can be a waste. I believe that being able to travel self-sufficiently is important," he said

According to Professor Ganz, PERCEPT would work as followed: "Let's say a blind person comes into the building, and they are trying to find room 302. The person knows that's on the third floor. One of the things he punches in at the [PERCEPT] kiosk is the [buttons for] third floor. The system knows this person wants to go to the third floor, and [the device] will lead [the person] to the elevator," she said.

"If someone gets lost, an RFID tag will guide them in the right direction," she continued. "All of our electronics are embedded in a glove," Ganz said. "The front part of the glove is open, so the blind person can use their touch senses and the back part of the glove is where our electronics are [located]."

"Once the person touches the kiosk, the information entered is conveyed to the glove, then [the information] goes from the glove to the Smartphone, and from the phone to the system, where auditory directions are given from the system to the phone," Ganz said.

"Sometimes I will work with a friend, or an ONM (Orientation and Mobility Specialist), who is contracted by myself through the state agency for the blind, Mass Commission for the Blind and they'll use a map to map out the route with me," said Pearson. "We'll practice it, and I have to orient the dog that way too. Usually by the second or third walk through I've got it."

Although the project, which started in October of 2010, is working out its final kinks, Ganz said that the project cannot be completed without people to test the results.

"Now we have the findings to carry this [program] out with human subjects. We designed this program for a specific population, and if we don't have their feedback it won't work," she said.

According to Pearson, the project could be beneficial to many in his situation.

"PERCEPT would be helpful in any kind of building, say airports or banks, because a dog can only do so much. If you don't know where you're going, your dog isn't going to know where you're going," Pearson said.

See BLIND on page 2

Once completed, RFID kiosks will be implemented in various buildings around the campus, allowing the visually impared to acquire vocal directions to their destinations.

PVAC forces join to improve quality of health in Springfield

Through grant money and various other resources, efforts from the Pioneer Valley Asthma Coalition will be made to fight against potential threats against the environment in Springfield, Mass.

By Katie Landeck
Collegian Staff

Springfield is a far cry from being the healthiest environment in America, with an air quality rating of "C" from the American Lung Association and an asthma rate twice the state average.

Kathleen Szegda, director of the Pioneer Valley Asthma Coalition, is starting to make changes through "Healthy Environment, Healthy Springfield." The project is a collaborative effort between several Springfield organizations and schools, as well as the University of Massachusetts to address and fix environmental risks in the area.

The project is funded through an $84,700 Community Action for a Renewed Environment (CARE) grant awarded by the Environmental Protection Agency (EPA) on Jan. 20. According to the website, these grants are given to local and non-profit organizations and are designed to "complement national regulatory approaches and meet community needs."

Szegda, the principal investigator of the project, was "excited" to receive the grant. "This is a great opportunity for organizations in Springfield to come together," she said

The purpose of the grant is to address environmental risk factors, such as toxins, and bring awareness of them to the community. Some of the specific factors to be examined include air pollution, indoor air quality, lead, hazardous waste, pesticides and drinking water.

The grant also pays for UMass public health students to acquire data on environmental toxins in Springfield.

The project will follow the EPA's "10-step Road Map." At the end of the process, community members will discuss and rank the environmental risk factors in order of importance, and develop an action plan. In order to implement these plans, Springfield will have to file for another competitive grant. The project is expected to take two years.

Mike Muilenberg, a UMass senior research fellow in public health explained, "one key part of the program is the organization of community forums to educate the communities within Springfield about the CARE program, help them understand some of the risks of exposure to environmental toxins in their community, and also to enable the community to have input and final say in the ranking of importance of these risks."

According to a UMass news release, Mulienberg and Christine Rogers, leader of the UMass efforts and assistant professor of environmental health science, will be gathering data on air pollutants such as sulfur dioxide, nitrogen dioxide, carbon monoxide, ozone and particulates, plus water and soil pollutants such as arsenic, and contaminated brownfields as well as residential health risks such as lead paint, tobacco smoke and mold.

"We will use government databases and research studies, among other sources to compile the data," Muilenberg said.

They will also be working with students from Aurora Kushner's 10th grade science class from the Springfield Renaissance High School. There has been continued communication between these two groups that will culminate in the spring.

"In the spring, several of my honors students will work with UMass graduate students and help with collecting data," Kushner said.

The students will also be helping to raise awareness in the community. According to Kushner, they will be hosting a Community Awareness Fair about environmental toxins on Feb. 10.

One of the main topics that will be discussed at the fair as well as during discussions about the grant is asthma. According to Szegda, approximately 20 percent of Springfield children have asthma, which is about twice as high as it is in the rest of the state. In addition,

Student debt increasing

By R.P. Hitt
Collegian Staff

Ben Taylor, a University of Massachusetts senior, faces the grim reality of having to pay back over $30 thousand in debt after graduation. He, like many other soon-to-be college graduates, not only face mounting debt, but an increasingly competitive job market.

Taylor, an intern for Public Higher Education of Massachusetts (PHENOM) and political science major, feels "anxious" thinking about having to pay off his mounting debt.

"The average student debt burden is over $20 thousand," said Taylor, "with outliers of $50 thousand."

The economic crisis hit public education hard. Faced with balancing state budgets, lawmakers of many states dialed back on funding for public higher education to the chagrin of many in the higher education system.

The aftermath of the recession was somewhat softened by funding from the American Recovery and Reinvestment Act of 2009, which has saved UMass in recent years from having to drastically increase fees.

UMass administrators discuss the need to increase revenue while consolidating departments to cut costs. However, with cut-off of stimulus money from the federal government in FY11 UMass faces another possible hike in fees.

University spokesperson Ed Blaguszewski asserted that the administration is making a concerted effort to raise revenue and has no plans as of yet to increase student fees. However, Blaguszewski did not rule out any fee hikes in the future.

"Any decision on increasing fees is made at the Board of Trustees in Boston," Blaguszewski said.

Blaguszewski said the UMass Trustees would draw-up the budget in spring after the state legislature creates its budget for the Commonwealth.

"[There is] no one solution in terms of meeting a budget gap, but we'll look to be as efficient as possible to run the University everyday," Blaguszewski said.

The spokesperson outlined several strategies the University has taken to increase revenue including; recruiting out-of-state students and research ventures that create patents.

However, some feel it should be the mission of the University to put more focus on recruiting middle and lower class students from Massachusetts.

Actively recruiting out-of-state students to Ben Taylor is "abandoning the core idea of public colleges," which he believes to be serving those in lower income brackets gain a quality education at a reasonable price.

Ferd Wulkan, PHENOM organizer of Western Mass., described the tendency of universities to recruit more out-of-state students as a "circular firing squad."

"This funding crisis could turn into a debt crisis," said Wulkan, "and [like the housing market] the next bubble to burst."

Auerbach talks balance at UMass lecture

BY ASHLEY BERGER
COLLEGIAN STAFF

On Jan. 25, Commonwealth College students filled the Student Union Ballroom to attend the latest installment in the "Ideas that Changed the World" Faculty Lecture Series.

The seminar, entitled "Seeing the Light in the 21st Century: R U Still in Plato's Cave," featured Scott Auerbach, a professor in both the chemistry and chemical engineering department.

Auerbach graduated in 1988 from Georgetown University and then went on to gain his doctoral degree from the University of California at Berkeley. He opened his talk by asking the audience to form teams of two so they could ask each other questions about the lecture before it began.

After a brief chatter from the audience, Auerbach countered with what questions he thought the audience may ask. Some of these included "What is the cave?," "Why the U is in the title of the lecture?," and for students required to be in attendance for a class "How do I get an A?"

After showing the clip "Plato's Cave," Auerbach delved into the main point of his lecture. "We think we are hearing the real thing, we are only hearing echos, we are only seeing shadows," stated the speaker in response to the mini-film.

The audience consisted of mostly Commonwealth College students and professors, and Auerbach considered this by giving a brief history behind the story of the cave. The allegory of the cave is a classic piece from Plato's "Republic." The allegory tells the story of prisoners chained in a cave, lit by fire. The prisoners are facing the opposite wall, so the only thing they are able to see is the shadows that dance on the wall in front of them. One prisoner is set free and is excited to share the tales of the outside, sunlit world, yet his fellow prisoners do not understand what he is saying because they have not experienced it for themselves. The topics illustrated in the allegory include being shackled, and then having the ability to find true light. Auerbach entertained and intertwined these throughout his discussions.

By writing and teaching the themes in "The Republic," Plato was interested in inspiring the youth, which Auerbach related to modern university study. "He wanted to find someone interested in mathematics, astronomy and philosophy. He was talking to the current generation of Commonwealth College students," said Auerbach, which elicited laughter from the packed ballroom.

Auerbach continued to make pop culture references, framing movies such as "The Matrix" and "Tommy" as parallels to the allegory of the cave.

The second half of Auerbach's lecture focused namely on the

With stimulus funding cut, the University may have to resort to more drastic measures, including increasing student fees.

DEBT from page 1

According to an article in The Valley Advocate entitled "Killer Loans," the total debt for 2010 topped $800 billion.

"The size of student loans has been ballooning," said Taylor. "[A] solution is student activism with students, faculty and staff putting pressure on the state [to increase funding to public higher education.]"

Taylor said most of the money to cover the operating cost for UMass should be coming from the Commonwealth. This added revenue would potentially make public higher education more affordable and accessible to individuals lower on the income bracket.

Study shows students aren't thinking critically

BY SARA RIMER
THE HECHINGER REPORT (MCT)

NEW YORK — An unprecedented study that followed several thousand undergraduates through four years of college found that large numbers didn't learn the critical thinking, complex reasoning and written communication skills that are widely assumed to be at the core of a college education.

Many of the students graduated without knowing how to sift fact from opinion, make a clear written argument or objectively review conflicting reports of a situation or event, according to New York University sociologist Richard Arum, lead author of the study. The students, for example, couldn't determine the cause of an increase in neighborhood crime or how best to respond without being swayed by emotional testimony and political spin.

Arum, whose book "Academically Adrift: Limited Learning on College Campuses" (University of Chicago Press) comes out this month, followed 2,322 traditional-age students from the fall of 2005 to the spring of 2009 and examined testing data and student surveys at a broad range of 24 U.S. colleges and universities, from the highly selective to the less selective.

Forty-five percent of students made no significant improvement in their critical thinking, reasoning or writing skills during the first two years of college, according to the study. After four years, 36 percent showed no significant gains in these so-called "higher order" thinking skills.

Combining the hours spent studying and in class, students devoted less than a fifth of their time each week to academic pursuits. By contrast, students spent 51 percent of their time or 85 hours a week socializing or in extracurricular activities.

The study also showed that students who studied alone made more significant gains in learning than those who studied in groups.

"I'm not surprised at the results," said Stephen G. Emerson, the president of Haverford College in Pennsylvania. "Our very best students don't study in groups. They might work in groups in lab projects. But when they study, they study by themselves." The study marks one of the first times a cohort of undergraduates has been followed over four years to examine whether they're learning specific skills. It provides a portrait of the complex set of factors, from the quality of secondary school preparation to the academic demands on campus, which determine learning. It comes amid President Barack Obama's call for more college graduates by 2020 and is likely to shine a spotlight on the quality of the education they receive.

"These findings are extremely valuable for those of us deeply concerned about the state of undergraduate learning and student intellectual engagement," said Brian D. Casey, the president of DePauw University in Greencastle, Ind. "They will surely shape discussions about curriculum and campus life for years to come."

Some educators note that a weakened economy and a need to work while in school may be partly responsible for the reduced focus on academics, while others caution against using the study to blame students for not applying themselves.

Howard Gardner, a professor at Harvard's Graduate School of Education known for his theory of multiple intelligences, said the study underscores the need for higher education to push students harder.

"No one concerned with education can be pleased with the findings of this study," Gardner said. "I think that higher education in general is not demanding enough of students. academics are simply of less importance than they were a generation ago."

But the solution, in Gardner's view, shouldn't be to introduce high-stakes tests to measure learning in college, because "the cure is likely to be worse than the disease."

Arum concluded that while students at highly selective schools made more gains than those at less selective schools, there are even greater disparities within institutions.

"In all those 24 colleges and universities, you have pockets of kids that are working hard and learning at very high rates," Arum said. "There is this variation across colleges, but even greater variation within colleges in how much kids are applying themselves and learning."

For that reason, Arum added, he hopes his data will encourage colleges and universities to look within for ways to improve teaching and learning.

Arum co-authored the book with Josipa Roksa, an assistant professor of sociology at the University of Virginia. The study, conducted with Esther Cho, a researcher with the Social Science Research Council, showed that students learned more when asked to do more.

Students who majored in the traditional liberal arts – including the social sciences, humanities, natural sciences and mathematics – showed significantly greater gains over time than other students in critical thinking, complex reasoning and writing skills.

Students majoring in business, education, social work and communications showed the least gains in learning. However, the authors note that their findings don't preclude the possibility that such students "are developing subject-specific or occupationally relevant skills."

Greater gains in liberal arts subjects are at least partly the result of faculty requiring higher levels of reading and writing, as well as students spending more time studying, the study's authors found. Students who took courses heavy on both reading (more than 40 pages a week) and writing (more than 20 pages in a semester) showed higher rates of learning.

That's welcome news to liberal arts advocates.

"We do teach analytical reading and writing," said Ellen Fitzpatrick, a history professor at the University of New Hampshire.

The study used data from the Collegiate Learning Assessment, a 90-minute essay-type test that attempts to measure what liberal arts colleges teach and that more than 400 colleges and universities have used since 2002. The test is voluntary and includes real world problem-solving tasks, such as determining the cause of an airplane crash, that require reading and analyzing documents from newspaper articles to government reports.

The study's authors also found that large numbers of students didn't enroll in courses requiring substantial work. In a typical semester, a third of students took no courses with more than 40 pages of reading per week. Half didn't take a single course in which they wrote more than 20 pages over the semester.

The findings show that colleges need to be acutely aware of how instruction relates to the learning of critical-thinking and related skills, said Daniel J. Bradley, the president of Indiana State University and one of 71 college presidents who recently signed a pledge to improve student learning.

"We haven't spent enough time making sure we are indeed teaching and students are learning these skills," Bradley said.

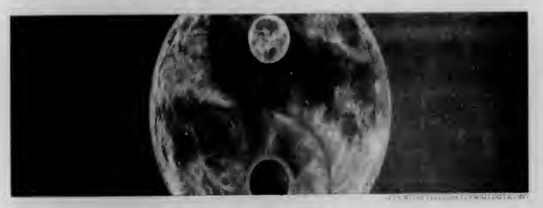
Christine Walker, a senior at DePauw who's also student body president, said the study doesn't reflect her own experience. She studies upwards of 30 hours a week and is confident she's learning plenty. Walker said she and her classmates are juggling multiple non-academic demands, including jobs, to help pay for their education and that in today's economy, top grades aren't enough.

"If you don't have a good resume," Walker said, "the fact that you can say, 'I wrote this really good paper that helped my critical thinking' is going to be irrelevant."

MARSHA GELIN/COLLEGIAN

Many graduates have been found to unable to think analytically and some believe schools are not teaching students properly.

ComCol learns about balance



Auerbach delved into the relationship between yin and yang, light and darkness and several other examples as a way to help the audience undertand the necessity for balance.

LECTURE from page 1

idea of balance, and the yin and yang. He argued science can trace its roots deep into the idea that faith, or the yin, and reason, the yang, are heavily intertwined. This relationship is therefore more meaningful because they can co-exist. This assertion, while perplexing to some of the science majors in attendance, came with further explanation by Auerbach, "In order to understand distinction you must first realize the connection between them," he said.

Following the discussion about balance, Auerbach further discussed the intrinsic need for human connection and asked the main question, "Does texting give authentic human connection?"

One audience member asked, "How do we define authentic human connection?"

Auerbach drew on the idea illustrated by author Robert M. Pirsig in his 1974 novel "Zen and the Art of Motorcycle Maintenance," saying "You know it when you feel it, and I think we have all felt it."

To answer his own question, Auerbach claimed texting is an inauthentic connection which therefore leads to obsessive texting in the modern world. Auerbach listed many different yin and yang type comparisons; white versus black, fire versus water, light versus dark, to name the obvious. The list also included word versus image and connection versus detachment. Auerbach said texting incorporates word and connection, but emphasized more of the word, than connection and therefore led to an imbalance between yin and yang.

Auerbach concluded his discussion saying that "If we seek balance, maybe humanity will get out of the cave. Each of us has the power to choose if there is true light, or a balance of the mind."

Following the discussion a professor of political science, Ray LaRaja, said "Even at home or with friends, Scott [Auerbach] is always challenging us to think in terms of yin and yang, and pulling from fields of science and philosophy. He lives his life this way, trying to find balance. It's impressive and inspiring."

A little taste of history

The University recently featured various Red Sox memorabilia of historical significance and value in the Curry Hicks Cage for students and other spectators to view.

Pioneer Valley Asthma Coalition fights for air

SPRINGFIELD from page 1

Springfield has some of the highest rates in the state for asthma hospitalizations.

This is part of what drew Muilenberg and others to the project. "We were all interested in helping asthmatics better deal with their disease through reduced exposure to asthma triggers and proper management through behavioral and medical means," Muilenberg said.

Muilenberg continued to explain why he thought this project was important to the community.

"Communities like Springfield, with a depressed economy and many minority and socioeconomically disadvantaged residents, often do not have the resources or information necessary to implement programs to reduce exposures to environmental toxins," Muilenberg said. "Through partnerships formed under the CART program, solutions for reducing these exposure risks can be implemented," he said.

Katie Landeck can be reached at klandeck@student.umass.edu.

COURTESY STUDENTLOANSONLINE.ORG

Muilenberg says areas of Springfield that are in economic hardships have several disadvantages and do not have the resources necessary to prevent exposure to harmful toxins.

Contentious curves create image concerns

Chelsea Whitton

Marilyn Monroe or Megan Fox? Christina Hendricks or Natalie Portman? No men, I'm not asking you, "who would you rather…?" But gals, what do these comparisons say to us? What body type would you work for? Endless legs and serious curves seem to be both shown off on the red carpet. We need to find a comfortable middle ground in the minds of young women.

If you are familiar with AMC's hit show "Mad Men," currently in between its forth and fifth season – would you rather be office siren Joan Harris played by real-life hottie Christina Hendricks or thin household ice queen Betty Francis (formerly Draper) played by the classic blonde beauty January Jones? Both of these characters fit the ideal for bodies in the early '60s, but are entirely different. We may not be teenage girls anymore, but image plays an undeniably profound role in the way we view ourselves and our world.

Media messages conflict and confuse when it comes to body image. There seems to be ,wo extremes in this country, bordering between unhealthy and unhealthy on the large and small of things. In December, French model Isabelle Caro died of anorexia after a 15-year battle with the illness. Most famous for her advertisement on an Italian billboard baring skin and bones for a frightening anti-anorexia campaign, Caro's death highlights the real dangers of anorexia.

The Massachusetts Eating Disorders Association reports 15 percent of women ages 17 to 24 have eating disorders and up to 40 percent of college females have experienced eating disorders.Middle ground for weight and image could become a safe haven for self-acceptance.

In a recent article published by the Boston Globe Lifestyle section last week. The article, "Body Building," by Christopher Muther, outlines the question of what body types are popular in today's world compared with old Hollywood's. The article speaks with psychotherapists, psychologists and nutritionists reporting a varied sample of what seems to be the sought after body type.

How are we to decide who we want to be and what we'd like to look like or what our natural self is supposed to look like if magazines are constantly handing out the latest tips and newest research and dieting trends?

Some suggest certain physique trends span over decades and then quickly change. In the '50s Marilyn Monroe's physique was considered insanely gorgeous and perfect – and it was natural. Today, the endless pictures of Megan Fox featured in Esquire Magazine, Men's Magazine and others is what seems to be the idyllic look. In my personal opinion, Fox is brainless and can't really hold a conversation or an intelligent sounding interview – so that doesn't really give me reason to want to look like her either. But photos of her dominate the media and women's perception of beauty.

Anyhow, back to my obsession with a time when things were perfect, outfits untouchable, hair perfectly curled and glasses were always filled with just the right amount of Scotch. The Globe article and the Golden Globes reassured me of one thing.

I'm not the only one with a fascination with the hit AMC show "Mad Men," the 1960s and Christina Hendricks' wardrobe. Hendricks, a Hollywood actress plays Joan Harris, a 1960s bombshell and office vixen with curves that make men question in the dialogue, "How does she not fall over?"

In real life, Hendricks' ideals of body type parallel that of what her character portrays on the show. Her curves are real and are staying. Hendricks has said of her figure in an interview with Esquire, "This is the way I'm built, and I feel beautiful. It's funny, because I don't feel like I look that different from anybody." Women should learn from this, and men, too. I know your all Google imaging Christina Hendricks as you read this.

Do we embrace curves signifying healthy not fat – hips and legs or do we narrow down at the University of Massachusetts recreation center? How are we to decide who we want to be and what we'd like to look like or what our natural self is supposed to look like if magazines are constantly handing out the latest tips and newest research and dieting trends? Cosmopolitan Magazine for instance gives tips on how to dress your body in the perfect dress, and then a link next to that online article will be one on how to lose two dress sizes in two weeks.

With the recent passing of the Golden Globes which encapsulates bedazzled stars, flawless figures, perfected makeup and everything else made to fit in a perfect frame – and the media focusing so much on it – I was left asking what is normal? How in our day-to-day jeans and sweater lifestyles are we to accept and love who we are when we are being told that Christina Hendricks' curves are nice and all – but January Jones has the better more typically lusted after body by the female gender.

In a 2009 interview with the modern day pinup Christina Hendricks, Esquire writer Ryan D'Agostino said, "Christina never thought that she would become the poster girl for...curvy girls." "When the attention started to be about my figure, I was surprised, because it wasn't something I was focused on. And then it became very positive, and people were saying very nice things," said Hendricks. Perhaps this is a turn of the decade change in ideals as mentioned in the Globe article. Perhaps it is true there isn't any particular mold you should fit.

However, to many women it seems possible the pressure for unattainable goals has lessened. "People have stopped trying to conform to something and just started to do the best they can," said Women's Health Editor-in-Chief Michele Promaulayko to The Boston Globe. "I think the desirable body type in Hollywood has broadened recently."

The article also reported "What I see is that people are less concerned with health, and more concerned about looking like the star of the moment," Cassetty says. "But in a way I think people are always emulating what they see in Hollywood and in magazines, and that's why you've seen these shifts in what's considered ideal. You never know what body part a client will fixate on next."

Do people now buy this new ideal that there isn't any particular ideal – or is the skinny blonde Paris Hilton type still secretly sought after? You make the decision. I've made mine. I'd rather look like Christina Hendricks and all her curvaceous glory than any other Hollywood actress in today's limelight. It's time to change with the decade – but this time we'll get rid of the ideals and to turn to individual realities.

Chelsea Whitton is a Collegian columnist and can be reached at cwhitton@student.umass.edu.

Dead white men

Will Syldor

Recently I've noticed just how white the walls of the Ivory Tower are. After the first week of this semester, I was left with a feeling of dread that took days to quell. For the past two years, I've taken classes primarily focused on oppression and interpersonal and institutional violence carried out in forms seen in our society, such as racism, heterosexism, sexism, classicism and ableism.

The works I've studied in these classes come from a range of authors from different genders, sexualities, education levels, abilities and races. What I've found is that the narratives of social issues are told through a particular pen of gender and race – dead white men.

We've read authors such as bell hooks, Leslie Marmon Silko, Andrea Smith, Ann Ferguson, Gloria Anzaldúa, Cherrie Moraga, James Baldwin and Winona LaDuke.It wasn't just the various identities of these authors, but more so the construction of their stories. Antonia I. Castañeda writes, "the issue is not simply one of exclusion versus inclusion, but rather one of construction."

The exclusion of the majority of the world is painfully obvious in most of these and other classrooms.

All of these authors construct narratives which in their foundations, take into account the experiences of people excluded from most dominant discourses; such as poor people, people of color, women and LGBT people.

Their lives are incorporated into these texts in a way that alters the dominant lens through which the world is usually perceived.

The majority of classrooms however, deem it fit to represent these populations using the narratives and lenses of the people oppressing them, or sharing very little connections in terms of life experiences. Most famously dead white men. Very rarely are these authors taught in full context as writings from flesh and blood human beings who have places of ignorance and are not intellectual deities, literary gods or superior beings.

The exclusion of the majority of the world is painfully obvious in most of these and other classrooms. I recently had a conversation with a professor of mine, who made the decision of creating a syllabus with all male authors, for a class focused on the diversity of American identity. This conversation complicated my perception of the curricular ordeal I am facing this semester, making it less bleak. So I thanked him for that.

I am grateful I was not simply ignored. We spoke about the writings of the men he chose to be in the syllabus. The material focuses on the issue of patriarchy and sexism and writers devoting large amounts of their lives in combating these systems.

We spoke of the texts of dead white men, the knowledge and experience that does lie in the lines they've written. We discussed feminist women authors also engaging with those authors. And though I left that conversation feeling satisfied, I wonder where this satisfaction came from, for I am also a man and an author who, if successful and remembered some time from now, will most likely be chosen over the texts of a woman author. I am a man who understands this world from a foundation rooted in patriarchy.

So this foundation probably made it easier to accept that the main authors in our class will be male. This probably made it easier to accept that next year, woman authors will be added, but unless in supplementary form, not this year. My internalized sexism probably made it easy to feel satisfied with that conclusion, yet I still feel an unease.

Essentially, we will be using texts written by men to speak of a system that has profoundly altered these men's sense of reality. My unease comes from a place where I feel, at least when talking about gender, there is something wrong with not placing at least some women writers at the center of our canon. Yet, once again, the issue is not just exclusion, but rather construction.

There was a study done a few months back, "proving" what is obvious to most who deal with constant prejudice against their identities. The study was built on years of research showing that people don't perform well in situations where they're subjected to negative stereotyping..

The issue isn't necessarily all men make up the syllabus, but more so that our male professor did not feel it necessary to voice this during our first class; to explain himself, to let people know that this was intentional, as he stated in his reply to my e-mail of inquiry and our conversation. He stated that he will do this though, introducing a space for critical interrogation that would not have to be pried open by students.

Where we are now is a place of crisis. Groups raising the cry of reverse discrimination are gaining speed and popularity alongside the growth of discriminatory policies, practices and events. This signifies a growing chasm between realities.

I am not asking that every curriculum becomes revolutionary. Ultimately, I demand it. Yet now, rather, I ask that academics be at least academically honest, and that they take note that these dead and living men do not, have never, or will never, capture the fullness of this world.

This must be a collaborative effort. Anything less is a treason against educational equity, creating an academically invigorating place for some and an oppressive and outright painful space for others. This inequity should be challenged always, as it has and continues to be by those most often suppressed. If you notice population omissions, ask why this is so if you haven't already.

Falling snow doesn't mean canceled classes

Nicholas O'Malley

If you're reading this on Thursday morning, I'm sorry.

The snow, ice and overall winter disaster that's been the start of this semester is easily the worst in my four years at the University of Massachusetts. We've had snow days, ice days and that one rain day in the past, but not so much so early.

And it sucks for everyone.

Keeping track, we had last Tuesday's afternoon classes canceled and last Thursday and Friday's morning classes canceled. Somehow, no whole days off, regardless of how much my roommates plead for it.

It feels like we're stuck in that horrible, horrible Nickelodeon movie "Snow Day" and the UMass Administration's that evil snow driver who's just doing their job. Who do they think they are, doing their jobs and working tirelessly to give us our education?

Jerks.

Well, I want to be angry. I really do. I went to a high school whose superintendent, according to rumor, wouldn't cancel school unless he lost his dog in the snow in the morning. Snowy mornings were a cruel ritual of getting up early and watching local news channels slowly scroll towns across the screen, knowing that I rarely had the satisfaction.

But I can't.

It's easy to say that it's dangerous out there (it is). It's even easier to say that last week was merely mentioning class syllabi (I did on Facebook). But the reality of the matter is that the University is composed of much more than the classes we have to roll out of bed for at 9:30 a.m. There's maintenance staff and loads of people working in administrative and financial offices. For example, I work in the Controller's Office, which, according to statistics I'm winging right now, 6.43 percent of UMass students have heard of.

The major deterrent, the safety factor, is a sensitive issue. Luckily, there have not been any major or newsworthy incidents due to snow. But in the administration's favor, they did realize that the campus was freezing over and shut down the campus. And you know what? It wasn't that bad, this coming from someone who missed two buses and walked to campus.

For those who had to commute or simply couldn't make it in, though, it was still syllabus week. Everyone knows what happens in syllabus week. It's 15 minutes long and involves determining how much you're going to spend on books.

Students can shout out all the safety issues they want and claim that the first week was useless (read: me last week), but all anyone wants to do is stay in and sleep, watch TV and drink hot chocolate. That's not a bad thing, unless they cry safety then turn around and call D.P. Dough.

Also, would somebody please think of the children/freshmen? They can only survive on Easy Mac and peanut butter and jelly sandwiches for so long. I mean, I love snow days as much as the next person, especially since I was deprived for so long. But after a while, I really have to get some paperwork signed before add/drop ends.

It's like the episode of Sesame Street where Elmo wishes every day is Christmas. Oh, it's awesome at first. But after a month or so, everyone's bitter and tired of Christmas music. By the next Christmas, it's apocalyptic, the carolers are destitute and there's no Christmas spirit.

As awful as it is, the UMass Administration is doing everyone a favor by forcing their lazy bums (including me) to classes instead of letting them stay in and watching Avatar: The Last Airbender (mostly my apartment).

So, I salute you, bitterly, stupid UMass Administration for being big jerks and keeping our "classes that we're playing for" open as long as your "infrastructure will allow" so that we can put "legitimacy" behind our diplomas and "achieve the American dream" through the potential education allows for upward mobility in our society.

You guys really are jerks.

The snow day is an idea born of a simple concept: no school without consequences. It's a dream that is pure and white in elementary school where cursive lessons were replaced with fort building. But, like all things, snow days lose their innocence. Full days off are replaced with delays and horrid drives. The pure white snow in the backyard is replaced with that brown mush on the sidewalk. The consequences are no longer pushed back a day; they build up. It is with this Caulfield-esque mindset that one unequivocal truth emerges.

It really needs to stop freaking snowing.

"Humor is reason gone mad." - Groucho Marx

ARTS@DAILYCOLLEGIAN.COM

Super Nintendo games stand test of time

Nick O'Malley

Since its release in 1991, the Super Nintendo Entertainment System is the first video game console that many college students have encountered in their lives, unless you're the poor soul whose parents bought a Sega Genesis.

Until recent years, SNES games have been difficult to find. They have been either too expensive through EBay or too illegal through the Internet. But ever since Nintendo came out with the Virtual Console, SNES games have been made readily available and relatively cheap. Most games sell for 800 Wii Points, or $8.

But for those who didn't have the luxury of playing these games growing up, here's a quick overview of which games you should pick up and download to your Wii.

The Classics

If you've played these games, you know they're good. If you haven't played them, these games are all a worthwhile purchase: "Super Mario World," "Donkey Kong Country," "Donkey Kong Country 2: Diddy's Kong Quest," "Super Metroid," "The Legend of Zelda: A Link to the Past" and "Final Fantasy II."

But these are only the well-known classics. Here are the games on the SNES Virtual Console that some people may not have heard of.

"Super Mario Kart"

This really should go with the classics. But out of any of the games available on virtual console, "Mario Kart" has aged the best. It's a challenge and the large population of people that have played it are really passionate about it.

It has come to my attention that some people think that "Mario Kart 64" was the original in the franchise. This disturbs me.

"Harvest Moon"

OK, so, back in high school, I would play this game, and people would ask "How can a game about running a farm be fun?" At that point, I didn't have any way to describe the simple pleasure of running a little virtual farm – it's hard to describe.

Then came FarmVille, and all of a sudden, video game farming is socially acceptable. I call shenanigans. "Harvest Moon" has everything FarmVille has, in addition to an accompanying town, characters and the ability to move around instead of a god-mode approach. "Harvest Moon" also gives the character the ability to marry one of the young lasses in town and procreate with her. That's cool, too.

"Kirby Super Star"

Not everyone's played a Kirby game, which is unfortunate. The guy's a Nintendo cornerstone and a pretty popular choice in "Super Smash Bros.," but his games don't dominate the market share.

However, if you're going to play one Kirby game, make it "Kirby Super Star." The game, which is actually an aggregation of several smaller story-mode games along with mini-games, is pleasantly challenging while remaining consistently fun.

In "Super Star," Kirby has 15 different abilities he can steal from his enemies in addition to five other special ones. These powers range from hammer, sword and yo-yo to plasma, ninja and suplex. It's about as good as you can get in terms of non-Mario platforming.

"ActRaiser"

This lesser-known game is an interesting mix of platformer and SimCity (also a solid choice to download). In the game, you play The Master, a vague all-powerful deity who arises from his slumber and must go out and save the world from darkness.

In the first stage of the game, The Master is looking down upon the land and must macro-manage the area to purge of famine, pestilence and the like.

Then, once The Master has gotten rid of the larger issues at hand, he must go first-hand into the various dungeons, which unfold like a typical platforming game with a sword-wielding protagonist.

"ActRaiser" won't blow you away, but it's a truly creative game that's worth a try.

"Street Fighter II"

If you like old school fighters, get it. The issue here is that there are currently an absurd four versions of this game on virtual console.

Original Super Nintendo games are difficult to come by and can be pricey, so the Nintendo Wii has made their old games available for download to their latest hit system. Such classics as "Street Fighter II," above, can be downloaded for around $8.

Even worse is the fact that two of them are obsolete. (Unless you have a preference, but in that case, why do you care what I say?) With 16 characters and the most updated character models and other little tidbits, "Super Street Fighter II: The New Challengers" overshadows the original arcade "Street Fighter II: The World Warrior" and "Street Fighter II Turbo: Hyper Fighter."

This leaves "New Challengers" with "Street Fighter Alpha 2" (now it's getting ridiculous), which are actually quite different in terms of characters. Both games have Ryu, Chun-Li, Guile, Ken, Sagat, M. Bison, Zangief and Dhalsim. That leaves "New Challengers" with E. Honda, Blanka, Balrog, Vega, Cammy, Fei-Long, Dee Jay and T. Hawk. Meanwhile, "Alpha 2" has Charlie, Guy, Birdie, Sodom, Adon, Rose, Dan, Rolento, Sakura, Gen and, important for some, Akuma.

"Zombies Ate My Neighbors"

A throwback to a simpler time when all adults were stupid, 3D glasses were cool, and kidz rooled. So, yeah, third grade in the early 80s.

This game's fun lies in its simplicity. The plot: There are zombies, because we said so. The objective: Save everyone who is wandering around in the apocalypse. The weapons: You have a water gun, soda cans, popsicles and a bazooka.

The game is hard and a surprisingly entertaining cult game. You take your goofy protagonist who is far too comfortable in this situation and go around backyards, shopping malls and other settings fighting zombies, giant insects and the occasional baby monster. The game's got 48 levels, but it's a pain to get to them all. "Zombies" is at its best when you look up the passwords to levels and goof around.

Games to Avoid

"Donkey Kong Country 3: Dixie Kong's Double Trouble"

Ah yes, it does say "Donkey Kong Country" up there, doesn't it? But you don't play as Donkey Kong. Or Diddy Kong, for that matter. Instead, you're stuck with Dixie Kong and her little cousin Kiddy Kong.

This game is like that great band you loved, but then all the members left and they still kept the same name. Frauds.

"Super Ghouls 'n Ghosts"

This game is too difficult to be fun. Sure, you could read this and say "Challenge Accepted." But then you'll just spend the next half hour dying. Just dying.

If you want to do that, download Steam and buy "Super Meatboy."

Nick O'Malley can be reached at nomalley@student.umass.edu.

Editor's Pick: Best pop-punk of 2010

By Ellie Rulon-Miller
Collegian Staff

With a mountain of new albums being released each year, it is easy to disregard those that do not get enough attention from mainstream media to make the Billboard Top 40 charts. Artists will release their best work yet, and it will go completely unnoticed by the greater audiences they deserve. Such is the case with The Dopamines' "Expect the Worst."

Released in June 2010 on Paper+Plastick, the album has gained a reputation among punk reviewers as one of, if not the best pop-punk album that year. "Expect the Worst" is 25 minutes and 15 seconds worth of unabashed punk rock and attitude that it cannot be ignored.

At times, Mike "Mikey Erg" Yannich will play with the band; he is in the Dopamines' music video for their single off of "Expect the Worst," "Public Domain."

The video is full of the typical elements of a punk rock/pop-punk video: destruction and beer. The band is playing in a room with symbols of bad luck stuck everywhere: black umbrellas hang from the ceiling, salt shakers stand lined up on a table. After the second chorus, the band proceeds to break and spill all of the salt shakers, along with everything else in the room, with their instruments. Singer/guitar player Jon Lewis spins around a black umbrella underneath a ladder. It all happens in between pulls on cans of beer and bottles of champagne. The scene is fast, fun and denounces the idea of bad luck.

Yannich has been proclaimed by many as "The King of Pop-Punk" and is behind the brilliantly relatable lyrics and quintessential sound of the reigning "Best Pop-Punk Band Ever," The Ergs.

The Dopamines' sound has some similarities to that of the Ergs, yet the kick-you-in-the-face attitude is all their own.

The album focuses much of its energy on the rejection of the common lifestyle in which a person goes to college and gets started on a career path. Lyrics like, "The life that you knew is just passing through, kicking dust into your eyes" in the song "October 24th" evoke thoughts of the fun, former life a person threw away in favor of the cubicle life. The song "June 4th" is similar: "My life's not in a bank, gaining interest, losing interest. It's in this van, in this can, on your finger, set the rest on fire."

One of the highlights of the album is the song "Dick Simmons." It has the feel of a punk rock anthem, as a number of the songs on "Expect the Worst" do. It punches you right in the throat in a fit of dismissal; each and every line screams, "Your reality is not the same as mine, and mine rules."

One of the dominating themes in "Expect the Worst" is doing what you want and disregarding status symbols as a means of showing how happy you are with your life. In an interview published on punknews.org in which the Dopamines' Lewis and Municipal Waste's Tony Foresta interview each other, Lewis discloses the inspiration for the song "Cincinatti Harmony," saying that the idea formed in his head after constantly hearing a former boss tell tales of all the material things she liked to buy.

In telling about the origin of the song, Lewis said "it developed into hatred toward all the people who are so eager to tell you how great their lives are, and they act like they care about what you have going on so they can feel better about themselves. I've been tossed around a lot by past and present employers, and kind of betrayed by what is considered a career and all that… I found out a beer and some friends [kind of] take the sting away from that." One of the most telling lines in "Cincinnati Harmony" say, "Booze on my breath, holes in my shoes, make no mistake, better off than you."

"Expect the Worst" also deals with the loss of friends to the lifestyle it so adamantly opposes. The song "It Really Couldn't Be Any Other (We'll F**k You Like Superman)" deals with friends abandoning the lifestyle of their youths, referring to friends as kids: "Now that the kids are gone, we go through less alcohol, and my prescription for Lorazepam lasts two weeks longer. And at 4 a.m., I won't get shaken awake by a reminder of how cool I was when I was his age."

It is a shame and a half that the Dopamines are not a more widely-known band than they are. Their refusal to surrender the fun things in life is a timeless concept, and one that every person can relate to. "Expect the Worst" is set to go down as one of the quintessential albums of pop-punk.

Ellie Rulon-Miller can be reached at ellie@dailycollegian.com.

The Dopamines' newest album, "Expect the Worst," has been extremely well-received since its debut in June, 2010. It is riddled with in-your-face attitude that rejects societal norms in terms of what is acceptable as a career and life path.

'Network' leads noms

By Justin Gagnon
Collegian Staff

The nominees for the 83rd Academy Awards are in.

Despite a year with no movie that distinctly stands out amongst its peers, David Fincher and "The Social Network" have been cleaning up at the early award shows. While not an extraordinary year in cinema, the Academy of Motion Picture Arts and Sciences could provide a few surprise picks, as they already have with their nominations.

One year after the Academy chose to nominate 10 films for Best Picture for the first time since 1943, the category is full of nomination-worthy films, but doesn't have one that stands like some films in the past have.

The clear favorites are "The Social Network," (which has already won at both the Golden Globes and the Critics Choice Awards), "Black Swan" and "The King's Speech." A potential dark horse – no pun intended – for Best Picture are Joel and Ethan Coen's "True Grit." The western did not receive a single nomination in any category at the Globes, yet it is up for 10 Oscars, second to "The King's Speech," which is nominated for 12 awards. While the tale of Mark Zuckerberg's rise to world domination is definitely in the lead for the biggest award of the night, don't be too surprised if the Academy chooses "Black Swan" or "The King's Speech."

Colin Firth, who plays the tongue-fumbling King George VI in "The King's Speech," and Natalie Portman, as the elegantly-psychotic Nina Sayers in "Black Swan," are nearly shoo-ins for the Best Actor and Actress awards, respectively. Their nominations come as no surprise to anyone as both have already taken home two awards for their performances, and neither have any real competition in their categories.

It should be noted, however, that the Academy made a few different selections than the Hollywood Foreign Press Association (HFPA) made for the Globes. Ryan Gosling ("Blue Valentine") and Halle Berry ("Frank and Alice") were not nominated for an Oscar in the categories and were respectively replaced by Javier Bardem ("Biutiful") and Annette Bening ("The Kids Are All Right").

The nominations for Best Supporting Actor and Actress also have almost clear-cut winners as Christian Bale, for his emotional performance as Boston-native Dicky Eklund in "The Fighter," and Melissa Leo as his mother in the same film. Geoffrey Rush ("The King's Speech") and Jeremy Renner ("The Town") are the only other actors to be nominated for Best Supporting Actor at each the Critic's Choice, Golden Globe, Screen Actor Guild and Academy Awards, but are still unlikely to be recognized considering the powerful performance by Bale. On the other hand, Mila Kunis ("Black Swan") was not chosen as a nominee for Best Supporting Actress, a category she was nominated for at the other three ceremonies. She was snubbed in favor of the young Hailee Steinfeld for her breakout performance in "True Grit." She won the Best Young Actor Actress at the Critic's Choice Awards, and could provide another dark horse victory for the latest Coen Brothers' film.

The thickest category of nominees is without question for Best Director. While their films didn't necessarily blow up the Box Office, their outstanding work on these films is undeniable. The nominees are Darren Aronofsky ("Black Swan"), David O. Russell ("The Fighter"), Tom Hooper ("The King's Speech), Joel and Ethan Coen ("True Grit") and of course, David Fincher ("The Social Network").

Fincher is the favorite to win so far after taking home a Golden Globe and a Critic's Choice Award for the film. Each of these directors, however, did magnificent work on each of their respective films, and it would come with little surprise if someone other than Fincher took home the award. "The Social Network" was put together beautifully and was a clean, accurate portrayal of the setting – although the same probably isn't true with regards to Facebook's real story.

Aronofsky seems to be the most likely director to upset Fincher, but Russell, Hooper and the Coen Brothers aren't far behind. Christopher Nolan ("Inception") and Danny Boyle ("127 Hours") were not nominated for the award, but with such great work by an all-star cast of directors, it's not terribly surprising.

To see whom the actors themselves choose to win the big awards, watch the Screen Actors Guild Awards on Sunday, Jan. 30 on TNT and TBS. For a full list of the Academy Award nominees, go to http://oscar.go.com nominations.

Turnovers result in Temple blowout over Minutewomen

By Michael Counos
Collegian Staff

The Massachusetts women's basketball team took on Temple on Wednesday at the Mullins Center in an Atlantic 10 conference battle.

While tip off was moved up to 5:00 p.m. due to inclement weather, the University of Massachusetts was unable to advance in the A-10 standings. The Owls remained undefeated in A-10 play with a 76-48 victory over the Minutewomen.

The game started out close with the Minutewomen (6-15, 2-4 in A-10) leading 11-7 after seven minutes of play. The UMass defense had the Owls (14-6, 5-0 in A-10) confused, forcing them to take bad shots from beyond the perimeter.

Temple	76
UMass	48

"We started off well and were leading but it seems like when our offense gets bad, everything else gets bad as well," coach Sharon Dawley said.

Things went downhill from there for the Maroon and White. The Owls went on an 8-0 scoring run to take a 15-11 lead. The UMass offense looked disoriented as turnovers became a serious problem, finishing the first half with 19 total. The Owls took advantage of Minutewomen mistakes by scoring 23 points off turnovers in the first half.

UMass relied heavily in the first half on points in the paint, scoring 16 of its 24 down low. Sophomore center Jasmine Watson had a scary moment in the beginning of the game when she fell to the ground and grabbed her knee, but she was able to recover and continue to play. Watson chipped in four points in the first half while Shakia Robinson came off the bench to add six. UMass trailed at the intermission 40-24.

Temple stayed hot in the second half as they extended their lead to a game-high 30 points. UMass was unable to come within 16 points for the remainder of the game. With 48 points, the Minutewomen tied their worst offensive performance of the season while also committing 32 turnovers. "32 turnovers in one game are just not acceptable, you're going to lose to anybody if you play like that," Dawley said. "Turning the ball over to an elite team like Temple 32 times means you're going to get blown out."

Only two UMass players were in double-figures; Cerie Mosgrove had a team-high 13 and Robinson added 11 off the bench. The starters combined for just 26 points while Robinson, Marisa Stabile, Kelly Robinson and Talen Watson all saw quality minutes on the hardwood.

"The starters just weren't good, and when you have bad starters you go to the bepch and look for them to step up," Dawley said. "If the starters continue to play this poorly then we look to something else that will work."

UMass was outplayed in nearly every statistical category. The Owls had the edge in points in the paint 42-24 and Temple scored 35 points off of turnovers including 18 on the fast break.

"We're going to run in practice for every turnover we had tonight," Dawley said. "32 turnovers are not acceptable and they are going to pay for it and realize that we need more urgency."

Michael Counos can be reached at mcounos@student.umass.edu.

Jeff Bernstein / Collegian

UMass forward Shakia Robinson (15) jockeys for position in the paint against Temple. Robinson was one of two Minutewomen to score at least ten points against the Owls.

From Canada to Massachusetts, Filiou makes smooth transition

Filiou from page 8

In his first semester on campus, Filiou said he was a little nervous about meeting his teammates and new coaches, but the transition onto the squad has been easy, thanks in part to his experience away from home and the nature of the players on his team.

"He's a great teammate," Gracel added. "He's definitely a guy who's going to be a leader on this team. He's a guy who likes to lead by example."

His first season at UMass has been productive, though not in statistical categories. Filiou has played in eight out of 11 games this season and has taken over majority of faceoff duties when he is on the ice. He has only netted one goal, but Cahoon praises his work ethic, maturity and natural ability, saying that, with some experience, the game will become even more instinctual for him.

"I think the best part of his game is that he's pretty trustworthy," Cahoon said. "[As far as getting in position], he's pretty sound. He doesn't make a lot of mistakes with where he is on the ice and supporting his players."

Being a native of Montreal, Filiou grew up idolizing the Canadians and said his ultimate goal is to be drafted and play for them. Part of his workout regimen at UMass is designed to prepare him for professional play and he is dedicated to improving on a day-to-day basis.

"I really want to go pro," Filiou said. "I want to get better everyday. I was a little bit better offensively when I was playing in Vancouver, and it's something I'm working on here."

Filiou may have lacked a typical family environment growing up, but in the mean time, he's found a new family and a sense of belonging in Amherst and is focused on enjoying life as a Minuteman "So far, it's been a really great time," Filiou said. "I love everybody I've met here and I'm really happy I picked UMass over everywhere else."

Track and field teams head to Roxbury, Mass. for Reebok event

Courtesy of UMass Athletics

The Massachusetts track and field teams are primed to compete against mostly northeastern schools at the Reebok Boston Indoor Games in Roxbury, Mass. this Friday.

By Eric Mansfield
Collegian Staff

The Massachusetts men and women's track and field teams will travel to Roxbury, MA this Friday to compete in the Reebok Boston Indoor Games at 3:30 p.m. This will be the third competition for both squads as they look to compete against 12 to 15 schools, all of which are primarily located in the northeast.

Ken O'Brien, the men's coach, said although it's clear the team has not reached its full potential yet, there has been a substantial amount of good performances. The distance medley relay team had the most notable performance. Last week at the Great Dane Invitational in New York, Seniors Daniel Barry, Sean Duncan, Scott VanderMolen and sophomore Joe Doyle qualified for the IC4A Championships that will be held in March with a time of 10:09:13.

O'Brien said Friday will most likely be the last meet when he and the other coaches evaluate what everybody's events will be for the stretch run.

"[I] still like to experiment with another event or two," O'Brien said.

With the team of Barry, Duncan, VanderMolen and Doyle having already qualified for IC4A's in the distance medley relay, Friday's race will not be a major concern.

"Relays will probably be a little less stacked or loaded [on Friday]," O'Brien said.

During the first third of the season, O'Brien said it's important to start developing the individual event. O'Brien also said Friday is an opportunity to "evaluate and build the versatility of the team."

"We're optimistic about where we will be able to go," O'Brien said.

It is not yet confirmed what teams the Minutemen will be competing against, but O'Brien expects that the northeastern to non-northeastern school ratio will be around 4:1.

For this meet O'Brien considers any finish within the top five a success.

On the women's side, coach Julie LaFreniere said both of their relays are looking fairly strong.

Friday's 4x400m relay will include junior Deanna Julian, sophomore Michelle Jenssen and freshmen Meghan Leahy and Sarah Bitterman. LaFreniere said that Leahy and Bitterman have been holding their own in their first indoor track season.

LaFreniere said that these meets earlier in the season are good practice for May's Atlantic 10 Championships, where many athletes will have to participate in more than one event.

Which teams will be competing against the Minutewomen on Friday is also unknown; however, it is likely the team will face a similar situation to the men's meet, where most of the teams will be coming from the northeast. One team out of the northeast LaFreniere expects to be there is the University of South Florida.

Teams closer in proximity that generally compete are Boston College, New Hampshire University, Brown University and Harvard University.

Whoever ends up showing up to compete, LaFreniere thinks it will be beneficial for the Minutewomen.

"Better competition will make our athletes better," LaFreniere said.

"No matter what event there should be good competition."

Assistant coach David Jackson places his focus on jumps and multi-events, and he said junior Chrissy Silvar is ready to make some good jumps, having just moved into fifth place all-time for UMass in the pole vault with a leap of 11' 2".

Jackson also said senior Stephanie Aguguo is also ready to take her triple jumps to the next level.

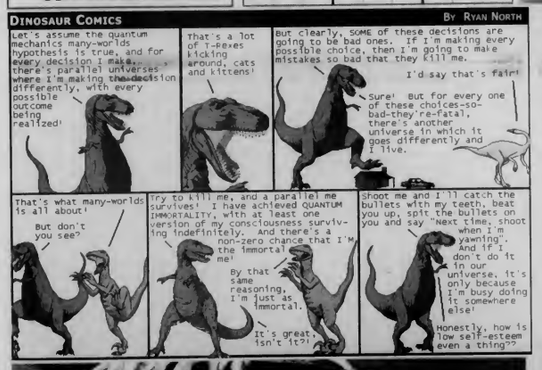
SEND ME COMICS!! DO IT NOW!!

Dinosaur Comics By Ryan North



Let's assume the quantum mechanics many-worlds hypothesis is true, and for every decision I make, there's parallel universes where I'm making the decision differently, with every possible outcome being realized!
That's a lot of T-Rexes kicking around, cats and kittens!
But clearly, SOME of these decisions are going to be bad ones. If I'm making every possible choice, then I'm going to make mistakes so bad that they kill me.
I'd say that's fair!
Sure! But for every one of these choices-so-bad-they're-fatal, there's another universe in which it goes differently and I live.
That's what many-worlds is all about!
But don't you see?
try to kill me, and a parallel me survives! I have achieved QUANTUM IMMORTALITY, with at least one version of my consciousness surviving indefinitely. And there's a non-zero chance that I'm the immortal me!
By that same reasoning, I'm just as immortal.
It's great, isn't it?!
Shoot me and I'll catch the bullets with my teeth, beat you up, spit the bullets on you and say "next time, shoot when I'm yawning". And if I don't do it in our universe, it's only because I'm busy doing it somewhere else!
Honestly, how is low self-esteem even a thing??

Populism is awesome. You should buy some Pro–populism pins and badges for your thrift store jacket.

THE MASSACHUSETTS DAILY COLLEGIAN

SPORTSTHURSDAY

THURSDAY, JANUARY 27, 2011

SPORTS@DAILYCOLLEGIAN.COM

Filiou finds home away from home

COLLEGIAN FILE PHOTO

Freshman forward Eric Filiou has overcome much adversity on his way to becoming a respected member of the Massachusetts men's hockey team. Filiou has a .523 faceoff win percentage.

By Mike Wood
Collegian Staff

In the last 10 years, Massachusetts' hockey player Eric Filiou has lived in Canada, Europe and the United States, but the one place he hasn't lived during that decade is the only place he can truly call home.

When he was 11-years-old, Filiou left his home in Montreal and everything he knew behind to learn English and develop his hockey skills in a setting completely different from what he was accustomed to.

He found himself at Athol Murray College of Notre Dame for high school in Saskatchewan, Canada where everything was new to him. The language, the people and in particular, the lifestyle were all foreign. All Filiou had known was the hustle-and-bustle of Montreal and the immense cityscape. When he arrived in Wilcox, a small village in Saskatchewan, he was greeted with vast farmlands and a population just over 300 people.

"It was a big change," Filiou said. "To go from all the big buildings [in downtown Montreal] to all the farms and barns and tractors [in Saskatchewan] was almost surreal. But it did me well."

Being a native of Montreal, Filiou's first language was French, which is not typically spoken in Canada outside of the major cities in Quebec. Not only did he have to adjust to a life without his parents and friends, but he was forced to do it all without speaking the same language as his peers.

"The language barrier was there for the first couple of years," Filiou said. "Some way, somehow I ended up being team captain there in my first year, when I could barely speak English. It was extremely hard at points to relate to the guys when I couldn't talk to them, but I worked through it and we had some great years of hockey."

Filiou first learned to skate at age four, when his father, Laurent, took him out on the ice in his backyard in Montreal, which freezes over for most of the winter. Laurent taught his son how to glide and move on the ice and when he got older, how to handle a stick.

"[Eric] and his brother came home from daycare one day and told us they wanted to play," Filiou's mother Charlyse Roy said. "His father had never really played before, but the kids knew how to skate and wanted to learn. So they went out in the backyard and they played."

As the years passed and he progressed through youth hockey, Filiou demonstrated an adept understanding of the game and developed a keen sense of proper positioning and in-game strategy. He learned to move around the ice to put himself in better position to score goals, and improved his skating and stick-handling skills with regular training. Growing more passionate about the sport with each passing day, he ultimately decided he wanted to pursue hockey and made up his mind to take his game as far as he could.

"He was always best at skating, but he was a leader among the kids early on too," Charlyse said. "He spent a lot of time outside, skipping rope, rollerblading, jogging and sprinting. A lot of his time was dedicated to getting better at hockey."

But the decision came with a price.

"It was hard. Very hard," Charlyse said. "I was thinking the best for me would be to have [Eric and his brother] stay in Montreal, but the best interest for them was to let them leave. Experiencing life, learning English, which is the business language and [becoming independent] was the best idea for them."

Hockey was Filiou's stabilizer amongst a whirlwind of change.

He immersed himself in his favorite game as a way of coping with the stress that surrounded him. He spent countless hours on the ice, skating back-and-forth, working to perfect his craft. Sometimes he joined in pick-up games with neighborhood kids, and what began as a family tradition, quickly developed into not only an escape, but also, a way of life.

"That was a big step," Filiou said. "I was 11 [years old], couldn't speak English, living two provinces away from my family. It's pretty crazy, looking back now, I can't believe I did it, but I'm really glad I did it."

Throughout high school in Saskatchewan, Filiou continued to develop his skills, while also maturing into adulthood. When his parents divorced, he was forced to deal with the pain and uncertainty of family life. Already so far from home, he was removed from any direct contact, but the emotional side effects still took a toll on him and forced him to become tougher as an individual.

He began to gradually increase his muscle mass by skating and lifting weights. Filiou played lacrosse for four years as well. Filiou stuck diligently to a workout schedule consisting of conditioning drills and intense running to keep himself in shape for hockey in the winter. He developed a good relationship with his hockey coach, who also coached the lacrosse team, and was able to relate most of his lacrosse drills directly to hockey training.

During Filiou's off hours, he made sure to keep his parents, particularly his mother, updated on his life. They spoke every day, which helped bridge the geographical gap that separated them.

"I saw the kids every month," Charlyse said. "Whether we went to a game or they visited Montreal for a weekend. We talked on the phone, emailed and talked over cell phone. He had a calling card too."

Filiou was also fortunate enough to live next door to Phil Lecavalier, brother of current NHL player, Vincent Lecavalier while in high school. Vincent, who plays for the Tampa Bay Lightning, practiced with his brother and taught him everything he knew when he was growing up. In turn, Phil, who was Filiou's age, helped him fine-tune his game and grasp some of the more finesse tactics.

When Filiou graduated high school and moved to Vancouver, he lived with a host family on Vancouver Island and played for a team based in the city of Nanaimo. He didn't know it at the time, but in a game against Port Alberni, he would come face-to-face with another player, Branden Gracel, who would end up being his roommate at UMass in his freshman year.

"Funny enough, we didn't know each other, but we found out that we played against each other back in Canada, so it's a good little connection we've got there," Gracel said. In two seasons playing for the Clippers, Filiou won the British Columbia Hockey League Championship and the BCHL Rookie of the Year while playing with former Minuteman Matt Irwin, who first sold UMass to the young forward. Filiou played one more season in the BCHL the following year in Penticton before taking Irwin's advice and exploring his opportunity to play hockey in the U.S. Filiou believed

He had a better chance of fulfilling his dream of playing in the National Hockey League if he attended an American university.

"I had considered [playing in the U.S.] when I was younger," Filiou said. "I know we have great hockey back [in Canada] and I love it, but the U.S. hockey scholarship is just so much better than the Canadian one. It's recognized by a lot of different places if you want to move on and go play pro."

He went to take the Scholastic Aptitude Test and scouted schools in Hockey East, in what UMass head coach Don Cahoon calls, "the best hockey conference in the country, without a doubt."

Since French is his first language, he received a boost on the English section of his exam, qualifying him to receive offers from Ivy League schools like Harvard, Yale and Princeton, but none of them attracted his attention.

Instead, Filiou committed to UMass in 2008, and after arriving on campus as a freshman this fall, it exceeded his expectations in just about every way. He also credits his decision to the unique and player-specific coaching style of Cahoon.

"A lot of coaches, when you come down, don't really care about you as a person," Filiou said. "One of the things Toot [Cahoon] puts a lot of emphasis on is how good of people his players are. Everyone here is actually a good person and nobody has their own agenda."

Minutemen cruise by Bonnies for 4th conference victory

By Herb Scribner
Collegian Staff

Maybe the Massachusetts men's basketball team should have travel issues more often.

Whether it was the delayed landing or not, the Minutemen (12-7, 4-2 Atlantic 10) earned another conference victory, 78-69, against Saint Bonaventure on Wednesday night.

UMass	78
SBU	69

"It was a good road win after a weird couple of days tying to get here," UMass coach Derek Kellogg said.

"I thought that was a good basketball game and both teams played really hard," Kellogg continued. "I thought our UMass team played, I don't want to say as well as we can, but almost as good as we can as far as how we attacked offensively."

UMass relied heavily on Anthony Gurley (28 points) to get the job done against the Bonnies. This is the 17th time in the last 19 games that Gurley has led the Minutemen in scoring.

"The last couple of days haven't been easy for us but we stuck together as a family, and as a team … I couldn't be happier," Gurley said.

Gurley wasn't the only high scorer for the Minutemen though, as first half efforts by Javorn Farrell (16 points) gave them some baskets before Gurley took over the game.

"He played like a senior, he played like a big-time player today," Kellogg said.

The Minutemen controlled the first five minutes of the second half until the Bonnies started a run to close the once 11-point gap down to two following a Michael Davenport 3-pointer.

Davenport's lead-slimmer did little though for the game as the Maroon and White picked up the pace and led the way for a 12-2 run to fly past the Bonnies.

The game featured a well-shooting Minutemen side (28-for-53), however their 3-point shooting suffered (near 33 percent) as the result of the Bonnies defense.

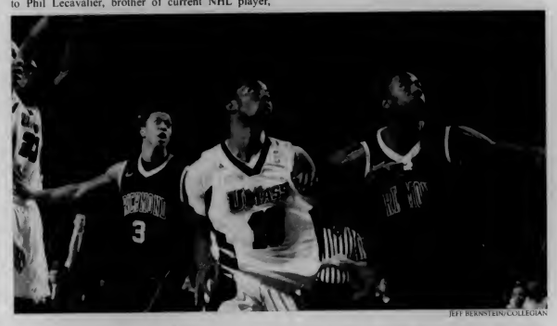
Kellogg attributed much of the success to the seniors of the squad.

"I hope that it shows that we're maturing some," Kellogg said.

The Minutemen jumped out early in the first half, conjuring a 10-point lead with nine minutes remaining until halftime off 9-for-18 shooting and going 4-for-6 from beyond the arc within that time span.

While the lead shortened to eight points before half, UMass held on duc to its variety in scorers as nine players contributed in the first 20 minutes. Gurley and Correia led the team with eight and six points, respectively.

The Minutemen shot 16-for-31 in the first half, going 4-for-9 from the perimeter. The bench helped UMass shoot well during the first half as they contributed 10 points.



JEFF BERNSTEIN/COLLEGIAN

UMass forward Javorn Farrell (10) looks for a rebound in a game against Richmond earlier this season. Farrell is averaging 10.1 points and four rebounds per game.

Rebounding proved to be influential for the Minutemen with both Sampson and Sean Carter leading the charge (four rebounds each). Seven of UMass' 15 rebounds came on the offensive side of the floor.

Unlike their recent performances, the Minutemen put away 10 second-chance points against the Bonnies in the first to help add to their lead.

Defensively, UMass held SBU from making any dangerous moves towards the lead. The Bonnies shot 8-for-25 in the first, with a pair of points coming from the bench and the same amount from second-chance opportunities.

The Minutemen will have another shot at downing an A-10 opponent when they take on Rhode Island on Sunday at 4 p.m. at the Mullins Center.

Herb Scribner can be reached at hscribne@student.umass.edu.

Younger players log more minutes on court

By Michael Wood
Collegian Staff

The Massachusetts women's basketball team has a starting five that can usually score points, but even the most potent offense can stall and fortunately for the Minutewomen, they have a bench that can step up and play well when necessary.

In two out of the last three games, UMass has recorded at least three players in double figures in points.

In a game against Saint Louis, four players reached double-digits and three of them were everyday starters. Senior Cerie Mosgrove has gone 10 consecutive games with at least 10 points, and guard Megan Zullo is just five 3-pointers away from the school's all-time record in a single season.

Yet in Wednesday night's matchup against Temple, the intensity and fire that makes the starting five so good was absent from the Mullins Center. Mosgrove was the high scorer in the game, but managed only 13 points, the same number as the other four players combined.

"[The starters] weren't good," UMass head coach Sharon Dawley said. "With a bad starter, you might as well go see if there's somebody better on the bench than a bad starter."

Instead, it was the sixth, seventh and eight players off the bench who paced the offense. Two of those players are freshmen and the other, Shakia Robinson, is a sophomore who tallied just over 100 minutes all of last season.

"It's always good to see a young kid getting better," Dawley said. "There have been moments where we can visually see that a kid is getting better I see them getting better with a good offseason and a good summer."

MARIA TRONSLA/COLLEGIAN

UM freshman guard Kelly Robinson (3) tries to shoot over a defender in a game earlier this season. Robinson is one of six freshmen on the roster.

The highest point total off the bench came from Robinson, who has played just as much as any starter this season while filling in for injured forward Jasmine Watson for much of the year. Robinson scored 11 points and added an assist, a steal, and a block in the paint. In a game against Saint Joseph's last week, she poured in 25 points off the bench and was the team's leading scorer.

Freshmen Talen Watson and Kelly Robinson each played over 10 minutes in the contest, jumping at the opportunity to lead the offensive attack and coordinate the team's play on both ends of the court. Watson netted four points and moved the ball successfully against the Owl defense and Robinson contributed five points and three assists.

"Talent was good today off the bench," Dawley said. "Like I said in the locker room, if the starters continue to play this badly, a kid like that is going to come right in and take away minutes from them. She came off the bench and played well, and she's going to get more minutes."

Even freshman Sara English, who doesn't play much unless Jasmine Watson, Mosgrove and Shakia fall apart in front of her, has come in and asserted herself. Although she had no points against Temple, Dawley praised her efforts and envisions that she will continue to help the team off the bench in the future.

"I think with freshman it's day-to-day," Dawley said. "Freshman could come in and play well against Temple or be deathly afraid of Temple. Sara may have been a little intimidated today, but against Saint Joe's she was fantastic. She'll be fine."

Forbidden fruit

By Lily Hicks
Collegian Staff

You say tomato, I say Salmonella.

Between 1996 and 2008, 14 of 84 produce-related outbreaks of foodborne illness were linked to tomatoes, according to a report released by the Food and Drug Administration (FDA) in 2009.

Although the popular fruit was proven innocent during the Salmonella scare of 2008, in which 1,440 people fell ill (the likely culprit: jalapeño peppers), it's been linked to 20 Salmonella outbreaks since 1990, according to the website for the Center for Science in the Public Interest. Lynne McLandsborough of the University of Massachusetts department of food science wants to find out why – and how – Salmonella-tainted tomatoes make it from the field to the supermarket.

McLandsborough, an associate professor who also serves as the department's undergraduate program director, will soon be starting research on the transfer of Salmonella to tomatoes during packaging and transport. The Center for Produce Safety (CPS), a research group at the University of California Davis, has granted her $235,787 to fund the project.

"I started thinking about it and, you know, produce, you can take a piece of lettuce and smash it down and it breaks, it becomes a very different environment. So we have come up with a system that's going to be kind of non-invasive," said McLandsborough.

The system, now a prototype, is a chute design, "like a slide," said McLandsborough. The professor and her team of researchers plan to contaminate the surface of the slide with Salmonella and roll the tomatoes over it to see if the contraption helps tomatoes to resist contamination. They will also be testing different plastics, such as those used for harvest bins and gloves, to find out which surfaces Salmonella thrives on and which levels of abrasion make tomatoes most vulnerable to Salmonella.

Members of McLandsborough's research team include Julie Goddard, another professor at the department of food science, Wes Autio, a professor at the department of plant and soil sciences and two post-doctoral researchers, one from Cornell University and one from Ireland.

Goddard, an assistant professor who specializes in food packaging, recognizes the myriad of ways in which food can become contaminated during transport.

"Even in minimally-processed food materials, our food touches a lot of stuff," said Goddard.

While working as a research engineer from 1999 to 2003 at Kraft Foods in Tarrytown, N.Y., Goddard witnessed firsthand the mechanics of food production. She wondered about the ease with which so much food and packaging could potentially become contaminated, and became interested in "how we can reduce the likelihood of contaminating material," said Goddard.

Bonnie Fernandez, the executive director of the CPS, shares Goddard's interest.

"We're like a resource for all policy makers and consumer awareness groups on the front-line," Fernandez said of the CPS.

COURTESY FACEBOOK

This tomato has taken ill with Salmonella. University professor Lynne McLandsborough works to prevent this plague.

Fernandez said that the goal of the CPS is to provide the research and scientific evidence necessary for farmers and government agencies to make educated decisions about food safety.

Optimistic about the progress of food safety in the United States, Fernandez said there is "an increased ability to detect and report food safety events" in the country. For its part, the CPS prioritizes funding for research concerning fruits and vegetables that have been connected to recent outbreaks of food-borne illnesses, said Fernandez.

Another portion of the CPS' grant money will go towards conducting a survey of tomato farmers in the United States, said McLandsborough. The researchers will try to find out how farmers clean and sanitize their tomato plants. They will then test the most common of those methodologies in a laboratory. Those methods that produce the cleanest tomatoes may be recorded and sent to the CPS and then to some of its major partners and organizations from which it receives funding, which include the United States Department of Agriculture (USDA), said McLandsborough.

Although research was slated to begin this month, McLandsborough said that the money is not on campus yet and that she and her research team, in coordination with the University, are still in the process of establishing accounts. "It's kind of how research works," she said.

But the waiting period is not without its perks. McLandsborough was invited recently by the CPS to participate in a two-day teleconference in February on tomato safety – a conference in which the FDA and the USDA will participate. Because research at the university level is often times very regionalized, McLandsborough appreciates that the CPS operates on a national level.

Hampshire prof. dies suddenly

Hampshire College photography professor Robert Seydel, died today, according to the Daily Hampshire Gazette.

"Professor Seydel was a very kind gentle person and dedicated professor known for his probing intellect and dedication to his students," said Elaine Thomas, director of communications at Hampshire.

"The community is very saddened by the loss and will greatly miss him."

According to Hampedia.com, Seydel was an assistant photography professor of photography and film, held a B.A. in English from New York University and an M.F.A. in photography from the Rhode Island School of Design.

He also taught at the University of Massachusetts Dartmouth and University of Connecticut for a period.

The medical report detailing the cause of death have not surfaced yet, but officials say there were no unusual circumstances surrounding this unfortunate loss to the Five College Community.

The Massachusetts Daily Collegian will update this story as more information is made available.

Students get A in 'BS'

By Simone Shenny
Collegian Staff

Many college students today are finding that while they haven't improved academically, they have learned how to effectively "BS" assignments. Some academic scholars have ventured to illuminate an apparent lapse in critical thinking seen throughout the higher education system.

Recent research showed 45 percent of college students do not make significant progress in written communications, analytical reasoning or critical thinking in the first two years of college, says two academic scholars in their new book, "Academically Adrift: Limited Learning on College Campuses."

The book just hit the shelves this month.

The authors, Richard Arum and Josipa Roksa, conducted research by having 2,300 students attending different four-year colleges and universities take an exam entitled the Collegiate Learning Assessment (CLA). This test is designed to assess students' analytical reasoning, critical thinking, communication writing skills and other skills meant to be taught in higher education.

This group of students underwent standardized assessment within their first year of college and then again near the end of their second year. The findings in the analysis of about 2,300 students at 24 universities and colleges were negative. Forty-five percent of students who took the test showed no significant improvement in the above range of skills.

Madeleine Maggio, a junior theater major, has doubts about the results of the research. "If that statistic exists then it could be coming from something that is true, but then what are we doing here? I feel like I have grown a lot from being in college and have learned a lot," Maggio said.

"College has changed the way I think about things in general." On the other hand, another student felt differently.

"I learn more outside my classes than inside because I read a lot," said Ben Davis, an English major at the University of Massachusetts.

Arum is a professor of sociology and education at New York University and Roksa is assistant professor of sociology at the University of Virginia. They conducted their research through the CLA which is a part of the Council for Aid to Education (CAE), a non-profit organization based out of New York City

According to the CAE website, cae.org/content/about.htm, its function is to conduct research on higher education and advance corporate support of higher education.

Also, the CAE is focusing on improving access and quality in higher education.

The researchers believe the CLA is crucial to this focus. The goal of the CLA is to help college and university faculties such as department chairs, school administrators and anyone else concerned with making improvements to learning, teaching and educational skills.

There are four parts to the CLA scoring criteria. The first is analytical reasoning which tests one's ability to interpret, analyze and evaluate the quality of information. Second is writing effectiveness where one would construct and organize logical and understandable arguments. Third is writing mechanics where it is necessary to demonstrate a strong knowledge of the English language, tense, syntax and other factors. And fourth, problem solving, takes into consideration the importance of information and the ability to weigh that information in order to make decisions.

Taco Bell has major beef

By Michelle Williams
Collegian Staff

"Where's the beef?" was once a slogan of the fast-food restaurant chain Wendy's, in regards to the quality of meat of their competitors' products. Now, some consumers are asking just that of Taco Bell.

An Alabama law firm has filed a class-action law suit against the fast-food company, that claims the "seasoned beef" served in its products does not contain enough beef to be considered beef, seasoned or otherwise.

According to the lawsuit, only 35 percent of the beef filling served in tacos was actual beef, with the remaining 65 percent consisting of ingredients including: water, isolated oat product, wheat oats, soy lecithin, maltodextrin, anti-dusting agent, autolyzed yeast extract, modified corn starch and sodium phosphate and seasoning.

For a product to be considered ground beef by the U.S Department of Agriculture's Food Safety and Inspection Service, it must be at least 70 percent beef, not include added water, phosphates or binders, and no more than 30 percent fat.

To be considered taco beef filling, the product must contain at least 40 percent fresh meat, and the label must display that the product is not ground beef, but "taco filling with meat," according to the Department of Agriculture.

"Taco Bell's definition of 'seasoned beef' does not conform to consumers' reasonable expectation or ordinary meaning of seasoned beef, which is beef and seasonings," the class-action suit states.

In an interview with the L.A. Times, W. Daniel "Dee" Miles III, of law firm Beasley Allen who filed the lawsuit said, "You can't call it beef by definition." He added, "It's junk. I wouldn't eat it."

In response to the lawsuit, Taco Bell Corp. released a statement on their website. Greg Creed, the president and chief concept officer, began the statement with, "The lawsuit is bogus and filled with completely inaccurate facts." Creed goes on to say, "Our seasoned beef recipe contains 88 percent quality USDA-inspected beef and 12 percent seasonings, spices, water and other ingredients that provide taste, texture and moisture."

Creed also said in the statement that the company plans to take action against the law firm that filed the suit. "Unfortunately, the lawyers in this case elected to sue first and ask questions later — and got their 'facts' absolutely wrong. We plan to take legal action for the false statements being made about our food."

Tase of rage

Matthew M. Robare

The South Hadley Police Department was given some tasers back in November by the Village Commons, a company that rents office and retail space across the road from Mount Holyoke College, according to MassLive.com. Also according to MassLive, tasers are "non-lethal."

This interesting nugget of un-truth was actually brought to you by Taser International, a company that makes millions selling the miniature, mobile electric-chairs — I'm sorry — "neuromuscular incapacitators." Remember the first rule of time-travel safety: keep your incapacitators and your flux capacitors separate and clearly labeled.

It's just not true that tasers are non-lethal. The company website includes only one possibility: "Subjects located in the water may drown if their ability to move is restricted."

Then again, they would probably blame the water if a victim drowns, just to keep that "non-lethal" status, regardless of the fact that being electrocuted caused the person to drown. If an arsonist burns down a house with a person inside, they're charged with murder. No jury, no prosecutor, no defense attorney would accept a defense of "I'm innocent of murder. The poor man had a condition that made him burst into flames at the same time the fire I started reached his location."

But arsonists are criminals and police officers are law enforcers, so the ordinary rules for those of us not part of that elite class — fair trials, standards of evidence, prison sentences — get waived for officers. Three years ago a 29 year-old man in Minnesota, Mark C. Backlund, died after being tased by police, according to The Minneapolis Star-Tribune. Backlund's father, Gordon, said that his son had no medical conditions that could have been aggravated by a taser. Five state troopers on the scene were put on administrative leave.

In April of 2009, police tased Michael Jacobs Jr., a mentally ill man, to death by "inadvertently" holding the trigger down to long.

Unfortunately for the police, there was no convenient medical history or excessive drug use to pin the death on and the Tarrant County, Texas Medical Examiner found that Jacobs had suffered "sudden death during neuromuscular incapacitation due to application of a conducted energy weapon" and that it was homicide.

No jury, no prosecutor, no defense attorney would accept a defense of "I'm innocent of murder. The poor man had a condition that made him burst into flames at the same time the fire I started reached his location."

The autopsy was "inconclusive," according to the Associated Press.

Author William N. Grigg, who has collected numerous incidences of death by non-lethal weapon, wrote, "Where the death was clearly a result of police violence, defenders ... take refuge in contrived ambiguity. Whenever a young person dies after being subjected to electro-shock torture via taser, the public is lectured about the lethal effects of 'excited delirium,' a mysterious condition that seems to afflict only those who are gang-tackled, tased, and otherwise abused by police. (While some medical examiners accept 'excited delirium' as a valid cause of death, the condition is not widely recognized among medical professionals apart from those closely associated with law enforcement.)"

However, according to The Fort Worth Star-Telegram, a police investigation cleared the officers of wrong-doing and a grand jury refused to indict them. I bet that if one of us taxpayers killed a police officer, even "inadvertently," we would be indicted for murder. A taxpayer wouldn't get placed on administrative leave, either.

There are some big questions here, but they're answerable and like many of life's mysteries, those answers can be found on Cracked.com. In the early 1970s, psychologist Philip Zimbardo conducted an experiment at Stanford University where 12 students were made prisoners and 12 students were made prison guards. It was supposed to run for two weeks, but Zimbardo's girlfriend made him end it after six days because conditions had become so nightmarish. Putting people into positions of authority over others tends to make them more aggressive and less sensitive to the feelings of the people they have authority over. Even worse, the earlier Milgram experiment showed that most people are willing to follow an authority figure's orders even when they are told to do something morally repugnant.

But there's still another part of the taser story, coming to us from the Cracked.com article "Five popular safety measures that don't make you any safer." It's called the Peltzman effect and it's where the presence of safety regulations increases unsafe behavior because people assume that because there's a regulation that injury risk has been taken care of.

So a company markets a dangerous weapon as being non-lethal to a group of people whose professional careers revolve around being in a position of authority over others and many of whom, according to MSNBC, believe that a war is being waged against them. Like mixing weed and Adderall, it's a bad combination.

One of the arguments made by Taser International is that officers armed with tasers are safer. That may be true, but I think that the evidence is clear that when officers have tasers, the people aren't safer.

Sometimes it's more important to be protected from the cops than from the criminals. I hope the South Hadley Select Board takes that into consideration when they make their decision.

Point-Counter-Point

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

State of the Union: good or bad?

Obama full of fantasy

Harrison Searles

President Barack Obama's State of the Union address this past Tuesday was uninspiring at best and can be more accurately described as an yet another act of Obama, with his eyes set on 2012, trying to secure himself as a part of the American center. Even though he may have stood behind the health care reform of last year and drives towards green energy, over half of his speech was so bland that it would not have been surprising had a Republican stood in his place speaking the same words.

Whether it be a lukewarm endorsement of deregulation or an attempt to make a Reaganesque joke about the clumsy nature of regulation, the speech was clearly more about re-branding the president as a man of the center than providing a thoughtful much less controversial summary of the past year along with a vision for that to come.

Even though Obama's speech may have been insipid, there were many points in his speech that extrapolated the wrong lessons from history, ignored basics lessons of sound economics and were just plain wrong, which can be illustrated in his discussion of American research and development. He began to speak about the state of American technological research by mentioning how the Soviet Union beat the United States to space with the launch of Sputnik, resulting in the Space Race that brought sudden increase in the amount the American government spent on science and technology.

However, this is the wrong moral to be taken from Sputnik. Obama claimed of the Space Race, "after investing in better research and education, we didn't just surpass the Soviets; we unleashed a wave of innovation that created new industries and millions of new jobs." As innocent as this may seem, it is dead wrong because it did not take more government investments in areas like technology to surpass the Soviet Union, the United States had always been a far superior economy compared to that of what was once referred to as the second world.

In reality though, the American reaction to Sputnik was an overreaction that was fueled not only by Cold Warriors' fear of the Soviet military dominating America's, but also by academics who taught that the Soviet economy was the wave of the future and that Sputnik was yet another piece of evidence that showed the superiority of an ordered Soviet system compared to the anarchy of capitalist production.

When Mikhail Gorbachev launched his liberalizing reforms and the Soviet Union was finally opened to the West, this delusion was finally shattered and the collapse of the Warsaw Pact and then the Soviet Union itself finally showed that it was nothing but a paper tiger. The "Sputnik moment" that Obama claimed was an example of America rising to a challenge was an overreaction. Despite the fancy gadgets like satellites, ICBMs and boomers the Soviet economy could produce, it was a broken society held together by violence with a standard of living that made the poorest Americans look like kings.

Furthermore, Obama then went on to suggest that an imitation of the heavy expenditure in research and development by the government in imitation of the Space Race is what is necessary to keep the United States at the top of the world economy. As inspiring as this may sound, it is absurd. Why would anyone want a repetition of the Space Race's wasteful spending on things like missiles and spacecraft? How did Sputnik help to increase the standard of living for the average Soviet comrade? How did Wernher von Braun's rockets increase that of the average American? The Space Race resulted in millions of dollars, back when that amount actually meant something, being diverted from productive uses in the private economy to being launched up into space for nothing other than being able to boast to the USSR that the USA was first to the moon.

Mr. President, what will drive the American economy forward into the next millennium is the same thing which has been driving it forward these past decades: the ideas of entrepreneurs, not the central planning of the government. Only through the market process can the technologies of tomorrow be discovered, they simply cannot be dictated to society by the government.

Even though a positive "Yes we can" attitude may be a secret to the American exceptionalism that Obama endorsed in his move to the center, he failed to comprehend that the secret of the success of America over the past century has not simply been the existence of that attitude, but how it has been channeled. It is through allowing human creativity to blossom within the markets that multiple solutions to a problem facing society can compete for consumers rather than having a single plan imposed by the government's technocrats that the United States will thrive in the years to come.

Aiming for the future

Chelsea Whitton

Before I address the promises proposed, economic upturns optimistically stated and ideals propelled in President Barack Obama's State of the Union address Tuesday night, I would first like to say how thankful we should be for the country we live in. The media rarely addresses any amount of gratefulness each of us should have and U.S. citizens with access to a college education, to clean water, the digital age and to the opportunity to make something of ourselves should address these privileges before criticizing the government's policies.

I think it may be fair to say the nation now has a general sentiment that "together," as Obama said often during the speech, is the only way we will move forward economically, socially, environmentally and technologically. The future is about making America "a better place to do business," he said. I think this is both an economic step in the right direction as well as progress for our place in the international markets.

President Obama's speech was vague when it came to specific cuts in funds for federal budgets and military expenditures; however, Obama highlighted a couple of important things in his speech — that America's slipping after years of prosperity has not become a dust bowl of desperation.

According to Obama, we have a future in leading the world economically, in international security, technologically and in our education system. "This isn't about faster internet or fewer dropped calls. It's about connecting every part of America to the digital age," Obama said. He said that deficit spending began a decade ago.

"Now that the worst of the recession is over, we have to confront the fact that our government spends more than it takes in." To do this, annual discretionary domestic spending will be frozen over the next five years, saving $400 billion over the decade and adding to this there will be painful cuts during the next two years due to frozen salaries.

As for our foreign policy, "The Iraq war is coming to an end," Obama said. It is planned that in July 2011 troops will begin to leave Afghanistan, but he mentioned that "there will be tough fighting ahead." And in a message to the Taliban and Al Qaeda, he said "We will defeat you."

Despite his rhetoric largely proposing repair and revamping of the way we view ourselves and our country and the long and hard road ahead of us, we must reflect on how profound of an opportunity we have to be here in America. Think about it.

According to the CIA factbook updated in July of 2010, the United States has the third largest population in the world. The average individual income in America has been reported in my classes as anywhere from $41,000 to $47,000 a year. In China, that national average income is a 10th. Do you realize how lucky you are to be a part of this country where we have a media that functions as a watchdog of government leaders, a country that serves as a functioning democracy compared to many others?

Though Obama did address that our democracy can clearly be contentious at times, we all have the ability and potential to contribute to this country making it a safe place for all cultures and ethnicities to live, but we also have the ability to seek that our leaders are doing the job they were elected for and this is of course where debate comes in.

Serious subject matter was of course the health care bill, Medicare, successful education fueling the future of America's children, innovation and technology advancements, domestic production increases, spending cuts and freezes, stricter tax regulation and more money allocated for improving our country's infrastructure — bridges and roads, which we all can admit, are falling apart. One of the most mentioned needs for advancement was clean energy. This of course also tied in with Obama's push for every American to have access to the digital age, incorporating this in the American education system, while making living costs more affordable.

Obama ran on the premise of change and the American people have seen change but not the kind they expected. In his last two years of his first term the Obama administration now has a Republican-controlled House and if change was hard before, now health care and tax cuts will be even harder, but his speech Tuesday outlined that we aren't headed to the last half of his presidency unaware of some extreme challenges to face and defeat.

Another White Out hits UM

By Andrew Sheridan

[illegible] scene is pl[illegible] familiar with the [illegible] of a "white part[illegible] venues from [illegible] New Yo[illegible]

[illegible] University of Massachusetts will be playing host to [illegible] the west, [illegible] all-encompassing white [illegible] event of the New Year, and it's happening in the dead of winter.

The Winter White Party, which is presented by NV Concepts, is taking over the Mullins Center tonight and transforming it into the Valley's biggest dance club. While it is well after Labor Day, the white party concept makes perfect sense at this time of year. As far as the eye can see, the state is blanketed in snow, and instead of bundling up to face the whiteness, partygoers can break down and celebrate it.

Genuine dance club atmosphere is the name of the game, and in that spirit, the Mullins floor will be completely transformed. Custom UV lighting, confetti cannons, and "snow machines," will be [illegible] a plain white event [illegible] escent dance party. The [illegible] and artists across a [illegible] including hip hop, top[illegible] With admission [illegible] all ages, the idea [illegible] everyone to [illegible]

[illegible] directors [illegible] ing company, [illegible] on and the [illegible] states working and [illegible] ass. They began their busi[illegible] years ago, creating restaurants and bars into after-hours dance scenes. The company moved on to larger scale event planning in clubs and dance halls, and has now gotten to bigger venues such as the Mullins Center.

"Our involvement [with the University] just began recently," said Hutchinson, referring to their recent production with Rick Khaled which attracted over 5,000 people.

Headlining the Winter White Party is DJ Khaled, a disk jockey and record producer who has worked with nearly every big name in the hip-hop industry. Khaled is coming off of last year's release of his fourth studio album "Victory," which featured the talents of Ludacris, Snoop Dogg and Nas, and spawned hit single "All I Do Is Win." The Miami-based performer is hitting the Mullins Center as part of an East Coast tour that will span the first part of 2011.

Joining him on stage will be Boston-based performers Adam Ramirez and DJ Bent, as well as the Pioneer Valley's own DJ Construc. This Easthampton spinster plays a diverse club set, running the gamut from R&B to reggae, and in addition features some of his own signature mixes.

The Winter White Party will run from 9 p.m. until midnight tonight. Tickets are $20, and are still available for purchase from Ticketmaster. For fans of club dancing and black-light highlighters, this should prove to be a unique opportunity to get a taste of the big-city club scene without leaving Amherst.

Bob Seger's 'Like a rock'

By Brian McCollum
Detroit Free Press (MCT)

DETROIT — Bob Seger is gearing up for his first tour in four years, the Detroit rocker confirmed Thursday morning.

Shows in "major cities across North America" will begin in March, with dates to be announced soon, according to a statement from Seger's management.

The tour confirmation, which follows a Wednesday video teaser on Seger's website, isn't the only news from the Seger camp: A yet-untitled album is also on the way from the 65-year-old star, who will be previewing some of the material in a live set with his Silver Bullet Band largely made up of classic hits.

Wednesday's not-so-cryptic video teaser featured concert photos, a U.S. map highlighting states such as Michigan and Ohio, and a simple message: "Stay Tuned."

It's all good news for Seger fans who had grown accustomed to long waits. Before his 2006-'07 run, he had toured just twice in two decades.

Seger, who will turn 66 in May, had hoped to hit the road by late 2010. Speaking with radio personality Dick Purtan in March, he talked hopefully of a fall tour.

While he eased out of the public eye in the '90s to spend time with his family, including a son and daughter who are now in their mid-teens, Seger continued to write, record and stockpile songs. His 2006 tour accompanied the release of "Face the Promise," his first new album in a decade, though his shows were dominated by his repertoire of classics.

For fans, it's a promising sign that Seger is eager to hit the road. He has often talked of the mental and physical challenge involved in ramping up for a tour.

"I've got to build up my stamina, my wind, my physical ability to do a live show, because people are going to expect a certain amount of energy," he said in the days before his 2006 kickoff. "The band is certainly able to deliver it. I have to step up to the plate and get there."

McLovins' ID is legitimate

By Leslie Rosenfeld
Collegian Staff

At 16-years-old, most high school sophomores are more concerned with after-school sports and gearing up for that highly anticipated driver's test, but that's not the case with Hartford, Conn. band, The McLovins. This band is comprised of three members: Jason Ott – Basslovin, Jake Huffman – Drumlovin and Jeff Howard – Axlovin. The McLovins may be rather new to the Western Massachusetts area, but surprisingly, this trio has performed over 125 shows. That includes appearances at festivals Mountain Jam, Strange Creek, Gathering of the Vibes and Nateva this past summer. This past fall has also been a great run for these guys playing 10 shows around Connecticut, Massachusetts and Vermont with upcoming shows right around the corner, including a stop at the Iron Horse in Northampton on Saturday, Jan. 29 at 10:00 p.m.

The boys definitely held their ground and made a name for themselves in the rock and jam band scene, and they are still in high school.

While they don't have many original songs, they are a talented cover band and feature the works of the Rolling Stones and one of their biggest influences, Phish. Jason, Jake and Jeff look and sound like they have been playing together for 10 plus years, and certainly exude the skills of great musicians like Phish lead guitarist Trey Anastasio, Les Claypool and Police drummer Stewart Copeland, all of which are very hard bands and musicians to cover. Technically it takes a lot of time, practice and effort to produce music the way these youngsters do.

They definitely have spent the time learning the tough riffs, bass slaps and drum solos of their mentors. If you have ever seen or heard Phish play, then you know that Trey's fingers move quickly up and down the frets making you think, "Is this really humanly possible?" while Mike hits the bass with swift plucks and forcible funk beats and Jon Fishman keeps the whole band on pace with his elaborate drum kit.

To cover a rock or jam band is a hard feat, but The McLovins have shown they have what it takes.

COURTESY THEMCLOVINS.COM

Though too young to even drive a car, Hartford, Ct. band The McLovins have made an identity for themselves in the area. They are playing at the Iron Horse on Saturday.

They first popped up on YouTube when they filmed themselves covering one of Phish's most popular and technically challenging songs, "You Enjoy Myself," more commonly known as "YEM." It is hard to believe that the guys in the video are still in high school and show a technical skill, flow and a demeanor beyond their years. Another video that floored fans was that of yet another Phish song, "Harry Hood," which has over 39,000 hits on YouTube. The song allows these boys to show that they too have the valiance to exhibit the staccato style of music, where the notes are not connected and are detached to allow flow and improvisation throughout the jam – something that comes with chemistry within the band.

The McLovins, like Phish, the Stones and Led Zeppelin, do not just find inspiration in one genre of music. The McLovins show through their music that they gain knowledge and motivation through the stylings of funk, soul, rock and progressive music.

What's unique about the McLovins, though, is that they have been making a name for themselves for a little over two years and already sound like a tenured jam band. As a result of all their success and lovin' from fans, they landed a record deal with Triple J Records and recently recorded a new song with lyrical genius Tom Marshall and Rocker Anthony Krizan, called "Cohesive."

Hopefully that tune will be busted out this coming Saturday when The McLovins will be rocking in Northampton.

Tickets are available in advance online at IHG.com for $8 and $10 at the door.

Minutewomen travel to face St. Bonnies

By David Martin
Collegian Staff

The Massachusetts women's basketball team will look to pick up a much-needed conference win off of a short road trip to St. Bonaventure this Saturday.

The Minutewomen (6-15, 2-4 Atlantic-10) are coming off a tough loss at home to conference opponent Temple (14-6, 5-0 A-10), in which they were beaten, 76-48.

The 28-point loss was the second largest losing deficit of the year for UMass. The worst scoring difference of the season came at the hands of Maryland back on Nov. 27, in which the Terrapins won by 32 points and the final score of 82-50.

In regards to the loss, UMass coach Sharon Dawley did not have to search hard for an explanation.

"[The starters] just were not good," Dawley said. "With a bad starter, you might as well go see if there's somebody better on the bench."

Overall, the lackluster performance by the starting five certainly did not reflect the effort and success that they proved capable of in games past this season.

Of the starting lineup, Cerie Mosgrove led the way with 13 points and nine rebounds. The other four starters combined mustered up a matching 13 points, of which senior Megan Zullo scored five.

In addition to multiple scoring droughts throughout the game, the worst of which being a 20-2 Temple run in the first half, the Maroon and White gave up 32 turnovers over the course of the night.

With so many questions heading into Saturday's showdown in the Reilly Center, and with strong performances coming from the younger members on the bench being the only highlight of the loss, it goes without saying that the lineup is going to be shaken up a bit before the Minutewomen take the court.

"We need to have more urgency," Dawley said. "And we are going to run for all those turnovers we had against Temple. As far as the starters go [for this weekend], we'll see who steps up this week in practice."

Whatever the decisions may be, they are going to have to be made with very little room for error, as SBU will not be giving UMass any breaks come Saturday afternoon.

The Bonnies (14-7, 4-2 A-10) are playing convincing basketball and sit among the conference's best in fifth place. Their starting lineup consists of players that have started in at least 20 of the team's 21 games this season.

The Bonnie starters have a combined average of almost 10 points a game each. The team's two marquee performers, junior guard Jessica Jenkins and junior forward Megan Van Tatenhove, lead the team in scoring with 262 and 306 points, respectively.

In addition to having a fully capable offense, SBU has a tough defensive game. Of their 14 wins this season, the Bonnies limited the opposition to under 60 points in 13 of them. By comparison, the Minutewomen have accomplished the feat in three of their six wins.

As UMass prepares for what is undoubtedly going to be a crucial game, one can only hope that Wednesday night's game was just a minor setback on the team's way to clinching a chance to perform in the postseason.

David Martin can be reached at dmmartin@student.umass.edu.

Guard Emilie Teuscher drives the lane against Temple on Wednesday. Teuscher and the rest of the Minutewomen are preparing for Wednesday's game at St. Bonaventure.

UM splits over weekend

By Jackson Alexander
Collegian Staff

The Massachusetts swimming and diving teams will split up this weekend and compete in separate venues for the Dartmouth Invitational.

The swimming team will travel to a new facility in White River Junction, Vt., while the divers will go to Dartmouth to compete.

Both the men's and women's teams are coming off of convincing victories versus Boston College on senior night last week. The men won by a score of 254-58 and the women prevailed 216-78.

With the Atlantic 10 Championships coming closer each day, women's head coach Bob Newcomb spoke of the physical toll a season puts on his swimmers and divers.

"It's an interesting time of year, we got a lot of the little bumps and bruises and injuries that are starting to pop their head up," Newcomb said.

Men's head coach Russ Yarworth is hoping to use the Dartmouth Invitational as preparation for upcoming tournaments.

"It's a very big meet for them and that's what I'm looking at. If the score comes out with us on top I'll be happy with that too, but really our focus this time of year is preparing for the championships," Yarworth said.

Yarworth is referring to the A-10 Championships, which will be held from Jan. 24-27 in Buffalo, N.Y.

"The key for this week is for the kids to swim their championship events, and we also have eight kids shaved and tapered competing for the last 3 spots on the Atlantic 10 roster," Yarworth said.

Newcomb agreed with Yarworth that preparing the swimmers and divers is essential.

"Virtually everything we do during the year is geared towards getting them set for Buffalo," Newcomb said.

The first annual Dartmouth Invitational will feature five East Coast schools: UMass, Bryant, the Big Green, Maine and Boston College.

The Minutewomen will enter the tournament with a 3-2 record in nine events overall. They've defeated BC, Army and Stony Brook and lost to Boston University and Northeastern.

The Minutemen boast an impressive 4-1 record, with victories against Army, Stony Brook, Yale and the Eagles. Their lone defeat came at the hands of the Terriers.

The Big Green men's team will look to build on their 1-4 record and the women will attempt to improve their 3-4 mark.

Both Bryant squads come into the tournament with recent success. The men have taken three of their last four and the women have taken two of their last three events.

The Maine women's team enters the tournament winners of its last two events with a 5-5 record while the men enter the tournament at 6-3.

Finally, BC's men's team has a 10-6 record and the women have 12 events under their belts.

Newcomb and Yarworth have preached preparation for bigger events, but coming away with a victory this weekend would also be nice.

"We've had a really good week of workouts and I'm really happy and impressed with what they're doing," Newcomb said. "Ideally we'd like to keep it going."

Both teams have one goal this season – win the A-10 tournament – and an impressive outing in the pool this weekend could go a long way to achieving that goal.

Jackson Alexander can be reached at jtalexan@student.umass.edu

Minutemen return to Mullins to take on URI

By Herb Scribner
Collegian Staff

The Massachusetts men's basketball team is returning home on Sunday afternoon after a week that featured travel woes, practice in an airport with a shoe instead of a ball and a win against Atlantic 10-opponent St. Bonaventure.

Now that the smoke has cleared, UMass returns back to the Mullins Center with a victory under its belt following a surreal experience on the flight out to SBU. The delayed landing left them practicing in an airport with a shoe, and out of their usual routine.

"It could have been easy for it to be a distraction," senior guard Anthony Gurley said, "but myself and my teammates, we really showed that we were focused."

This Sunday at 4 p.m., the Minutemen (12-7, 4-2 A-10) will focus on traditional rival Rhode Island in a heated contest that'll pit two very similar teams against each other.

The Rams (13-7, 4-2 A-10) enter the Mullins Center with a near-identical record as UMass, and are one spot above them in the A-10 table.

Three of URI's four conference wins came in a streak right towards the end of the winter break as the Rams toppled Richmond, the Bonnies and Saint Joseph's all within a week's span. The contests against the Spiders and the Hawks were both away, giving URI a 3-0 record in all its road games.

While the Rams are boasting an undefeated road record in the conference, the Minutemen are 1-1 for home conference games this season. Before conference play began however, UMass suffered three-straight losses at the Mullins Center.

Part of the reason the Rams have been off to this hot conference start is due to senior forward Delroy James, who just recently scored 21 points (12 in the second half) in URI's 59-57 win against Saint Louis.

The Minutemen will be eyeing James quite closely in the upcoming contest, as he averages 17.7 points per game along with near eight rebounds per contest.

While the Rams boast James and senior guard Marquis Jones (10.7 points per game), UMass will likely rely on its traditional high scorer, Gurley, who has led the Minutemen in scoring for 17 of their first 19 games.

UMass will be looking for Gurley to repeat his performance from last season's meeting between these two teams, when the senior guard scored all of his 15 points in the final three-plus minutes of UMass' 93-85 loss to URI.

These 15 points by Gurley came after a 36-minute struggle for the Minutemen, and were the surge for a comeback that limited a 24-point Rams lead down to as little as six points.

"We can't have him not play the way he played at the end for a whole game," Kellogg reflected after the URI game last season. "I don't think we have enough fire power, we're not good enough."

Despite his strong performance in last season's meeting, after the SBU game on Wednesday, Gurley called the upcoming contest against a URI a "tough game."

Although Gurley is always a threat, if the Maroon and White's last competition against SBU is any indication, others like Javorn Farrell and Gary Correia will need to step up.

Against the Bonnies, Farrell earned 16 points, while Correia had six points with two steals on the defensive end of the floor.

For most of the statistical categories in the A-10, URI and the Minutemen are at a near deadlock, except for 3-point field goal defense, which the Rams lead with just over 30 percent allowed from beyond the arc.

Conversely, the Minutemen rest at the pit of 3-point field goal percentage rankings, scoring over 28 percent of their attempted 3-pointers.

URI's top 3-point defense mixed with the ailing UMass 3-point offense could limit the capabilities of top shooter Freddie Riley, who lurks from beyond the arc.

Meanwhile, the Minutemen rank fourth in the A-10 for offensive boards (URI is seventh), and averages less than a percent higher than the Rams for defensive rebounds.

Sean and Sampson Carter will look to continue their rebounding ways, as they earned eight and nine rebounds, respectively, against the Bonnies on Wednesday night.

No matter what Sunday afternoon holds for UMass, the team will have Saint Louis and SJU to compete with next, both of which are away games.

Herb Scribner can be reached at hscribne@student.umass.edu.

Guard Anthony Gurley attempts a shot against Richmond last Saturday. The Minutemen will return to the Mullins Center on Sunday for a game against Rhode Island.

JEFF BERNSTEIN/COLLEGIAN

Forward T.J. Syner chases the puck against New Hampshire this season.

Mass Attack ready for Huskies

By Dan Gigliotti
Collegian Staff

Massachusetts hockey coach Don Cahoon called a timeout with eight minutes, 53 seconds left in the second period after his team gave up its second two-goal lead in the game against Northeastern.

His message to his team, down 4-3 after surrendering three goals scored in less than two minutes, was that the game would be won or lost in the remaining 28-plus minutes.

The game was played on Jan. 7 at the Mullins Center and it ended with a 5-3 Minutemen loss.

Following the game, Cahoon was upset that his team did not play with a sense of urgency. He was incensed by his team's lack of toughness, calling his players undisciplined and criticized them for their lack of physical play.

UMass (6-12-3, 5-7-3 Hockey East) has a chance to overtake the Huskies (7-10-5, 6-7-4 HE) for seventh place in the conference standings with a home-and-home series this weekend.

Cahoon believes that the toughness that the Minutemen lacked three weeks ago will go a long way in determining whether or not they can win this weekend.

"Two factors are going to play into this weekend: If we are disciplined enough to play as hard and physical as we need to play to succeed against Northeastern, yet without taking penalties and putting ourselves at a real disadvantage," Cahoon said during the Hockey Radio Show on Tuesday.

Northeastern scored three goals in a span of 38 seconds the last time the two teams met. It was the quickest three goals that the Minutemen have allowed in school history. Two of those goals came on a power play, including a five-on-three.

UMass took six penalties for 12 minutes in that game, allowing the Huskies to convert on 3-of-6 power play opportunities.

The types of penalties the Minutemen took, according to Cahoon, were untimely and extremely unsettling. Northeastern ranks second in Hockey East in penalty minutes (16.1 per game) and UMass can expect the Huskies to test its physicality.

"The discipline piece is really critical, but we need to be ready to play a real intense, physical game or it won't be a good evening for us," Cahoon said. "Northeastern is going to try to take it to us on a physicality basis. That is clear the way they played the game [on Jan. 7]."

Since its struggles against Northeastern, the Minutemen have allowed one power play goal in the five games since, going 21-of-22 on the penalty kill.

UMass has won three of its last four games, back-to-back wins over last-place UMass-Lowell and a 6-0 victory against ninth-place Vermont in their last outing.

Senior Paul Dainton made 26 saves in his second career shutout on Saturday, earning Hockey East Defensive Player of the Week honors. Assistant captains T.J. Syner (two goals, one assist) and Danny Hobbs (two assists), led the Catamount rout offensively. Hobbs has now scored 15 points in his last 11 games (six goals, nine assists).

Wade MacLeod tallied two points (one goal, one assist) on Jan. 7 and is Northeastern's leading scorer with 22 points (11 goals, 11 assists) and tied for 10th in conference scoring.

Cahoon sees improvement in his team since the comeback loss to the Huskies, yet he remains concerned with his team's discipline and sense of urgency, two things that can't be taught by the 11th-year coach.

"The discipline piece continues to concern us, specifically with penalties," Cahoon said.

"That sense of urgency comes from a great will. You have to have the courage to compete," Cahoon continued. "The will to compete is usually behind the impetus to having that sense of urgency."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

SGA inducts a new senator

Junior Jarred Rose appointed amid fierce debate at meeting

By Sam Hayes
Collegian Staff

Despite vocal opposition and heated debate, Jarred Rose was appointed to the vacant Southwest South senate seat during last Wednesday's Student Government Association meeting.

"I'm pretty happy about it," said Rose through restrained laughter about his senate appointment. "Being back is exciting."

The 20-year-old junior was an SGA senator last year for the Orchard Hill Residential Area, but served as special assistant to the president for the fall semester after losing his seat in the election.

Rose took the seat previously held by Tyler Reed, who vacated the position when he moved to Central Residence Area.

Nick Barton, an SGA Senator and chair of the Administrative Affairs committee, which sponsored Rose's candidacy, saw Rose as well-suited for the position. Barton claimed Rose had "an acute knowledge of the Senate and the SGA bylaws" and that "there is nobody on campus more qualified for the position who is not already in the Senate."

Not all senators were as supportive of the motion as Barton, including fellow Southwest South senator Ben Johnson, who led the opposition. Johnson argued Rose already had an SGA position and that "something the senate voted unanimously for was new people."

Johnson and SGA President Brandon Tower both referenced an argument they had about the appointment, which occurred earlier in the week. Tower called the altercation "completely inappropriate" and apologized.

"We are a student government," Student Trustee Mike Fox said. "I don't think we should take things too personal…in four or five years, no one is going to know who the hell we are."

Acting speaker Tina Kennedy told the Senate that "if [they] want to act like middle-school girls [they] can leave."

With support from President Tower and Senator Broughton, and later mediation by Speaker Modesto Montero, Rose was elected by the senate. Johnson abstained from voting.

"We wanted to give other people a chance [for the open Southwest South seat]," said Johnson in an interview after Rose's appointment. "I think Jarred will be an important senator. [He] has the seat now and that's it."

"I can understand the argument of giving someone a chance," said Rose. "I tried my best to get someone into this seat last semester [when I was] special assistant. But I think I will be a good senator."

"The people that [Ben Johnson] wanted, I would love for them to be in the Senate if there was another seat," Rose went on.

Rose explained that being a senator is a "very interesting position."

"[An SGA senator] is important enough to talk to the important people, but is still just a regular student," he added. "Being special assistant was highly administrative, [but being a senator] allows me to do more on my own, [work on] more creative projects."

Specific projects Rose discussed included organizing a campus-wide foot race to raise money for scholarships, restructuring the Residential Housing Association and area governments to increase autonomy, and moving the whole campus to a four-credit class system.

"They're scared of the state," said Rose, regarding the University of Massachusetts' faculty. He explained that he believes the faculty is afraid of changing all classes to four credits because it will appear to the state legislature that the faculty want the same amount of pay for teaching fewer classes.

"We are never going to pass this with the faculty alone; we need student support," said Rose, who added that he feels the four credit

University of Massachusetts physics professor Jennifer Ross was recently named a 2010 Cottrell Scholar, a prestigious accolade reserved for the brightest up-and-coming stars in the sciences.

The recognition comes from the Tucson, Ariz.-based Research Corporation for Science Advancement (RCSA), an organization which states on its website that it is dedicated to supporting early-career faculty, innovative ideas leading to transformative research, the integration of research with undergraduate education, and several other goals. The Corporation has been giving out the awards, named for its founder, Frederick Gardner Cottrell, since 1994.

According to Research Corporation Program Officer Richard Wiener, the awards are given out to "support outstanding research and teaching practices conducted by early career university scholars at PhD-granting institutions."

The award includes a grant of $75,000, with no budget proposal required, meaning awardees can use the funds for research and equipment costs at their discretion. $5,000 of the award is set aside to allow the scholars to attend the annual Cottrell Scholars conference in Tucson.

Ross won after her proposal, titled "Studies of Microtubule Intracellular Highways: Building Bridges between Physics and Biology," was reviewed and selected by a panel of her peers picked by RCSA. According to a UMass News and Media Information Office release, only 12 percent of applicants received Cottrell Scholar awards this year.

Wiener said Ross distinguished herself through the innovative design of her proposal and because she combined aspects of physical and life sciences in shaping her plan.

"Professor Ross proposed conducting systematic investigations of how the architecture of cellular microtubule networks impact the motion of single protein motors and motor-laden molecular cargo," he said. "RCSA believes Ross' work bridges the boundary between the physical and life sciences and will provide a deep understanding of the dynamics of cellular processes. Professor Ross' educational plan seeks to educate undergraduates from physics, chemistry, the life sciences and engineering in advanced mathematics and physics using an interdisciplinary approach."

Ross and 10 other winners will also receive a write-up in the prominent journal Science.

According to the UMass release, Ross' proposal pertains to imaging single molecules of microtubule motor proteins, with applications for neuromuscular disease research.

"These nano-scale proteins shuttle materials and organelles throughout all your body's cells," explained Ross in the release. "These active motility processes are most important in very long cells – like nerve cells – where goods and materials made or recycled in the cell body need to be transported a long way, up to 1 meter in nerves connecting your toes to your spine) to be used at the end of the axon. Defects in transport are related to neuromuscular diseases, such as amyotrophic lateral sclerosis or Lou Gennig's disease," she furthered. "We are interested in dissecting how nano-scale traffic jams could stop transport inside cells. We study these motors one at a time using fluorescence microscopy that can see single proteins."

Beyond applications to her research, Ross plans to use her Cottrell money to develop an interdisciplinary optics course.

"My course is designed to give students a basic understanding of optics design and construction principles, so that they can take these skills to their own research. The course has an extensive laboratory section where groups of students design and build an optics microscope out of component optics pieces. The Cottrell Award will enable me to purchase two more experimental set-ups so that more students can take the class," she explained in the release.

Ross, who came to the University in 2007 and runs the Ross Lab here, conducted her Ph.D. work at the University of California Santa Barbara and her postdoctoral training at the University of Pennsylvania.

SAM BUTTERFIELD/COLLEGIAN

Fewer students earn degrees, finds survey

Claire Reid Kiss
Collegian Correspondent

Due to a number of circumstances ranging from financial woes to lack of preparation, graduation rates at colleges and universities are decreasing across America.

According to an article in the Chronicle of Higher Education, of 1,400 surveyed universities, one-third reported a decrease in graduation rates for the six-year period ending in 2008, compared to the period ending in 2003. The other two thirds of the universities improved, but by just 2 percent.

The graduation rate for the class entering the University of Massachusetts in 2004 over a six-year period was 69 percent, much higher than the average rate of 55.9 percent nationwide, according to the National Center for Higher Education Management Systems.

This issue has drawn concern at all levels of government, including the White House itself.

"America has fallen to ninth in the proportion of young people with degrees," President Barack Obama said during his State of the Union Address last Tuesday. The College Board cautioned that this gap could lead to weakening America's economic competitiveness, especially due to the fact that private universities have raised tuition by 4.4 percent and public universities by 6.5 percent over the past two years alone. According to a College Board report, universities have had to raise tuition because government has cut support to public universities, leaving them strapped for sources of income and sometimes forced to raise tuition and fees. Faced with a record-shattering deficit, the government has been forced to issue less money to federally-funded college

UM studies abroad in China

UMass Chinese programs support '100,000 Strong Initiative'

By Kara Clifford
Collegian Correspondent

When Chinese President Hu Jintao visited the White House last week, First Lady Michelle Obama took the opportunity to advocate for the new "100,000 Strong Initiative."

Announced by President Barack Obama in 2009, the initiative seeks to increase greatly the number of American students studying abroad in China by 2014. Obama and President Hu discussed the importance of cooperation and friendship between the United States and China, while the First Lady brought up a concrete way to improve relations.

Mrs. Obama stated that she believes the key to national success is about working "with them to make our world stronger. It's about the friendships you make, the bonds of trust you establish, and the image of America that you project to the rest of the world."

Wendy Simon-Pearson, a University of Massachusetts student currently abroad in China, was motivated by a desire to make such bonds.

"I realized how important it is to understand China in order to really comprehend what is going on in the world…part of normalizing relationships between societies is demonstrating respect through the study and use of the language," said Simon-Pearson.

The administration is relying mostly on private sector funding for the initiative. Mrs. Obama announced $2.25 million had already been raised from companies such as Caterpillar, Inc. and Citigroup.

However, according to Forum on Education Abroad president Brian J. Whalen "the success of this program depends not only on the amount of private funding that is raised, but also on how it is going to be allocated."

He also pointed to "new education abroad programs, the expansion of existing partnerships and programs, the development of Mandarin language courses, and the training of personnel to develop and manage education abroad programs in China" as important causes to which money should be allocated.

Recently, Secretary of State Hilary Clinton gained support for the initiative by sending letters asking various colleges and universities across the nation to support the initiative. In response, 324 institutions pledged to double the number of their students who study abroad in China in the next four years. But this commitment requires an expansion in Chinese curriculum across subjects such as language, culture, literature, history and economics.

The initiative concentrates on providing minority and community college students with the opportunity to travel, which would also require great expansion of small or nonexistent Chinese programs at the community college level.

However, the Chinese program at the University of Massachusetts gives hope to the goal. Chinese courses such as those covering the Mandarin language have seen increases in enrollment over the years. The program continues to gain resources, including improvements to its tutoring center. The International Programs Office has also experienced increased interest from students wanting to study abroad.

Mrs. Obama emphasized the importance of "sharing your stories and letting them share theirs, by taking the time to get past the stereotypes and misperceptions that too often divide us."

Melanie Keyes, a junior at UMass, experienced the breaking of some common American misperceptions when she studied abroad in China last year.

"One stereotype that I think prevails is that China is all city and pollution," she said. "I'll admit that there are areas where pollution is really bad and more could be done about it, but the

UMass doctoral candidate founds nonprofit to assist his native Haiti

BY AMY BRENNAN
Collegian Staff

Although the world seems to be accustomed to natural disasters due to their abundant recent occurrences, the disaster in Haiti last January created uproar around the entire globe.

The 7.0 magnitude earthquake, according to USA Today, killed an estimated 230,000 people, sending the impoverished country into chaos. People became desperate, shooting others for food and vying for placement in portable hospitals beleaguered by contagious diseases such as measles, tetanus and diphtheria. Numerous people who survived the earthquake died waiting for medical treatment.

Misfortune and heartbreak, however, are nothing new to most Haitians. The educational system is ailing in an abundance of ways. According to haitipartners.org, 50 percent of primary school-aged children are not enrolled in school. Thirty percent will not make it to third grade, and 60 percent will not make it to sixth grade. Thirty-seven percent of the population cannot read or write, and 70 percent are unemployed, according to the same statistics.

These figures were not acceptable to Marky Jean-Pierre, a doctoral candidate in education at University of Massachusetts.

Jean-Pierre grew up in Haiti and came to the United States in 1998. Since then, he has been going to school full-time while working to support his family both in the U.S. and in Haiti.

When Jean-Pierre finished tenth grade, he could not continue his education because his parents were not able to afford a private school. He began teaching elementary classes in the mornings and taking classes in the evenings to complete his secondary education.

After his secondary education, he participated in a selective contest to have a place at the State University of Haiti. Jean-Pierre became one of the one percent of Haitian students who had access to higher education.

Before coming to the U.S., he completed his degree in psychology. He then attended UMass Boston in 2001, where he completed his bachelor's degree. From 2003 to 2005, he received his MA in applied linguistics at UMass Boston and then began his doctoral degree in education in 2005 at UMass Amherst. He defended his doctoral dissertation last December.

Haiti was devastated after last year's 7.0 earthquake rocked the island nation. A UM Ph.D. student has started an organization promoting education there.

Jean-Pierre became involved in Haiti's education system following his developing interest in how education intersects with geopolitical and social expansion in the modern world.

"I have been curious of the discourse in the media through which Haiti is most of the time portrayed for negative aspects of our dignity as human beings," said Jean-Pierre.

Jean-Pierre cited chronic political turmoil, substandard housing, hunger, lack of healthcare, a high rate of infant mortality, and a low life expectancy as a few ways Haiti has been negatively portrayed through the media.

"While I cannot deny these facts about Haiti, I have also come to understand that this is the same country whereby access to education is very limited and intricately interwoven with socioeconomic status," said Jean-Pierre,

"School success is distressingly low, and the main medium of instruction is a language that many Haitian intellectuals consider a foreign language for most Haitians."

Jean-Pierre realized that Haiti would not be able to raise the standard of human dignity for its citizens and would not be able to compete in the local, regional and global markets if the problem of education was not properly addressed.

Thus he made the decision to start up the Fondasyon Onè pou Ayiti (Honor for Haiti Foundation). The Honor for Haiti Foundation (FONHOH), according to its website (www.fonhoh.org), was created to develop a long-term strategy for changing education and economic opportunities in Haiti, particularly in the rural region of Lagoun. It was founded in 2005 and is a 501(c)(3) nonprofit.

There are three phases FONHOH has implemented, the first of which is to obtain land and build a school. To date, 10 acres of land have been bought and have received 200 hours of pro bono work from a team of architects and engineers.

A survivor of the Haitian earthquake carries a salvaged table. A UMass student recently started a nonprofit to help victims like this one.

Phase two is meant to create classes and educational services for both children and adults. The organization has already started offering classrooms for children who were displaced by the earthquake.

According to Jean-Pierre, more than 80 percent of school buildings collapsed in the capital region. Approximately 600 teachers, 200 education professionals and 1,300 university professors and students died in the earthquake.

Cyber training is also being offered to teachers in the area. Eleven laptop donations were flown to Haiti to equip a café for adult education. The adults were shown the fundamentals of word processing, pedagogy and language.

Finally, the third phase's intent is to influence the national approach to education through teacher training.

According to haitipartners.org, roughly 75 percent of all teachers do not have satisfactory training. Of those 75 percent, many have only a ninth or twelfth grade education with absolutely no teacher training.

In order to foster teacher training, the foundation has created partnerships with UMass. To date, a proposal has been submitted to the U.S. Department of Education in order to create a curriculum for a training program in multilingual education.

After the earthquake, Jean-Pierre traveled to Haiti three times.

"It was heartbreaking to see how the places that have influenced my life were all under rubble," he said. "It was particularly difficult to see how the K-6 school where I collected my data for my dissertation turned into debris."

"It was hard to call my friends and family members, as I was afraid of the news they might have about those who died," he went on.

"I had to call anyway, at least to know who survived and who didn't."

Although Jean-Pierre saw a profusion of devastation after the earthquake, he believes there is still hope.

"It is important to notice that I've found a country that is devastated but a population that does not give up and is ready to face the challenge of making Haiti an honorable and decent place to live," he said.

Amy Brennan may be reached at brennana@student.umass.edu.

Don't trash Mass.!

Members of the environmental activism organization MASSPIRG placed a posterboard advocating for revisions to Massachusetts' bottle receiving bill in the Campus Center concourse Jan. 29.

UMass students reflect on studying in China

CHINA from page 1

bluest sky I have ever seen was while we were in Zhoushan. Much of China is still very rural and developing."

"It is thrilling to hear the First Lady speak about study abroad and support its importance for students and for our nation," added Whalen.

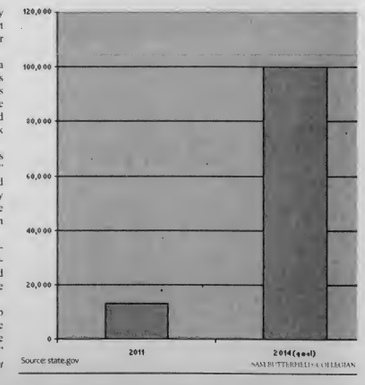
Strengthening relations with China not only requires political agreements but relationships between members of each nation. It could potentially be a large task to get past language and cultural divisions, but the hard work appears worthwhile.

Keyes described the relationships that came out of her trip as "family." She recalled that her group would "cook and eat dinner together, play majiang, watch movies, relax on the banks of the West Lake, and go out on the weekend."

In addition, they "would have conversations late at night about different tourist attractions in China and America, our families, and our college experiences."

Melanie and her group still keep in touch and "are trying to convince [their] Chinese counterparts to come visit or attend grad school in the U.S."

Kara Clifford can be reached at kmclifford@student.umass.edu.



Study: graduation rates dwindling nationwide

DEGREE from page 1

aid programs. According to The Chronicle report, universities are admitting more students who are less prepared for college because they bring with them money the schools need.

"Some research shows that if schools raise their academic standards for admission, graduation rates go higher not lower, so I think there is some evidence showing that student preparedness for college is one of the factors that influences graduation rates," said Ron Hambleton, co-director of the Center of Educational Assessment at UMass.

In the past nine years, the highest four-year graduation rate at UMass was the class that entered in the fall of 2002, with a 51.3 percentage rate, according to data released by the UMass Office of Institutional Research. However, the same data set revealed that out of the rest of the 48.7 percent, only 19.4 percent continued for their fifth year at UMass.

It should be noted that the UMass system only counts full-time students who started and graduated at that specific university within six years of enrolling. It does not count transfer students or students going to school part-time, or students who take longer than six years to graduate. According to the Chronicle report, their study excludes about 50 percent of enrolled students.

Currently, one-third of all students transfer to different schools during their college enrollment according to The New York Times.

According to a report by the National Center for Public Policy and Higher Education, 17 percent of American college students graduate with a degree, which places the U.S. sixteenth internationally in terms of graduation rate. Obama stated in his first State of the Union Address that education is essential to economic and social prosperity and that his administration was drafting plans to attempt to raise graduation rates by 2020. This effort could cost the government $155 billion, according to a study conducted by the Georgetown University Center for Education and the Workforce.

One way the Obama Administration is helping the graduation rate is through the new higher education tax credit, which is part of the $787 billion stimulus package passed in 2009. This tax credit provides a $2,500 tax break for parents of college students during college enrollment. This aims to help with the financial struggle families face when paying tuition and will hopefully help the graduation rates start to increase.

Although graduation rates seem to be lower across the country, Massachusetts' public universities ranks in the top 10 in graduation rates, according to Katy Abel, the Associate Commissioner for External Affairs from the Massachusetts Department of Higher Education. However, Abel also mentioned that Massachusetts ranks forty-fifth in the nation on spending for public higher education.

Massachusetts is trying to increase its graduation rates further with efforts like The Vision Project, an effort to emphasize the strength of Massachusetts' public universities.

Claire Reid Kiss can be reached at creidkiss@student.umass.edu.

UMass' six-year graduation level, 69 percent since 2004, has hovered well above the national level of 55.9 percent.

Holub speaks of budget woes

In a letter to the University of Massachusetts community late Thursday night, Chancellor Robert C. Holub addressed the issue of the University's budget for the next fiscal year.

In the letter addressing the campus, Holub discussed budget cuts from the state, cuts by the University in funding for campus projects, and possible fee increases for students.

Holub began the letter by addressing the reduction of funds allocated to the University by the Governor's office in Boston. According to the Chancellor, UMass will receive $196 million in state funding this year, as Gov. Deval Patrick announced the Commonwealth's budget last Wednesday. The allocation is about $18.8 million less than the University received last year.

Due to the end of federal stimulus money and $9 million in salary increases for University employees; there will be a $28 million gap between the 2011 fiscal year budget and 2012.

To close the gap between allocated funding and the University's expenses, Holub said he is consulting with campus planners to determine where fees should increase.

"I have asked the Budget Planning Task Force to consider carefully what kind of a fee increase we need to request in order to preserve our educational quality and our revenue-generating operations if we are faced with a budget resembling the Governor's budget," he wrote.

"If we are going to reach our goal of ascending into the ranks of the foremost research institutions in the nation, we must have appropriate funding," he continued.

The Chancellor ended the letter on a somber note, with the final sentence reading, "In sum, the campus community should recognize that we are still facing serious financial challenges in the coming fiscal year."

Chancellor Robert Holub told the campus by email last week that the school should brace for budget cuts.

SGA appoints senator, adds funding for RSO start-ups

SGA from page 1

proposition would push students to take four classes and allow them to focus more. In addition, a motion to allocate Registered Student Organizations (RSOs) more money for startup costs was later passed at Wednesday's meeting. Now RSOs can get up to $200 from the SGA for startup costs without going before the Senate and arguing their case.

Financial Committee chairman Ben Johnson explained that, "Traditionally RSOs are asked to fend for themselves" and it is increasingly "harder to fundraise in this economic climate."

"We've been working hard to support groups on campus," said Johnson, "and RSOs are the life of campus."

Balaj Rai, Ben Lees, Justin Thompson, Juan Moreira and newly-appointed Secretary of Finance Janam Anand worked on the legislation to provide aid to the RSOs.

In addition, SGA commuter senator Nathan Lamb announced his bid for SGA president.

Sam Hayes can be reached at sdhayes@student.umass.edu.

At last Wednesday's meeting, SGA members discussed funding RSOs and swore in a new senator.

K-9 unit gets new outfit

Money raised during a month-long drive in December brought in enough funding to purchase a bulletproof vest for UMPD K-9 unit Diezel, pictured above at a vesting ceremony Jan. 27.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

MONDAY, JANUARY 31, 2011 "Censorship offends me." -Author Unknown EDITORIAL@DAILYCOLLEGIAN.COM

Stop whining!

Nestled gently on the bosom of the Pioneer Valley, the University of Massachusetts has never really had much of an identity crisis when it comes to its political slant.

Nicholas O'Malley

UMass, and much of the surrounding area, could be accurately described as Smurf Blue.

But with that political mindset taken for granted at times, it's easy to think why there's a liberal consensus around these parts; except, of course, when that small, boisterous minority, which ironically tends to refer to itself as the opposition, makes its presence felt.

We're talking Republicans here. Not that it's a bad thing. I love Republicans – except for the crazy ones. Well, I guess that means I just hate crazy people that talk about politics.

Saying UMass has a long history of censorship isn't particularly fair – despite the two aforementioned incidents. I can point you towards the rallies outside Whitmore over student fees, the China-Tibet rallies, or even the Israel-Palestine rallies. But apparently, these weren't deemed "controversial" enough to make it onto FIRE's list.

If Lukianoff wanted to make a case, it would be for Republicans being forced to jump through hoops to express their beliefs. It makes sense, though, why Republican rallies could be considered controversial – they're unpopular.

Case in point: Don Feder.

Feder, who came to UMass to give a speech on how hate speech should be covered under free speech, eventually had his speech shut down, but not by the UMass administration. Instead, protesters gathered outside the Cape Cod Lounge in the Student Union eventually forced Feder to leave the stage. It wasn't censorship; it was a guy getting booed offstage.

When it comes down to it, controversy is dependent on reactions, not content.

This is all relevant because of a recent Huffington Post article, "The 12 worst colleges for free speech." The piece, written by the president of the Foundation for Individual Rights in Education (FIRE), Greg Lukianoff, ranked UMass the fourth-worst school in the country for free speech.

The reasons, Lukianoff argued, were UMass' strict policies on when and where "controversial" rallies can be held on campus and the school's "long history of censorship." For examples, Lukianoff cited the decision to revoke a rally permit for a pro-war rally after 9/11 and the incident two years ago with the conservative student newspaper, The Minuteman. For those who don't remember, The Minuteman had made demeaning remarks towards two members of the Students Government Association (SGA), one of whom responded by taking a stack of The Minuteman and standing on them so no one could read them – it was a mess.

In both cases, conservative groups were screwed, with FIRE playing a direct role in the resolution of the latter.

So, what's really going on here? Are Republicans really getting a bad wrap and rough treatment from the UMass administration, or is FIRE taking a pro-right pot shot at UMass now that it has an online audience? Probably a bit of both.

If anything, touting the First Amendment together with conservative rallies is like touting universal healthcare and liberal rallies. So it should come as no surprise FIRE is backing shafted conservatives. At the same time, though, they do have a point, just not the one they made.

When it comes to free speech v. free speech, volume wins.

It's unfair really, that, of all things, conservative viewpoints should be deemed "controversial."

There's no reason pro-life should cause a bigger stir than pro-choice. But it does.

When it comes down to it, controversy is dependent on reactions, not content. In this area, anything with a whiff on the red side of the aisle is going to draw ire, and, to be honest, it's really not fair.

In the end, though, this isn't about free speech. It comes down to a vehement minority pushing for what they believe in and the University's administration realizing people want to push back.

Does this mean they should stop? Absolutely not! Shine on you crazy diamonds.

Our political climate is one of the hallmarks of this school: the large, content pseudo-democratic majority and the small, disgruntled, redder-in-comparison minority. Problems only arise when the administration tries to cool down the atmosphere so things don't get out of hand.

Is it censorship when this happens? Probably. It's too bad, because Republicans don't have too much to complain about since last November. It's not the same when the right's not riled up.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

Revolutionary double standards

It is rare to see a revolution unfold, and in the past month we have seen two. Tensions in Tunisia exploded Dec. 17 after Mohammed Bouazizi, a simple shopkeeper, set himself on fire to protest police brutality, government corruption and repression, as well as widespread unemployment. The entire country erupted in protests, eventually forcing Tunisia's dictatorial president-for-life Zine El Abidine Ben Ali to offer concessions ranging from cabinet re-shuffling to a promise to step down from power in 2014. None of his offers placated the protesters, whose goal was now to remove the dictator from power completely. On Jan. 14, the public pressure became too much, and Ben Ali fled to Saudi Arabia. Tunisia's dictatorship was over, and a caretaker government has been installed while the Tunisian people hold elections and review their constitution.

Yaroslav Mikhaylov

However, it's not Islamic fundamentalism that is repressing the people of Egypt; it's its own brutal dictatorship, which the U.S. supports.

More recently, a similar public opposition movement has swept across Egypt. On Jan. 25, Egypt's National Police Day, thousands of protesters took to the streets in major Egyptian cities, including Cairo and Alexandria.

After the protesters refused to disperse despite several clashes with police, the Egyptian government cut off all Internet and most mobile phone access in the country. Shortly thereafter, the Egyptian army was deployed to major cities to restore order and suppress the protesters. Few clashes between military personnel and civilians have been reported – a result of Egypt having a conscription-based rather than a professional military.

Yet, despite all of this, Egyptian president Hosni Mubarak – whose 30-year term is the norm for the region – refuses to cede power. His dissolution of the government was a meaningless gesture that could not quell the nation's one demand – his ouster.

President Obama and the State Department welcomed the Tunisian revolution with open arms and pointed to it as a triumph of democracy over dictatorship. Meanwhile, U.S. support for Egypt's almost identical revolutionary fervor is scant and carefully worded. When speaking of Tunisia, Obama praised the Tunisian people and their dedication to democracy.

However, when discussing Egypt's situation, the conversation rotated around Mubarak and how he could resolve the current crisis. The protesters are mentioned only as a component to an ultimate solution that Mubarak and his government must surely find.

Why such a difference in tone?

Tunisia is a small country mostly known for its tourism. Mubarak is a strategic partner for the U.S. and a recipient of a significant amount of U.S. aid as a result of his self-described position as a bulwark against Islamic extremism. Approximately $1.5 billion worth of aid, $1.3 billion of which goes to the military, is sent to Egypt every year.

However, it's not Islamic fundamentalism that is repressing the people of Egypt; it's its own brutal dictatorship that the U.S. supports. In his speech on the issue, President Obama mentioned that the Egyptian government should institute reforms to address the dissatisfaction of the Egyptian people. But at no point did he mention Mubarak giving up any of his dictatorial powers.

The U.S. stands at a crossroads now. Flowery rhetoric about how much the U.S. values democracy abroad is meaningless if it is not backed up by similar actions, like a withdrawal of U.S. support for the Mubarak regime until it caves to the demands of the Egyptian population. Mubarak is seen by the Egyptian people as the cause of the corruption and inequality which keeps so many Egyptians mired in poverty while allowing Mubarak's private clique to use an entire island in the middle of the Nile as their pleasure club. Giving up power would mean an end to this lifestyle for him and his supporters, so he will cling to power for as long as he has any support – U.S. support included.

Democracy is risky business; you never know who will end up in power. If the U.S. backs the pro-democracy protests in Egypt, it risks losing Mubarak as an ally, should he manage to remain in power. Even if he is ousted, the resulting government may end up unfriendly to the U.S., or more likely as pliable as Mubarak's regime. However, in order for democracy to flourish, risks must be taken.

So the U.S. is faced with a choice; support another risky experiment in democracy, or play it safe with the friendly neighborhood dictator. If Obama's answer is the latter, as his recent addresses on the issue seem to suggest, then the U.S. is clearly not dedicated to democracy, but to American-minded dictatorships.

Anonymous History

On Thursday, Jan. 27, history was made. In an unprecedented act, Hosni Mubarak's National Democratic Party stopped the Internet in Egypt. Since then, no single Egyptian website has been accessible from the outside world, and modern communication has ground to a halt throughout Egypt.

Max Calloway

The next day, all hell broke loose. Amidst rubber bullets and raging fire, the people of Egypt unanimously shouted, "Enough!"

Sitting at my desk on Friday night, I bore witness to history. On a window streaming Al-Jazeera's live coverage, I watched as President Mubarak showed his people the rigged deck he had been playing with for the past 29 years. He promised his nation a unilateral dissolution of the government and his intention to rebuild it in order to better serve the people. In effect, he admitted, on live television, that he and he alone ran the show. The free people of Egypt called for his head.

None of this is news. At this point, everyone around the world knows what is happening in Egypt. But right next to my browser sat a different sort of window: one looking at the back-door of the Egyptian Revolution.

While Al-Jazeera's pundits commented on the continued unrest, I watched as hundreds of Anonymous agents worked to restore communication to Egypt. I was sitting in the #opegypt channel of the Anonymous network's Internet Relay Chat (IRC) server.

IRC is more or less the iChat of serious Internet junkies. Depending on the server and channel you connect to, you can find everything from video-game enthusiasts and hackers, to pretty much any type of pirated multimedia your heart desires. The whole program is minimalistic in that disheveled sci-fi way that made the Matrix eye candy for your office's IT guy.

On a window streaming Al–Jazeera's live coverage, I watched as President Mubarak showed his people the rigged deck he had been playing with for the past 29 years.

There are five windows – only one of which I actually know the function of – pertaining to various ports, usernames and server addresses. The one that I pay any attention to is a continuous scroll of boring looking text punctuated by a symphony of clicks, beeps and what I can only describe as "dunts." This – the chat window – is where all the action is, where all the Anony-mites reside.

Anonymous, in case you've missed it, has gained a reputation as WikiLeaks' shock troops. While it's recently attracted some colorful press for malicious Internet attacks on organizations that cross its sense of ethical standards, its beginnings are much more humble if just as zealous.

Anonymous first reared its head in 2006 when a group of anonymous users logged onto the social networking site "Habbo" and formed various offensive shapes, for… well apparently for no reason.

Their next move revealed Anonymous' political sensibilities after it knocked racist radio host Hal Turner's website offline.

Then, in 2007, an Internet predator named Chris Forcand was arrested. Shortly after his arrest, information came out that members of Anonymous had been tracking and monitoring him. They apparently employed some Chris Hanson-style tactics trying to catch him. But anyway, the whole incident revealed the scarily old-testament ethics of Anonymous. This same wrath has since then aligned itself with the villainous looking Jullian Assange's WikiLeaks and been directed towards the Church of Scientology, MasterCard, the Tunisian government and now Hosni Mubarak.

In the case of Egypt, the users logged into the #opegypt channel were busy establishing a series of proxy servers that would allow Egyptians to access the Internet and begin communicating with the outside world again while simultaneously dumping as much information on Egypt as their efforts would allow.

With such a media overload going on, I found myself a little thirsty, and so I went to the kitchen for some needed hydration. As I turned off the faucet, I heard the frantic punditry of Al-Jazeera rattling off rapid fire, punctuated by IRC's erratic percussive alerts. As I stood outside my closed door I couldn't help but feel as though history was on the other side. It was the same feeling you get when you realize you're a part of some mass of humanity all rabidly pursuing a shared goal.

Then I started to feel guilty and more than a little stupid.

I had been staring at a computer for the better part of a half-hour, absolutely enthralled by a bunch of light on a screen pertaining to an event that was a world away. But that didn't change the familiarly human energy that was seemingly oozing from my laptop's monitor.

We live in a very different time. On "Anonymous Operations," the Anonymous blog, their latest post reads, "Anonymous is a machine that harnesses the talent that other, lesser institutions often fail to acknowledge or incorporate." It continues stating, "All significant human activity is the result of human collaboration - including this very press release. And the means by which humans may collaborate has exploded - not expanded, not increased, but exploded."

What all this means for democracy I can't really say. What I do know is that Anonymous' effort in support of the Egyptian people is a new type of historical precedent that says something about our potential for meaningful change if we drop the ego games so characteristic of contemporary social movements.

Things scree slopes can teach you

It is a strange thing to be submerged in the wilderness for four months with nine people who were previously strangers to you. Quickly you understand more about these people than you knew about your closest friends. Living together in the outdoors, you share everything; close sleeping quarters in tents, food, the discovery of new places, to name a few. You watch each other learn, live, and, in the most revealing of times, struggle.

Natalie Beittel

Nine other students and I spent 30 days sea kayaking and canoeing on the south island of New Zealand during my semester with the National Outdoor Leadership School (NOLS) during the spring of my junior year in college. For the most part, there was beautiful weather during these two expeditions, and the morale of the group stayed high. We worked hard during the traveling part of the day, and then swam in the warm ocean water, napped on the beach or explored the nearby hills and mountains in the afternoons. Both boating sections were relatively easy. Travel days were six hours or less, leaving lots of time to relax and rejuvenate.

Now immersed in the final expedition of the semester - backpacking - the physical demands of travel became greater and the weather grew harsher as we moved into New Zealand's fall and climbed higher into the mountains.

As the backpacking section progressed and we learned necessary skills -such as navigating with our maps and compass, predicting weather and traversing the high peaks and scree rock walls - students were assigned to lead each day's travel. The second time around, while each leading a group, our instructors would remain silent unless an emergency arose.

As Leader of the Day (LOD), you were responsible for planning the group's route - all off-trail - navigating, and monitoring the other students. Nasty weather made for less enthusiastic travel, as putting on frozen boots each morning is not particularly pleasant. Carrying 80-plus pound backpacks all day was the most difficult thing some people had ever done. One or two students in particular really struggled on a daily basis; we were all hungry and there never seemed to be enough food.

My second day as LOD I had three other students in my group, Tim, Aaron, and Cheryl were with me along with Jorn, our "silent instructor." Cheryl had it especially bad; a sore ankle and a slow pace resulted in little confidence in her steps. As I prepared for a slow moving day up on the high peaks, I asked Tim and Aaron to be patient and encourage Cheryl, who would need all the support she could get. The day began at a snail's crawl, and as we moved onto the sliding, rocky ridge sides, Cheryl's movements slowed even further as her nerves rose. I tried to balance navigating, keeping the group intact, and taking turns with others coaching Cheryl. Luckily, the weather held clear and calm. When the peaks become submerged in clouds, navigating becomes scary as you move blindly.

Reaching the tops and looking out at endless scenery with the wind often pounding at your face is one of the best feelings I have ever experienced.

The day progressed, and by mid-afternoon we were all instructing Cheryl through the climb. The wind had been increasing, and as we moved onto a new ridge, it became severe. Walking upright on the slanted slope was incredibly difficult, and you had to shout to be heard. Despite all of this, the mountains were absolutely beautiful. Bare of any vegetation, covered in layers of gray rocks that acted like sand when you walked, with occasional large sculpture-like slabs jutting up out of the surface, the peaks were amazing. Reaching the tops and looking out at endless scenery with the wind often pounding at your face is one of the best feelings I have ever experienced.

Cheryl was mentally drained at this point and lost all self-sufficiency. She started to fall over every few steps and, after picking her up off the ground several times, I made the decision to end the day, descend and find a tent spot. Because she was having such difficulty, we unloaded Cheryl's backpack on the ridge and stuffed our bags with her gear. Aaron put Cheryl's arm over his shoulder and with his arm around her waist he carried her down the mountain to the grass, where we would camp.

Camp was not ideal; we were far above the trees on a mix of rocks and grass with the wind howling in every direction. We wrestled with the tent trying not to let the wind whip it away, and it had to be secured with every large rock we could find in order to stay put through the night. By the time all five of us squeezed into the three-person tent - the other group of five had the other tent - I was exhausted, frustrated and disappointed to be in such close proximity to Cheryl, who had tested my patience to its limit.

Looking back, that day as LOD with Cheryl was one of the most difficult days I have ever experienced. Leading a group in the backcountry with a group member requiring constant and full support from the others was incredibly challenging. However, balancing self-exploration with the needs of a team is the goal of NOLS. On that day, I learned the most beautiful and exhilarating trips can be bad despite your best efforts; sometimes, the best you can do is maintain.

Later, our instructor reminded me of the day's significance: We had survived a hike in severe weather despite unsure footing and an injured teammate. I also learned there are limits to my patience - I'm still very angry with Cheryl when I think of her lackluster efforts. But I know if I choose to pursue similar leadership roles after graduation, I will encounter similarly frustrating situations. I hope with this experience under my belt, I will be able to appreciate the fruits of my efforts with less frustration.

Phish fried: Noho loves McLovins

By Leslie Rosenfield
Collegian Staff

The streets and restaurants of Northampton were bustling Saturday night with teenagers, college students and adults all gathered and gearing up for a common reason: The McLovins were in town.

Hailing from Connecticut, the band surprisingly did not meet in their hometowns. Members Jeff Howard and Jake Huffman actually met in the summer of 2008 at a rock music camp, while Huffman met Jason Ott at a jazz camp that same summer.

"I just called them up and we started jamming in the basement," said Huffman.

Huffman's mother, Carol, the band's manager and driving force, was at the front of the stage the entire night. Throughout the night, the trio liked to throw out the term "momager" in recognition of her work.

Nearly two years after becoming a YouTube sensation with their popularized rendition of the quintessential Phish song "YEM," Ott, 17, Howard, 16, and Huffman, 18, have blown up across the jam-rock scene. Their talent, despite their youth, has captivated many, with their numerous YouTube videos. They didn't get there overnight, though; Drumlovin Huffman has been playing the drums for 10 years and explains, "Music has always been a part of my life."

Axlovin Howard started out playing the acoustic guitar and transitioned to playing the electric around nine-years-old. Now 16, his skill most certainly surpasses that of his years.

While Basslovin Ott started playing the piano at age 5, he mastered the cello and picked up the bass around the eighth grade, when he first learned how to play "Seven Nation Army" by the White Stripes.

With several years of getting to know one another, practice and perseverance, this trio let the entire crowd at the Iron Horse know they are the real deal.

The McLovins opened the set at 10:12 p.m. with "Caravan," a solid funk-rock jam that spanned a little over an astonishing 13 minutes. The song featured outright guitar solos from Howard, while Huffman kept the pace and upbeat rhythms of the flow, and the infusion of Ott's swift bass slaps and funk beats turned the heat up. Throughout the first song, the crowd's energy started out a little slow but increasingly gained speed, allowing the boys to show off their mastery of funk, rock and bluegrass infusions.

When the second song, "Tokyo Tea," started up, everyone knew they were in for a wild ride. The fans erupted and the entire venue was grooving right along with the energy exuding from the stage.

While the three definitely showed they have strong technical skills, their inspiration and love of music shined through at every moment of the show. They explained how they are influenced by electronic, jazz, classic rock, jam music and funk - anything that has a "good funk groove," according to their bassist, Ott.

As the first set rolled on, the energy at the Iron Horse kept getting stronger and stronger, to a point where the floor was even shaking. The third song marked a point of independence for the guys. They went right into their new song, "Cohesive," written with Tom Marshall and Anthony Krizan of Phish. Ott, Howard and Huffman clicked with each other, exuding a fluid blend of their music throughout the entire song.

Huffman took on lead vocals during "Cohesive" while smashing down on his well-rounded kit. The hooks, guitar licks and catchy lyrics were crowd-pleasers and drew in the fans even more. Although their sound needs maturation, this matter should be resolved as the band members get older.

The boys were approached to write and record this song with Krizan and Marshall after the two and Phish front-man Trey Anastasio spotted their "YEM" video online. The trio explained how they learned to write songs in a different way, where they became more focused and thorough with their music. All three agree, "Cohesive is more accessible than other songs - short, to the point and grabs listeners, and has a catchy hook." The crowd seemed to agree, as their screams grew louder and the grooving on stage increased during the tune.

Throughout the rest of the first set the three held it down and rocked it out with funk, rock, jazz and reggae tones which had fans soaring through the highs and lows of every guitar, bass and drum solo.

Toward the end of the first set, the band busted out their hit cover "YEM," and had the entire venue in an uproar. Screams, laughter, cheering and dancing ensued when they attacked the technically-challenging piece. All three executed their rendition flawlessly with "Landlady" and "Peaches" teases infused throughout the jam.

Howard hit the axe precisely and roused the crowd with his enthusiastic dancing and roadrunner fast fingers up and down the frets, while Ott laid down funk beats and Huffman had a riveting drum solo at the end, with sharp hits to the symbols and kick drum.

The energy and hype remained as the second set started up after a quick 10-minute break. This time around, the trio came out with instruments blazing. They opened with their original song, "Beadhead Crystal Bugger," featuring quirky bluegrass and jazz infusions. The McLovins showcased their unique style with elongated notes, striking riffs and playful beats that had heads bobbing and feet moving.

Nearly two years after becoming a YouTube sensation, high schoolers Jeff Howard, Jake Huffman and Jason Ott took to the stage at the Iron Horse Music Hall in Northampton on Saturday as The McLovins.

Next came another original McLovins song, "Deep Monster Trance," that let everyone know these guys have their own style and are producing progressive music with an original funky flare.

As the set progressed, their flare, technicality and energy only grew and pulled the crowd's heartstrings with a cover of "Break On Through" by The Doors. They rounded out the set with "Conundrum" and "Hell Yeah," which got the crowd chanting, "Hell yeah, encore!"

The trio rounded out the evening around 1:00 a.m. with "Virtual Circle" as an encore. The song sustained a high level of intense jamming; flawless guitar solos and brought the tempo back down at the end for a soothing close.

The McLovins showed their dedication to pleasing their fans when they lingered after the show to sign merchandise and pose for fan photos at nearly 1:15 a.m.

Although commonly mistaken as a Phish cover band, The McLovins demonstrated their talent with a bunch of hit original songs and their funky, smooth and slick style. The trio are making a big name for themselves with a solid fan base and hopefully some festival spots this summer.

According to the group, their goal for the future is to "Headline MSG, Red Rocks or Bonaroo…really headlining a festival would be amazing!" Given their performance last Saturday, there is little doubt that The McLovins will be around within the coming summer months and for many, many years to come.

Leslie Rosenfield can be reached at lrosenfi@student.umass.edu.

Crowd dons white for party

By Andrew Sheridan
Collegian Staff

This past Friday, the University of Massachusetts played host to hip hop producer and spin artist DJ Khaled in a dance club event known as the Winter White Party.

Sponsored by NV Concepts and featuring the talents of several DJs from around the country, the event took over the Mullins Center and for one night, transformed it into the biggest dance club in the Valley.

At 9 p.m. the doors opened and the bleached-white masses poured in, rocking and dancing, running eagerly to the floor. Only filling the floor half-way, the crowd was small compared to many concerts and events held at the Mullins Center, but when put next to a typical dance club, the numbers were more impressive.

White balloons, bathed in black light, littered the floor and bumped with the pounding bass. Most of the assembled dancers crowded the stage to move with the music, but not all. In addition to the milling crowds at the edge of the floor and those taking breaks in the stands, a dedicated group of booty-shorted volunteers took up residence on a platform in center court with a dance routine of their own.

The theme of the party - the dance floor and the dancers were decked out in white, while ultraviolet lights illuminated the area - played out reasonably well. The outfits on the floor were all in-theme, but varied significantly from person to person. The males were dressed largely in jeans and white shirts, while female attendees ran the gamut from sporting white concert t-shirts and pants to bare-bones outfits of sports bras and booty shorts. It was readily apparent that, especially among the girls on the dance floor, it had been a chilly walk to the Mullins.

The special effects, which could have pushed it over the edge, were underwhelming.

Confetti and glitter launched from the stage produced a cool effect in the strobe lights, but were so intermittent that most of the time they were forgotten entirely. The main problem in the effects department was the UV lighting, which, since it came only from the stage, only lit up two-thirds of the crowd.

The music was pretty standard club fare, with some mega-hits from the past decade, current chart toppers and a healthy dose of mash-up. The biggest crowd pleasers included "Shots" by LMFAO and Andy Sandberg's "I'm on a Boat." What really drove the energy, however, was the DJ on the stage.

While opener Adam Ramirez did nothing but mix tunes, later DJs worked the audience much more skillfully. Shouting, singing and interacting with the dancers, New Englander DJ Construc drove up the energy level and got the crowd fired up for the headliner, DJ Khaled.

Based out of Miami, Khaled has been touring the East Coast after the release of his latest album, "Victory."

The recording artist and record producer has worked with many of hip hop's biggest names, and when it came to his mixes, there was no doubt as to his genre of choice.

When trying to recreate the feel of a real dance club, the Winter White Party fell short. The lack of a bar and other club fixings made it hard for the all-ages event to capture the genuine club feel.

The party also had a hard time matching the excitement that follows most big-name concerts at the arena, where the stands are packed and floor space is at a premium.

If taken at face value as a dance party, though, the event was a success. While the style and the quality of the DJs differed, on the whole the music was good, and most attendees found exactly what they were looking for.

Andrew Sheridan can be reached at asheri1@student.umass.edu.

Thousands filled the Mullins Center dressed from head to toe in white for the Winter White Party on Friday. DJ Khaled preformed as the Mullins Center was converted into the Pioneer Valley's largest dance club for one night only.

The "Rite" idea

By Kate MacDonald
Collegian Staff

The latest in what should be a Hollywood genre of exorcism films, "The Rite," starring Colin O'Donoghue and Anthony Hopkins, is surprisingly well-made and entertaining. Where other movies have failed (like the ill-fated "Exorcism of Emily Rose" and "The Omen"), "The Rite" is supported by a flowing story based on true events.

Young mortician Michael Kovak (O'Donoghue) decides to get out of his small town and see something of the world. Due to his family's history, Kovak is forced to choose between being a priest or a mortician. After entering the seminary, he begins to question his faith and wants out; before he can do so, he is enticed by an exorcism class in Rome - a last ditch attempt by a mentor to enlist another priest.

Attending the class, he is clearly still a doubter. With prompting, he visits Father Lucas Trevant (Hopkins), an unorthodox exorcist. When Kovak witnesses a series of exorcisms, will his faith be saved? What will he do when such proof of the unseen gets a little too close for comfort?

New to the silver screen, O'Donoghue plays his part like a seasoned Hollywood veteran. Known for a small part on the television series "The Tudors," the Irish actor has had little experience, but brings tangible depth to Kovak's character. The majority of Kovak's back-story is shown through a series of flashbacks throughout the film, which round out the character nicely. Although supported by great actors like Hopkins and Ciarán Hinds, O'Donoghue steals the show with his performance.

These experienced supporting actors do not, however, fall without a fight. Known best for his portrayal of the character Hannibal Lecter in "The Silence of the Lambs" series, Hopkins flawlessly assumes the role of Trevant. There are quite a few ominous scenes in which Father Lucas channels Leeter's crazed doctor character in his speech and actions. While this can be distracting, as viewers try to figure out what is so familiar about the character, it actually adds to the chilling scenes.

Surprisingly, Father Lucas' character brings laughs to "The Rite." A movie about exorcisms doesn't seem like it would have many funny moments, but Hopkins brings a comedic timing that doesn't seem out of place or odd.

Most notably, Director Mikael Hafstrom effectively controls the pacing of the film, preventing scenes from dragging on and becoming boring. Hafstrom, known for the 2005 thriller "Derailed," kept the audience on the edge of their seats for most of the film, a tribute to his ability to avoid predictability.

Clearly the hardest working contributor to "The Rite," however, is cinematographer Ben Davis, who viewers can thank for some visually beautiful shots. The cinematography first gets the audience's attention with captivating depictions of behind-the-scenes mortuary work, but Davis' work keeps the scene interesting, rather than disgusting.

"The Rite" also features amazing aerial shots of Rome and the Vatican which are eventually lowered down to street level, allowing viewers to see Rome the way Romans do. The majority of the scenes are shot at eye level and close up, which adds to viewers' feeling of being present in the room for the exorcisms.

The score, though it becomes lost in the action, can also up the fear factor, as creepy laughter and church bells fill the silence. Although more probably could have been done with the background music, its simplicity emphasized the actions portrayed on the screen.

While a movie about exorcisms must include religious symbols and values, Hafstrom is careful not to force any beliefs on the audience, mostly because the central character is a nonbeliever.

The most chilling aspect of "The Rite" is that it is actually based on true events. While little is revealed concerning this fact, the story's basis in reality is alarming when events begin to unfold.

Overall, "The Rite" is a great addition to the stack of exorcism flicks. Between the cast, flowing plotline and visually appealing shots, there is never a dull moment. "The Rite" is already at the top of the box office for its opening weekend, and this chilling, psychological thriller is sure to captivate viewers for some time.

UM runs key in win against Rhode Island

BASKETBALL from page 8

included a pair of 3-pointers.

This appeared to be the spark UMass needed, as its game play changed significantly following the deadlock. The Minutemen went out on another run, as sophomore forward Freddie Riley netted a 3-pointer to put the Minutemen up five. Even Hashim "Big City" Bailey got in on the action, as he scored a quick layup off his own steal and fast break.

"I think 'City' really came out and played with a high level," Gurley said. "He was definitely a big contributor tonight and I'm proud of him."

"Last time I did something like that was prep school, high school, something like that," Bailey reflected on his own crowd-pleasing move.

Even Kellogg took notice of Bailey's agile moves.

"He showed some cat-like quickness on the poke-away," Kellogg said.

As the half continued, UMass found other ways to stay on top and increase its lead. One of the highlights of the offensive production came with three minutes remaining, when Gurley nailed a buzzer-beating, NBA-length 3-pointer to put the Minutemen up nine.

"It just comes with the flow of the game," Gurley said. "I tried my best to get a good look, and fortunately it went down."

"When he makes shots like that, I personally think he's the best player in our league," forward Javorn Farrell said.

Kellogg commented after the game that Gurley's buzzer-beater was an indication of the level of development Gurley has seen. According to Kellogg, in years past, Gurley wouldn't have paid as much attention to the shot clock and would have hocked up a shot without careful consideration.

"It was great to watch," Kellogg said. "To see him make that play, it's rewarding as a coach to see that."

As the rest of the half dwindled down, the Minutemen kept their game together and never had to look back as their lead held up.

The first half of the contest featured a transition from fiery, fluid play to brutish, tough-nosed combat between the two sides. The Minutemen jumped out early with a 15-2 run through the first seven minutes to separate itself from its traditional rival.

Once UMass reached 20 points, URI picked up the pace and cooled off UMass with a 13-2 run of its own. UMass would have the final say going into the break after Gurley, true to style, put away a last-second shot from beyond the arc to give the Minutemen a 25-22 advantage.

The win puts the Minutemen ahead of the Rams, and it says something about where the Maroon and White are headed. The URI game isn't the end of the road for the Minutemen, however, as they are about to start a two-game road trip against Saint Louis and Saint Joseph's.

"It was huge for us," Gurley said. "We know we have the opportunity to make another statement in this league."

Herb Scribner can be reached at hscribne@student.umass.edu.

JEFF BERNSTEIN / COLLEGIAN

Sophomore forward Terrell Vinson (2) dunks the ball against Rhode Island on Sunday. Vinson is averaging 6 points and 3.7 rebounds in 20 games this season.

Gurley, Bailey make big plays

GURLEY from page 8

knows, so for the player to have that ability that, 'I'm the guy at that point,' I think that gives you confidence."

What Kellogg was most impressed with in that play was Gurley's patience in waiting for the right time to pull the trigger. Shot timing has been a point of emphasis between Kellogg and Gurley as the senior develops as a player. "For anybody who's seen his maturation process, two years ago the ball would have hit his hand and he would have shot with nine [seconds left on the shot clock] and not even move," Kellogg said. "Last year, it would have been a situation where maybe it would be one move and then a fade-away with a guy hanging on him."

While Kellogg is used to seeing Gurley make big plays, he was both entertained and impressed with Bailey's effort.

Midway through the second half, the Minutemen center recognized a similar play he saw run by Rhode Island in the first half. Bailey overplayed it and tipped the ball away from his man before coming away with a steal. With an open path to the basket, Bailey raced to the other end and finished a layup over a Rams defender.

"It looked funny," Kellogg said with a smile. "In all honesty, we work on that layup with the guys in practice just about every day. It's our perfection layup, we've been doing it as a coach for the last better of 15, 20 years. ...That may have been one of every fifth-game you get that [play] from a big guy, but it actually paid dividends."

Bailey said he hadn't had a steal leading to a basket in the open floor since his time at prep school or high school.

Aside from exciting the crowd on that play, Bailey also contributed three rebounds (two offensive) in his time off the bench to give UMass a spark in the front-court.

Mosgrove's performance not enough as Minutewomen lose, 62-51, against SBU

BY MICHAEL WOOD
COLLEGIAN STAFF

After trailing St. Bonaventure by 12 points in the first half, the Massachusetts women's basketball team fought back to take a two-point lead late in the game, but couldn't hold on, as the Bonnies recovered and defeated UMass, 62-51, on Saturday.

Senior Cerie Mosgrove, who has been playing extremely well of late, tallied her fifth double-double of the season, pouring in 18 points and tying a career high with 11 rebounds.

"I thought Cerie, with another double-double, was phenomenal," UMass head coach Sharon Dawley said in a UMassathletics.com interview. "She's playing so well. I think we have to find a way to get her a little bit more rest, but she's doing a great job right now."

"It's her rebounding that has really taken over and helped us in games now, and I'm really proud of her efforts," Dawley added.

The Minutewomen were ahead briefly to start the game, but quickly fell behind, 14-5, after six minutes of play. The Bonnies continued to pull ahead with layups from Doris Ortega and led by nine points at halftime.

The Maroon and White recovered in the second half, shooting 50 percent and making 10 of 16 free throws to cut St. Bonaventure's lead to four. UMass tied the game at 40 when Mosgrove netted a 3-pointer, and took the lead when she converted on a layup to put her team up by two points.

"It was a great play, a great shot," Dawley said. "Unfortunately, at that point we gave up some [offensive] boards after that, so we have to mature a lot to be able to make a big shot then get a stop."

The Bonnies refused to let the Minutewomen's lead last long, as they went on to outscore UMass, 18-5, in the rest of the half to hold on for the victory.

UMass' Jasmine Watson, last season's Atlantic 10 Rookie of the Year, tallied 10 points and eight rebounds, Emilie Teuscher scored 10 and senior Megan Zullo recorded six assists and three points for the Minutewomen.

For St. Bonaventure, Megan Van Tatenhove had a double-double of her own, leading the attack with 20 points, 13 rebounds and six steals. Cara Gustafson added 12 points and seven boards, while Alaina Walker contributed 11 points and six rebounds.

St. Bonaventure shot 41 percent from the floor, made 26 percent of its 3-pointers and converted almost 80 percent of their attempts at the charity stripe. The team also forced 17 turnovers, 11 of which were steals, and blocked three shots.

The Minutewomen will return to Amherst for two games this week when they take on Duquesne Wednesday and Charlotte Saturday. Coach Dawley said that after a few games on the road, she's happy to be back at home for a little while, so the team can practice and play on their home floor.

"[Not traveling] is a little less stress[ful] on the girls," Dawley said. "It's good to practice and play in one spot for a solid week."

Michael Wood can be reached at mcwood@student.umass.edu.

Ohio State survives scare, Duke upset

BY BEN LAMBERT
COLLEGIAN STAFF

It came down to a last second-shot, but No. 1 Ohio State was finally able to chalk up their 22nd consecutive victory over Northwestern on Saturday night.

The game was a thrilling back-and-forth affair, ultimately ending with the Buckeyes on top, 58-57. Freshman star Jared Sullinger put the Buckeyes (22-0, 9-0 Big Ten) ahead for good by knocking down a late free throw. Northwestern's (13-8, 3-7 Big Ten) desperation heave bounced wide off the top of the backboard as time expired.

Although Ohio State was heavily favored, Northwestern did not concede. The Wildcats fell behind early in the second half, but came storming back with a 21-7 run capped by Michael Thompson's 3-pointer that put NU up, 55-54, with 3:43 remaining. Thompson was the star performer for Northwestern, leading the team with 16 points and eight assists.

Thompson could not single-handedly carry the Wildcats to victory, though, as Ohio State senior guard Jon Diebler hit a 3-pointer that gave the momentum back to the Buckeyes right before Sullinger's free-throw put the Wildcats away for good.

Sullinger, as he's done all season, led the way for Ohio State with 21 points and eight rebounds.

Dwight Hardy's 26 points spurred St. John's to a 93-78 blowout win over No. 3 Duke on Sunday afternoon. The outcome was never in doubt, as the Red Storm jumped out to a 46-25 lead at the half.

St. John's (12-8, 4-5 Big East) controlled the game with an aggressive trapping defense, which forced 17 turnovers and prevented Duke's 3-point shooters from getting in sync. Despite hitting shots at a 48.1 percent clip this season, the Blue Devils (19-2, 6-1 ACC) converted five of 26 total 3-point attempts. In contrast, St. John's knocked down 58 percent of their attempts from the field, while committing just 11 turnovers.

In addition to Hardy's scoring, the Red Storm got major contributions from seniors Justin Brownlee and Paris Horne. Brownlee filled the stat sheet with 20 points, nine rebounds and six assists, and Horne added 15 points and six assists.

Duke Senior guard Nolan Smith was the lone bright spot for the Blue Devils as he paced the team with 32 points, 7 rebounds, 4 assists and a block.

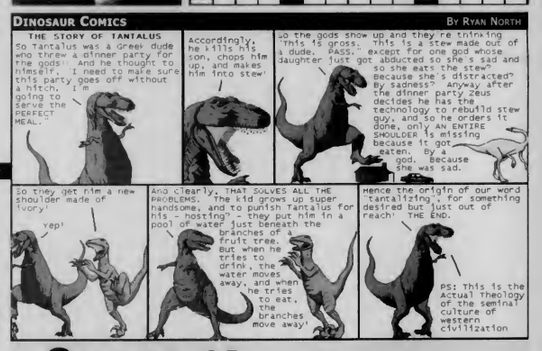
DINOSAUR COMICS BY RYAN NORTH



THE STORY OF TANTALUS
So Tantalus was a Greek dude who threw a dinner party for the gods! And he thought to himself, I need to make sure this party goes off without a hitch. I'm going to serve the PERFECT MEAL.
Accordingly, he kills his son, chops him up, and makes him into stew!
So the gods show up and they're thinking this is gross. This is a stew made out of a dude. PASS. Except for one god whose daughter just got abducted so she's sad and so she eats the stew? Because she's distracted? By sadness? Anyway after the dinner party Zeus decides he has the technology to rebuild stew guy, and so he orders it done, only AN ENTIRE SHOULDER is missing because it got eaten. By a god. Because she was sad.
So they get him a new shoulder made of ivory!
yep!
And clearly, THAT SOLVES ALL THE PROBLEMS. The kid grows up super handsome, and to punish Tantalus for his - hosting? - they put him in a pool of water just beneath the branches of a fruit tree. But when he tries to drink, the water moves away, and when he tries to eat, the branches move away!
Hence the origin of our word "tantalizing", for something desired but just out of reach! THE END.
PS: This is the Actual Theology of the seminal culture of western civilization

Minutemen impress in win over the Rams

UM beats URI, 64-54

By Herb Scribner
Collegian Staff

Something has inspired the Massachusetts men's basketball team.

Whether it was from their travel issues, the 4,239 in attendance at Sunday's game or a Gordon Bombay-like speech from UMass coach Derek Kellogg, the Minutemen (13-7, 5-2 Atlantic 10) defeated Rhode Island, 64-54, on Sunday despite heavy pressure from the Rams (13-8, 4-3 A-10).

In earlier games this season, UMass would open up a large lead before losing it and leaving the outcome to what happened in the final few minutes. Sunday's game was a different story, as the Minutemen kept their composure on the way to another victory.

"That was a good victory for the kids," Kellogg said. "They put together almost a complete game. I thought the guys weathered the storm well."

In the win, UMass stayed true to its recent offensive downfall with 20-for-54 shooting from the floor, and an 8-for-26 mark from beyond the arc. Similar to other games this season, the Minutemen showed how much of an impact their bench can make, as it combined for 22 points.

Guard Anthony Gurley led the team with 21 points, seven assists and two rebounds. Gurley's leadership was matched by Gary Correia, who led the team on both ends of the floor. His five steals and one turnover were indicative of his defensive stabilities.

The contest kept the two sides at a near deadlock for a while, with URI storming back from an early UMass run to knot the two teams closely.

"I thought the game could have gone either way for a while," Kellogg said.

At the 14:31 mark in the second half, the Rams stole the lead from the Minutemen following a quick run that

UMass guard Javorn Farrell (10) takes a shot against Rhode Island on Sunday. Farrell registered six points, four rebounds, three assists and two steals in UMass' 64-54 win over the Rams.

Gurley, Bailey step up

By Jay Asser
Collegian Staff

Massachusetts men's basketball guard Anthony Gurley is used to making pivotal plays which lead to wins. Center Hashim Bailey, however, doesn't get that opportunity too often.

Nevertheless, both players contributed significant baskets to help UMass win its second consecutive Atlantic 10 game over Rhode Island on Sunday.

Gurley's moment came late in the second half, when the Minutemen (13-7, 5-2 A-10) were holding onto an eight-point lead as the Rams (13-8, 4-3 A-10) attempted to make a comeback.

With just over three minutes remaining and the shot clock winding down, the UMass guard received the ball at the top of the key for an isolation situation. After trying to get by Rhode Island point guard Marquis Jones on several moves, Gurley stepped back and created space, as Jones overcommitted. Gurley fired with the shot clock expiring and hit his fourth 3-pointer of the game to put the dagger in the Rams.

The long-range connection not only extended the Minutemen lead, but demoralized the Rams after nearly 35 seconds of unrelenting defense.

"I think they thought the game was over," UMass guard Javorn Farrell said of Rhode Island after the shot. "When he makes shots like that, I personally think he's the best player in our league."

UMass coach Derek Kellogg knows it takes a certain type of player and person to take on the burden of such a moment and believes Gurley is that kind of player.

"There's no question [as to] what's happening at that point from anybody," Kellogg said. "The team knows, the coaches know, everybody in the building

See GURLEY on page 6

UMass picks up a point in weekend series against Huskies

By Steve Levine
Collegian Staff

On Saturday, the Massachusetts men's hockey team avoided what could have been a terrible weekend at the hands of Northeastern.

After losing 3-0 to the Huskies in Boston Friday, the Minutemen returned home to a raucous crowd at the Mullins Center, eventually tying their conference rivals, 2-2.

The game was tense throughout and featured plenty of momentum shifts, penalties and a physicality level that UMass (6-13-5, 5-8-5 Hockey East) has not seen yet this year.

"[Northeastern] is as physical a team as there is in our league and they're a team that took it away from us on Friday on that front," UMass coach Don Cahoon said. "That's they're makeup, and our younger guys are learning more about it each and every weekend."

Northeastern (8-10-7, 7-7-6 HE) quieted the home crowd just 33 seconds into the first period on senior Wade MacLeod's team-leading twelfth goal of the season. NU's Steve Silva started the sequence by throwing a wrist shot on goal that Paul Dainton turned aside. NU's Tyler McNeely then gathered the loose puck behind the net and found MacLeod in the slot, who fired a shot past Dainton for the 1-0 lead.

UMass responded immediately with two goals in two minutes from Chase Langeraap and Michael Pereira. Langeraap, a senior, tied the game with his sixth goal of the season, a wrap-around effort from behind the net that just beat Husky goaltender Chris Rawlings.

The Minutemen then made it 2-1 on Pereira's team-leading tenth goal of the season. Pereira, a freshman, positioned himself in the high slot during a UMass 3-on-1 rush that began with Colin Shea passing to Conor Sheary in transition. Sheary then led the rush and found Pereira, who unleashed a perfect shot over Rawlings' left shoulder.

"It was a real pivotal game for us emotionally to be able to hang in there," Cahoon said. "We would've liked a better result, but I felt good about the team and the effort that [the players] made."

"Tonight was really important to not just cave in and succumb to what could've been a disastrous weekend," Cahoon added.

Neither team would score for the remainder of the period, as UMass went into the first intermission holding a 2-1 lead.

Northeastern came out with a vengeance in the second period, outshooting the Minutemen, 11-0. MacLeod tied the game at two apiece three minutes into the stanza, taking advantage of a failed clearing attempt by the Minutemen. The clearing attempt hit a body on its way out of the zone and landed right in front of the faceoff circle, where MacLeod picked up the puck and sent a backhander through Dainton's legs to tie the game. The Huskies did not let up for the remainder of the period, using physical play to control the puck and pace of the game.

UMass lost forward Danny Hobbs earlier in the game to an injury, as he joins a group of Minutemen currently listed as day-to-day.

"From a coaching perspective, it was a really interesting game because of what took place [on Friday], our lineup and the way it had to be put together, the resolve that it took within our locker room to get an honest effort from everyone and not dwell on the fact that some of us weren't there," said Cahoon.

The Minutemen escaped the second period without further damage, and took the 2-2 tie into the third.

The third period was evenly-played, as Northeastern held a 6-5 edge in shots. The best opportunity for UMass came with over six minutes to play, as it went on a 5-on-3 power play for 45 seconds. The Minutemen continually tried to set up shots from the point, but Rawlings denied the efforts, carrying the Huskies into the five minute overtime period.

"We brought it tonight and we certainly had as many opportunities as they did to put it away," Cahoon said. "Our penalty kill was fabulous, and I thought we had some pretty good looks on the power play… finishing is another story altogether."

The overtime period belonged to UMass, which outshot Northeastern, 8-2. With time dwindling down, Dainton made a clutch save to preserve the tie. Dainton finished with 30 saves to Rawlings' 39.

The Minutemen will try to build on their effort for the remaining 10 games, nine of which come against ranked opponents.

"This team's in for a slugfest," Cahoon said. "Anything we can get along the way is going to help us grow and maybe give us a mentality and a base to grow from and to build off of to succeed."

Steve Levine can be reached at slevine@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Freshman forward Michael Pereira (7) controls the puck along the sideboards during Saturday's game against Northeastern. Pereira scored his team-leading 10th goal of the season in the 2-2 draw.

ALEX MOE/HERO/COLLEGIAN

Freshman defenseman Joel Hanley (44) takes a shot from the blue line against Northeastern on Saturday. Hanley leads all UM defensemen with 12 points (1 goal, 11 assists) in 20 games this season.

Penalty kill unit effective as power play struggles continue

By Dan Gigliotti
Collegian Staff

The Massachusetts hockey team's weekend series against Northeastern ended in a 2-2 stalemate on Saturday, with the Minutemen special teams playing with varying results.

It would be misleading for UMass, which is 3-3-1 in its last seven games, to lump their power play and penalty kill into the tidy category of special teams. Their efficiency on the power play and penalty kill has been a stark contrast of late.

Entering last weekend's series against the Huskies, the Minutemen had given up one power play goal since a debacle at the Mullins Center on Jan. 7 that ended in a 5-3 come-from-behind win for the Huskies. UMass coach Don Cahoon pointed to that game as a marker for his team's lack of discipline, which resulted in six penalties and a comeback win for Northeastern.

Two of those six penalties came about halfway through the second period, set up a five-on-three, and led to the Huskies etching their names in the UMass record books with the fastest three goals ever given up by the Minutemen against a Division 1 opponent.

UMass took eight penalties at the Mullins Center last Saturday, which didn't necessarily irk Cahoon.

"Tonight's penalties were more a part of the fabric of the game," Cahoon said after the game. "I think penalties went both ways today and both teams went at it."

Northeastern had five power play opportunities, but UMass' penalty kill unit staved off every attempt and all nine shots. This was a far cry from three weeks ago, when Northeastern went 3-for-6 on the man advantage.

For the weekend, the Huskies finished 0-10 on the power play, a result indicative of the Minutemen's shorthanded success of late. In six games prior to this weekend, UMass allowed one goal on 19 chances.

If one considers special teams play to be one category, then Saturday's game was not a total success. Although the Minutemen played well with a man down, they missed on all seven power play opportunities of its own. For the weekend, UMass finished 0-11 on the man advantage.

"[Northeastern's] penalty kill, at the end of the day, they're probably pretty happy with [how they played]," Cahoon said. "I thought we had some pretty good looks on our power play. I thought we possessed the puck and had some pretty good chances, finishing is another story altogether."

UMass has scored one power play goal in its last four games (1-23) and is tied for seventh in Hockey East in power play scoring percentage (14 percent).

The Minutemen scored eight power play goals in their first 13 games (12 percent) before a stretch of games between Dec. 30 to Jan. 15 in which they converted on the man advantage in five straight games (7-for-24, 29 percent).

UMass' last ten games will be against all but one ranked opponent. It is likely that the results of these contests will be decided by the Minutemen's special teams units.

Mubarak protests continue

UMass student at American University Cairo said to be safe

By Tim Jones
Collegian Staff

A country steeped in chaos, Egypt has become a nation in upheaval. Protesters have stormed the northeast African Republic's streets, defied curfew and torched cities in an attempt to overthrow their government. And as communication is slowly dismantled from the inside, most of the world can only gaze at the destruction and upheaval of the fragmented Muslim nation.

Ray Mohammed, an Egyptian-American student at the University of Massachusetts, said the protests sweeping across his homeland have left him uncertain, unable to envision an Egypt without President Hosni Mubarak.

"Honestly, I didn't know how to react," said Mohammed. "I've only known one Egyptian president for my life, and that's Mubarak, and he is Egypt."

Egyptian President Hosni Mubarak, in office since 1981, is currently holding on to his power amid protests from many factions of the country demanding the termination of his reign. He did not emerge from hiding until several days after the protests began, when he announced the installment of Vice President Omar Suleiman, the first time the deputy executive has been publicly seen in his entire reign.

Due to the number of calls and requests processed by the American University of Cairo (AUC), representatives were unable to provide any information on current UMass students attending the school.

"We're cooperating with the Department of State and the U.S. Embassy to evacuate the students," said a representative in a phone call around 4:15 p.m. on Monday. "The first plane of students arrived a few hours ago. Some are coming back permanently stateside, and several have opted to stay in Cairo. We've got about 500 students in all, and we're doing our best to accommodate them."

Ed Blaguszewski, executive director of news and media relations at UMass, confirmed in a phone call around 4:30 p.m. Monday that the University does have a student at AUC.

"We do have one student who had been studying abroad at AUC, and the International Programs Office has been in touch with the student," he said. "We don't have an exact time frame, but he's been reported to be leaving for the airport soon."

Blaguszewski did not disclose the student's name, and said it was unclear at this time as to whether the University would maintain its connection to the program in Cairo.

Protests broke out last Thursday, and shortly thereafter access to Internet was cut off by the Egyptian government nationwide in an attempt to prevent the protesters from organizing.

Many social networking sites such as Facebook and Twitter were inaccessible to Egyptian citizens, and cell phone service was widely reported as down across the country, forcing citizens to temporarily rely on alternatives methods, such as land-line phones and fax machines to relay communication.

Steve Fox, a professor of multimedia journalism at UMass, said despite the government interference, people can always find a way to exchange information.

"What's interesting is that even with the action taken, info is still getting out and is getting amplified by people outside of Cairo," he said.

Fox continued, "Some people are calling this a 'social media revolution,' but I wouldn't agree with that."

Fox compared Western and Middle Eastern media, and, using an example of live reporting from a morgue in Egypt, said what

Egyptians protested Monday in Cairo's Tharir Square against the ongoing rule of President Hosni Mubarak. Resistance to the Mubarak regime has turned Egypt upside-down since Jan. 25.

Three UM faculty given service grants

Three University of Massachusetts faculty members were awarded Public Service Endowment Grants by the Office of the Vice Chancellor for Research and Engagement last week, according to a UMass News and Media Relations Release.

School of Education faculty Laura Valdiviezo, an assistant professor who focuses on the role of education in social justice, and Nelida Matos, a lecturer in Teacher Education and Curriculum Studies, and food biotechnology professor Kalidas Shetty in the School of Food Science, were recognized for their work in local communities and education facilities.

The grants total $40,000 and, according to the Jan. 25 release, "are intended to enhance the public service mission of the campus."

According to the release, Matos will use her funds towards a project which seeks to bridge the so-called "achievement gap" in the struggling Springfield Public Schools, specifically in western Massachusetts' largest city's middle schools. She plans to consult with teachers in Springfield's middle schools to identify what teaching methods are effective and innovative, and which are contributing to the schools' woes.

Matos will look to see what methods "have the potential to effectively reduce the achievement gaps in the classrooms," through researching "where promising practices appear to be emerging, with future research planned to carry out an in-depth assessment of the most effective strategies," according to the UMass release.

Shetty, whose work focuses primarily on food-borne bacterial pathogens and phenolic phytochemicals, will also work on community building in Springfield. He will help in developing community food structures aiming to combat type 2 diabetes in minority communities in Springfield.

To accomplish this, Shetty will use his funds to make available "culture-specific and health-relevant fruits and vegetables" from local sources. Shetty will initially work to provide "high-phenolic antioxidant and fiber-enriched fruits and vegetables from a Hadley-Amherst area farmer's network."

Valdiviezo won a grant for work on teaching English as a second language.

Shetty is studying ways to reduce the prevalence of Type 2 diabetes.

Obama hopes to 'startup' US

By Sam Butterfield
Collegian Staff

"Winning the future" seemed to be the refrain most frequently sounded by President Barack Obama in his State of the Union Address last week.

To accomplish this, the president told America and the rest of the world, that he believes the nation must "outinnovate, out-educate and out-build the rest of the world."

The White House announced in a Monday morning release from Press Secretary Robert Gibbs that the president, his administration and various business and philanthropy leaders will be launching a new multi-tiered initiative to promote entrepreneurship and small business growth, investment in emerging fields such as green technology, revitalization of economically distressed communities, and a collective push to reinvigorate America's small business climate.

Gibbs wrote that the president hopes the measures his administration and its partners are putting in place will "create the jobs and industries of the future by investing in the creativity and imagination of the American people."

Together, this push for innovation will be called the "Startup America" initiative, a campaign aiming to promote "high-growth entrepreneurship across the country," emphasizing private sector investment in "job-creating startups and small firms," as well as "accelerate research" and working to level "barriers to success for entrepreneurs and small businesses."

In the Monday morning announcement, President Obama stated he believes this renewed focus on entrepreneurship and small businesses is, in some ways, at the very core of what drove America to become the world's foremost economic power.

UMass assault suspect responds to charges in Northampton court

Former UM student Luther Gorahkov pleaded not guilty to sexual assault charges stemming from an Oct. incident.

A man facing a number of charges stemming from the alleged assault of two female University of Massachusetts students last October has pleaded not guilty to all accusations lodged against him.

Twenty-four-year-old Luther Gorahkov, a UMass student from Providence, R.I., maintained his innocence at Hampshire Superior Court in Northampton last week when he answered to charges of assault with the intent to rape, kidnapping and attempting to accost someone of the opposite sex, according to the Daily Hampshire Gazette.

Prof. jams for home care nurses' rights

By R.P. Hitt
Collegian Staff

Tom Juravich, a professor of labor studies at the University of Massachusetts, recently performed in a music video for the Ontario Public Service Employees Union. The video defends the plight of visiting nurses in the town of Hamilton, Ontario.

The song, titled "What Will You Do When I'm Gone?" was written by Juravich and fellow artist Teresa Healy, according to a release on the University of Massachusetts website. The song was originally written for a 2008 rally to protest the unstable work environment for visiting nurses. The strife over the issue, according to the release, has been caused by a system of competitive bidding between two home care agencies, the Victorian Order of Nurses and St. Joseph's Home Care.

The video begins with a nurse visiting "an old steel worker." The scene depicts the nurse preparing bandages for the man and asking him about his day, while the melody of Juravich and Healy plays in the background.

The video proceeds to show a nurse visiting an apparently sick child, while Healy sings, "Queen's Park politicians think they know better than me. They want to give away our nursing jobs to some private company."

Juravich and Healy are shown singing in front of protesting nurses at the end of the video.

"We want out nursing jobs, what gives him the right," sings Juravich, as he strums his guitar. "We're standing strong together, we'll not give up the fight."

According to the release, the 2008 rally led to officials placing a moratorium on competition for home nursing care in the area. However, last spring the health minister of Ontario declared that competitive bidding would be put in place once again in Hamilton, despite its history of resistance to such a move.

The union to which the nurses belong continues to maintain that competitive bidding drives up the cost of home care and leaves patients without long term care, according to the release.

The video was released and distributed by OPSEU to media outlets last week. The YouTube video currently has 1,170 hits.

According to the release, OPSEU produced a website to host the video. The website contains information about the group's cause, and the organization plans to put up more content pertaining to the video.

R.P. Hitt can be reached at rhitt@student.umass.edu.

UMass

In his State of the Union Address last Tuesday, President Obama called for America to "win the future." To help make that vision a reality, he and his administration have launched the Startup America Initiative.

New push seeks to create jobs

STARTUP from page 1

"Entrepreneurs embody the promise of America: the belief that if you have a good idea and are willing to work hard and see it through, you can succeed in this country," he said. "And in fulfilling this promise, entrepreneurs also play a critical role in expanding our economy and creating jobs."

Essentially, the President said, he and his cabinet are seeking to clear the way for American businesses to take root, which he and senior officials believe will jumpstart the American economy.

"That's why we're launching Startup America, a national campaign to help win the future by knocking down barriers in the path of men and women in every corner of this country hoping to take a chance, follow a dream, and start a business." .

The President also stated he believes the new initiative is historically unprecedented, as it represents a first-time collaboration between government, business executives, investors, educators, non-profits and private foundations.

"Startup America also represents a historic partnership with business leaders, investors, universities, foundations and non-profits," he said, "and we're urging others to join them in this effort."

The drive was officially kicked off Monday morning at the White House in a ceremony featuring Commerce Secretary Gary Locke, Energy Secretary Steven Chu, Karen Mills, the administrator of the Small Business Administration, Director of the National Economic Council Gene Sperling, Austan Goolsbee, Chairman of the Council of Economic Advisers, and, according to the White House release, several of the nation's premiere entrepreneurs and businesspeople.

Chairing the private-public partnership will be AOL co-founder and Chairman of the Case Foundation Steve Case and Carl Schramm, president and CEO of the Kauffman Foundation, will be one of the initiative's founding board members.

The program will be anchored by several new incentives seeking to foment private sector investment in up-and-coming businesses and startups.

According to Gibbs' release, President Obama's FY12 budget "will propose making permanent the elimination of capital gains taxes on key investments in small businesses." The repeal passed as a temporary freeze last September under the Small Business Jobs Act, and the Administration will seek to cement that freeze, allowing investors to keep their rewards for betting on innovative business ideas. In addition, the Obama Administration will seek to bolster investment in small businesses based in lower-income communities by proposing an expansion to the New Markets Tax Credit.

Further, the Small Business Administration (SBA) will fund $2 billion over the next five years to match private sector investment in startups and small firms in what Gibbs' called "underserved communities." Concurrently, the SBA will promote "early-stage investing" in organizations it sees as having potential for rapid growth through its Small Business Investment Company (SBIC) program.

As part of the president's promise to promote job growth through clean energy, Startup America will direct the SBA and the Department of Energy (DOE) to advise and support clean-tech startup firms, while the Veterans Administration (VA) will seek to support soldiers returning home by providing new job training options to veterans who wish to start their own businesses.

A billion of that funding will come as part of the "Impact Investment Fund," which will go to investing capital in companies in underserved communities, like economically distressed areas and companies in developing sectors like clean energy. A billion more will go to an "early-stage innovation fund," seeking to help fledgling firms get off the ground.

Also under the umbrella of the new initiative, the Department of Commerce plans to broaden to i6 Challenge, which gives cash rewards to inventors in clean technology. The Commerce Department is also working to implement a program which would allow entrepreneurs to expedite reviews of their patent applications, which the White House hopes will "speed the deployment of new ideas to the marketplace."

Before the Startup program was even announced, the Obama Administration had already laid the groundwork for several private-public-philanthropic cooperative projects, which today were announced at the Washington ceremony inaugurating the program.

Locally, the Startup drive will single out the MassChallenge competition, a collaboration of tech, medical, philanthropic and government organizations working together to promote innovation in new fields, seeking to replicate its results nationwide.

The initiative calls such projects "startup accelerators," and will work to "provide seed funding and intensive mentorship" in the program's early stages, while also working "to serve twice as many women entrepreneurs."

In addition to taking the MassChallenge model nationwide, Startup America will work to build up a similar program, the TechStars Network, another startup accelerator, bringing its formula to such markets as Miami, Seattle, Pittsburgh, Dallas, Cincinnati, Salt Lake City, Nashville and New Orleans.

Startup America will also work to turn students into entrepreneurs and to prepare young people to become business leaders.

The drive will "scale up programs that prepare K-12 and college students to start their own companies, such as the Network for Teaching Entrepreneurship, Blackstone LaunchPad, Junior Achievement, National Collegiate Inventors and Innovators Alliance, the Virtual Incubation Network for America's Community Colleges and the Artist & Instigators Practicum."

In addition, the drive will seek to promote support and investment in successful technology firms like Intel, HP, IBM and Facebook, and will seek to "promote" innovation in selected regions, mostly formerly industrial ones seeking to grow out of their former Manufacturing-based economies, like Ohio, Indiana, Michigan, Minnesota and New York.

Several of the tech firms have already committed hefty sums to the initiative. Intel has promised $200 million to American startups through its Invest in America Alliance, which aims to "bring together companies to expand investment in American startups." In addition, IBM has promised $150 million this year for investment in "programs that promote entrepre-

He will select the particular plants he'll serve up to Springfield based on research he has conducted on the healthiest high-phenolic crops in his UMass lab. High-phenolic and high-fiber foods. Shetty has shown, are healthy as low-glycemic index foods. The antioxidants can help serve to "inhibit specific steps of carbohydrate metabolism and potentially reduce rapid glucose uptake," according to the release.

Valdiviezo, for her part, will develop curricula seeking to give teachers a framework for understanding the linguistic and sociocultural backgrounds of first-time English learning students. She will seek to train teachers to become researchers, giving more comprehensive across disciplines to English learners in the Amherst regional public school system.

Sexual assault suspect appears in NoHo court

GORAHKOV from page 1

Gorahkov allegedly attempted to sexually assault two female students on campus on Oct. 15, 2010. The first incident reportedly took place in the Isenberg School of Management, while the second is said to have occurred shortly after in Morrill Science Building III.

A campus-wide alert was subsequently sent out after the incidents, and Gorahkov did not turn himself into police until Oct. 18.

After pleading innocent last week, Gorahkov was released on $3,000 cash bond and told by Judge Mary Lou-Rup to follow a mandated curfew, abide by treatment administered by a doctor and stay away from the UMass campus, as well as the two victims, the Gazette reported.

Luther Gorahkov is seen here leaving Morill Science Building III in this Oct. 15 surveillance shot.

Insurrection in Egypt rages into second week

EGYPT from page 1

Americans view here may not represent a full picture of what is going on inside the country.

Mohammed, who was born in the United States, but has family throughout Egypt, said he was relieved to hear from his relatives.

"I was really curious to hear from them," he said. "Half of my family is hardcore Mubarak, and the other half is 'off with his head.' I'd say I'd fall somewhere in the middle. I'm a pragmatist," he quipped.

Egyptian protesters are divided in their form of resistance, with some demonstrating peacefully and cooperating with military police and some looting museums and police stations, and then turning the equipment against police officials. A strict curfew from 4 p.m. to 8 a.m. was recently pushed even further back to 3 p.m. though protesters continue to be defiant of the rule, according to McClatchy News Service reports.

The military, attempting to uphold a state of martial law, is also interspersed with the protesters in Egyptian cities, tasked with the difficult task of attempting to keep order, while not attacking peaceful citizens or forcing them out of the streets.

Mohammed said the outcome may not turn out to be a peaceful one.

"Chaos is the only way to describe this. Egyptians aren't violent by nature, but if the reins break loose, it's going to be anarchy," he said.

"What many don't realize is that the country is armed to the teeth with weaponry. The instability this is causing may not end well at all," he continued.

David Mednicoff, an adjunct assistant professor in the department of Judaic and Near Eastern studies and the program in Middle Eastern studies, said the outcome is, of yet, indeterminable, but he believes the demands of the people are justified.

"They want the end of a repressive political system and the possibility to have a more democratic and accountable government," he said. "Whether this can happen in the medium-run with the many political issues in the country is hard to know."

"But," he continued, "the demands are clear and completely rational - an end to a longstanding, unpopular political system that enjoys little credibility in the eyes of its people."

Fox said he believes, in the end, the people will be the difference-maker in what happens next in Egypt.

"The people are the primary factor, and next would be the media," he said. "Everything is acting in conjunction. These are all tools that are adding together."

Mohammed concluded, "In a way, I'm happy. This is the change they've needed."

Tim Jones can be reached at timothyj@student.umass.edu.

Egyptian President Hosni Mubarak rearranged his senior cabinet Monday, but the moves were not enough to appease millions of Egyptians, who continued taking to the streets protesting his rule. Here, thousands gather in Cairo's Tahrir Sq.

Comm. prof. tours S. Asia lecturing on modern media

Professor Jan Servaes has returned to the University of Massachusetts from a trip to several Asian countries. The communications professor traveled to Hong Kong, China and Thailand according to a press release from UMass News and Media Relations.

Servaes was invited to speak at a conference called "Internationalizing International Communication." The attendees included scholars from Europe, the U.S. and Asian nations, and discussion revolved around the future of international communication.

Servaes spoke on a paper he published recently, "Questioning the Western Bias in International Communication: Beyond Modernization of the Four Theories of the Press."

In Wuhan, China, Servaes lectured as an honorary guest professor at Huazhong University of Science and Technology. There, he presented a lecture on young Americans' media use. He also lectured at Hubei University and Zhongan University of Economics and Law while in Wuhan.

In December, Servaes traveled to Bangkok, Thailand for the ORBICOM-UNESCO (United Nations Educational, Scientific and Cultural Organization) regional conference to discuss a project initiative meant to facilitate communication and information for social change. The lecture was held in Bangkok. United Nations Conference Center. Researchers from 18 countries spoke on their 45 papers at the [illegible].

Drive to reinvigorate US economy launches

STARTUP from page 2

neurs and new business opportunities in the U.S."

HMM's commitment will serve to "coach and mentor startup businesses throughout the U.S. expand education, build skills and mentorship programs in collaboration with the academic and venture capital communities, and provide skills and business opportunities to the growing community of software developers who collaborate on emerging technologies."

Other elements of the program include a national tour from Obama administration officials to help reduce burdens to entrepreneurs launching startups. The administration will also create an online suggestion site for entrepreneurs to write in about what hinders their firms, and the tour will take business and commerce officials to such innovation corridors as Silicon Valley and the Raleigh-Durham-Chapel Hill Research Triangle.

The Administration will also broaden its "DC-to-VC" summits promoting investment in healthcare technology, where the government officials meet with wealthy venture capitalists to make appeals for investment in emerging treatments, technologies and facilities. These meetings are coordinated by Todd Park, Chief Technology Officer of the Department of Health and Human Services, and include help from the White House, the Office of the National Coordinator for Health Information Technology, and the Centers for Medicare and Medicaid Services (CMS) Innovation Center.

Further, New York's Blackstone Foundation will chip in a $50 million, five-year commitment it is calling the Blackstone LaunchPad, which aims to make entrepreneurship an appealing and successful route for college and grad students. The program debuted at the University of Miami and operates out of colleges' career centers, "providing concrete tools and guidance by experienced venture coaches to help aspiring entrepreneurs university-wide transform untested ideas into vital businesses that lead to economic revitalization." LaunchPad has already been established at two Detroit colleges, Wayne State University and Walsh College, and, according to the release, will move to more economically distressed areas soon.

EDITORIAL@DAILYCOLLEGIAN.COM

Internet "Kill Switch" in the USA

Shane Cronin

The silence is deafening. You probably haven't heard or read much about it. This is because the people that are trying to spread the word about the Internet "Kill Switch" are largely niche bloggers who would be directly impacted by the proposed legislation.

The recently resurfaced "Protecting Cyberspace as a National Asset Act" would give President Obama and his Homeland Security Department the authority to declare a "cyberspace emergency." If senate bill co-sponsors Joseph Lieberman of Connecticut and Susan Collins of Maine successfully pass this bill, DHS will, "establish and maintain a list of systems or assets that constitute covered critical infrastructure." Essentially the president would be able to shut down the entire web without consulting the judiciary. Although the criteria for "critical infrastructure" have supposedly been modified and tightened since the introduction of the "Kill Switch" last year, it is no less alarming.

"For all of its user-friendly allure, the Internet can also be a dangerous place with electronic pipelines that run directly into everything from our personal bank accounts to key infrastructure to government and industrial secrets," Lieberman warned of the penetrability of the Net. Thank you, Senator, for that brilliant technical analysis. According to a wired.com report, it appears that the bill has bipartisan support.

If this bill was introduced under a Republican administration, I dare say, the liberal media would be out for blood.

If this bill was introduced under a Republican administration, I dare say, the liberal media would be out for blood. The circumstances surrounding the "Protecting Cyberspace as a National Asset Act" under the Obama administration feel eerily like those surrounding the passage of the USA Patriot Act after September 11. The left went batty over secret wiretapping, surveillance and the jailing of suspected terrorists - all without judicial consent and under the broadly-defined guise of "national security." But when Obama signed a partial extension of the bill last year, all was quiet on the western front.

Overnight, the press went from railing Bush about abusing civil liberties to barely covering the story under Obama. It appears the "Kill Switch," which grants one man the authority to blackout mass media in America, is in for similar kid glove treatment.

Disappointingly, the "Kill Switch" issue hasn't received much play on talk radio either.

This bill is so troubling because (I won't even mention the new bureaucracy that will be created as a result of its passage) Americans increasingly get their news and other information from the Internet. Online news is now more popular than radio and newspapers, and the web medium is fast closing in on television.

It won't be long before the two fully merge in the mainstream.

Consider this. Major telecommunications corporations such as AT&T and Verizon already spend millions of dollars each year on cyber security. We also have the FBI and other governmental agencies monitoring and acting upon potential Internet threats. No, their efforts do not provide an impenetrable shield against hackers, but shutting down the whole system is not the solution to solving these problems. Internet security breaches have occurred in recent years, and they will happen in the future.

Recall some of the major financial security breaches in recent years including that with the TJX Companies and BJ's wholesale club. Millions of credit cards and bank accounts were compromised in those situations. But in the case of TJX, it was years before the company caught on to the breach.

Many major Internet security breaches are discovered after the fact – rendering a "Kill Switch" a moot solution, anyway.

Furthermore, I find it more than coincidental that the "Kill Switch" comes in the wake of renewed interest in reinstating the Fairness Doctrine. The Fairness Doctrine is code for curbing Fox News, talk radio and conservative websites.

Given this administration's attitude toward these outlets, this type of court-exempt power is bad news.

Look at the situation in Egypt.

The Egyptian government almost unilaterally blacked out Internet access nationwide, as well as most cell phone service last week due to the massive citizen protests in Cairo. Both President Obama and Secretary of State Hillary Clinton have denounced this move - particularly the blocking of social networking sites.

Therefore, I beg the question, if the president feels the Internet should remain operational during a period of citizen revolt, a capital city in flames, a plunging stock exchange, rising death toll and the very real threat of a terrorist group, the Muslim Brotherhood, taking control of the nation, what exactly qualifies as an "emergency" scenario in which the Internet should be disconnected?

According to techi.com, Homeland Security is using a Hoover Dam breach as an example scenario. If someone was to gain access to the dam's computers, he could haphazardly open the floodgates, so to speak. In theory, armed with the ability to freeze the Internet, the president could prevent such a catastrophic attack. However, this is assuming that the government will have prior knowledge of such a breach.

Living in an America with an Internet "Kill Switch" in the Oval Office is a frightening idea. The press needs to wake up and report on it before it loses the ability to do so.

The gender gap, Wikipedia and online registration

Matthew M. Robare

No. I'm not going to log in. I absolutely refuse. A lot of sites these days require you to log in to get their content. Some of them even want you to pay for it. When that happens, my preferred option is to go somewhere else. I can vote with my mouse as easily as with my feet.

But being a journalist, I try to keep up with the news and Vice President Joe Biden's activities – like many public figures, his activities often overlap with news, despite being vice president in a non-campaign year. So it really galls me when "The New York Times," or "The Boston Globe" or "The Washington Post" demands that I log in to their website, giving them my e-mail address and creating another username and password to remember. If I was the kind of person who wrote comments or didn't mind wading into the eldritch, twisted nightmare of Internet comment threads, I'd probably find it useful.

But I'm not that kind of person. I value my sanity too much. So I read newspapers for the articles, for information important and trivial, though hopefully not inane. For instance, I'm curious about the Egyptian protests and the international response, but not the inability of "The New York Times" writers to understand the Internet or Wikipedia.

But I'm not that kind of person. I value my sanity too much.

"But another number has proved to be an intractable obstacle for the online encyclopedia, surveys suggest that less than 15 percent of its hundreds of thousands of contributors are women," wrote Noam Cohen in an article on Sunday entitled "Define gender gap? Look up Wikipedia's contributor list."

Alarmist headline aside, the article represents one of the greatest forays into the inane I've ever seen. The article essentially argued that because Wikipedia emerged out of a male-centered programming culture it retains elements of that culture that "discourage[s] women," in the words of Harvard fellow Joseph Reagle. The article goes on to say that "Adopting openness means being 'open to very difficult, high-conflict people, even misogynists,' [Reagle] said."

Reagle, at the very least, should realize that's not how Wikipedia works. Contributors generally work alone and register with the site, using usernames. One cannot tell sex, age or anything else from the vast majority of usernames.

Contributors have their own user pages, where they choose what biographical information to provide. That's right, the contributors can choose which gender other contributors think they belong to and as any Omegle user knows, there are a lot of people out there pretending to be members of the opposite sex.

The article also contained one of the best quotes ever (though unfortunately it wasn't said by Vice President Joe Biden) by Catherine Orenstein, director of the OpEd Project. This is an organization trying to get women to contribute editorials more often. I highly approve of this project, especially if the women are "Five Colleges" students, and they're contributing to The Daily Collegian. She said "When you have a minority voice, you begin to doubt your own competencies."

It's a misogynistic stereotype that women can't do math, and an empirical fact that journalists can't, but I'm reasonably sure that when any group is approximately half of a population, that's not a minority.

Personally, I suspect that that the Wikipedia disparity has more to do with the fact that men have the ability to memorize and retain reams of factoids, whereas most of the women I know are much better at recalling important things. I'm sure I could memorize "Harry Potter" wand lengths and cores in a few minutes, but if I don't keep checking my syllabus I'll completely forget I have homework due Wednesday (fun fact: the Wikipedia article on "Hogwarts" is longer than the one about the University of Massachusetts system).

Most of the women I've known in my life will scoff at the first task, and just work on the second.

That's another thing forcing site registration leads to: distraction. You get blocked by the registration wall or the pay wall (curse them), and try to get at the content with Google News.

Only something ridiculous catches your eye, and you end up following that. That's how I found out about that stupid astrological sign change.

Was there anything more inane? St. Augustine of Hippo, who died some 1600 years ago, devoted a section of one of his theological works to disproving astrology by bringing up the case of twins.

I don't want to register, I don't want to log on, I just want to read the article. "Maximum content, minimum hassle" should be the marketer's motto. There are few things more annoying than having to reload the whole page to click through a photo slideshow, or wait for an ad to play about a car I'll never be able to afford. But if you are into registration, you can always vandalize the site's Wikipedia page. As for me, I wonder what Vice President Joe Biden thinks about registration.

President Obama's Unsung Conservatism

Dan Stratford

President Barack Obama is many things to many people. To the Democratic Party, at least since he defeated Hillary Clinton in the 2008 primary season, he is the standard-bearer of a new age, and a symbol of hope, renewal and an emboldened focus on the national interest and the greater good. To the Republicans, he is yet another tax-and-spend liberal concerned more with social leveling and wealth redistribution than with individual liberties or the sanctity of the Constitution. To many elements of the Tea Party, he is a Kenyan national, a Marxist, a socialist sleeper agent, a Nazi, or, confusingly, all of the above.

However, President Obama is of a completely different disposition. Despite running and winning election to the presidency as a Democrat, he is apparently not bound hand-and-foot to any specific ideology. He seems to the casual observer to concern himself solely with the greater good, the national interest, both domestically and in his foreign policy. He possesses, at times, a political deftness that is under-appreciated in the normal spin cycle, but is geared towards advancing objectives that will afford the United States an advantageous position in the multi-polar world to come. Could it be, perhaps, that President Obama is something of a conservative?

Before the author of this piece is assailed from all sides by a withering tide of vitriol, we must first define what "conservatism" is. According to Russell Kirk, a prominent 20th century conservative thinker and author, conservatives do not possess an outlook on life pigeonholed by rigid dogma; rather, he emphasizes ten general "principles" that conservatives have historically adhered to, among which are prudence, a restraint on human passions, and a reverence for tradition.

As such, true conservatism of the cerebral variety, as expounded by Kirk, is not so much an ideology as it is a loosely-organized philosophy. It is a philosophy that transcends party and partisanship, but that does not at all repudiate the political process. With regards to the three aforementioned principles, President Obama readily extols his conservative credentials.

The president first and foremost understands the value of prudence and realism in all things relating to governance. Political prudence is not just made evident by frugality, but by resourcefulness and practicality, all the while avoiding Scylla of speculative utopianism and the Charybdis of hysteria.

Could it be, perhaps, that President Obama is something of a conservative?

Especially with regards to foreign policy, his approach has encompassed a broad ideological cross-section, not for the sake of ideological diversity, but for the sake of practicality and stability.

In this regard, the president has managed to at least partially rehabilitate the image of the United States in the eyes of our allies in Western Europe, while concurrently engaging nations in the Middle East whose view of the United States is less than jovial. This is in spite of reactionaries who view with contempt any sort of diplomatic engagement with the Middle East outside of Israel as "dealing with terrorists."

He has also recognized the need to open up new markets to American exports, as made evident by recent trade deals signed with India and South Korea. This stands in stark contrast to prior administrations, which saw the decline of industry and the rise of an omnipotent financial sector to be the natural progression of a mature "industrial" economy.

The trend of domestic politics over the past two years since President Obama's inauguration has lent itself to a confluence of the latter two principles of conservatism. The president recognizes, unlike certain segments of the modern Right, that government is more than just a mere umpire over economic transactions. Government, in the words of Edmund Burke, is a "pact of the dead, the living, and the as of yet unborn," and is amongst the most potent arbiters of rationhood and social adhesiveness.

Because government derives its ultimate legitimacy, or perception thereof, from the populace, it is empowered to act on its behalf. This can entail enacting policies that the individual or those not attuned to politics may not want, but that the nation overall needs. To again quote Burke, "the multitude is foolish, but the species is wise." There is much historical precedent to this assertion, from Alexander Hamilton's nationalization of the accumulated debt from the Revolutionary War in spite of opposition from many Southern states, to Franklin Roosevelt's insistence on a peacetime draft to prepare for war, in spite of the howls of many isolationists.

This tradition of synergy between government and populace reaches back to the birth of the Republic. Like any good conservative should, President Obama recognizes and has reverence for this harmony between government and the governed, and seeks to prudently manage it. Though President Obama's foreign policy lends itself to this conception of government, it is most pertinent to discuss his domestic economic programs, especially the Troubled Asset Relief Program (TARP).

The stabilization of the financial system in the formative years of the Great Recession has been controversial since its inception. The hysterical cries of "let them fail, the market will fix it!" could be heard from every street corner. Yet President Obama, and Bush before him, recognized that a collapse of the financial system would lead to a collapse of the economy - a second Great Depression. In short order, both presidents wisely stabilized the financial system through the TARP program. President Obama wisely continued the program during his first months in office. The people inform, but do not dictate, and as such, the passions of the multitude were necessarily restrained for the good of the nation, with most of the TARP money set to be paid back in the near future, with interest.

Despite the caustic nature of radio talk show hosts everywhere, President Obama has acted in a manner that can only be described as the epitome of traditionalist conservatism. Conservatism, at its very core, emphasizes stability over dogma, and the role of government as the guarantor of that stability. Through his prudent and level-headed prosecution of affairs both foreign and domestic, President Obama has demonstrated himself to be, in more ways than one, more conservative than most "conservatives."

'Valentine' isn't all hearts and flowers

By Margaret Clayton
Collegian Correspondent

Originally rated NC-17 for explicit sexual content, "Blue Valentine" is the raw portrayal of a couple's marital struggle, interwoven with flashbacks of when they were first falling in love.

In this crumbling love story, Dean (Ryan Gosling) and Cindy (Michelle Williams) are living with their daughter, Frankie, in Pennsylvania. Williams plays the overworked mother, ridiculed for her preparation of instant oatmeal and Gosling is the tattooed, smoker who shades his emotions with his aviator sunglasses. The film is a romantic drama where we see the evolution of the characters in a non-linear development. Cindy used to wear her hair down and dance, and Dean used to play the ukulele and make her laugh. Several years later, instead of warbling "You Always Hurt the Ones You Love" on the street in a cute, off-beat date, the couple is wobbling on the edge of a breakdown after all of the hurt.

Gosling performs three songs throughout the film, two of which are his own compositions. The other main contributor to the soundtrack is Grizzly Bear, a Brooklyn-based band whose folk rock sound matches the spirit of the film as it oscillates between sweet romance and harsh words.

In an over-the-shoulder camera scene, the young couple is skipping on a bridge holding up a piece of cardboard that says, "Is this you?" The blue in the title "Blue Valentine" does not come from the blue telephone in Cindy's childhood bedroom, nor the blue pinstripe suit Dean wears to their wedding, nor the blue lighting in "The Future Room" - their themed suite at a romantic hotel. Instead, the blue is the cold, numb feeling when the excitement is over and there is no more bringing home red and pink flowers. Blue is a color, but theirs is a colorless love.

A small detail in the film opens up the debate of who is at fault for this estrangement, or what event started the downfall. One of Dean's tattoos is a rectangle on his upper left arm with the cover art of Shel Silverstein's "The Giving Tree," a story about a tree and a boy whose relationship is one part devotion, one part leech. Now this does not describe Cindy and Dean's relationship. They both work to provide for their daughter, Cindy as a nurse and Dean as a house painter. However, the question raised by the book is, when we do things out of love, should we stop when we are not feeling appreciated?

Released just before Valentine's Day, "Blue Valentine" asks its audience to look at the relationship and decide whether they should be passing judgment. These characters could be anyone. They are the kind of people who only remember to give their significant other a compliment on a Hallmark holiday or a birthday. Instead of celebrating the happiness of being parents in their own home, this couple focuses on how tired, spent, and used up they feel. Running out of patience with each other, Cindy and Dean argue and never fully recover from the insults exchanged.

Both of these actors deserved their respective nominations this awards season. Gosling takes a hooded, rough-and-tumble, blue-collar guy and turns him into a romantic who can convince his daughter to eat raisins by licking them off the table like a leopard. Williams plays a woman who has been surrounded by unhealthy relationships her entire life and is now struggling to figure out why she is unhappy when she has a husband who has always been faithful to her and is a great father. The history behind the couple has so much depth and passion that it is hard to decide what you want their future to be.

For a realistic, depressing, well-crafted film with talented actors, go see "Blue Valentine" as a piece of art, not entertainment.

Margaret Clayton can be reached at mclayton@student.umass.edu.

Ryan Gosling (pictured above) and Michelle Williams star in "Blue Valentine," a cinematic tale of crumbling love that is just as artistic as it is engaging.

West's remake thrills

By Brian Canova
Collegian Correspondent

In Simon West's high-impact remake of the 1972 film "The Mechanic," Jason Statham ("The Transporter," "Crank") reprises the role of Arthur Bishop, a mechanistic hit man once played by Charles Bronson. After a hit is carried out on his wheelchair-bound, long-time mentor, Harry McKenna, played by Donald Sutherland ("Dirty Dozen," "M*A*S*H"), Bishop takes on a protégé of his own, Harry's son, Steve McKenna.

McKenna, played by Ben Foster ("Alpha Dog," "X-Men 3"), is Bishop's antithesis. Emotionally volatile, fatalistic and an egomaniac with everything to prove, Bishop uncharacteristically takes it upon himself to coach McKenna in the art of the kill and the unique mindset that his profession demands.

Using an online directory of classified ads resembling Craigslist, Bishop receives his assignments in encrypted postings. He then carries them out quickly on designated targets ranging from arms dealers to pedophilic hit man and messianic cult leaders.

Rivaling Bishop, McKenna's sarcastic wit and unresolved anger fuel his training as he swigs whiskey, rips cigarettes, and studies actuary manuals to align his kills with what insurance agents look for when investigating their clients' deaths. Take autoerotic asphyxiation as one example. McKenna struggles with this concept, however, choosing brutal bloodbaths over safer, more cunning and quiet chemical assassinations. The kills are graphically depicted throughout the movie and may be difficult for some to stomach, but others will find it a proper element in the tried-and-true formula of Statham's work.

McKenna finds the rush he's looking for in this new craft, an outlet for the anger that bounced him between three high schools and had his college acceptance revoked. Always a disappointment to his father, McKenna finds redemption while seeking out vengeance on the ultimate target - the man who ordered his father's hit.

In the end, neither Bishop nor McKenna can completely suppress their emotions. Bishop hunts down the man who deceived him into carrying out an unwarranted hit on a close personal friend, and McKenna fails to shake off his hunger for brutal and ruthless vengeance.

"Amat vitoria curam," or, "victory loves preparation," is the inscription on the elder McKenna's pistol, serving as a recurring theme throughout the film. His son, however, is never able to master this philosophy in lieu of his impulsive and impassioned spontaneity, which ultimately spells his demise. "Vengeance is the mission," he says to Bishop.

"There is no peace," Bishop tells himself. Emotionally tortured but conditioned not to feel, Bishop doesn't think like other people do, and this is what enables him to excel in his profession. Juxtaposing his detached relationship with Sara (Mini Anderson), the classical music he plays on vinyl at his house, the carefully restored car in his garage, and his twisted ethical code, Bishop is built with an unsettling precision reminiscent of Christian Bale's portrayal in "American Psycho." Bishop is homesick for a place he's never been, an old man in a rocking chair tells him in the film's weak attempt at tapping into something deeper.

Don't expect anything deep or profound from "The Mechanic." The film fiddles with the idea of spite and the comfort vengeance can bring, but answers these musings with only an explosive exploration of the action-packed form it takes in Hollywood.

If you're searching for wisdom in Statham's cold, sharp one-liners, you're looking in the wrong place. Nonetheless, what this film lacks in depth it more than makes up for in its fast-moving plot and eye-opening action sequences. Without the mental taxation of more complicated and ambitious films, expect to sit back with ease and be well entertained with this updated thriller.

Brian Canova can be reached at bcanova@student.umass.edu.

"Kiss Each Other Clean," the latest release from Sam Beam's Iron & Wine is a departure from folk in exchange for some musical experimentation.

COURTESY FACEBOOK.COM

Bearded Beam's Iron & Wine no longer 'Naked As We Came'

By Acacia DiCiaccio
Collegian Staff

Many music fans often yearn for their favorite artists to reinvent themselves. Yet, musicians must deal with straddling the fragile line between reinvention and a complete disconnect from their original sound that fans have come to adore. The risk of becoming a "sell-out" is always a daunting one when a band attempts to alter their style. Iron & Wine's new album, "Kiss Each Other Clean," dances dangerously across this line.

The sound of "Kiss Each Other Clean" is definitely not the low-fi, ethereal tones of Iron & Wine's previous albums. The band leaves their organic folk style behind in exchange for the synthetic sounds of electronic instruments. For those who may have been previously turned off by Iron & Wine's style of put-you-to-sleep music, this album offers a brighter range of tempo and style.

The opening track on the album is a dud. Melodically boring, "Walking Far From Home" is definitely one to skip. Thankfully, the album only improves from there.

Between the influences of jazz, funk, electronic and even doo-wop, Iron and Wine has definitely widened their musical scope. While some tracks may be considered failures, others offer a bright, never-before-seen side to this generally static band. The experimental intro on the track "Monkeys Uptown" could be mistaken for a Radiohead song before Beam's distinctive murmuring voice appears. Meanwhile, the saxophone in "Big Burned Hand" creates a catchy jazz tune.

However, with this new approach, the band appears to have lost focus on the human spirit lyrically with their attention turned to musicality.

The band's mastermind, singer and guitarist Sam Beam, is renowned for his intimate lyrics illustrating the human plight. On this album, the poetry of his words is lost to the somewhat distracting use of electronic instruments. While the reinvented sound is definitely more interesting than that of past albums, the focus on the emotionality of nostalgic lyrics disappears.

In the past, even when songs had befuddled lyrics, the emotion in Beam's vocals personified a specific mood. While some tracks on "Kiss Each Other Clean" still hold this as true, others possess lyrics that appear as placeholders to the musical experimentation.

While "Kiss Each Other Clean" entertains listeners with its fresh sound, some may argue that some of Iron & Wine's most organic qualities are lost to the overproduction of the album.

The cover art perfectly exemplifies the dilemma of this album. Sam Beam is artfully illustrated as a figure lost amidst a river of multicolored sound waves and neon peacocks.

Acacia DiCiaccio can be reached at adiciacc@student.umass.edu.

Simon West's latest film, "The Mechanic," may not break the action movie mold, but keeps viewers on the edge of their seats at all times. The film is now showing in theaters nationwide.

Duquesne remains unbeaten

By Stephen Hewitt
Collegian Staff

After a three-point advantage at halftime on Sunday afternoon, the Duquesne men's basketball team pulled away in the second frame to stay undefeated in Atlantic 10 play, beating Dayton 82-64 at the CONSOL Energy Center.

Senior forward Damian Saunders led all scorers with 19 points to catapult the Dukes (15-5, 7-0 A-10) to a first-place tie with Xavier and its best 20-game start to a season since the 1971-72 team opened the year 16-4.

A–10 Basketball

It was Saunders and senior guard Bill Clark – who boasted 17 points of his own – who led a strong attack to break open the game in the second half, leading DU to a 19-8 run that put the game out of reach.

Freshman T.J. McConnell and junior B.J. Monteiro also contributed double-figures in points for the Dukes, adding 15 points each.

Junior forward Chris Johnson led the Flyers (15-7, 3-4 A-10) with 13 points, while senior forward Chris Wright posted a near double-double with nine points and 10 rebounds.

The loss puts the Flyers in an eighth-place tie with St. Bonaventure and La Salle, as they look to turn things around when they play both of those schools this week.

DU will look to extend its winning streak to 11 games and put its perfect conference mark on the line when it hosts George Washington and takes a road trip to face off with the Bonnies this week.

La Salle edges Charlotte

After its chances of winning seemed unlikely down six with just over a minute left in regulation, La Salle defied the odds to push it to overtime before ultimately defeating Charlotte in double overtime, 91-86, for its third consecutive victory.

Five players scored in double-figures for the Explorers (11-11, 3-4 A-10), including 17 points from both senior Jerrell Williams and junior Earl Pettis.

Freshman Cole Stefan tied the game with 7.8 seconds left in the first overtime by netting a 3-pointer and LSU took the momentum into the second extra period to move into a tie for eighth place in the conference.

Sophomore KJ Sherrill led the 49ers with 24 points, including going 14-for-18 from the foul line and notching 13 rebounds.

For Charlotte, the loss marks its fourth-straight loss and places them 12th in the standings. The road doesn't get any easier, however, as games against Xavier and GWU lie ahead for the 49ers.

La Salle will try and build on the momentum gained against Charlotte with home games against Temple and Dayton later this week.

Woes continue for Hawks

After a solid 3-2 start to its season, including good wins against the likes of Fairfield and Rutgers, it has gone downhill for Saint Joseph's.

The latest suffering in what has been a very disappointing season for the Hawks (5-16, 0-7 A-10) came with a 72-54 blowout loss to the hands of Temple.

The loss marks SJU's (15-5, 5-2A-10) eighth-straight defeat and its 14th loss in its last 16 games.

Temple, led by Scootie Randall's game-high 17 points, used a 12-0 run in the first half to go up 23-10 with eight minutes remaining in the first frame. SJU would never cut its deficit to single digits for the remainder of the contest.

The lone bright spot for the Hawks, as he has been all season, was sophomore guard Carl Jones, who paced the team with 19 points on 7-for-13 shooting.

Jones – who boasts 17.9 points per game – will need to continue his dominant form as SJU searches for its first conference victory this week with games against Richmond and Massachusetts.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

The Dukes won their 10th consecutive game to have their best 20-game start to begin a season since going 16-4 in 1971-72.

Justin Brownlee helped the Red Storm defeat previously No. 3-ranked Duke by adding 20 points, nine rebounds and six assists.

St. John's shocks Blue Devils

By Ben Lambert
Collegian Staff

Dwight Hardy's 26 points spurred the St. John's men's basketball team to a 93-78 blowout win over No. 3 Duke on Sunday afternoon. The outcome was never in doubt as the Red Storm jumped out to a 46-25 halftime lead on their way to the dominant victory.

St. John's (12-8, 4-5 Big East) controlled the game with an aggressive trapping defense that forced 17 turnovers and didn't allow Duke's 3-point shooters to get in sync. Despite hitting at a 48.1 percent clip this season, the Blue Devils (19-2, 6-1 Atlantic Coast Conference) went 1-for-13 in the first half from beyond the arch and only 5-for-26 overall. In contrast, St. John's knocked down 58 percent of their attempts from the field and had just 11 turnovers.

In addition to Hardy's scoring, the Red Storm got major contributions from seniors Justin Brownlee and Paris Horne. Brownlee filled the stat sheet with 20 points, nine rebounds and six assists, while Horne added 15 points and six assists.

Top 25 Basketball

Senior guard Nolan Smith was the lone bright spot for the Blue Devils, pacing Duke with 32 points, seven rebounds and four assists.

OSU survives scare

It came down to a last second-shot, but No. 1 Ohio State (22-0, 9-0 Big Ten) was finally able to chalk up their 22nd consecutive victory on Saturday night.

After a back-and-forth affair, the Buckeyes defeated Northwestern (13-8, 3-7 Big Ten), 58-57. Freshman star Jared Sullinger put Ohio State ahead for good by knocking down 1-of-2 free throws with three seconds to go and Northwestern's desperation heave bounced wide off the top of the backboard as time expired.

While no one expected such a close game going in, the Wildcats would not say die against the heavily-favored Buckeyes. They hung tough throughout the first half and after falling behind early in the second, came storming back with a 21-7 run capped by Michael Thompson's 3-pointer to put Northwestern up, 55-54, with three minutes, 43 seconds remaining.

Thompson was the star performer for the Wildcats all night, leading the team with 16 points and eight assists. He could not quite put them over the top, however, as OSU senior guard Jon Diebler hit a 3-pointer that broke the momentum of the Wildcats.

Sullinger, as he's done all season, led the way for the Buckeyes with 21 points and eight rebounds. Freshman guard Aaron Craft added 13 points off the bench as well.

UConn loses in double-OT

Peyton Siva came up big in the clutch for Louisville, topping Connecticut's Kemba Walker on Saturday night as the Cardinals beat the Huskies, 79-78.

Walker missed the potential game-winning shot at the end of regulation and the second overtime, while Siva tied the game with 30 seconds remaining in the fourth quarter and at the end of the first overtime.

The two teams played a hard-fought, even game throughout. No. 19-ranked Louisville (17-4, 6-2 Big East) hung around, despite being behind for most of the game. The Cardinals trailed at the half and retook the lead with 2:26 left in regulation on two Siva free throws.

They struggled in the first overtime as well, falling behind by four with 37 seconds remaining. Nevertheless, Louisville came back to tie it on Siva's dunk and came up big in the second overtime to seize the victory.

Siva scored 19 points, while junior forward Terrence Jennings added 16. Guards Preston Knowles and Kyle Kuric also contributed 15 points apiece.

It was a three-man game for the Huskies as freshmen guards Shabazz Napier and Jeremy Lamb led the way, scoring 23 and 21 points, respectively. Walker chipped in 20 points but uncharacteristically could not convert when it counted the most.

Ben Lambert can be reached at wlambert@student.umass.edu

Minutewomen dominate shot put

UMASS from page 8

third with a time of 4:14.54. Also a member of the cross country team, the senior missed the IC4A cut by only 0.36 seconds.

The Minutemen look to continue their hot streak into this weekend's Giegengack Invitational in New Haven, Conn.

The Minutewomen put together a strong outing at Friday's Reebok Boston Indoor Games, taking sixth place after accumulating 58.5 points on the day.

The final standings crowned Northeastern at the top with 97 points, followed by Brown (93) and Boston College (72). The Minutewomen finished in front of eleven teams, including Vermont, Yale and Williams College.

"Every week our...athletes push themselves to new levels," UMass coach Julie LaFreniere said, who was very excited about her team's performance. "Their hard work and sacrifices are paying off."

The Minutewomen dominated the shot put as Nafis Mbianda captured first place after throwing 44-06.00, while teammate Rachelle Bourque showcased her ability by finishing third with a throw of 43-05.25. Both earned bids to the NEC with their efforts, while Mbianda also qualified for the ECAC Championships.

LaFreniere gave much of the credit to assistant coach Darcy Wilson, who spends a great deal of time developing her throwers.

"You will see much more out of coach Wilson and her throwers," Mbianda said.

The Maroon and White distance medley team did well once again, crossing the finish line in second place in 12:04.70. Courtney Baldwin, Michelle Jenssen, Gina Perno and Karen Roa achieved their pre-race goal of qualifying for the ECAC.

"They...compete with pride and represent UMass well," LaFreniere said. She later went on to add that the four are "a great inspiration to their teammates and the coaching staff."

Perno also chipped in with a stellar run in the 1,000-meters, setting a personal record with a time of 2:53.28 and a third-place finish.

Erika Unger was the final UMass competitor to qualify for the NEC after crossing the finish line 10th in the 500-meter dash in 1:19.45.

Up next for the Minutewomen is the Giegengack Invitational. LaFreniere feels this meet will serve as a "practice run" for the Atlantic 10 championships on Feb. 18.

This weekend's meet is a two-day event, which is similar to the A-10 championships. The meet will be held at Yale in New Haven, Conn.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Nafis Mbianda, along with teammate Rachelle Borque, helped the Minutewomen capture the shot put event with first and third place finishes, respectively. Mbianda recorded a throw of 44–06.00, while Borque accumulated 43–05.25. Their efforts earned both bids to the New England Championships.

BU, Maine tie

HOCKEY EAST from page 8

sive, showing an outstanding mix of rookie and veteran players. They are one win away from tying their win total of 16 from last season, their best since joining the Hockey East in 1988.

Overtime not enough

The Hockey East matchup between Boston University and Maine saw a hard fought battle Saturday night at Alfond Arena which ended in a 1-1 tie.

The goalies for both teams quickly took over following first first period goals. Will O'Neil scored 21 seconds into the game on a feed from junior forward Brian Flynn for the Black Bears.

The Terriers (12-7-7, 9-5-5 Hockey East) scored shortly after as a result of a blueline interception by Chris Connolly, which led to a breakaway goal for Joe Pereira, his 11th of the season.

The highlight of the matchup was the great goaltending by junior goalie Kieran Millan. Millan saved 41 shots through regulation and an overtime period. The Maine offense bombarded Millan with shots, holding a 20-2 advantage in shots on goal in the first period to finish with a 42-20 advantage.

There were outstanding saves on both sides of the puck, with Millan and Maine goalie Martin Ouellette each making game-saving stops. Ouellette faced some tough shots and finished with 19 saves.

Despite success in the net, each team struggled mightily on the power play. Maine was scoreless in seven opportunities, while BU was scoreless in five.

The Black Bears return to action this Friday when they take on the Hockey East-leading UNH for a two-game series in Durham, N.H. BU will face off against last place UMass Friday night as well.

Matt Strong can be reached at mstrong@student.umass.edu.

The Life and Works of the
Rev. Dr. Martin Luther King, Jr.
A Multifaith Celebration
led by
The Rev. Samuel "Billy" Kyles
Rev. Kyles, one of the last surviving witnesses to the assassination of Martin Luther King, Jr., was a leader in the Civil Rights Movement. Rev. This Multifaith Celebration will also feature music by the Amherst College Gospel Choir and Choral Society.
Tuesday, February 8, at 7 p.m.
Johnson Chapel, Amherst College
This event is free and open to the public.
Sponsored by the Rev. Dr. Martin Luther King, Jr. Celebration Committee

UMass needs its 'Tracy Morgan'

GURLEY from page 8

Minutemen are 4-6. In games that he takes at least 18, they are 1-4. That one win, which was against Rider, is a bit of an aberration, as it included Gurley and Freddie Riley combining for 59 points in a desperate comeback.

Meanwhile, when Gurley takes under 15 shots, the Minutemen are 8-2. In one of those losses, which was against Xavier, UMass got clobbered 79-50, slightly diminishing the value of Gurley's shot total.

Going even further, the Minutemen are at their best when Gurley isn't even leading the offensive output. Gurley has been the leading scorer for each of the Minutemen's games this season, save two, both of which were wins. Guard Javorn Farrell led with 25 points in a win against Quinnipiac while Riley put up18 against Charlotte. They're also 2-0 when a teammate is within two points or less of Gurley's team-high, if that counts for anything.

What should be taken from this isn't that Gurley putting up points is a bad thing. It's a great thing. It's simply a question of how much offense goes through him before things start leaning too heavily on him. No. 12 is simply a part of your balanced breakfast. Offense too.

Just like Kobe, though, there are times when the Minutemen need Gurley to step up and take a shot or three. One key example was Sunday's game against Rhode Island. With the game winding down and UMass with the lead, the offense needed to hold onto the ball to run the clock. Gurley, with the ball in his hands, did just that. But with the shot clock at two seconds and the defense swarming, Gurley stepped back at least five feet behind the 3-point line and drained the shot. This was part of a day where Gurley went 5-for-14 from the field, but 4-for-10 from distance.

Another example was in the Minutemen's first win of the season against Rider. Down at 22 just after the half, Gurley, along with Riley, was forced to go into Kobe-mode to storm back into the game. And they did, finishing with a 10-point victory.

As a wise man once said, "With a sweet jumper comes great responsibility." OK, fine, I said that. Regardless, only so much can be accomplished with the Gurley Show. There needs to be a Tracy Morgan.

In the best case scenario, Tracy Morgan comes in the form of "The Human Torch" Riley, who ended up going 6-for-11 from 3-point range in the Rider game. Other times, he comes in the form of the sophomore, Farrell, who has shown great skill in getting to the basket or Sampson Carter, who has a great combo of size and shooting.

Like all great forces in the world, Tracy Morgan comes to us in more than one way. Saturday Night Live taught us this. But if his success on 30 Rock has shown us anything, it's that he's best as a gamebreaking compliment to Liz Lemon's original "Girlie Show."

Without the "Girlie Show," there is nothing. But without Tracy Morgan, what's there just isn't as good as it could be.

'The Gurley Show' won't lead to wins

Nick O'Malley

At the beginning of the TV show "30 Rock," Tina Fey's character, Liz Lemon, is the head writer of the fictional "The Girlie Show."

At that point, the show's main feature is the eccentric Jenna Maroney and didn't meet the expectations of company executive Jack Donaghy, played by Alec Baldwin.

Donaghy, in his infinite wisdom, realized that "The Girlie Show" was not enough by itself. It needed something more to compliment the main feature. It needed Tracy Jordan, played by Tracy Morgan. It needed a grand force that made it more than a one-(wo)man show run by Lemon.

Much like in "30 Rock," the Massachusetts men's basketball team is chronically at risk of becoming a one-man show with its leading scorer, senior guard Anthony Gurley – UMass' own "Gurley Show."

Gurley, the leading scorer for the Minutemen and second-leading scorer in the Atlantic 10 with 20.4 points per game, is a force to be reckoned with on the offensive end. However, as the Minutemen's loss against Richmond showed, even if Gurley puts up 30 points like he did in that game, there needs to be more. So, there can only be one conclusion.

The most important thing for the UMass basketball team is the impact of Tracy Morgan.

In their 84-68 loss to the Spiders, the Minutemen showcased what can happen if they can't produce much outside of their leading scorer. On the afternoon, Gurley scored 30 points, but on 9-of-22 shooting, including 6-of-12 from 3-point range.

It's something that ties in with the play of Kobe Bryant on the Los Angeles Lakers. Bryant, one of the greatest players in NBA history, is a renowned scorer who, at times, is known to go into a mode where he keeps the ball and jacks up shots. Despite his immense talent, this play is not the best scenario for his offense.

It's the same deal with the Minutemen.

When it comes to UMass and the Gurley Show, the key statistic is shots taken by Gurley, with 15 attempts being a vital threshold.

When Gurley takes at least 15 shots in a game, the

See GURLEY on page 6

JEFF BERNSTEIN / COLLEGIAN

Senior guard Anthony Gurley rises up for a jumper against New Mexico earlier this season. The Boston, Mass. native leads the Minutemen in scoring this season, averaging 20.4 points per game.

The Minutemen scored just over 1,000 points in the Dartmouth invitational to defeat Bryant, the Big Green, Boston College and Maine.

Minutemen win invitational

Minutewomen fall short, place second behind host Dartmouth

By Nicholas Bellofatto
Collegian Staff

The Massachusetts men's and women's swimming and diving programs split up this past weekend to participate in the Dartmouth Invitational. The swim team traveled to White River Junction, Vt., to swim in a brand new facility, while the diving team headed to the Dartmouth campus to compete.

The Minutemen showed once again why they were voted the preseason favorite in the Atlantic 10 conference this year by placing first at the invitational.

Scoring just over 1,000 points in the tournament, the Minutemen defeated Bryant, Dartmouth, Boston College and Maine to secure their second invitational victory this season. With the Big Green as the runner up in their own tournament, BC, Bryant and Maine finalized the standings by placing third, fourth and fifth, respectively.

The Minutewomen came up a little short and allowed the hosting Big Green to be the victors in the tournament. The Dartmouth women's team was in control of the tournament for both days, scoring 1,165 points to take a commanding first-place finish. The Minutewomen scored 835 points, which was good enough to take second place, leaving the Eagles in third, the Black Bears in fourth and the Bulldogs in fifth.

At the start of the second day of competition, the Minutemen were in first place and Dartmouth was trailing right behind them. The team of Joey Sbordon, Chris Inglis, Troy Nichols and Derek Hursch allowed the men's team some breathing room by placing first in the 800 freestyle relay.

The performances allowed UMass coach Russ Yarworth to better understand what a swimmer's tendencies are, as well as who should be paired up with who in such team events.

Although winning is always at the forefront of any competitors mind, both coaches noted that these regular season tournaments are more of a preparation for A-10 championships than anything else. Since the early days of the season, the coaches have stressed the importance of these tournaments in preparing their swimmers both physically and mentally for the A-10 tournament.

By gaining a better understanding of what certain athletes on the team are capable of, it is much easier for the coaches to set their lineups for the different events.

Along with the swim team, the Minutemen divers continued to dominate as Jason Cook and Adam Duffield took first and second in the one-meter and three-meter dives, respectively.

The Minutewomen also had a strong day on the diving boards, with sophomore Molly Elkins placing second in both the one-meter and three-meter dives.

Yarworth explained that such supremacy in the diving events must be accredited to diving coach Mandy Hixon and the great job she has done over the past 10 years at UMass.

The Dartmouth Invitational was the last tournament that the Minutemen and Minutewomen will compete in before the A-10s take place from Feb. 24-27 in Buffalo, N.Y.

Both teams are heading to Fordham on Saturday to take on the Rams in their final dual meet of the regular season.

Nicholas Bellofatto can be reached at Nbellofa@student.umass.edu.

Many qualify for NEC

By Stephen Sellner
Collegian Staff

The Massachusetts men's track and field team racked up 69 points and a third-place finish in Friday's Reebok Boston Indoor Games.

The Minutemen competed against 16 others schools, tying with Central Connecticut for third and finishing only behind host Northeastern (118.50 points) and Brown (70).

Quinn Ryder took first in the 55-meter dash, clocking in a time of 6.52 seconds. With that showcase, the freshman qualified for the New England Championships.

"I think it was a reward for all the hard work he's put in over the fall and the first…weeks of the season," said UMass coach Ken O'Brien. He also added that it was a "true indication of his ability."

The Maroon and White are hitting its stride, following their recent ninth-place performance at the Great Dane Invitational (24 teams) in Boston and third-place showing at the Sparks Sorlien Invitational (17 teams). O'Brien contributed his team's current surge to solid fall training, returning veterans and contributing freshman.

Paul Grafov also finished first in the 5,000 meters with a time of 1:04.59, while Sean Busch took first in the pole vault after jumping 15 feet. Grafov's efforts earned him a bid to the NEC, while Busch qualified for the IC4A Championships.

Tyler Cotto did not disappoint, turning in another solid performance in the 55-meter hurdles with a time of 7.52, while teammate Zachary Koncki crossed the finish line in third place in 7.85.

"It's a combination of being more experienced now, a very good competitor and…a very experienced success rate that makes his performances much more consistent," O'Brien said of Cotto.

The Minutemen also received solid performances from seniors Kevin Spicler and Scott VanderMolen in the weight throw and 1,000-meters, respectively. Spieler placed third, tossing the 35 lb. weight a personal record distance of 54-02.75. VanderMolen, meanwhile, placed third as well, crossing the finish line in 2:27.65 and qualifying for both the NEC and IC4A Championships.

UMass' Daniel Barry shined in the mile, qualifying for NEC after finishing

Several competitors qualified for the New England and IC4A Championships in Friday's Reebok Boston Indoor Games.

Wildcats sweep weekend play

By Matt Strong
Collegian Correspondent

The New Hampshire hockey team continued its great play this weekend with a sweep of Providence.

Friday night's matchup saw senior forward Mike Sisko notch his 100th career point in collegiate play for the No. 7 ranked Wildcats (15-5-4, Hockey East 13-2-2). Sisko led UNH to a 5-2 victory at Schneider Arena scoring a goal and adding two assists, while junior forward Paul Thompson scored two goals and had an assist as well.

The scoreless pace set in the first period of the game was quickly interrupted by a six goal-second period which saw UNH take a 4-2 lead.

The Wildcats were able to execute following a Friars (7-12-5, Hockey East 3-10-4) power play to start the second period. Phil DeSimone played a long pass up to Thompson who skated into a breakaway and netted a wrist shot for the first score of the game.

The Friars responded quickly with junior Andy Balysky's fourth goal just three minutes later off of a forced turnover by sophomore Chris Rooney, but were not able to stop the Wildcats' attack.

UNH skated past Providence again on Saturday night with a 5-1 victory at home at the Whittemore Center. Friars forward Kyle MacKinnon's five-hole goal 59 seconds into the second period tied the game at one. A 5-on-3 power play shortly after allowed for Thompson's 20th goal of the season, giving UNH a 2-1 lead.

UNH never looked back and for the second consecutive night the Wildcats offense exploded, scoring four second period goals.

Sophomore goalie Matt DiGirolamo had an impressive home-and-home weekend series with 35 and 37 saves in Friday and Saturday night's victories, respectively.

Freshmen lead Merrimack

Boston, Mass. native and freshman Mike Collins picked up his first career hat trick on Saturday night as he helped Merrimack wiz past the Vermont, 7-1.

Collins had an assist in addition to his noteworthy hat trick, which is an ode to his second-effort, hardnosed play throughout the game. Freshman Carter Madsen chipped in to the scoring spree with a first-period goal as well.

Senior captain Chris Barton added to the mix with two goals and an assist, netting him his 10th goal of the season and bringing his collegiate point total to 100, making him the first Merrimack player to accomplish such a feat since 2002.

The No. 14-ranked Warriors (15-5-4, Hockey East 9-5-3) were impressive on both sides of the power play, going 3-for-6 on offense and killing 5-of-5 power plays on defense, solidifying them as the nation's second best power play killing team.

Following a losing season, the Warriors have been impres-

UM student threatens Fla. Rep.

Manuel Pintado allegedly commited 2nd, 3rd degree felonies in threat of public servant

By Sam Butterfield
Collegian Staff

A University of Massachusetts student is awaiting extradition to Southeast Florida for allegedly sending threatening emails to a Florida state representative last month.

Manuel Pintado, a 47-year-old of Northampton, was being held at the Hampshire County House of Corrections in Northampton as of Tuesday night after police there took him into custody at the request of Martin County, Florida law enforcement.

Pintado was arrested Monday night for allegedly sending Rep. William D. Snyder, a third-term Republican representing Florida's House district 82, a message attacking him for his involvement in a bill which would grant police wider power to check individuals' immigration status, according to a release from the Martin County Sheriff's Office.

According to the Feb. 1 statement, the text of the email read, "To the Honorable William D. Snyder; You better just stop that ridiculous law if you value your and your familie's [sic] lives ashole [sic]."

Snyder's office received the communication Jan. 8, the same day Rep. Gabrielle Giffords and 18 others were shot outside a Tucson, Ariz. supermarket, and contacted Martin County Sheriff Robert L. Crowder's office the next day.

Martin County Investigations Division Detective Brian Broughton then commenced an investigation to identify the sender and the legitimacy of the threat. Broughton was able to determine the sender of the unsigned email was Pintado, after tracing the email's origin to a public access wireless Internet line originating at the Starbucks at 211 Main Street in downtown Northampton, a short distance from Pintado's Hampton Street residence.

Broughton then contacted Northampton Police seeking support in the investigation. Northampton PD interviewed Pintado, who, according to the release, told police in the Pioneer Valley's anchor city he views himself as a "political activist." According to the release, Pintado admitted to NPD that he had sent the message, and said he believed Snyder was seeking to abolish the 14th Amendment, which establishes that all people "born or naturalized in the United States" are citizens of the U.S.

Snyder has been among the leaders of a charge in the Florida house to draft an immigration bill which

See PINTADO on page 2

COURTESY NORTHAMPTON POLICE DEPARTMENT

Manuel Pintado allegedly sent a threatening email to Rep. William D. Snyder, of Florida. Pintado is currently awaiting extradition to Southeast Florida where he will be arraigned on charges.

Scientists discover galaxy protocluster

By Melanie Muller
Collegian Staff

Work done by astrophysics faculty Grant Wilson and Min Yun has led to an intriguing discovery: a massive galaxy protocluster caught in its development only a billion years after the Big Bang.

Wilson and Yun helped develop technology that led to this discovery as part of an international team of astronomers led by Peter Capak of the California Institute of Technology. The group's findings were published on January 12 in the scientific journal Nature.

"I think it's pretty safe to say [the discovery] took us all by surprise," Wilson said. "[Finding the cluster] in the act of formation so soon after the Big Bang was not what we were expecting."

According to Wilson, protoclusters, while "not at odds with current simulation theory," are thought to be extremely rare. It was a shock to the researchers that one was found so quickly.

Wilson and Yun said that they became involved in this research through their work on the AzTEC camera and Large Millimeter Telescope (LMT). Wilson said he came to the University of Massachusetts with the goal of developing the camera, which was designed for use in the LMT. UMass is helping to build the LMT on a mountain in Mexico.

According to Yun, who came to UMass in 2000, the LMT, is specifically "designed to study the formation and evolution of young massive galaxies soon after the Big Bang." A problem arose, however, when work on the AzTEC camera was completed before the LMT.

"For a short while," said Wilson, "We had a world-class camera without a home."

The researchers were invited to install AzTEC on the James Clerk Maxwell Telescope in Hawaii. They only stayed for a few months, during which AzTEC allowed them to "image the sky in an entirely new way and find hundreds of new galaxies never before seen by other telescopes."

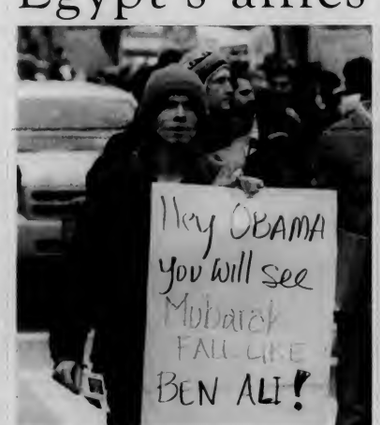
One of these new galaxies was AzTEC-3. Nothing distinguished it, besides being the third brightest galaxy found in a section of sky called the COSMOS Field. "When we found AzTEC-3, we had no idea it would turn out to be in such a special part of the universe," said Wilson.

See GALAXY on page 2

COURTESY JBIETO.FLICKR.COM

Astrophysicists Grant Wilson and Min Yun used a a Large Millimeter Telescope, such as the one pictured above, to discover a galaxy protocluser.

Egypt's allies



FACEBOOK

Tyler Mitchell, a University of Massachusetts student, was one of hundreds to protest in Boston over the weekend.

By Michelle Williams
Collegian Staff

From Cairo to Boston, emotions towards the protesters in Egypt have ranged from fear to joy, anger to support. Over the weekend, hundreds of demonstrators gathered at the Boston Common and Harvard Square, peacefully protesting Egyptian President Hosni Mubarak and demanding major reforms in government.

The protesters waved Egyptian flags, while marching through the streets chanting "Egypt, Egypt will be free. From the Nile to the Sea."

"The people of Egypt all over the globe are protesting against the Egyptian regime that has been forcefully in power for 30 years. Today, Egypt is on the brink of falling apart," said protest organizer Marihan Hashesh on the event's Facebook page. "In response to the protests in all [of] Egypt, the Egyptian government cut the water supply, electricity [and] cell phone networks … Egypt is in deep need of your help!"

On the same day as the protest in Boston, Mubarak fired all of the members of his cabinet and named a vice president for the first time since he came to power, nearly 30 years ago.

Much like the protests in Egypt, the protest in Boston was organized with the help of Facebook. According to the Facebook event, 720 people attended.

The crowd gathered in Cambridge, where they began to march down Massachusetts Avenue in a calm, peaceful manner, towards the Government Center. The mass of protesters were escorted by six Boston police vehicles and Cambridge police officers on foot.

One member of the crowd was University of Massachusetts student, Tyler Mitchell. He said he traveled east to attend the event because, "I hoped to make some noise celebrating the unfolding accomplishments of the Arab world rallying and marching

Zipcars Inc. looking to arrive at UMass

By Chelsea Faria
Collegian Correspondent

"Wheels when you want them, gas and insurance included." This is the tagline of Zipcar Inc., the world's leading online car sharing network of North America and the United Kingdom.

More than 225 universities have accounts with Zipcar including Stanford University, with 35 Zipcars and Yale University with 32 cars. Zipcar persuades its customers to join their network based on the selling points of convenience, cost effectiveness, and as an environmentally-friendly alternative to other forms of transportation.

On Feb. 1, Hampshire College launched a new partnership with Zipcar Inc., making it the third college in the Five College Consortium to partner up with Zipcar Inc. Amherst College, with four cars and Smith College, with five cars joined Zipcar in the fall of 2006. But the University of Massachusetts has not yet been sold, and neither has Mount Holyoke College.

According to a Zipcar press release, Hampshire College has two cars available for students, staff, and faculty – a Toyota Prius and a Honda Civic are parked at the bus circle at the center of campus. The cars are available 24 hours a day, seven days a week, to all members of the Hampshire community, including students, faculty and staff members as long as they are 18-years-old or older. Zipcar requires members to be 21-years-old or older to open an account.

With the addition of Hampshire to Zipcar Inc., members from the three colleges have access to the combined 11 vehicles on the three campuses.

The annual fee to join Zipcar for universities is $35 per year. Hampshire College applicants receive $35 worth of free driving credit that applies towards their first month of driving. The daily rates for the use of Zipcars start as low as $8 per hour and $66 per day depending on the model of the car. Zipcars include gas, insurance, roadside assistance, reserved parking, and up to 180 free miles per day, according to the press release.

Zipcars can be used for as short as one hour or up to four days. Students who live out-of-

Galaxy cluster found by UM astrophysicists

GALAXY from page 1

Galaxies like AzTEC-3 are difficult to study because they are extremely far away and faint. The world's largest telescopes are required for useful analysis. There are also many other galaxies between Earth and the AzTEC-3 galaxy complicating the identification process.

"The discovery reported in this article is really a case of a good calculated gamble and a clever experimental design that paid off because we did not know for sure there would be a protocluster here," said Wilson. "Our Caltech friends did the hardest work of this project," as they had to go "galaxy by galaxy and picked out the ones, that are associated with the protocluster."

COSMOS-AzTEC, besides being an unexpected find, has several other intriguing features. AzTEC-3, the protocluster's central starburst galaxy, is extremely massive and produces nearly 1,000 new stars each year. The protocluster also houses a massive black hole and luminous quasar nearby.

This surprised the researchers. Yun expected to find "baby galaxies" and instead found "a quasar, which is generally considered an object with some history under its belt already."

Wilson said he hoped the discovery would provide astronomers with a good "laboratory" for studying both black holes and quasars.

"Astronomers still don't have a good handle on when, or even how," very massive galaxies and very massive black holes form, Wilson said. "This is just scratching the surface of some very fundamental questions about galaxies."

Wilson and Yun both seem excited to continue studying these high red-shift galaxies at the LMT, which is now nearly complete. AzTEC and other advanced instruments will be installed later this year. Once this happens, research into galaxies like AzTEC-3 are expected by Yun and Wilson to progress far more rapidly, as the LMT will make AzTEC and other new instruments 10 times more powerful."[With the] AzTEC/LMT combination, we will discover galaxies like AzTEC-3 at a rate of about one a minute. This is going to fundamentally change our access to star-bursting galaxies throughout the universe," said Wilson.

This will perhaps help to resolve some of the questions

A group of hundreds gathered in Harvard Square and peacefully marched into Boston. The protestors chanted "Egypt, Egypt will be free. From the Nile to the sea."

Boston protests to oust Mubarak

EGYPT from page 1

together with hundreds of people in Boston. Anytime a group of repressed people stand up and work for their self-emancipation, we need to be right there cheering them on."

Mitchell said he learned about the event through the Facebook page, and decided to go to not miss out on a historic event. "We are experiencing history in the making. Attending the rally in Boston was one of the best ways I knew how to stand in solidarity with the Egyptian people.

"Living in the United States, I think we have a very important role in expressing dissent towards our own government as it has funded the Mubarak regime for many years," said Mitchell, expanding further about why he supports the Egyptian protesters.

Similar demonstrations took place in New York, Chicago and San Francisco. On Saturday, Feb. 5, the movement will set afoot in Amherst.

The march in Amherst, according to its Facebook page, will be called, "The March in Solidarity with the Egyptian People."

Saturday has been declared the international day of solidarity with the Egyptian and Tunisian people by many groups in support of the protesters.

The event was organized by 13 Western Massachusetts groups, including the Western Mass. Coalition for Palestine, and The American Friends Service Committee.

Michael Fiorentino, a founding member of the Western Mass. Coalition for Palestine explained why the group decided to organize the march.

"First off, the mass democratic movement in Egypt is inspiring in its own right, and deserves the support of all who value democracy and human rights, and we wanted to put Western Ma[ssachusetts] on the map as an area that sides with social justice in the Middle East."

Fiorentino said he is expecting several hundred to turn out, from a variety of student and community groups. As of Thursday night, 357 people have said they would attend, on the event's Facebook page.

Mitchell said he plans to attend the local event in hopes of change on a global and local scale, "A better world is possible. If the people of Egypt and Tunisia can completely reshape their society for the better, what's to say that we can't as well?" He added that the rally will provide an opportunity for people with like ideologies to meet.

The march will begin at 1 p.m. at the UMass Hargis Mall, and is anticipated to end at 5 p.m. after rally-goers march to the Amherst College Library.

Michelle Williams can be reached at mmwilliams@student.umass.edu

Emotions towards the protestors in Egypt have ranged from fear to joy, from anger to support. Over the weekend hundreds gathered at the Boston Common in solidarity with Egyptian protestors.

Zipcars go to Hampshire and Smith Colleges

ZIPCAR from page 1

state and don't want to bring their cars with them have the potential to go on road trips with their friends, run errands or go out and socialize.

Matthew Malloy, the vice president of global university operations at Zipcar said he thinks that Zipcar would be "extremely beneficial" to the Five College community if UMass and Mount Holyoke College joined up.

"This would bring increased mobility that would provide 18-plus members at these schools with access to all of the cars in the valley at the five schools," said Malloy.

Malloy is a UMass alum who majored in marketing and graduated in 1990, and he said he thinks Zipcar would be "wildly successful" at UMass. "Everyone knows how congested parking is there," said Malloy. "Zipcars would give students a whole new level of mobility and freedom that we really want to bring to campus."

"We have had several discussions with UMass staff over the last two years," said Malloy. "But they have yet to move forward."

Still, Malloy appears hopeful about the possibility of bringing Zipcars to UMass, which would possibly eliminate the number of cars filling the UMass parking lots, and encourage both faculty and students to carpool more often.

"We just need students to speak up and say they want it. We can see UMass as being the top car-sharing school of the east coast," Malloy said. "If UMass was to decide they want to move forward, Zipcar could potentially have a program live within as little as 6-8 weeks," Malloy added.

At Hampshire College, the Zipcar program was launched by Josiah S. Litant, the assistant dean of students and program coordinator at Hampshire College. Litant said that many of the deans had heard about the program and its presence at both Amherst and Smith College.

"The biggest draw for us was the ease of use for Zipcar members to access cars, and the level of convenience it would provide to students," said Litant. Litant was also drawn by the environmentally-friendly possibilities of Zipcar, which provide an alternative to car ownership. If the program stimulates carpooling, Zipcars also have the potential to reduce carbon emissions.

The independent research firm Frost & Sullivan reports that, on average in North America, each car Zipcar shared replaces 15 personally-owned cars on the road.

Andrea Heredia, a fourth year student at Hampshire College, is a signer for New Leaf, a sustainability group at Hampshire that encourages sustainable behavior among the Hampshire community. She is also a student member of the environmental committee, and is enthusiastic about the potential of the Zipcar program.

"The environmental committee has been trying to find something like this for a while," Heredia said. "I'm hoping it will stimulate carpooling. Both students and staff offices can use the Zipcars," Heredia added.

Heredia drove her car from

Northampton man arrested, to be extradited to Florida

PINTADO from page 1

some have compared to the controversial law in Arizona, which allows police to ask anyone pulled over for proof of immigration papers or citizenship.

Pintado told Northampton Police he did not wish to harm Snyder, but also said "he was glad the email made him nervous." Broughton was also able to confirm that Pintado had traveled from Massachusetts to Florida last December, "giving him the ability to carry out a threat against Representative Snyder."

Broughton then secured warrants for Pintado's arrest on charges of corruption by threat, a third-degree felony, and written threat to kill or do bodily harm, a second-degree felony.

On Monday night at approximately 8 p.m., Pintado was taken into custody without struggle in Northampton. According to the release, Pintado "has a history of multiple arrests in the Northeast," and "lists his occupation as a student at the University of Massachusetts."

Snyder said in a statement released Tuesday he is grateful to law enforcement in Florida and Massachusetts for their efforts, and glad Manuel Pintado, the suspect in the case, is in custody.

"I am grateful to the Martin County Sheriff's office and the arresting officers from the Northampton Police Department for their dedication to the protection of public safety and am thankful that the individual is in custody and will be brought to justice," he said.

A woman who said she is Pintado's sister, however, said while she believes his actions were misguided, she feels Pintado is not a serious threat.

"He is very passionate about politics and is not a threat to anyone," said Michele Catalano. "He is not a violent person and has not and will not do any bodily harm to anyone."

Catalano said Pintado participates in veterans' welfare initiatives and food drives, and that he is a veteran of the Persian Gulf War.

"My brother is not a terrorist," she continued. "My brother is a caring person that helps with food drives or anything involved with veterans. My brother came back from the Gulf War, he came back with anxiety depression and mental illness."

Catalano said she believes Pintado may have lapsed in taking his medication when he allegedly sent Snyder the email.

"After reading what he wrote, with all the misspellings, I strongly believe that he did not take his medication, and when he doesn't take his medication he says things that he doesn't mean."

Florida House of Representatives Press Secretary Lyndsey Cruley said neither Rep. Snyder nor any other Florida lawmakers are taking any additional precautions or security measures, and that Rep. Snyder is continuing with his legislative business as usual.

University of Massachusetts Executive Director of News and Media Relations Ed Blaguszewski confirmed that Manuel Pintado, the individual arrested in connection with sending threatening emails to a Florida lawmaker last night, is enrolled as a student at UMass.

Blaguszewski could not discuss specifics of whether or not the Dean of Students office would pursue sanctions against Pintado, but said that in situations where a student is arrested and the University becomes aware of charges, the Dean of Students generally commences proceedings.

In the Martin County release, Sheriff Robert L. Crowder said that any time a threat is made against a public servant, law enforcement must respond swiftly and take the threat seriously.

"The safety of those who serve the public, in any capacity, is of utmost importance and a matter we take very seriously," he said. "This individual made a serious threat to both Representative Snyder and his family, and that is something that law enforcement and the citizens of the State of Florida will not tolerate."

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

Fla. Rep. William D. Snyder was allegedly threatened by UM student Manuel Pintado. Pintado was angered by an immigration bill proposed by Snyder.

Researchers discover quasar, black hole

GALAXY from page 2

raised by the discovery.

"The real question here is, why were we able to find one so quickly? Is it because we were extremely lucky? Or is it because they are not so rare after all?" said Wilson.

Yun appeared confident the LMT will lead to new discoveries. "I predict that we will be answering a lot more questions from you within the next year," he said.

The AzTEC camera was partially funded by the National Science Foundation.

"With support from NSF, this program is providing the largest survey of the nature and evolution of submillimeter galaxies to date," said Dr. Richard Barvainis, a program manager in NSF's Division of Astronomical Sciences. "The result will be an unprecedented catalog of well over 1,000 new submillimeter galaxies," Barvainis said. "The project will also help define the properties of high redshift clusters of galaxies, such as the one recently described in a Nature publication."

Melanie Muller can be reached at mpmuller@student.umass.edu.

Zipcars make traveling affordable

ZIPCAR from page 2

her hometown of Temple, Texas to Hampshire at the beginning of the fall semester. "The reason I brought my car is to go grocery shopping, but if we had this last semester, I wouldn't have brought my car," said Heredia.

"I think it's a big selling point because students don't have to worry about parking, maintenance fees and other expenses," Heredia said.

The "sophisticated technology" of Zipcar assures that each college has the right number of cars needed to accommodate the needs of the students, so there is no wait list. "You should generally be able to get a car when you want one," Litant said. "Once a car is in use more than 40 percent of the time during daytime hours over the course of a quarter, Zipcar will add another car to our fleet," Litant added.

Chelsea Faria can be reached at ccf08@hampshire.edu.

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Bring back the vendors

Eli Gottlieb

The first time I came to the University of Massachusetts, the sight of all the vendors in the Campus Center impressed me. Sure, I didn't really want any jewelry or fake African sculptures, but they bespoke a campus full of life and diversity. On occasion, I even bought something from them, such as my wool-and-fleece winter gloves.

Without them, the Campus Center just doesn't feel the same; it feels sterilized, controlled, without actual life because everything living has been regulated out of existence. Oh, hasn't everyone noticed? The administration kicked the vendors out.

I've heard that Auxiliary Services plans to replace the space used by non-RSO tabling and vendors with more dining options, as they did when they opened French Meadow. Honestly, I don't see why we need more food shops.

They shouldn't. We need to bring them back, not just because we can afford to do so but because many students actually enjoyed patronizing the vendors. Whatever I thought of the merchandise, lots of people bought the stuff. Yes, even the pretend-African elephant sculptures, and even the jewelry. Tons of people I know bought those winter gloves-mittens, and when I got a pair they turned out to keep my hands wann better than my sheepskin gloves or my Polartec fleece gloves.

A friend of mine bought his first gift for his girlfriend from a Campus Center vendor. Real people shopped at those vendors on a daily basis and those vendors were real people doing their best to make a living by providing goods that people wanted to buy.

Or, to put things in economic terms, the Campus Center vendors were independent entrepreneurs and exemplary capitalists. The Auxiliary Services folks who told them to go away have acted as corporatists, restricting the free operation of the market while also taking over public space.

Without them, the Campus Center just doesn't feel the same; it feels sterilized, controlled, without actual life because everything living has been regulated out of existence.

The Campus Center and Student Union complex already has the Blue Wall, the Hatch, the vending machines, the French Meadow stand, Earthfoods, the People's Market and now it has the Central Cafe selling sushi and sandwiches as well (without taking my YCMP swipes to boot). Given all that, why has the administration thrown out the non-RSO tabling and vendors in favor of yet more dining?

Of course, UMass claims that it has kicked out the vendors to make way for more RSO tabling, but how many RSOs actually table on any given day? Usually one just sees a few sports, and maybe a larger bunch of Greek-life organizations. Sometimes, there are religious groups tabling, or occasionally one of the two major political parties. Twice a year, the Mass Games Club tables to promote Humans vs Zombies.

In sum, I don't think anyone is using so much space in the Campus Center concourse that we really needed to throw out the vendors. It's probably just about the administration wanting more revenue from dining options, as signaled by the addition of all the dining tables to the Concourse.

By the way, as I recall, these vendors paid $70 a day in order to vend inside the Campus Center, so we can't exactly pretend that UMass didn't make money off this. Quite to the contrary, they provided valuable public space and entrepreneurial opportunity, from which quite a many people built functioning businesses. Why should those people lose that livelihood?

One need not adhere to a specific school or ideology to see who they should support here. Let's go further with this. Greater competition between individual, independent vendors leads to increasing variety of products at decreasing prices.

Greater monopoly power wielded by Auxiliary Services has already shown its result: more expensive food shops that don't even take swipes. One of these two things works how capitalism should work; one of them works exactly how everyone wants capitalism to stop working.

The non-RSO tabling did not even come entirely in the form of vendors. There were also simply members of the local community tabling for causes they happened to believe in, such as Dade Singapuri and her "peace and social justice table." UMass students used to stop by and help table at these themselves, demonstrating a clear student interest in community participation at our campus' public space rather than participation only for RSOs.

The administration tells us that they have not actually made a new decision, merely enforced an old rule: that only RSOs can table in the Campus Center. We have to ask, however: If this rule has existed without enforcement for entire decades and its ubiquitous violation has shown no actual ill effects, why keep it? A rule without purpose should be removed, so let's have vendors and community tabling back in the Campus Center.

Eli Gottlieb is a Collegian columnist. He can be reached at egottlieb@student.umass.edu

Beginnings with Facebook

Isaac Himmelman

Facebook came into my life in the 11th grade. This was the year 2006 — tumultuous times, to say the least. George W. Bush was in office, the Iraq War was in full swing, and I was madly in love with a girl named Emma Steiner (not her real name).

In those days a good portion of my extracurricular time was spent hooking up with Emma Steiner in the backseat of my black '05 Corolla (at the time the backseat Corolla hookup was my go-to move with the ladies).

Now Emma Steiner had an older sister who attended Oberlin College, and who Emma tried to emulate in every way possible. She cut her hair like her sister, she listened to the same music as her sister did (jam bands, ugh), she dabbled in coke like her sister did (that was years later at Vassar), and as soon as Facebook allowed high schoolers to sign up, Emma Steiner went and got herself a Facebook just like her sister did. One day after a particularly intense, yet all together frustrating make out session, Emma and I sat on the faux leather backseat of my Corolla, hands held, the "Garden State" soundtrack pumping through my Toyota's Japanese-made speakers, when Emma said frankly, "Isaac, you need to get a Facebook."

I'd never heard of Facebook and so my response was a very typical and admittedly puerile, "Facebook? That sounds gay."

Emma explained to me how Facebook was this new cool thing, "like Myspace only better" and that it was made for college kids and her sister had one, and Ashley Olson had one.

And did you know her sister partied with Ashley Olson in the city? And would you ever try coke?

And blah, blah, blah until by the end of the afternoon I found myself on the couch in the living room of her dad's house signing up for Facebook on her new MacBook, which she explained she'd gotten as a gift a few months earlier on the occasion of her younger sister's Bat Mitzvah, although nowhere in the Jewish canon does it make mention of receiving a gift on the occasion of a sibling's Bat Mitzvah.

Nonetheless, there I was navigating Facebook, still dismissing it out loud as "gay," though deep down inside admiring its sleek blue and white interface.

No, Facebook was a very different social networking experience. I was hooked.

It was so clean, so sterile, nothing like Myspace, that jungle of messy URLs and bulletins adorned with Bright Eyes lyrics and desperate pleas to "cOmMeNt oN mY PiCz." No, Facebook was a very different social networking experience. I was hooked.

Two weeks before summer Emma broke up with me over AIM for a guy named Hunter (his real name) who smoked clove cigarettes and wrote folk songs on his accordion protesting the Iraq War. I was crushed.

That summer, my family rented a house on a beach in Israel. While my siblings and cousins played outside in the sands of Netanya, basking in the same sun our ancestors basked in 2,000 years earlier, I spent the days walled up in an upstairs bedroom plugged into the DSL line, crazily skimming through Emma's posted photo albums.

Most of them were pictures of her and her friends, her and her sisters.

But every so often I'd come across a picture of her and that Hunter smoking cloves on the pier or driving around the city in his black on black Audi.

The image of the two of them making out in the backseat of his fine German automobile with some anti-war hippie nonsense pumping through the Audi's no doubt superior sound system would pop into my mind, boiling my blood and slowly chipping away at my already broken heart.

Senior year of high school, they found Saddam Hussein buried in a hole and hung him. I watched this on a YouTube link someone posted to my Facebook wall. Around that same time I got over Emma Steiner. I'd still venture onto her Facebook once and while and look at her pictures. Before graduation, Hunter almost died in a car accident speeding down Highland in his Audi.

I found this out through Facebook as well. When someone invited me to join the Facebook group "Pray for Hunter" I accepted and even commented on a link of one of his accordion songs somebody posted to the group's wall. I posted, "Feel better, man!" and at that moment I forgave him for stealing the girl I'd loved.

Much has changed since then. I wrote all this from a Pub in Dublin, where patrons were seated with their eyes glued to a television overhead. CNN was reporting that tomorrow morning in Cairo 1,000,000 people would take to the streets fueled in no small part by Facebook. Governments from Tunis to Cairo are being overthrown, and all I can think about is that one afternoon junior year when Emma Steiner had me sign up for Facebook on the couch in her dad's living room, saying almost prophetically, "It's like Myspace, only better." Only better indeed.

Isaac Himmelman is a Collegian columnist. He can be reached at ihimmelm@student.umass.edu.

Five Ways UMass decides to stay open

1) The snow bribes the Chancellor.

2) Since they got rid of trays there's no real reason to close.

4) The whole system is messed up now that all the Deans' zodiac signs changed.

5) Holub has to see his shadow before noon in order for the school to close (h/t Alyssa Creamer).

Ed/Op

Will you ever eat at Taco Bell again?

A class action lawsuit filed on Jan. 19 by California law firm Blood, Hurst, & O'Reardon LLP, and Alabama firm Beasley, Allen, Crow, Methvin, Portis & Miles on behalf of Californian Amanda Obney accuses the Taco Bell chain of using beef filling in lieu of real ground beef.

Seyi Obasa

According to United States Department of Agriculture standards, taco beef filling must be at least 40 percent fresh meat, and must be clearly labeled taco filling with meat, beef taco filling or taco meat filling. Greg Creed, Taco Bell's president is not amused by these accusations and told ABC News that the company "would not be taking this sullying of their reputation lying down." Allegedly, Taco Bell's meat is said to only constitute about 35 percent beef, with the rest being filler such as binders, extenders, preservatives and other additives. The plaintiff's main complaint is that their meat is being advertised as real ground beef and is thus being misleading to customers.

Allegedly, Taco Bell's meat is said to oniy constitute about 35 percent beef, with the rest being filler such as binders, extenders, preservatives and other additives.

The real question and problem are the government's baseline standards to begin with. According to USDA standards, taco beef and ground beef are two different things. Ground beef must be at least 70 percent beef and not include additional water, phosphates, extenders and binders, although seasoning can be an ingredient. Taco meat must be at least 40 percent fresh meat.

The fact that there is such a discrepancy between the two kinds of meat is quite questionable. The regulations allow companies to sell customers labeled taco filling that is mostly additives. Standards should be raised for the quality of beef across the board as to keep restaurants and fast food chains honest, as well as ensuring that fast food chains use quality or at least semi-quality ingredients in their foods.

The same can be said of standards with other consumer foods. Did you know that genetically modified food on the market is not entirely required to be labeled as such? Such is out in supermarkets near you, and the consumer is not made aware of it.

Other fast foods, such as McNuggets, according to the book, "The Omnivores' Dilemma," contain up to 38 synthetic ingredients, including TBHQ, which is sprayed onto McNuggets to preserve freshness.

With all this talk about the legitimacy of our fast food and consumer-based food aside, it is too early to tell how this is going to affect the overall consumer's perception of the brand. Will Taco Bell lose substantial business, as a result of these claims, and will the plaintiffs successfully prove that the company has been falsely advertising their product? I can remember very clearly when the documentary, "Super Size Me," came out.

It created a mass hysteria among viewers and opinions were quite mixed. Some people vowed to never touch McDonald's again, while other people I know craved McDonald's right after watching the movie. The same may be the case for Taco Bell.

Like the popular axiom goes: "Any publicity is good publicity." Many people, believe it or not, may want to buy more Beefy Crunch Burritos as a result. In the grand scheme of things, McDonald's sales haven't been affected. However, the documentary has arguably resulted in a change of their practices as they've gotten rid of the super size option within their chains.

Such publicity may arguably have a similar effect on Taco Bell.

Whether or not the plaintiffs can successfully prove that Taco Bell has been falsely advertising their product is still left to be decided, but this court case may bring more attention to the restaurant chain's practices, as well as general government standards in regards to food. Public awareness may be the most important outcome of this entire fiasco, and it may be the plaintiff's primary objective.

As for me, will I ever buy Taco Bell again? I have never really been crazy about their food to begin with, and I usually enjoy making tacos from ground beef, materials, shells and seasoning from the grocery store. However, after hearing about the possibility that their meat is up to 65 percent filler, I highly doubt I would consider going there again. But that is not to say that I don't enjoy my fix of the 10 piece McNugget meal or Stouffer's French bread Pepperoni Pizzas every now and then. A lot of our food is allowed to be processed according to government standards, so it is hard to escape in the typical American diet in general. It's up you to decide one way or the other if you want to consume tacos that may or may not possibly contain anti-dusting agents.

"Life isn't about finding yourself. It's about creating yourself" - George Bernard Shaw

ARTS@DAILYCOLLEGIAN.COM

Keep your look hot when it's cold

It's tough to look good and stay warm at the same time. Designer rain boots are one accessory that could make your outfit fashionable even after a big snow storm.

By Effie Spertidakos
Collegian Correspondent

Knowing how to dress for the winter is a crucial survival skill as a student at the University of Massachusetts. Even still, the climate is never an acceptable excuse as to why there are so many fashion victims parading campus post rain drizzle. College is a place where most people develop out of their conforming ways and begin expressing their own identity as they find it. So, this is the time to toss the North Face, leggings and Uggs winter wardrobe, and start investing in some sharp and sensible winter pieces.

Trekking through slush around campus all day calls for some durable shoes guaranteed to keep your pinky toes warm. Rain boots are a great option, and don't always need to be sported in obnoxious prints. Steve Madden and Tory Burch bring the rain boot to the chic side with versatile colors and hardware accessories.

The important lesson here is to ditch the Uggs. Let's remember they were made in Australia and intended for the dry atmosphere there. Sheepskin ruins when it is dragged through snow and, furthermore, stains when it is dragged through salty snow. If there is any uncertainty left, these are not the kind of "boots with the fur" Flo-Rida was referencing.

Save the leather boots for drier days. With leather, the options are endless: equestrian style boots bring the preppy, while biker boots bring the cool-grunge. Make sure to layer knee socks with taller boots for warmth. This can add a cute touch to your look if you let the sock peek out a half an inch above the boot.

Another essential element to the perfect winter outfit is the coat. Down jackets will keep the body insulated and comfortable, but make it easy to resemble the shapeless burrito being rolled up at the Hatch. It needs to be warm, but not bulky. To reflect a feminine silhouette through your outerwear, the waist must be cinched. Keep an eye out for coats with belts. If they are lacking, don't shy away from a little DIY, and add your own fabulous belt to complete it. Miss Sixty and Michael Kors put out flattering styles that have now gone on sale. Pea coats are another stable way to top off your winter ensemble. The identifying factor of a pea coat is that it is made of wool. Because the material is made of sheep's hair, it will keep you cozy. A sure benefit of sporting a pea coat is a slim look with a flattering shape. Either of these options beat the look and comfort of a North Face, as they keep you warmer and give you a sophisticated shape.

As for layering underneath, cashmere and wool are cozy enough to keep you feeling toasty, yet thin enough to keep you from looking like a super chunk. Knits prove to be comfortable, while fashionably relaxed looking.

A quick word on leggings: They are not pants, so refrain from wearing them with anything that doesn't cover your rear. Jeans are a fine alternative.

By highlighting your frame and accessorizing, you will be making yourself more attractive in a mature way. Hats are key in this bitter season. Warm body temperature escapes mostly from the head, so keeping it covered will help retain the heat. Earmuffs are a cool alternative to hats. Gloves and scarves also help bundle up. They are cool in luxe faux fur, animal prints, plaids or embellished. These accessories are fun to mix and match. Sunglasses are an accessory that is easily overlooked in the wintertime. The sun rays and bright white snow make eyes squint and scream for shades, so don't forget to grab a pair.

Getting dressed with these points in mind will bring you a step closer to looking and feeling like a fabulously chic grown-up. Voila, practicality and fashion can actually coexist.

The death of a genre

Kevin Romani

When looking at a TV guide for this winter's schedule, television fans will notice two glaring absences. For the first time since the winter of 2004, "24" and "Lost" will not be returning to a small screen near you. Regardless of how viewers felt about the last few seasons of "24" or the essentially answerless "Lost" finale, these shows defined the first decade of the new millennium.

"24" was a fresh and original premise that first aired in November of 2001. The series implemented a real time narrative structure where one episode covered each hour of the day. With the use of a ticking clock, split screens to show multiple events occurring at once and cliffhanger endings, "24" provided tension-building entertainment. Audiences were so captivated by the twists and turns that they found themselves unable to skip an episode out of fear for missing major plot points.

"Lost" was originally intended as "Cast Away on TV," but became a mystery-based show with a wealth of relatable characters. Premiering in September of 2004, the suspense and twists of "Lost" made it as addictive as "24." Fans also enjoyed tuning in for the depth of the characters, as the narrative included flashbacks that dug into the characters' pasts. Both programs were raking in the ratings. They were known as "genre" shows, as they offered elements that were not incorporated in most hour long dramas. "24" offered a sense of hyperrealism where terrorist attacks and government corruption were considered typical, daily events. "Lost" included elements of science fiction and fantasy that were subtly woven in to its complex narrative.

Viewers may have been surprised that these shows signed off for the last time on consecutive days last May, but they have not yet realized an even bigger shock: There will never be a show like "Lost" or "24" again.

Today's world of television is not what it was five years ago. Changes in both technology and audience participation negatively effected the ratings of shows like "24" and "Lost." As foreign as it may sound, television series DVD sets and internet viewing were not as popular then as they are now. This new preference to watching TV on DVD and the internet, on demand cable options and the use of TIVO or DVR devices have all given consumers the opportunity to watch their shows whenever they want to.

Before these outside forces became as popular as they were, "Lost" and "24" benefited from the "water cooler" effect. Workers would have to watch the previous night's episode in order to contribute in break time conversation. Viewers now watch their favorite shows at all different times, and thus, the shows cannot be discussed at the same time and place. Water cooler discussions have been replaced by "reality television," which is a style that seems impervious to the issues that genre television is facing. Since there is a sense of reality towards the atmosphere and the characters, viewers feel they need to be up to date with the program in order to truly feel the effects of what is happening on screen. It seems that viewers are willing to watch a genre program at their leisure, but are adamant to watch reality television while it is still relevant.

Reality television is not replacing all narrative television, but it is contributing to the death of genre shows. "Lost" and "24" were expensive and they required constant viewership in order for the plot to make sense. Today's audience seems more interested in watching programs that they can tune into whenever they feel like, and not worry about catching up with the previous week's installment. They will wait until the new season of a genre show is released on DVD to catch up. That way, the wait and suspense in between episodes will not have to be endured. As soon as one episode ends, another begins.

Cheaper programs to produce, such as reality television and situational comedies are more desirable for studios in today's market. They are less of a financial risk and are likely to perform better in the ratings, as viewers do not have to invest time catching up with the story. They can sit back and enjoy the mindless entertainment these programs provide. Studios are impatient, and they want instant results. If a new genre program is critically acclaimed but starts with low ratings, it will be cancelled immediately. Cable and premium channels like HBO and AMC are more willing to take on exciting and thought-provoking entertainment, but they tend to shy away from genre shows. They stick to excellent dramas, which have proven successful. Just like the network channels, cable and premium channels do not see the risk in taking on an expensive project that is less likely to make a profit.

"Lost" and "24" were able to survive in this new world of television viewing because they had established strong fan bases under the previous system. Despite lower ratings, studios could count on strong DVD sales to make up for the loss in advertising dollars. Writers who want to create a genre show in today's television atmosphere will not have the opportunities that "Lost" and "24" were given to push television boundaries. This fall, NBC premiered a new series, "The Event" which ran on the tag line "If '24' and 'Lost' had a baby, it would be 'The Event.'" Less than one month into its season, "The Event's" ratings plummeted. Why get caught up in a series where you have to wait and wait for answers when the DVD set is right around the corner? Yet the catch-22 here is if there is no audience tuning in while these programs air, they will be cancelled and will not have a DVD market at all.

Taking all of these changes in the television market into consideration, it's clear that there will never be a show like "Lost" or "24" again. If you were a fan of these shows, do yourself a favor and buy the DVD sets and watch them over and over again. This should not suggest that these shows were sublime and that a gifted group of writers could not make a show that is better. It's that they will not be allowed to.

Geoffrey Rush, Helena Bonham Carter and Colin Firth led the star-studded cast of "The King's Speech" that took home some of the biggest awards of the night at the Screen Actors Guild Award Show last Sunday.

'King' wins big at SAGs

By Margaret Clayton
Collegian Correspondent

The 17th annual Screen Actors Guild Awards were held this past Sunday, Jan. 30 in the Shrine Auditorium in Los Angeles, Calif. Broadcast simultaneously on TBS and TNT, the show finished on time — 10 p.m. — a rarity for awards season. It was an impressive showing, with only one winner not there to make an acceptance speech — Al Pacino for his role in the television movie "You Don't Know Jack."

Through the first commercial break, one might have thought we had a repeat loop of the Golden Globes on the television with one substitute: Steve Buscemi picking up the award for his performance in HBO's "Boardwalk Empire." Julianna Margulies, who was previously snubbed at the Globes for an actress that was not included in the Guild nominations, took home an actor statue for her work in "The Good Wife.". "Boardwalk Empire" made another splash earning an award for best ensemble in its first season. Melissa Leo's speech after once again being selected as the standout in the best supporting actress category was one of the most poignant of the night, complete with tears and politics. "Unions made this country great, because it gives the voice to the working people," Leo said.

She wasn't the only one to express appreciation for the community that gave her the award. A very pregnant Natalie Portman was the first winner to be censored during her acceptance speech, but she did manage to share her gratefulness.

"I've been working since I was 11 years old, and SAG has taken care of me," she said. "I'm so grateful to have this union protecting me every day."

That is why we love awards shows. The spontaneity of what happens at the podium is exciting. When Christian Bale, who celebrated his 37th birthday at the awards, was on stage receiving his statue for best supporting actor in "The Fighter," the man who he won a trophy for portraying, Dicky Eklund, came over for a hug.

This celebration and fellowship is not complete without the "In Memoriam" montage of those talents the community has lost in the past year. Notable among the deceased were Leslie Nielsen ("Airplane!"), Gloria Stuart ("Titanic"), Harold Gould ("The Sting"), David Nelson ("Cry-Baby"), Rue McClanahan ("The Golden Girls"), Gary Coleman ("Diff'rent Strokes"), Peter Graves ("The Love Boat"), and Pete Postlethwaite ("The Usual Suspects"). "The King's Speech" was the big winner of the night and took home the award for outstanding cast. Colin Firth was voted best actor for his work as King George VI as well.

Geoffrey Rush, who plays the king's speech therapist in the film, shared an eloquent speech on behalf of the entire cast.

He said, "It shouldn't be called the SAG Award, it should be called the uplifting award," Rush said, recognizing the success of "The King's Speech" as the success story of a devoted Duke and his real friends, the commoners who help him master his stammer. The film has proved itself a front-runner for the Academy Awards at the end of the month, winning in the two categories the acclaimed opposition, "The Social Network," was also competing for.

Overall, the television portion of the awards was a mixed bag with every single category's winner being a representative from a different show. Movies proved to be a close race, conflicting results with the Golden Globes. Now it's time to wait until the end of the month for the Academy to have the final say about the best films of the year.

To see the complete list of nominees and award recipients, go to http://sagawards.org.

Neko makes her Case

By Amy Larson
Collegian Correspondent

Nearly 15 years into her career, Neko Case still lets her auburn locks down, cracks subtle jokes and belts her melodies until the entire audience is captivated. And her next destination to charm is the music-loving town of Northampton this Friday, Feb. 4 at 8:00 p.m. Seven-member indie folk group, Lost In The Trees will serve as the opening.

Emerging with a predominantly country feel to her sound, Case released her first album entitled "The Virginian" in 1997 under the performing title Neko Case and Her Boyfriends. The album title originates from her birthplace of Alexandria, Va. Case spent most of her childhood in Tacoma, Wash., leaving the U.S. for the Emily Carr Institute of Art and Design in Vancouver in 1994. While studying, she dabbled in several different punk groups, even playing drums in a few of them. It was after she graduated and returned to the U.S. when she formed her first group and started recording.

By the new millennium, Case had already released two albums with Her Boyfriends and recorded vocals with the group The New Pornographers, whom she is well known for collaborating with. She lost Her Boyfriends as part of her recording name in 2002 and began releasing new music simply as Neko Case for the first time on the album "Canadian Amp." A multitalented and busy musician, Case has released seven albums and recorded on five albums by The New Pornographers. Her evolution over the past decade since she began recording has shown a young 20-something new to the music scene grow into a 40-year-old comfortably playing international tours.

Though her recorded works are numerous and highly acclaimed, her talent shines most brightly during her live performances. She entrances her audiences with her honest and approachable lyrics, thus leaving them feeling connected to her even after they leave the show. Her performances have been said to be a positive emotional experience that you can't get at any other show. Though she does write love songs often, they aren't the phony, poppy love songs you could catch on the radio. Case's songwriting power comes from the fact that her pieces can be applied to anyone anywhere in their life. She is as far from a sell out as possible, having once said she never wants to be on the MTV Video Music Awards.

Case is currently on a midwinter tour, playing Providence, R.I., Boston and Northampton this week. Sure to put on another very memorable performance, Case is the woman to watch this weekend.

Tickets are available in advance online at IHEG.com for for $25 and $32.50 at the door.

Amy Larson can be reached at alarson@student.umass.edu.

COURTESY FACEBOOK.COM

Neko Case will take her winter tour to the Calvin Theater in Northampton tonight, Feb. 4 at 8 p.m. Tickets are still available and can be purchased online at IHEG.com or at the door.

Gurley's 3-pointer shows team menality

HALFTIME from page 8

two strong programs who have been to the NCAA tournament multiple times this past decade.

On the flip side, UMass has averaged a lead of over eight points heading into the intermission in A-10 games they've won this season.

"Since conference play has started, we've come out and played pretty good the first half, with the exception of the Xavier game," Farrell said. "So, we're getting a better feel for how to come out."

A good example of UMass' mentality when leading at halftime came in the last home game against Rhode Island on Sunday. Despite hitting their stride to begin the contest, the Minutemen cooled off towards the end of the first period and allowed the Rams to climb back in the game.

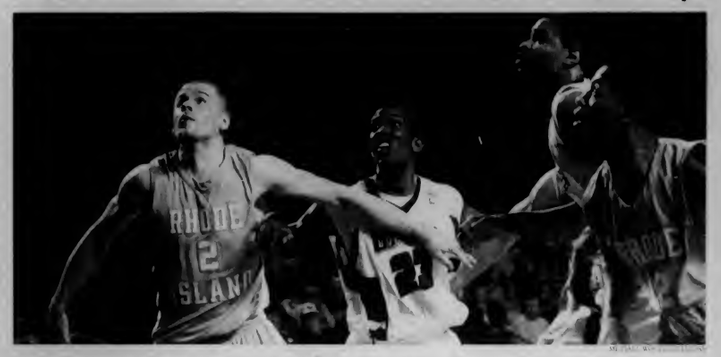
On its last possession of the half with a tied game, however, UMass received a much-needed 3-pointer from guard Anthony Gurley as time was winding down to take a three-point lead into the locker room.

To the Minutemen and UMass coach Derek Kellogg, that shot sparked a strong second-half performance which led to the victory.

"I thought that gave us a good boost and some confidence coming into the locker room," Kellogg said after the win. "Sometimes as a coach, you go into the locker room at half with a different kind of vantage point. Being up three, having Anthony [Gurley] and Javorn [Farrell] not played a lot of minutes, I thought that we were good shape, at least energy-wise that we'd be able to come out with energy."

Since that contest though, the Minutemen dropped the first game of a two-game road trip against Saint Louis after trailing by eight points at halftime. As they look to climb the standings in the A-10, UMass will look to sustain a consistent start to games.

Jay Asser can be reached at jasser@student.umass.edu.



Sean Carter posts up against Rhode Island last time UMass was home. Carter is averaging 5.2 points on the season with 5.7 rebounds a contest and will look to add to the continuing strength UMass has when entering the second half with a lead.

JEFF BERNSTEIN/COLLEGIAN

The Minutemen come together during their draw against Northeastern. The team looks to finish its subpar season with two victories against ranked opponents.

Injuries, fatigue no worry for Cahoon as season's end nears

By Steve Levine
Collegian Staff

To say the Massachusetts men's hockey team has endured a difficult season would be an understatement. It's not about to get any easier.

On Friday, the Minutemen will play the first of 10 remaining games against No. 1 ranked Boston College, which UMass will play again on Feb. 25. After the Eagles, the Minutemen will go on to play No. 12 Merrimack twice, No. 14 Boston University once and No. 15 Maine twice to close out the season.

Comparing the skill set between UMass and its competition over the next month is enough to consider the Minutemen as severe underdogs. Adding fatigue and injuries to UMass' youthful roster can't help its cause.

However, with the chips stacked against them, don't expect any excuses from UMass coach Don Cahoon. When asked if his team is fatigued, Cahoon replied sarcastically, "Are you tired? [This won't be discussed]."

As adamant as Cahoon is about not making excuses for his team, it's hard to ignore the amount of injuries the Minutemen have faced in recent games. Junior defensemen Michael Marcou hasn't played since Dec. 31, and senior winger Danny Hobbs is the latest Minuteman to go down with an injury in UMass' last game against Northeastern, a 2-2 tie.

"Hopefully we get everybody healed so that we've got all our skill sets and talent ready to contribute," Cahoon said.

In order to protect his players, Cahoon would not elaborate on the extent of his team's injuries. He also couldn't get into details about when he can boast a healthy roster.

"I think we're going to get some players back and to what extent and who [and] when, that's day to day and that's the truth," Cahoon said. "I could throw a couple of names out there … but until they play I can't be sure."

Ideally, with everyone healthy, UMass still features one of the youngest teams in the nation. The majority of its 13 freshmen see a lot of ice time game in and game out. Coaching this young group can't be easy.

"We have to make sure that we don't create a situation where there's paralysis to analysis," Cahoon said. "There [needs to be] good teaching and a foundation in place to let these kids go out and get after it."

Prior to the season, the Minutemen were picked to finish ninth in the Hockey East standings. They currently sit in seventh with a four-point cushion between No. 8 Providence. Given everything thrown its way, a seventh place finish would exceed expectations for UMass. The top eight teams make the playoffs, so it's likely that the Minutemen will be there. If the season ended today, UMass would travel to Boston College to play the Eagles in a best-of-three series.

What UMass does have going for itself is its grit and determination. These qualities carried the Minutemen to unlikely victories before, and could provide more in the future. Still, getting points throughout this home stretch will be no easy task.

Steve Levine can be reached at slevine@student.umass.edu.

Dawley, Minutewomen look for better result against 49ers

By Michael Counos
Collegian Staff

The Massachusetts women's basketball team will look to rebound from a devastating loss to Atlantic 10 conference opponent Duquesne on Wednesday, as it matches up with conference foe, Charlotte.

UMass (6-17, 2-6 in A-10) began its stint of conference play with an even win percentage in the early going. Since then, a string of four losses has set the Minutewomen in the bottom of the A-10 standings.

The Minutewomen's most recent loss came to the Dukes (19-3, 6-1 in A-10) on Wednesday at the Mullins Center. UMass played a hard fought game and were in grasp of picking up a win against the conference powerhouse, but a 3-pointer at the buzzer by Alex Gensler tied the game at 73 apiece. UMass held the lead 73-70 when Wumi Agunbiade pushed the ball up the hardwood to Gensler who sunk the desperation 3-pointer as time expired.

UMass dropped the game 84-79 as it shot just 1-of-7 from the field compared to the Dukes 4-of-5 shooting from the floor in overtime. UMass finished the game 26-for-61 (42.6 percent) overall, 10-for-22 (45.5 percent) from 3-point range and 17-for-24 (70.8 percent) at the foul line.

The Dukes went 31-for-64 (48.4 percent) overall, 9-for-22 (40.9%) from beyond the arc and 13-for-19 (68.4%) at the foul line. The Minutewomen held a 42-32 edge on the boards and out-scored Duquesne in second chance points (17-7) and points off turnovers (23-18).

"Games like this can only help us to be more confident and it shows that we can play with anyone in the A-10 conference," associate head coach Steve Lanpher said. "We executed well, did a tremendous job on the boards, shot well and took care of the basketball. Unfortunately, we just couldn't come out with a win but I was really pleased with the effort and execution out of our team."

The Minutewomen will look to redeem themselves against Charlotte on Saturday. Playing at the Mullins Center, UMass looks to hand the 49ers, who are currently ranked fifth in the A-10 standings, their third conference loss of the season.

The 49ers are coming off a statement win against Saint Louis, defeating the Billikens 75-38, to grab their eighth straight victory. The 49ers featured four scorers in double-figures and displayed a dominant game in the paint. Charlotte has out-rebounded its opponents 18 times this season and outscored the Billikens 42-8 in the paint. UMass will look to sophomore down-low players Jasmine Watson and Shakia Robinson to avoid the same result.

"Charlotte is a very up-tempo team and they like to press full court and confuse you," Lanpher said. "What we will look to do is be more patient on offense with good ball control and if we can play a half-court game and limit them to one shot per possession I think we have a good chance of winning that game."

Last season, UMass was blown out 85-51 by the 49ers in North Carolina. Then-junior Megan Zullo had the team-high in points with 11 while Watson chipped in for 10 in that game.

Action kicks off at 2 p.m. at the Mullins Center, before UMass hits the road to face Dayton and George Washington.

Michael Counos can be reached at mcounos@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Jasmine Watson battles to the hoop against Duquesne. Watson and the rest of the Minutewomen are looking to rebound from recent losses and climb out of the bottom of the A-10 table.

UM schedule lightens

M.HOOPS from page 8

defensive wall on the Minutemen who like to drive into the paint. On Wednesday night, UMass outscored the Billkens inside the paint, 36-16.

In the last meeting between the two sides, from the Mullins Center, UMass held the Hawks scoreless for the final 10:49 of the game, and went on a 16-0 run to shutdown the SJU side, 70-62.

"It was a good game," Kellogg said following the game last season. "I thought we played hard, at times we looked like we were a little lethargic. We had stretches where we played great defense."

Gurley scored 15 points in last year's contest, and will look to put on a repeat performance during this weekends affair.

"[He's] starting to get back to the Anthony Gurley we all know and love," Kellogg said on Gurley's performance after the game.

Conversely, Jones, who leads the Hawks in scoring, put up seven points against the Minutemen, which was the team's fourth highest during that game.

Neither team shot particularly well in last season's affair, with UMass going 20-for-57 (39.1 percent) and SJU shooting just over 40 percent.

The victory came on Valentines Day and was the first win after a five-game losing steak for last-season's Minutemen. Following the victory, UMass went on to lose four-straight competitions.

This game will also be a good place for UMass to catch a breather, as the team will make the transition from playing the worst to playing the first team in the conference. Next for the Minutemen are George Washington and Duquesne, who rank eighth and first, respectively.

With the undefeated-in-conference Dukes on the horizon, the Minutemen will be looking to release all their faults and mistakes on the lower-ranked SJU this weekend.

The Life and Works of the
Rev. Dr. Martin Luther King, Jr.
A Multifaith Celebration
led by
The Rev. Samuel "Billy" Kyles

Rev. Kyles, one of the last surviving witnesses to the assassination of Martin Luther King, Jr., was a leader in the Civil Rights Movement. Rev. Kyles will speak about his experience and help us remember and celebrate the life and works of Dr. King. This Multifaith Celebration will also feature music by the Amherst College Gospel Choir and Choral Society.

Tuesday, February 8, at 7 p.m.
Johnson Chapel, Amherst College
This event is free and open to the public.
Sponsored by the Rev. Dr. Martin Luther King, Jr. Celebration Committee

UMass prepares for Hawks after SLU loss

Kellogg, team still on road after recent loss

By Herb Scribner
Collegian Staff

After being covered in 3-pointers in its 69-53 loss to Saint Louis on Wednesday, the Massachusetts men's basketball team is in need of a confidence booster.

"You've got to find a way to win on the road," guard Anthony Gurley said following the SLU game. "It's not always going to be easy ... you've got to find a way."

Wednesday night's affair against the Billikens snapped a two-game winning streak for the Minutemen, as well as a three-game conference road streak that they had going. Instead of traveling back to Amherst following the loss, UMass went right on its way to Saint Joseph's.

On Saturday night, the Minutemen (13-8, 5-3 Atlantic 10) will have a chance to gain some of their lost confidence back as they face SJU, which is riding a 10-game losing streak.

For a team like UMass, which has had a relatively tough schedule this season in the A-10, the game against the Hawks (5-17, 0-8 A-10) gives the Minutemen a break from top-tier opponents and pits them against the bottom team in the A-10 table.

The Hawks boast two players in double-digits for scoring despite their low record, including Carl Jones, who is in fourth in the A-10 in scoring with 17.9 points per game, which is two spots below Gurley.

Langston Galloway also averages double-digits in scoring for SJU with 10.8 per contest. More intimidating is his ability to steal, as Galloway is tied for ninth in the conference with 31 steals and a 1.5 average per game.

Along with Galloway's ability to steal, the Hawks' defense also has a top shot-blocker to its credit in C.J. Aiken.

Aiken has 83 block shots on the season and is averaging four blocks a game, which could put a

Gary Correia comes up the court earlier this season against Rhode Island. Correia has led the Minutemen to an undefeated record (10–0) when they lead after the first 20 minutes.

UM undefeated after holding lead at halftime

By Jay Asser
Collegian Staff

Going into halftime with a lead does more than just give a team a cushion in the second half. It allows players to gain confidence and believe that they are on their way to winning.

Such is the case with the Massachusetts men's basketball team, which usually attributes wins to a strong first half effort and intensity to begin a game. It's no coincidence then that the Minutemen (13-8, 5-3 Atlantic 10) are a perfect 10-0 this season when entering the locker room at half with a lead.

"That right there tells you when we come out and play hard and we go at the team first, we're definitely a better team and that's how we win games," UMass guard Javorn Farrell said of the statistic after defeating Rhode Island on Sunday.

Conversely, the Minutemen struggle when entering the second period in a deficit. The tough starts usually carry into the second half and comeback wins have been hard to come by for UMass. One exception this year was the season-opener against Rider, when the Minutemen rallied from being down 22 points early in the second period to win, 77-67. That, however, has been it as far as comeback wins.

Farrell, along with the rest of the UMass squad, knows it's especially important for this team to come out swinging at the opponent.

"We go out in some games, we start off with a lot of energy, go play hard and that's how we play and that's how we're supposed to win," Farrell said. "Other games, we come out flat and we see ourselves getting in a hole early."

Since the start of A-10 play, coming out strong in games in order to win has held to be even truer for the Minutemen. In all three of its conference losses, UMass has entered halftime with an average deficit of over 10 points per game. In each of those contests, the Minutemen lost by 16 or more points. Two of those losses though, came against Xavier and Richmond,

The Minutemen recently drew with Northeastern in an overtime thriller. Next for UMass is two ranked teams in No. 1 Boston College and No. 12 Merrimack, which will add difficulty to its schedule.

Mass Attack heads into brutal weekend against BC, Merrimack

By Pete Vasquez
Collegian Staff

The Massachusetts hockey team will go on the road this weekend to face No. 1 Boston College and No. 12 Merrimack as it begins its most rigorous stretch of the closing season.

It will be the first meetings of the year with both teams for the Minutemen, who are coming off a gritty 2-2 tie versus Northeastern on Saturday night.

"[Saturday] was a test for us," UMass coach Don Cahoon said after some pivotal players had to watch from the bench with injuries. "Our team was fighting for survival. That was as good an effort from a group of players to just say 'Hey, it doesn't make any difference. We're going to find a way to compete and put pressure on the other team.'"

UMass posted a season-high 41 shots in the tie against the Huskies, including a season-high 20 first period shots. The high number of shots seems to be a good omen for the Minutemen this season, who average 4.8 goals per game in wins and 1.7 goals in losses.

BC is tied for first place in the conference with New Hampshire while Merrimack is positioned in fourth. UMass comes into the weekend in seventh place.

The Eagles come into Friday's game with a three-game winning streak. BC is also the owner of a 10-1 record since Nov. 28th with its sole loss coming at Maine, 4-1, on Jan. 16th.

"This is our league and that's just the way it is," Cahoon said. "It seems like every year we face No. 1. It's an opportunity, but we've expected this to happen. We get the chance to make the most of it. We're as prepared as we can be right now and we're going to have to bring a high-level performance to get it done, there's no doubt about that.

"When you play a team that's this skilled and talented as BC is, nothing short of that will allow you to succeed," Cahoon continued.

Merrimack has also been on a tear for the latter part of the season as it has jumped into the upper echelon of the Hockey East standings. After beginning the season with a 3-2-4 record, the Warriors have gone 13-3 since. However, two of those losses came at home, where Merrimack has been a typically strong 8-2-1.

The Warriors feature sophomore forward Stephane Da Costa, who is tied for third in Hockey East in power play points.

Senior Chase Langeraap has carried his load and more for the Mass Attack recently, picking up six goals and three assists in the last nine games.

Assistant captain Danny Hobbs has also played well, tallying six goals and nine assists in the last 12 games played before suffering an injury against the Huskies. He's produced three multi-point games in the last four outings.

However, Friday's prominent matchup will feature two of the best goalies in the conference as UMass captain Paul Dainton tries to best BC goalie John Muse, two goalies whose careers have told two different stories.

"[Their] experiences have been a little bit different in that Muse has had one of the top teams in the country in front of him each and every year," Cahoon said. "[Dainton's] gone through a whole different sequence of having teams that have played up at a real high level in the national standings, and teams that have disappeared from the national standings. [He's gone] from having experienced people playing in front of him to a lot of inexperienced people in front of him.

"I can't believe that John Muse is any better a leader or more important to his team than Paul Dainton is to ours," Cahoon continued. "You're talking about two players who are central to their team's success."

For UMass to have success on the road this weekend, it will have to draw from its latest performance.

"That was will over skill," Cahoon said. "Will over skill is an important feature for any team. We've got a pretty good skill level, but we have got unbelievable will. That usually results in some pretty good play."

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Demonstrators rally, march to protest situation in Egypt

About 100 Five College students marched through Amherst as part of a peaceful protest against Egyptian President Hosni Mubarak and his regime. Protests in Egypt are ongoing, and Mubarak has indicated he does not plan to step down soon.

By Michelle Williams
Collegian Staff

Despite the poor weather, over 100 people marched through Amherst on Saturday, peacefully protesting Egyptian President Hosni Mubarak and demanding major reforms to the Middle Eastern Republic's government.

Demonstrators gathered at the Haigis Mall on the University of Massachusetts campus, where march organizers rallied the spirits of event-goers, shivering while holding up signs supporting the Egyptian protesters. The diverse group varied in age, gender and race, but was unified in their support of the Egyptian people.

"People about ready to support the democratic movement in Egypt?" said Michael Fiorentino, an organizer of the event and a student at Holyoke Community College, as he addressed the crowd.

"We're not going to let New England weather stop us, right?"

The march left the UMass campus a little after 1 p.m., led by a banner that stated, "Egypt will be free," in both English and Arabic. As they marched towards Amherst Center, demonstrators shouted in unison chants such as, "No justice, no peace. U.S. out of the Middle East."

The demonstrators marched in a column down Massachusetts Avenue, and turning onto North Pleasant Street, blocked one lane of traffic. As they marched and sang protest chants, cars driving past honked their horns in approval.

At each intersection, the peaceful group of protesters was met by a police officer. Multiple departments contributed officers, including the University of Massachusetts Police Department, the Amherst Police Department, and the Amherst College Police Department.

On the steps of the Amherst College library, speakers took turns using the megaphone to rally the crowd into action. The area was dubbed "Tahrir Liberation Square" by a demonstrator who stuck a sign into a tall snow bank.

Speakers drew connections between the revolutions in Egypt and Tunisia, the protests in Cairo and the Civil Rights Movement, and the genocide in Darfur and the issues facing the Palestinian people.

The coordinator for the Amherst branch of Amnesty International, Dr. Mohamed Elgadi, spoke of the United States' history of civil disobedience, specifically the Women's Liberation Movement and the Civil Rights Movement, and the achievements that resulted from both.

"This is why I believe a strong movement like this- civil disobedience - like what's happening in the streets Cairo and Sudan, and Yemen and Tunisia - is going to be victorious," said Elgadi, who said he was "half Sudanese, half Egyptian and 100 percent international activist."

Saturday's rally was one of many across the globe. Feb. 5 was declared the international day of solidarity with the Egyptian and Tunisian people by many groups in support of the protesters.

The event was organized by 13 Western Massachusetts groups, including the Western Mass. Coalition for Palestine and the American Friends Service Committee.

Representing the Democratic Socialists of America, Emahuin Raheem Ali Campbell, a doctorate student in African-American studies at UMass, said this was an exciting time in the world.

"The kind of global warming that's happening right now is the kind that no scientist can measure," he said. "It is the global warming of revolution."

Campbell also related the protests in Egypt to the Civil Rights Movement half a century ago.

"It is very interesting that this is taking place and we're having this march during Black History Month," he said, "because I think of Dr. [Martin Luther] King and his last speech 'I've been to the mountaintop.' He said that no matter where it is, whether it is in Johannesburg, South Africa, New York City, Atlanta, Georgia, Jacksonville, Mississippi, Memphis, Tennessee, Western

Freshmen now stress the most in 25 years

By Nancy Pierce
Collegian Staff

College freshmen have experienced the highest levels of stress in 25 years and a 3.4 percent drop in overall emotional health from 2009 to 2010, according to a recent study.

An annual survey by the Cooperative Institutional Research Program at the University of California, Los Angeles' Higher Education Research Institute found the amount of freshman who listed themselves as having above average emotional health fell from 64 percent to 52 percent this year. The results also showed the percentage of students with unemployed fathers was higher than ever, at 4.9 percent, and students with unemployed mothers rose to 8.6 percent.

The report debriefing the results was titled "The American Freshman: National Norms Fall 2010," and the survey producing its results that bore the results was administered to over 200,000 freshmen from 280 different four-year colleges, including the University of Massachusetts.

Linda Deangelo, the assistant director for research at the Higher Education Research Institute and one of the authors of the report said the stress is indicative of freshmen desiring more out of their college experience.

"It seems to be related to the fact that students want more than ever for their college experience to mean something," she said.

Deangelo believes this craving for more and better services is, in part, based on increasingly expensive college tuition rates.

"There is a real sacrifice for families; they want to make sure they get the most out of their investment," she said.

Deangelo said students may also be anxious in advance about their prospects for finding a job when they get out of college.

"This is the first generation that knows they may not be able to achieve their parents' style of living," she said.

Along with a competitive job market and a cutthroat college application process, Deangelo mentioned other economic stressors, such as financing college. She described the overall decreased funding for higher education and students' increased financial aid needs as a "perfect storm" for students entering universities.

The survey also found a gender gap in how male and female students ranked their emotional health. 145.9 percent of females said their mental health is above average, while 59.1 percent of males said they had better-than-average mental health. Deangelo acknowledged that, historically, women have reported lower emotional health than men.

She also said the psychological wellness gender gap is actually growing.

"It seems that male students engage in more stress relieving activities, such as playing video games."

Typically, she added, female students engage in activities that do not necessarily relieve stress. She also suggested "it is possible that women are more in touch with how they feel."

According to Dr. Harry Rockland-

Concealed guns on campus?

By Zachary Weishar
Collegian Correspondent

It was an April morning at first like any other. Students filed into lecture halls and small discussion rooms at what is, more or less, a typical American state university. Then, around 7:15 a.m., a student walked into West Ambler Johnston Hall on the campus of Virginia Tech University and changed everything for students at the Blacksburg, Va. school and across the country.

In the wake of the Virginia Tech massacre, in which 33 students including gunman Seung-Hui Cho lost their lives, representatives from many states proposed legislation which would grant college students the right to carry concealed weapons on campus as a means of protection. Since the shootings at Virginia Tech, the majority of these bills have been quelled in various statehouses. However, Arizona, Georgia and Tennessee all have pending legislation that would allow concealed campus carry.

Currently, 30 states statutorily ban firearms on public college campuses. Of the remaining 20, 19 have no official stance on concealed weapons on campuses, instead allowing the colleges to make their own decisions. The 20th state, Utah, actually mandates that public colleges specifically give their students the right to carry a concealed handgun on campus.

In December 2009, the student senate at Colorado State University in Fort Collins, Colo. passed a resolution in support of concealed carry on campus. Supporting students gave reasons such as self-defense, constitutional rights and research showing concealed carry makes people safer.

"The general sentiment on our campus was very pro-concealed carry," said Cooper Anderson, then the student body president. "It was very one-sided when we were debating the issue."

The group Students for Concealed Carry on Campus (SCCC) describes itself as a grassroots organization started to support concealed carry efforts at colleges. The main goal of the group is to grant those individuals who already possess a license the right to carry concealed weapons on their respective college campuses. According to its website, the group boasts 42,000 members nationwide, and is composed of college students, professors, and college employees alike.

The group holds that the right to carry a concealed weapon on campus would better protect students from acts of gun violence that would otherwise leave them helpless.

This notion had some students at the University of Massachusetts up in arms. Sebastian Zapata, a

Amherst backyards to be barnyards?

By Lily Hicks
Collegian Staff

If Amherst's town meeting next May approves a zoning amendment, Amherst residents might have some new neighbors. They might also have some fresh eggs.

The amendment, which is currently under active consideration at the Planning Board's Zoning Subcommittee, would make it easier for people living in denser areas of the town to own hens, rabbits, and a selection of other birds including ducks, pigeons and doves.

Currently, a permit is required to own chickens and other small "accessory" livestock in those high-density neighborhoods surrounding Amherst's commercial center. Should the changes be approved at the upcoming Town Meeting, Amherst residents in three additional zoning districts will simply be required to register their property if they wish to own hens, rabbits or selected other poultry.

John Gerber, an Amherst resident and a professor at the University of Massachusetts' Department of Plant, Soil, and Insect Sciences, is leading the effort to amend the zoning bylaw. When Gerber endeavored to buy and keep five hens on his property, the town required him to complete a series of applications, field a visit from the Amherst Planning Board, and buy a permit that ended up costing a total of $210.

"I really thought that was a little excessive," said Gerber.

Under the proposed amendment, Amherst residents would register their property for ownership much like they would for dogs. A nominal registration fee would enable residents to own up to six qualifying animals by right, according to Amherst Senior Planner Jonathan Tucker.

The various combinations of hens, rabbits, and other poultry that would be allowed are still under review, but the selection would be restricted to "animals which are relatively quiet and can be kept in fairly tight quarters without any stress or injury to their health," said Tucker.

Along with the proposed changes would come additional regulations, including at-will inspections by the animal welfare division of the Amherst Police Department, bans on roosters and turkeys and a requirement that hens be fenced at least 10 feet from property borders and 20 feet from adjacent houses.

But these restrictions have not quelled the protests of at least one member of the Amherst Zoning Subcommittee, said Gerber. Gerber declined to provide his name, but said that for anyone who attends the Zoning Subcommittee meetings, the next of which is scheduled for Wednesday, "it'll be pretty obvious" who that member is.

Otherwise, Gerber and fellow proponents of the amendment, who include Bernard Brennan, soon-to-be owner of Amethyst Farm, and David Tepfer, owner of Simple Gifts Farm, are optimistic about the future of Amherst's backyard barnyards.

"They're not really willing to go out on a limb for this, but I think they'll support it," said Gerber.

Brennan, who moved to Amherst from Connecticut late last summer, was involved in two successful movements to legalize hens in Hamden and New Haven. When he moved to Amherst, he saw that owning hens was legal, but that it required a very complicated and expensive permitting process, said Brennan.

Loosening restrictions on hen ownership, said Brennan, requires public education to reduce the stigmas associated with chickens and cooperation on behalf of proponents. Amherst's Board of Health helped complete the former requirement in October, when it unanimously ruled that backyard chickens will not pose a health risk to the public, according to a report in the Daily Hampshire Gazette.

"This isn't really anything stranger than keeping a dog," said Brennan. "In fact, I'd argue that it's cheaper, cleaner, healthier, and quieter than your typical dog."

Tucker said that with the proper regulation, giving residents the right to own backyard chickens and other selected animals "makes perfect sense," but that the general attitude towards the proposed amendment will not be fully known until May's Town Meeting.

"It being Amherst," said Tucker, "everyone has an opinion."

Lily Hicks can be reached at lhicks@student.umass.edu

MCT

An Amherst zoning amendment to be looked at next May may simplify the process for town residents to keep their own chickens.

'Concealed carry' lacks support

HANDGUN from page 1

sophomore political science major, did not see the logic in the argument that having more guns on campus would make it a safer place.

"Arming the student population would not necessarily make us safer," he said, "and by doing so we would be taking law enforcement out of the hands of the proper authorities."

Ervin Staub, a professor of psychology at UMass, is also against the idea of concealed campus carry.

"Studies have shown that the presence of even a picture of a gun makes people behave more aggressively," hHe said.

Staub is the founding director of the Ph.D. concentration in the psychology of peace and violence, and has recently published a book titled "Overcoming Evil: Genocide, Violent Conflict, and Terrorism."

"If you look around on college campuses, the frequency of violence is extremely low," said Staub. "But research has shown that individuals who tend to be aggressive because of their prior life experience interpret certain behaviors as hostile to them and respond aggressively. But aggression can become fatal if you carry a gun."

Proponents of campus carry need tocite existing statistics to argue their case. After a combined 100 semesters where campus carry has been legal, there has not been a single incidence of gun violence resulting directly from the right to carry on campus, according to crime statistics and reports from the affected schools cited by the organization.

Furthermore, the group points to the fact that none of the 40 states that currently allow concealed carry in any capacity have seen an increase in gun violence since implementing their laws, despite the fact that many people carry their weapons in public places.

These statistics did not sway sophomore building and construction technology major Patrick Carey's viewpoint on the situation.

"Being one of the biggest party schools in the nation, where alcohol flows like water, and students often drink to the point of total inebriation, there would be many more gun related incidents on campus," he said.

While there is little debate that drugs and alcohol are prevalent on many campuses nationwide, SCCC does not view this as an issue. They strongly uphold that they are not out to change the current regulations governing licensed concealed carry. The law currently prohibits anyone that is under the influence of drugs or alcohol from carrying a concealed weapon.

MICHELLE WILLIAMS/COLLEGIAN

Demonstrators brandish protest signs as their march route takes them past Whitmore Administration Building during a Saturday rally in support of the people of Egypt.

Protesters rally to show support for anti-Mubarak demonstrators

PROTEST from page 1

Massachusetts, Cairo, Egypt, is doesn't matter, the cry is always the same, 'We want to be free. We want to be free no matter where we are.'"

Alex Cachinero-Gorman, a former student at Hampshire College, thanked all that participated.

"What I'm really excited for today, is to see all of you people, from different backgrounds, from different political affiliations and interests, starting to come together so that we can think about how we can be in solidarity with the Egyptian people, the people of Tunisia and Jordan, here in Massachusetts," he said.

Cachinero-Gorman also encouraged the crowd to stay politically active after the rally ended.

"I see a lot of old faces and a lot of new faces, and I'd like us to get together more often," he said. "I want us to start brainstorming creatively, and consider what we can bring to the table here in Massachusetts to help those across the Middle East."

Cachinero-Gorman, as well as other organizers, stressed that Saturday's march was a part of a larger movement to think critically about the United States' actions around the world, and to support people fighting for freedom across the globe.

Michelle Williams can be reached at mmwillia@student.umass.edu.

MICHELLE WILLIAMS/COLLEGIAN

An Amherst march to show sympathy for the anti-Mubarak organizers in Egypt progresses down North Pleasant Street Saturday. Protesters gathered to support the people of Egypt, Tunisia and Yemen, among other causes.

The Life and Works of the
Rev. Dr. Martin Luther King, Jr.
A Multifaith Celebration
led by
The Rev. Samuel "Billy" Kyles
Rev. Kyles, one of the last surviving witnesses to the assassination of Martin Luther King, Jr., was a leader in the Civil Rights Movement. Rev. Kyles will speak about his experience and help us remember and celebrate the life and works of Dr. King. This Multifaith Celebration will also feature music by the Amherst College Gospel Choir and Choral Society.
Tuesday, February 8, at 7 p.m.
Johnson Chapel, Amherst College
This event is free and open to the public.
Sponsored by the Rev. Dr. Martin Luther King, Jr. Celebration Committee

A national student organization has made some headway toward accomplishing its goal of granting registered student gun owners the right to carry their weapons on campus.

Freshmen stress at record high

STRESS from page 1

Miller, director of the Center for Counseling and Psychological Health at UMass, the center sees about nine percent of the student population every year. He also said there has been an increase in students coming in for help over the last 10 years or so.

"It's a national trend that students are coming in with more psychological needs," he said.

Rockland-Miller also stated that the most common needs students report are associated with depression and anxiety.

"People certainly experience anxiety around school," he said.

Rockland-Miller corroborated the study's findings on the apparent mental health gender gap stating that, in his experience, the clinic tends to see more women than men.

Dr. Christopher Overtree, director of the Psychological Services Center on campus, explained the economic situation is a stressor for the entire country.

"Financial stress is a bigger external stressor known to mental health issues," he said.

Financial issues, he said, add stress to college students in what he calls being "in the midst of a major life transition."

He further more explained that that "all mental health conditions interact with the environment. When there are stressors in the environment, the symptoms can go up."

He also gave examples of how being in tough financial straits can deter students from making certain choices, such as being able to seek health care, purchasing food, finding a safe place to live, and meeting educational goals.

The results of the study also found that 72.7 percent of students believe the primary benefit of college is to increase earning power.

Freshman psychology major Jillian Montuori said she was not surprised by the results of the survey.

"Getting a college degree is a lot more important now. I would expect freshmen to be more stressed," she said. She also admitted that she herself felt stressed, specifically with getting homework done and passing exams.

Another freshman, building construction technology major Eric Campbell, said he was surprised by the results.

"I get a comfortable feeling here," he said. "I have a lot of free time."

Campbell also said he felt more stressed in high school than in college.

Both Montuori and Campbell said the main reason they're attending college is to make more money.

"Stress is our body's coping response for dealing with demands," said Overtree.

He emphasized the importance of behaviors and lifestyle choices. Behaviors he said could potentially increase stress are lack of exercise, poor diet, lack of sleep and taking on too many demands.

To enable oneself to better manage stress and deal with anxiety, Overtree suggested to "stay active, sleep and eat well and take advantage of support."

In terms of support, Overtree recommended reaching out to friends and seeking counseling.

"A free press can be good or bad; but, most certainly, without free-dom a press will never be anything but bad." -Albert Camus

EDITORIAL@DAILYCOLLEGIAN.COM

Dear Western Leaders: Please shut up

Mike Tudoreanu

The peoples of the Arab world are rising. It started in Tunisia, spread to Egypt, and there are rumblings of discontent in Yemen, Jordan and Sudan. Corrupt dictators, who have ignored the needs of the many and pandered to the interests of big business for decades, finally have reason to be afraid. One of them, Zine El Abidine Ben Ali of Tunisia, has already fled his sinking ship. In Egypt, Hosni Mubarak seems determined to go down fighting, and take as many innocent lives as possible with him. In Yemen, Ali Abdullah Saleh quickly announced that he will quit later this year, and the protests have only just begun. All three of them have ruled for over 20 years - almost 30 in Mubarak's case. The King of Jordan is also looking worried. Saudi Arabia is quiet at the moment, but the amazingly rich - and amazingly repressive - House of Saud is probably concerned about the family business.

Democracy is coming to the Middle East, and it looks like secular democracy. Young Arabs do not seem to share the West's obsession with political Islam, and religion is no more than a background issue at best. Islamic extremists exist, but they were caught by surprise and left in the dust. Egyptian Muslims and Christians are marching in the streets side by side.

Before you know it, there might be free elections, and that means we don't know who's going to win! It might be anyone! Imagine that.

Western leaders have been talking about stuff like this for years. One would expect them to be overjoyed at the prospect of a democratic Middle East. But instead, they look concerned and somber. They call for "stability," not freedom or democracy. The problem, you see, is that most of the endangered dictators are their friends. Mubarak alone receives $1.5 billion in US military aid every year.

Some Western leaders have made clear where their sympathies lie, and it's not with the people of Egypt. Joe Biden said in a recent interview that he doesn't think Mubarak is a dictator. That's right: a man who has been president for 30 years and was, until recently, planning to hand over power to his son; a man who relies on a brutal secret police; a man who keeps "winning" elections just as free as the ones that used to be "won" by Saddam Hussein; a man who routinely imprisons people who speak out against him - this man is not a dictator.

Why is that again?

Because, in Joe Biden's own words, "Mubarak has been an ally of ours in a number of things and he's been very responsible on, relative to geopolitical interests in the region, Middle East peace efforts, the actions Egypt has taken relative to normalizing the relationship with Israel." So, apparently, being a friend of the US automatically makes you okay no matter how often you send your thugs to beat up or kill innocent people.

Even worse were the comments of Tony Blair. Just this Wednesday, he actually had the audacity to say that Mubarak is "extremely courageous and a force for good." Now, bear in mind, this is Tony Blair we're talking about, the second most enthusiastic supporter of the Iraq War. The former British Prime Minister who said he had to send troops to overthrow Saddam Hussein despite massive anti-war protests, because removing a dictator was the right thing to do. Now he sings the praises of a different dictator and compliments him on his great courage - presumably the courageous way he decided to repress the protesters calling for his resignation. I used to think Tony Blair had misguided principles, now I see he has no principles at all.

The hypocrisy of Western leaders is utterly shocking. Tyrants who oppose the interests of Western capitalism are evil dictators who must be removed by force in the name of justice and freedom. If some people get killed in the process, well, that's just collateral damage. Tyrants who support the interests of Western capitalism, on the other hand, are responsible and courageous forces for good, and totally not dictators. When people rise up against them to demand affordable food and fewer jackboots in their faces, well, that's just rude. You see, it's oh so very destabilizing when you topple a dictator-sorry, I mean a courageous leader. Before you know it, there might be free elections, and that means we don't know who's going to win! It might be anyone! Imagine that.

Sarcasm aside, can you imagine what would have happened if people were protesting on the streets of Iran instead of Egypt? Actually, you don't need to imagine, it happened last year. Predictably, Western leaders immediately called for democracy and the resignation of Ahmadinejad - who does count as a dictator, apparently, even though he has far less power than Mubarak.

It is now clear as day that the only things Western politicians care about are their own interests, and they are equally willing to support a democracy or a brutal dictatorship as long as it is self-serving. The fact that these people can support Mubarak (or the House of Saud for that matter) while fighting wars for "democracy" elsewhere is frankly sickening. Western leaders have completely lost any right to talk about democracy anywhere in the world.

Finding the right social lube

Mike Fox

The lines for the bars in the center of town have gotten out of control. For several weeks now, I've made my way uptown around 11 o'clock to find every bar with lines that stretch on for at least a block.

Now some bars always had lines, the trendy set-up in front of the Monkey Bar or The Pub typically comes to mind. But now even The Spoke takes forever to get into. Last spring, when I first turned 21, The Spoke was where I went to get away from crowded scenes. Now, it takes the hordes of people just looking for somewhere.

I imagine some combination of math, legal wrangling and design went into these magic numbers.

There're a few causes for this constant congestion. Primarily, last semester the town of Amherst started enforcing capacity laws much more strictly. Of course this makes complete sense. Capacity laws are in place so that tragedies can be avoided in the event of an emergency. I imagine some combination of math, legal wrangling and design went into these magic numbers.

But let's be serious. Besides ABC, where they use a counter at the door, how many bars could still be in violation?

Another cause could be the closure of Charlie's. For those who wonder why there's a vacant storefront next to The Pub that says Olde Towne Tavern, know that this was the former site of Charlie's. The bar wasn't pretentious, served up decent portions, and, like The Spoke, was usually easy to get into. However, it closed and new owners started planning a bar in its place. But for whatever reason, probably the economy, because it's easy to blame that for everything - or at least the news tells me that - the new bar, Olde Towne Tavern, is yet to open.

Then there's the weather to blame. Being stuck in our houses all day and all week because of ungodly amounts of snow gives one an acute case of cabin fever. The only prescription seems to be heavy social interaction with the proper lubricants. With this weather, one can't be expected to party outside, and it's difficult to get around. So the only solution seems to be to go where everyone else is: uptown.

This last reason - the need to see other people and interact - got me thinking the other night why I was even trying to get to the bars.

At this point, it just seems like the thing that you're supposed to do.

Tuesday and Thursday nights, you go uptown. Whenever I finally make my way into a bar, I remember why: it's such a gratifying feeling to be packed wall to wall with the people you've spent the past three and a half years with.

Essentially on those few nights, the bars throw the largest open party for the entire senior class.

Walking around a bar and seeing those friends from freshman year who you rarely have time for, that person who worked on a project with you sophomore year, and friends from home, makes the world feel pretty damn tiny.

But the bars are expensive - covers, drinks, Antonio's; why should the bars have a monopoly on social events?

For that matter, why do we need alcohol to be more outgoing and social? It's expensive when it tastes ok and disgusting when it's cheap. Sure, sometimes you have a drink that tastes good, but that's usually due to mixers or "acquired taste" – whatever that means.

Bars and alcohol have their status as mainstays of college life. I will keep enjoying both of them, but maybe it's time to question our dependence on them as cornerstones of our social lives. Maybe we need to introduce the outgoing bar mentality to everyday life. Or maybe it's just about diversifying what we do a bit. Go to more concerts, see more great movies, have a longer and more social meal.

I will keep making my pilgrimage uptown several nights a week. I like to "see and be seen," but when half the night is spent in line waiting to get somewhere to start the night, it's time to start looking for alternatives.

However, Tuesday is my birthday, so I'll start questioning things next week.

Mike Fox is a Collegian columnist. He can be reached at mfox@student.umass.edu.

Super-salad me

Tim Jones

Call me the Morgan Spurlock of the UMass crowd, only substitute McDonald's with vegetables, and 30 days with seven. That's right, for a whole week, I went vegan.

In an attempt to broaden my culinary horizons, I thought it would be interesting to live my life as a vegan for a week. I never thought that this idea was going to endanger my sanity. And I didn't even get amazing psychic powers like the Scott Pilgrim comics said I would. It's not my fault I didn't have the money for Vegan Academy.

Part of the idea came from all of the food documentaries I have watched recently. Without going into too much detail, most of what we put in our bodies is absolutely disgusting and comes from vile, putrid places. Yet, I'm a hypocrite, and many of us are. We know where this food comes from, and how it's inhumane to animals, but still eat it - mostly because it tastes good. Hey, out of sight, out of mind.

The rules sound simple enough. If it looks good, you probably can't eat it.

Joking aside, a vegan cannot eat any product that comes from or is made of an animal. No one was holding me to this, but being stubborn beyond belief, I wasn't going to give up easily. Spending money on food was out of the option, as well. If I'm paying $2,000 a semester for food, then I'm going to get my money's worth.

I frequent Franklin Dining Common, and when I actually paid attention to what I was grabbing, the results weren't as good as expected. Almost everything from the entree line, the pasta bar, the grill and the pizza bar had milk or eggs in it. My options were severely limited; a person can only eat so many salads. It was also no help that I can't stand the only three dressings I could actually eat.

What really was confusing to me was the vegetarian section. Almost all of the items contained milk, which works for vegetarians, but being vegan, I couldn't touch them.

I found over and over again that I was forcing down the same bland salads with no taste, eating the same cereals with soy milk, or grabbing starch-filled items. When you're forced to abide by certain rules, you really pay attention to what you are grabbing. I just wish there were more options. It didn't help that I'm a picky eater…

I'm pretty sure at one point I went through a bacon withdrawal. The scent of the glorious bacon was taunting me, plaguing my mind slowly.

Because I didn't get the fatty acids I needed, or direct sources of protein, I was constantly hungry. I did frequently visit the gym, but not enough to be consistently starving all day long. And truth be told, I didn't want to keep stuffing my face with green leaves or more bread. With the exception of a few items, I really did not enjoy any of the food. My brain and tongue have been programmed to enjoy the things that are horrible for me.

I'm pretty sure at one point I went through a bacon withdrawal. The scent of the glorious bacon was taunting me, plaguing my mind slowly.

Of course a trip to the store would have solved all of the problems - no offense, but UMass isn't an ideal place for vegans to dine. When presented with the many choices tailored to vegans, personal shopping is most likely to make the chore that much easier.

I learned that I needed to be crafty. I grabbed things I actually could eat and blended them with other items, and I found that with some creativity, some delicious vegan items could be made.

I would have liked to say that I got a complete vegan experience, but that's definitely far from the truth. I'm pretty sure I ate cereal with soy milk and salads every day - not exactly revolutionary. I didn't even notice a change in my health. I didn't feel any different, but I probably didn't do it right either.

This isn't to say I didn't pull anything away from all of this. Soy milk grew on me in a way, and so did a few items from the vegetarian section. I guess it doesn't hurt to eat healthy.

I'm not calling out vegans. It's pretty respectable that some people have the willpower and smarts to pull it off. It's just not for me in any way at all.

I ended my madness with a midnight run to Taco Bell, my Nirvana. It's healthy enough. Besides, it's not that bad, it's only 36 percent meat.

Tim Jones is a Collegian columnist. He can be reached at timothyj@student.umass.edu

The existential network

Edward Hand

Daniela just got back from drill. She'd been there since Friday. Several of her friends told her they missed her and she was excited to be home.

Kristen was in San Diego from Thursday till Tuesday. Her nose got sunburned. Blake dropped his phone in a margarita, and now he needs a new one. June lost her phone too. So did Chris. I have to look up Chris to figure out how I know him; I know eight Chris's.

I can't remember the last time I talked to these people, yet I know where they are going to be and what they've been doing.

I know this because Facebook knows this. If you don't have one at this point, you're either lying or within my dad's age group. My mom has one. My sister's dog has one. There are pages for everything from fictional characters to pickles.

The first thing you do when someone becomes your Facebook friend is scout out their information section. What are their interests? What music do they like? Are they in a relationship? This information is important. Sometimes this is a person you met in a class. Maybe it's a girl from a party. Maybe it's someone you went to grade school with; on a much rarer occasion, it's someone you have a real relationship with.

Brad came out of the closet. So did Ron. How do I know them again?

I have 527 friends. I know all of them but I have regular interaction with maybe 50 of them at most. On Facebook, you get something called the "live feed," which gives you updates of what other people are doing. If anybody does anything, Facebook will tell you.

Facebook encourages stalking.

I don't need to know this, but I am procrastinating, and this is like watching a reality show with a cast of hundreds. I can pick and choose who I'm following. This is legitimate entertainment.

It doesn't make a difference to me whether or not Morgan goes to the frat party tonight - she hasn't decided - and I really don't care that Nick has changed his interests - he's become a fan of ACDC. I haven't spoken to these people since high school. I don't really know these people, but I'm not going to delete them off my friend list. I don't want to lose touch with them.

Debbie just became a fan of "Overweight Cats." I don't need to know this, but I am procrastinating, and this is like watching a reality show with a cast of hundreds. I can pick and choose who I'm following. This is legitimate entertainment.

Maddy and Ashley just became friends. I momentarily wonder how they know each other.

Facebook is a lot like reality TV. This means no one on Facebook is real, just figments of collective perspective.

If someone goes to a party and pictures get taken of them drinking, the pictures will be uploaded because the person wants the world to see what an outgoing fun lover they are, or they will remain private. Sharing this information is based entirely on how the potential subject believes viewers will react to them. On "American Idol," the contestants pick their styles and reveal traits about themselves in the exact same way. It's real, but it isn't; it's selective reality.

Self presentation is a basic part of being human.

We want other people to see us in a good light and we change the way we behave in different groups to accomplish this. I'll act one way around the guys and another with my mother. Facebook levels the playing field. It's a place where all of these people you know, all of these different circumstances, overlap.

What do you do? Do you censor yourself? Is it a glorified cyber-rolodex? Or do you just say "screw it" and write whatever you want?

On my profile, I list "Venture Brothers," "King of the Hill" and "Blind Date" as my favorite shows. I neglect to mention any of the Japanese animation I like because there's a certain conception of what its viewers are like and I don't want that to be the first impression people have of me.

The alternative is to remain anonymous, but I like people knowing things about me. I like the appearance of being cool. Who doesn't? It's not like I'm lying, I really do like all those shows; I'm just being selective.

If you don't think this is important, you're wrong. People are going to judge you based on what you reveal. They won't know you any better than a stranger on a plane, but they're still going to come away with an impression.

For all of its flaws and all of its weirdness, it's still a great networking tool. Just remember that, for better or worse, Facebook is all show.

Edward Hand is a Collegian contributor. He can be reached at ehand@student.umass.edu.

"I'm going to Wichita, far from this opera forever more." - The White Stripes, "Seven Nation Army"

ARTS@DAILYCOLLEGIAN.COM

Folk singer Neko Case the cat's meow

By Amy Larson
Collegian Correspondent

Neko Case and Lost in the Trees surprised hundreds of eager fans at the Calvin Theater last Friday night when they were treated to not two, but four acts. Lost in the Trees opened for Neko Case and her three sub personalities: comedienne Neko, rocker Neko and poet Neko.

Lost in the Trees, the seven piece indie folk group from Chapel Hill, North Carolina, took the stage at 8:00 p.m. accompanied by a large decorative dinosaur. Their performance was a pleasing balance of orchestral and rock and roll sounds, like a soundtrack to an eccentric, thought-provoking film. The ensemble's tracks often featured echoing vocals, powerful strings and excited drum beats.

The indie group certainly was not lacking stage presence, either. At times, as many as four band members were banging on percussion instruments, including violinist Jenavieve Varga, drummer Yan Westerlund, singer and french horn player Emma Nadeau and cellist Leah Gibson. Lead guitarist and vocalist Ari Picker gained the crowd's participation on several songs, while bassist Mark Daumen and cellist Drew Anagnost held down the lower range with bumping, bold bass lines.

Together, the seven group members created a harmonious blend of eclectic sounds. Many of their songs were built on tension and release, progressing from eeriness to resolution. The unique and expressive performance was a fitting introduction to the main act, Neko Case.

Forty year-old Neko Case entered the stage as an image of casualness, rocking dark wash skinny jeans and a navy three quarters sleeve hoodie. Catering to a predominantly middle-aged crowd, Case appeared cool and comfortable at the Calvin.

Next year will mark her fifteenth in writing and performing original folk-rock music. To date, she has released eight albums, including two live albums. She released her first two albums under the name Neko Case and her Boyfriends. Case is also well known for collaborating with The New Pornographers on all five of their studio albums.

Her most recent album is her 2009 release "Middle Cyclone" which features the popular tracks "This Tornado Loves You" and "People Got a Lotta Nerve." On Friday night though, Case teased about getting to work and perhaps coming out with a new record sometime soon.

Of her three distinct personalities, Case introduced rocker Neko to the stage first. She donned an acoustic guitar to start the show and strummed out a patriotic first tune. As soon as her guitarist started to introduce her next song "Maybe Sparrow," the crowd erupted in cheers. The classic rock and roll slide guitar lines on "People Got a Lotta Nerve" reached every audience member.

Rocker Neko drove the energy to its peak by shredding her electric guitar on "Hold On Hold On." Her songs are all short - between one and four minutes - but they are never short of emotion and musical value. Case clearly displayed that she has the art of singing ballads down to a science at the level of the greats like Bob Dylan and James Taylor.

Case's siren-like voice never once hit a flat note. The red-haired folk-rock star played with an edgy, folk vibe while singing sweet lyrics. As she sang with her bandana-clad back-up singer, their harmonies and lines intertwined with precision.

"Red Tide" was an interesting mix of quick to slow tempos and loud to soft dynamics. Case's sound was reminiscent of Simon and Garfunkel at times. Her five multi-talented band members complemented her experienced stage presence. Though one of her instrumentalists played banjo, he offered a country feel that was never cliché.

Comedienne Neko was introduced next. She joked early in the show about how she had to keep tuning her guitar because of how "warm" it was outside. Her little vocal pieces in between songs were spunky and unpredictable. Something about her carefree nature was reminiscent to the comedic characteristics of the Barenaked Ladies.

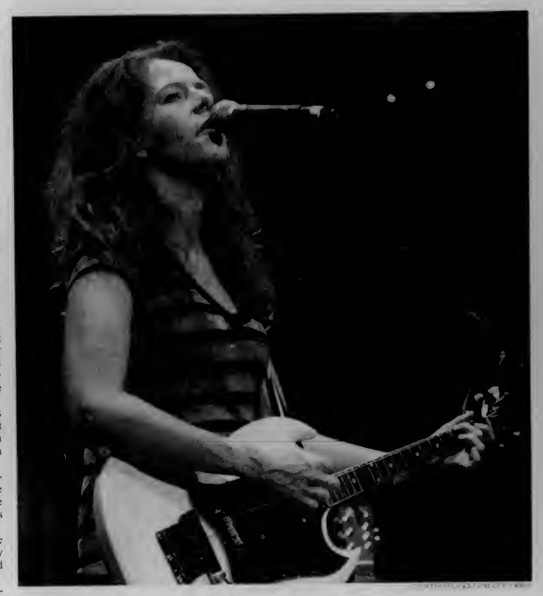
Comedienne Case giggled with her band members randomly throughout the show. The audience found it impossible not to connect with her because of her down to earth vibe; they shared dozens of genuine laughs with the witty singer.

Her most moving personality - poet Neko - was present throughout the entire performance. Case's deep side contributed ideas such as having to "keep limber on the tight rope of rock." The honesty that drove her songs captivated the audience.

The poet's words on "I Wish I Was The Moon" are not self-deprecating, but simply sincere. Case's perfectly held out notes delivered feelings of longing that tugged firmly at the crowd's heartstrings.

In her words "this show is funny, dirty and educational." And that it was.

Amy Larson can be reached at alarson@student.umass.edu.



Singer-songwriter Neko Case performed at the Calvin Theater last Friday night. Lost in the Trees opened for Neko Case, filling the night with eclectic sounds and a folk-rock vibe.

White Stripes' break-up as one-of-a-kind as duo's career

Alternative rock duo The White Stripes have officially announced the break-up of their band on Feb 2, 2011, almost 13 years after their debut. The news came nearly four years after their last studio album, "Icky Thump," released in 2007.

By Greg Kot
Chicago Tribune (MCT)

The news that the White Stripes broke up Wednesday really didn't come as a shock to anyone. It had been four years since their last studio album – and tour, but it still prompted an outpouring of social-media grief.

The Stripes, of course, are a duo consisting of Jack and Meg White, once a married couple who carried on long after their divorce to make some of the best music of the last decade. They had been together for 13 years, released six acclaimed studio albums and put on consistently galvanizing live shows.

The duo announced their break-up on the whitestripes.com Web site, saying they would make no more new recordings and no longer perform live. Fans hoping for a tipping-point motivation for the timing of this announcement were left hanging. There were no "artistic differences" or health problems, the duo wrote. "Mostly," they said, they are breaking up now "to preserve what is beautiful and special about the band and have it stay that way."

My Twitter response Wednesday to the announeement was this: "Stinks White Stripes are gone, but love that they exited while on top, with no cash-in tour. Jack and Meg integrity meter trending upward."

And make no mistake, the White Stripes could've cashed in. Had they announced a reunion or farewell tour for this summer in a concert industry starved for big-name acts, they would've been lavished with offers and played to the largest audiences of their career.

Instead, they simply walked away.

So is that going out "on top"? More than a few people questioned my assertion. A few wondered why the duo hadn't just broken up years ago. They speculated about why the White Stripes let things drag on this long, before finally declaring the inevitable. Wouldn't going out on top mean making a great album, following it with a triumphant tour, and then marching off into the sunset immediately afterward?

Indeed, nothing the duo did in the last few years suggested there was much of a future for the White Stripes. Meg White's health issues had prompted the group to curtail what would be its final tour in 2007, and Jack White had occupied himself with other groups (the Raconteurs, the Dead Weather) and other projects (running his Third Man label out of Nashville and producing albums for the likes of Wanda Jackson) that strongly indicated the White Stripes were no longer a priority.

But Jack and Meg White never once treated the White Stripes as an afterthought. Each of their albums was strong, and their last studio release, "Icky Thump," was among their best. The tour that followed made for riveting theater. The old show-biz adage is to leave the audience wanting more, and the White Stripes did just that. Most fans' last memories of the White Stripes will be of a band in peak form.

It's little wonder. The Stripes were meticulous about how they presented themselves and their music -- from the red-and-white color schemes of their clothes to the two-against-the-world sound of the songs -- even if it sometimes came across as loose, rough and spontaneous. And that careful approach survived through their break-up. Meg and Jack White never rushed into an artistic deeision in their career, and they weren't about to do it as they were ending their musical life together.

We'll probably never know much more about why the band splintered outside of those few paragraphs on their Web site. They've always been extremely guarded in interviews about their relationship. But Jack White once described "tension" as one of the band's guiding prineiples, and onee you accept that, this announcement makes sense.

In concert, the interaction between Jack White's vocals and guitar and the way Meg White answered him on drums was as snappy, witty and cutting as the dialogue in a Humphrey Bogart-Lauren Bacall movie. Play out the scene a little further, and anything from a kiss to a gun could be produced.

Meg White took a lot of heat for not being a particularly accomplished drummer, at least technically. But she was the perfect drummer for the White Stripes, listening to and playing off Jack White better than any other human being on the planet could have. The body language, the glances between the two, were a theater all their own. That's why the element I will miss most about the band is not the recordings, great as many of them are, but the live performances. The "tension" that Jack White spoke of was real, and it could be revealed in a smile, a smirk, a flick of Jack's hip or the way Meg came crashing down on a cymbal with just a little extra force to punctuate one of Jack's lyrics.

The music offered a glimpse of this relationship, but only a glimpse. In a rare private moment captured in "The White Stripes: Under Great Northern Lights" tour DVD released last year, Jack White sits backstage at a piano playing "White Moon," a ghostly song of obsession. Meg sits silently next to him, head bowed, mouthing some of the words. There is a glance from Jack, and then Meg begins to cry. The song ends, but the tears do not, and the couple clings to one another, in no hurry to let go.

Hot flicks for cold, snowy days

By Julie Hinds
Detroit Free Press (MCT)

So far it's been quite a winter in much of the country, and if you get snowed in, be safe, stay warm and consider yourself lucky. Oh, and find something to distract yourself from worrying — you won't help anyone if you're freaking out about a snowpocalypse.

That could mean watching a movie, as long as it's not "The Day After Tomorrow," the 2004 climate change disaster film, or "The Shining," the 1980 classic with Jack Nicholson and the scariest closed-for-winter hotel ever.

Instead, this might be a good time for something light or romantic, like these snow-themed suggestions.

"Doctor Zhivago" (1965): Omar Sharif and Julie Christie play star-crossed lovers in this beautiful saga of war and revolution in Russia. But the most gorgeous thing about the movie might be the snow scenes, thanks to director David Lean's knack for filming outdoors.

"Groundhog Day" (1993): Imagine waking up over and over to the same day of cold temperatures and slushy streets in Punxsutawney, Pa. For Bill Murray, it's a chance to reevaluate his life as a snarky, self-centered weatherman.

"Downhill Racer" (1969): There's this skier who races downhill and ... OK, the only thing you have to know about this chilly sports drama is that it stars Robert Redford in his prime.

"Planes, Trains and Automobiles" (1987): This hilarious comedy — about an ad man's quest to get home for Thanksgiving after a blizzard diverts his flight — features Steve Martin and John Candy as a traveling odd couple. Watch for the expletive-filled scene where Martin loses it at a car rental counter.

"Seven Brides for Seven Brothers" (1954): A musical that hinges on an avalanche? When rugged pioneer guy Howard Keel marries Jane Powell, his six brothers want to get married, too — so they kidnap six women and prompt a snow slide that keeps them from being followed. Somehow, love and superb dance numbers ensue.

"Love Story" (1970): Get out your handkerchiefs for this weepy romance with Ryan O'Neal and Ali MacGraw, in which love means never having to say you're sorry. For fashionistas, it's worth watching for MacGraw's stylish coats and hats alone.

"Ice Age" (2002): Here's a cartoon for the whole family about a sloth, a squirrel, a woolly mammoth and other animals facing the biggest snowstorm in history, you might say. The voices are provided by Ray Romano, John Leguizamo and Denis Leary.

"Star Wars: Episode V — The Empire Strikes Back" (1980): If you think this has been the worst winter ever, consider what Luke Skywalker experiences on the icy planet Hoth. May the extra mittens be with you.

"Northern Exposure": While it's not a movie, this 1990-95 TV series about the lives of the quirky citizens of Cicely, Alaska, will provide hours of fun and make sub-zero temps seem charming, not depressing.

Scrat, the sabre-toothed squirrel in "Ice Age," embarks on an endless quest to hide his prized acorn in a safe location.

Turnovers and offensive woes continue for struggling UMass

W.HOOPS from page 8

able to go inside and score on them, and we didn't do that."

The UMass offense struggled all game long, looking out-of-place, slow and disorganized. The 49ers' defense proved too great, as they allowed only Cerie Mosgrove and Jasmine Watson to reach double-figures.

Mosgrove led the offense, netting 18 points and four offensive rebounds. She shot just over 50 percent from the floor and converted on 3-of-5 three pointers and all five of her free throws. Watson tallied 12 points and grabbed eight rebounds.

Turnovers continued to be a problem for the Maroon and White. In one game earlier in the season, the Minutewomen turned the ball over a season-high 32 times and since then, the team has had trouble holding onto the ball. Against Charlotte, the team turned the ball over 12 times in the first half alone.

"With our inexperience, that's kind of an issue for us," Lanpher said. "We continue to practice against it and take care of the basketball, but that's going to be an issue for us, especially against all the heavyweights. When you play the best, you've got to be able to take care of the basketball."

"For us to be successful, we can't turn the ball over more than 12-14 times," Lanpher added.

Jennifer Hailey led the 49ers' offensive attack, which saw four players score at least 10 points. Hailey recorded a double-double, netting 12 points and 11 rebounds. Shannon McCallum also scored 18 points and handed out three assists.

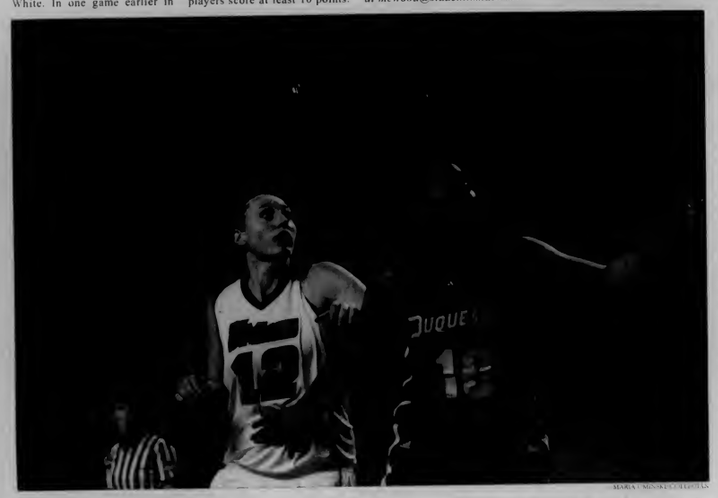
"We've got to be able to fight through this tough stretch of games," Lanpher said. "We're almost through it. Obviously we've got a great team in Dayton on Wednesday night, but then we've got games that, we feel like if we play well, we can win."

"If you look at the A-10 standings, there are the top six and then everybody else," he said. "So we've got a chance, if we can win three or four games, to be able to get into that eighth or ninth spot. That's where we want to be."

Michael Wood can be reached at mcwood@student.umass.edu.

MARIA I. MINSKY/COLLEGIAN

Members of the Minutewomen shake hands with the Dukes coaching staff earlier this season. UMass has now lost five-straight games and face their hardest stretch of the schedule in the upcoming weeks.



MARIA I. MINSKY/COLLEGIAN

Senior Cerie Mosgrove looks up after a shot by a teammate against the Dukes this year. Mosgrove was just one of two Minutewomen in double figures against Charlotte (18), as UMass fell for the fifth-straight time, 80-53.

Most difficult part of season ahead for UM

A-10 from page 8

to be steep, it will not be as rough as it seems from afar.

Looking at the four teams currently sitting higher than UMass in the hunt for the eighth spot, their conference records are, by all means, surmountable.

George Washington and Fordham both have 2-6 A-10 records, while LaSalle and Saint Joseph's both hold a 3-5 conference mark. If the Minutewomen are able to string together a good stretch of wins in the final weeks of the season, they will indeed be planning their trip to the A-10 tournament.

After all, they certainly have the tools at their disposal to make it happen.

Throughout both their wins and their tightly contested losses, the Maroon and White have shown formidable strengths in transition play, as well as from beyond the paint. In many of those games, their defense has proven strong enough to keep opposing scorers at bay, although they have allowed several virtually uncontested runs in the second half against more experienced opponents.

"For us to be successful, we've got to be clicking on all cylinders," Lanpher said. "We've got to have Jasmine and Shakia scoring inside to be successful, and we've got to have Meg and Cerie scoring on the outside."

Though their strengths can lead the team against opponents, it will be how they address their weaknesses that could change the tide of their season in their favor.

"Defensively, we've got to compete and follow through on assignments," said Lanpher. "And obviously, we cannot turn the ball over. For us to be successful, we can't turn it over more than 12-14 times."

Whatever their plan of attack may be, the Minutewomen have to prepare for what will be their toughest stretch of the year.

Time will certainly be putting them to the test.

Swimming, diving roll to win

A-10 championships, NCAA qualifiers up next for teams

By Jackson Alexander
Collegian Staff

On Saturday, the Massachusetts swimming and diving team beat Fordham, 171-127. However, the Minutewomen dropped their match to the Rhode Island Rams, 183-111.

The meet was held at Fordham University in the Messmore Aquatic Center and was the final meet of the regular season for UMass.

The Minutemen swimmers set the tempo early, as Trevor Ziegler, Peter Sacco, Christopher Howard and Timmy O'Neill combined to win the 200-yard medley relay with a time of 1:34.63.

Howard, the reigning Atlantic 10 player of the week, was the star in the pool on Saturday for the Minutemen. He ripped off a pair of victories in the 50 and 100-yard freestyles with impressive times of 21.33 and 46.96, respectively. In addition, he swam on the second place 200-yard freestyle relay team.

Individual accomplishments for the Minutemen didn't stop at that, Beau Garufi won the 200-yard breaststroke (2:10.48) and was second in the 100-yard breaststroke (1:00.74), and freshman Chris Inglis continued his personal hot streak, winning both the 200-yard butterfly (1:55.95) and the 200-yard IM (1:59.49). Inglis won the A-10 rookie of the week award last week thanks to his school record time in the 1000-yard freestyle last weekend at the Dartmouth Invitational.

Meanwhile, Adam Duffield had himself a career day on the diving board. The senior took home both the one and three-meter dives and set personal records in each event, with scores of 290.10 and 307.80, respectively.

Senior diving partner John Clark finished directly behind his teammate in both the one (271.40) and three-meter (293.33) dives.

The Minutewomen swimmers were led by Jessica Starosielec, who won the 100-yard breaststroke (1:08.05), came in second in the 200-yard breaststroke (2:25.30) and helped her team of Jennifer Corriveau, Kaitie English and Amina Meho to a second place finish in the 200-yard medley relay (1:50.37).

Meghan Nowak finished right behind Starosielec in both the 100 and 200-yard breaststrokes, with times of 2:25.48 and 1:09.03, respectively. Anna Cavanaugh had a strong showing, finishing second in the 200-yard freestyle (1:55.40), third in the 100-yard freestyle (54.39) and fourth in the 100-yard butterfly (1:02.45).

Molly Elkins started for the diving team on the women's side. She finished second in the one-meter dive and third in the three-meter dive. Her one-meter score was 226.65 and she finished with a score of 236.85 in the three-meter dive.

The meet in Fordham was the final dual-meet before the Atlantic 10 Championships. Both the men's and women's teams have been picked as favorites to win the championships.

Next up on the schedule will be the NCAA Diving Qualifiers on Feb. 11. Two weeks later will be the A-10 Championships, which will be held in Buffalo, N.Y.

The men's team has built a dynasty over the past 14 years, winning an impressive 12 conference championships under UMass coach Russ Yarworth.

The women are looking to win their first A-10 title under coach Bob Newcomb since the 2000-01 season.

Hawks soar past Minutemen

Kellogg and Co. fall to SJU Sat., Gurley has season low in points

By Herb Scribner
Collegian Staff

Every constant for the Massachusetts men's basketball team was absent Saturday night, as the Minutemen fell, 67-64, to Saint Joseph's University in Philadelphia.

UMass (13-9, 5-4 Atlantic 10) let the Hawks (6-17, 1-8 A-10) walk away with their first victory in conference play, ending their nine-game losing streak.

"We didn't have that moxie, that something you can't put your finger on," Massachusetts coach Derek Kellogg said.

When UMass found itself down 13 points, sophomore guard Freddie Riley went on a 3-point shooting spree, cutting the deficit to one.

The comeback for the Minutemen continued through the rest of the game. Down five points with 20 seconds left, Javorn Farrell hit one of two free throws, cutting the Hawks' lead to four. After Sean Carter grabbed an offensive rebound, Anthony Gurley hit a game-saving 3-pointer to cut the deficit down to one.

Junior forward Matt Hill had a 1-and-1 situation with a chance to save UMass, but the cards were not in the Minutemen's favor, and the Hawks held on to secure the victory.

UMass	64
Hawks	67

"We played right into their hands," said Kellogg.

The loss came despite the absence of SJU's top player, Carl Jones, who sat out the game due to injury. Conversely, the Minutemen's typical top player, Anthony Gurley, underperformed, as he scored a season-low 10 points.

"They stay connected with him," Kellogg said. "They really just stuck with one guy on him and really made the game hard on Anthony. He gets a little frustrated at times."

Gurley's slack was picked up by Riley, who tried to push the Minutemen back into the game. Riley finished the game with 14 points.

Junior center Sean Carter secured a season-high 15 rebounds to complement his seven points. However, he wasn't the only one with double-digits on the boards, as Javorn Farrell nabbed 10 rebounds of his own.

Despite out-rebounding the Hawks by 20, Kellogg didn't see that stat as anything out of the ordinary.

"All and all, there were just too many little things that we didn't execute on," said Kellogg.

UMass continued to perform well in rebounds, but its shot selection was lacking, as the team shot 24-for-57, including 10-for-24 from beyond the arc. Gurley was limited to eight shots on the contest.

With the Minutemen offense shooting around 42 percent for the game, their defense couldn't stop the Hawks' unloading of 3-pointers. In the absence of Jones, Langston Galloway went a perfect 6-for-6 from the perimeter.

The loss drops the Minutemen down to seventh in the conference, which still puts them in the playoff picture (12 of the 14 teams make the playoffs).

"Contrary to what you guys believe, we're a good basketball team," said Kellogg.

The fall at SJU is the second in a row for UMass, and the team's third in five games. Both were road losses, bringing the Minutemen's once undefeated conference-road record to 3-2.

The Minutemen will return back to Amherst on Sunday for its next contest against George Washington. After the Colonials, the Minutemen will remain home to take on the A-10 leader, Duquesne.

"A week off without any games, I think is good for us," said Kellogg. "It just felt like we were on the road for so many days."

Herb Scribner can be reached at hscribne@student.umass.edu.

Sean Carter looks to secure a rebound against Rhode Island earlier this season. Carter helped the Minutemen rally against the Hawks on Saturday, but UMass fell, 67-64.

MICHAEL WOOD/COLLEGIAN

UMass surrenders 16 goals in two HE defeats over weekend

By Dan Gigliotti
Collegian Staff

It was no secret to Massachusetts hockey coach Don Cahoon entering this weekend's road trip that its remaining schedule would pose a major challenge to his team.

Cahoon's worst nightmare could not have forecast this weekend's results.

The Minutemen dropped consecutive road games to two Hockey East frontrunners adding to a combined score of 16-2, including its worst-ever loss to No. 12 Merrimack (17-5-4, 11-5-3 HEA), 11-2, on Saturday.

UMass	0
BC	5

UMass lost 5-0 to Boston College (19-6-0, 15-5-0 HEA) on Friday. The Minutemen (6-15-4, 5-10-4 HEA) are now 0-10-2 against ranked teams this season.

In his postgame press conference, Cahoon had trouble providing any explanation for his team's lackluster performance and deferred to his players for comment.

Senior captain Paul Dainton said it was the worst game in which he's ever played.

"We're going to have to do some soul searching to see what they wanted out of this year," said Dainton, referring to his teammates in a MassLive.com interview.

Dainton made 49 saves and allowed 10 goals on the weekend, including 35 saves against BC and 14 stops against the Warriors before being pulled in the second period for freshman Jeff Teglia.

Saturday was the first time UMass has allowed 10 or more goals since giving up 12 in a loss to Maine on Feb. 14, 1998, the most goals scored by Merrimack in a game against the Minutemen.

Special teams play was a struggle for UMass, which went 0-for-12 on the power play and 5-for-10 on the penalty kill on the weekend.

UMass	2
Warriors	11

After stymieing Northeastern on the power play last weekend (10-for-10 penalty kill) and giving up one goal in its previous eight games (1-for-29 since Jan. 7), the Minutemen penalty kill went 1-for-4 against BC and 4-for-6 at Merrimack.

The UMass power-play is now 0-for-23 in its last four games. The Minutemen didn't capitalize on 25 Eagle penalty minutes on Friday and 12 Merrimack penalties for 24 minutes on Saturday.

UMass fell early against the Warriors when Fraser Allan scored his first goal of the season with 13 minutes, 21 seconds to play in the opening period.

Junior forward Danny Hobbs evened the score with three minutes 16 seconds left to go in the period off of a Rocco Carzo assist.

Less than two minutes later, Joe Cucci and Chris Barton put Merrimack on top for good, scoring on two separate power-plays in the final two minutes of the period following penalties by Joel Hanley and Hobbs.

Barton finished with five points (two goals, three assists) and Brandon Brodhag had three points (three assists), leading 11 Warriors who tallied multiple points.

Chase Langeraap scored the other Minutemen goal, his seventh of the season and tenth in his last nine games (seven goals, three assists).

UMass was outshot 43-to-16 by the Eagles Friday. BC took 20 shots in the first period to the Minutemen's six, and got out to a 1-0 advantage following a Joe Whitney goal with four minutes 27 seconds left.

The Minutemen took four penalties for 19 minutes in the opening frame, but the Eagles went 0-for-3 on the power-play.

Two Philip Samuelsson goals in the second and third periods, respectively, pushed the Eagle lead out to 3-0. Cam Atkinson finished the scoring with 4 minutes 17 seconds to play in the game, scoring his twentieth goal of the season.

Samuelsson (two goals, one assist) and Atkinson (two assists, one goal) each had three points, leading the Eagles.

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Captain netminder Paul Dainton skates in a game earlier this season. Dainton made 49 saves on the weekend but was pulled against the Warriors for freshman Jeff Teglia after allowing 10 goals.

ALEX MORTHER/COLLEGIAN

Minutewomen drop 5th straight vs. 49ers

By Michael Wood
Collegian Staff

The Massachusetts women's basketball team didn't score a point until almost five minutes into Saturday's game against Charlotte, and found itself trailing by double-digits all afternoon en route to an 80-53 loss.

"They're one of the best teams in the [Atlantic 10]," UMass associate head coach Steve Lanpher said. "We're young and we've just got to be able to learn from this."

UMass	53
49ers	80

Charlotte came out in a full-court press to start the game and wreaked havoc on UMass' offensive plan. The Minutewomen turned the ball over 12 times in the first half alone and allowed seven points off those turnovers. The 49ers started the contest on a 9-0 run before they allowed a basket and pushed their lead to double-digits soon thereafter. Trailing by as many as 35 points in the game, UMass could not keep up.

"They just sped us up," said Lanpher. "We were reacting to their offense too much instead of executing, and they forced turnovers. We missed some early shots and they made some early baskets. Against a team like that, you've got to be able to handle their pressure, and we needed to be

Playoffs not yet out of picture for UM

By David Martin
Collegian Staff

It's no surprise that, as a season creeps closer and closer to an end, the thought on everyone's mind is whether a team will be eligible for postseason play.

For the Massachusetts women's basketball team, the time they have to make that thoguht a reality is running short.

After what was a promising trend of victories in the last weeks of December through the first half of January, things were looking good for the Minutewomen. The team was working all angles of the court, points were aplenty and production came from both the upperclassmen and the freshmen coming off the bench.

As of late however, things have taken a turn in the wrong direction.

Since their last win against Saint Louis at the Mullins Center Jan. 19, the Maroon and White have lost their last five games and have dropped to 6-18 overall and 2-7 in the Atlantic 10, a mark which has them sitting at 12th in the conference.

But as the team looks towards the road ahead to catch eighth-seeded Saint Joseph's, UMass assistant coach Steve Lanpher knows there is still plenty of time to turn their playoff hopes into reality.

"If you look at the A-10 standings, there are the top six, and then everybody else," Lanpher said. "So we've got a chance, if we can win three or four games, to be able to get into that eighth or ninth spot. That's where we want to be."

Though conventional wisdom would dictate the climb up is going

UM student won't be extradited to Fla.

By Sam Butterfield
Collegian Staff

A Northampton judge released University of Massachusetts student Manuel E. Pintado from custody Monday morning, allowing him to travel to Florida on his own to face charges of corruption by threat and written threat to kill or do bodily harm, which could carry a sentence of up to 20 years if the 47-year-old is convicted.

Pintado, joined by relatives, friends, UMass faculty and parishioners from First Churches Northampton, where the sociology student serves as a deacon, was facing extradition to Martin County, Fla. for allegedly threatening State Rep. William D. Snyder, a Republican involved in drafting a bill which would give Florida police broader power to check detained individuals' identification and legal status.

Northampton District Court Judge W. Michael Goggins allowed Pintado to retract his waiver of rendition rights, meaning he voluntarily promises to travel to Florida, rather than going through a potentially lengthy and difficult legal fight to avoid being extradited by Florida authorities.

"I haven't seen this in 27 years," the Springfield Republican quoted Goggins as telling the court about Pintado's legal move.

Northampton public defender Thomas Estes, representing the Ecuador-born Pintado, said Pintado initially gave up his rendition rights because he did not think he would be able to finance the trip to Florida on his own, but after members of his congregation stepped forward and offered to bankroll some of his expenses, he changed his course.

"He initially decided to waive extradition because he didn't have any means to get to Florida on his own," he said. "His church came out in strong support of him, and when we were in court this morning, the judge allowed him to withdraw that waiver and released him with the agreement that he'll leave for Florida on Wednesday and turn himself in on Friday."

In a Monday afternoon statement, Martin County Sheriff Robert L. Crowder said he was shocked and confused as to why Goggins granted Pintado the right to travel to Florida on his own.

"A death threat lodged against a public official is a very serious matter," he said. "I am baffled as to why a Massachusetts judge would negate the bond amount on a warrant issued against a man threatening to do harm and having the ability to do harm to Representative Snyder and his family. These are serious allegations placed against a man who is no stranger to law enforcement, serious enough that a Martin County Judge ordered he be held on a very high bond amount."

Crowder said Florida authorities are worried Pintado will not turn himself in.

"We have grave concerns that Pintado will be unwilling to return to Florida on his own and, more importantly, are concerned that there again exists a possibility that because of his release, he could potentially act upon his previous threat," he said.

Crowder said that if "Judge Goggins had not ordered Pintado's release, he would have been in custody at the Martin County Jail by tonight."

Because Estes is a public defender, he said he will not be representing Pintado when he faces charges in Martin County, located in Southeast Florida near Port St. Lucie.

Estes said he believes Martin County officials were less than pleased with Goggins' ruling.

"The officers are actually at [Bradley] airport waiting for confirmation that Mr. Pintado has purchased his tickets to travel to Florida," he said.

Estes explained individuals facing extradition have several choices. One, he said, is "do nothing," or wait in jail until the so-called demanding state issues a governor's warrant allowing authorities from that state to retrieve a suspect. Estes said defendants usually only choose this option when they are facing highly serious charges like rape or murder and need time to prepare their defense.

A second option, he said, is "you can post bail and make your own way to the demanding state within a certain amount of time, usually 30 day or so, but in this case it was more quickly than that."

Last, Estes continued, defendants can waive their extradition rights, and the demanding state "has a certain amount of time to come and get you."

What was unusual in this instance, Estes went on, was that

NORTHAMPTON POLICE DEPARTMENT

Suspect's supporters: Pintado is a pacifist

By Sam Butterfield
Collegian Staff

A crowd of about 50 family members, friends, parishioners at First Churches of Northampton, community organizers and UMass sociology faculty members turned out at Northampton District Court Monday to support Manuel E. Pintado, who they know as Manny, as he faced extradition to Florida on charges that he sent threatening emails to a Florida State Representative.

"I've never had so many people show up for a client before," said Northampton public defender Thomas Estes, who represented Pintado at the hearing.

Family members and friends called the 47-year-old sociology student at the University of Massachusetts, who until last year attended Holyoke Community College, an amiable pacifist with a passion for immigrants' rights and state support of public higher education, though they said he suffers from anxiety and could sometimes become swept up in his own dedication and act excitedly.

Former UMass student and New York City resident Tito Espinosa, Pintado's son-in-law, said the Navy veteran who served in the Persian Gulf War is "incredibly sweet to my mother" and "a docile person."

First Churches interim pastor Mark Siefried, who was in court on Pintado's behalf Monday, said Pintado works extensively in the community on behalf of the church, is a member of the congregation's Peace and Justice Committee, and attends service almost every Sunday.

"Manny, we know him as Manny, is a deacon, which means he has been selected by the congregation at large to be one of the primary spiritual leaders of the church, which means he visits the infirm and people in nursing homes, helps prepare worship and serve communion and collect money with the offering every Sunday. He's given a lot of responsibility for the spiritual welfare of young and old alike," he said.

Siefried said Pintado is an ardent supporter of the marginalized and economically and socially disaffected.

"Manny has really been helping our congregation understand immigration issues and the plight of the poor," he said.

Siefried, who is serving as interim pastor after former minister Peter Ives retired last year, also mentioned that Pintado participated in Public Higher Education Network of Massachusetts' (PHENOM) cross-state march for public higher education funding last fall.

PHENOM Western Massachusetts organizer Ferd Wulkan called Pintado "a really committed and passionate advocate for public higher education and for students, especially."

Wulkan said he had known Pintado for about three years, but that he got to know him particularly well during the cross-state march, which took higher education activists from Berkshire Community College in Pittsfield to the State House in Boston last October.

"He spent a lot of time on that march just talking with people who we met along the streets and on campuses in a really gentle, sweet way," said Wulkan, who was also in

MLK meal creates stir at California-Irvine

A dining hall at UC Irvine served chicken and waffles to mark Martin Luther King Day.

FLICKR/DJALGAN

By Claire Reid Kiss
Collegian Correspondent

On January 17, 2011 America celebrated Martin Luther King Jr. Day with a day off. However, at the University of California, Irvine, dining services celebrated a different way. According to a Jan. 27 report in the Los Angeles Times, the Orange County university's dining services wanted to serve "comforting food" that corresponded with the holiday, so they chose a chicken-and-waffle night. The element which touched off a racial-sensitivity firestorm, however, was the sign above the food that read, "MLK Holiday Special: Chicken and Waffles."

Ricardo Sparks, the co-chairman of the school's Black Student Union, raised the issue. Sparks was offended by not

Select Board approves new taxi co. in Monday session at Town Hall

By William Perkins
Collegian Staff

A new all-hybrid vehicle cab service is headed to Amherst.

Members of the town's Select Board last night approved an application allowing The Green Cab Company, a subsidiary of the Peter Pan Bus Lines, to bring its fleet to town. The decision, which was unanimously approved by all board members — with the exception of member Alisa Brewer, who was absent — came after Paul Lemieux, a representative of the company, gave a brief oral presentation during a public hearing Monday night.

The service, which formed after the company bought two small area taxi services, has already been operating in Northampton, Lemieux said.

"It's just been a very, very positive experience in the Northampton area," said Lemieux.

And, Lemieux noted, since the business has been well-received in Northampton, it was an easy decision to bring the service across the Pioneer Valley to Amherst.

"It's difficult to do business in Northampton and not Amherst," Lemieux said.

The service's fleet, Lemieux noted, consists of a few hybrid Ford Escape SUVs and one Ford passenger van.

Since the business is based in Northampton, in order to comply with regulations, it will keep its publicly accessible records for Amherst on file at Amherst Books.

After Lemieux gave his presentation, he received praise form some board members for operating an environmentally-friendly transportation service.

"I think it's really great that [you're] using hybrid vehicles," said board member Diana Stein.

Additionally, board members also unanimously approved of license applications for a slew of the service's drivers to operate in town.

Elsewhere, Town Manager John Musante gave Select Board members a brief recap of discussions that took place at a recent Amherst Redevelopment Association meeting on the Gateway project — a proposal between the town and the University of Massachusetts that involves

Labor Dept. launches new site for job seekers

By Sam Butterfield
Collegian Staff

Call it a socialized LinkedIn, call it a government-run Monster.com, call it the feds cutting into the classified section's business. The Department of Labor announced last Thursday that it had created a new website designed to set Americans up with information about hundreds of occupations and job openings in their area, MyNextMove.dol.gov.

According to a Thursday release from the Department of Labor's press team, My Next Move is designed to help citizens of any age find employment and job skill training opportunities, but it is geared more specifically towards students and younger Americans.

The site "may be especially useful for students, young adults and other first-time workers as they explore potential careers based on their interests."

In addition to the new site, DOL has launched another initiative, "mySkills myFuture," aimed at assisting Americans' with prior experience in a given field match the skills they have with developing fields. That new program can be found at its website, mySkillsmyFuture.org.

In last Thursday's release, Secretary of Labor Hilda L. Solis said President Barack Obama's administration is striving to make job opportunities available for everyone.

"This administration is committed to expanding opportunities for all Americans," she said. "That includes ensuring all workers – those with years of experience and those just entering the workforce – have the information they need to make informed career decisions and get good jobs."

Solis said My Next Move is just one instance of the administration attempting to make government services more accessible to citizens.

"By leveraging technology in a user-friendly tool, My Next Move will help those seeking career guidance learn more about work opportunities in fields that are of interest to them and that are likely to have job openings today and well into the future," she said.

Like other jobs sites, My Next Move allows viewers to search for jobs across a variety of categories, such as occupation, industry, and the new "O*NET Interest Profiler" function, which pairs users' interests with matching job areas by prompting employment-seekers through a 60-question survey. For the last 10 years, the Labor Department's Occupational Informational Network (O*NET) has offered an 180-question version of the profile-generator that citizens could print out or download. The new version is now available as part of My Next Move.

In a push to promote certain emerging fields and industries, the Labor Department has also designed My Next Move to let users search for jobs in developing areas. Users can search for jobs in fields with a "bright outlook," as well as searching for jobs in "green" industries or, for individuals looking to hone their skills over time, can seek jobs with a Registered Apprenticeship program.

The site features succinct, easily-read profile pages of about one page in length for each of the more than 900 occupations about which it offers information. The profiles detail information on what knowledge, job skills and aptitudes potential applicants must possess for a given job, provides a rating about the particular industry's outlook for development and job growth, lets users know the level of education they need to get a job in the field of their choice, technologies the field relies on and gives users similar field links when they search in a given area. The profile pages also provide information about salary ranges, training opportunities in particular areas and relevant openings by area.

In other communications from the Obama administration, the White House released last Friday a report, "A Strategy for American Innovation: Securing our Economic Growth and Prosperity," which emphasizes the significance of focusing on innovation to grow America's economy.

Among other goals, the report outlines the administration's goal of launching a new wireless initiative, which would aim to bring 98 percent of Americans wireless Internet access by 2016. The administration would also like to expand the speed and power of wireless Internet by 500 MHz, which the report said "is critical to avoid[ing] 'spectrum crunch' and facilitate[ing] the rapidly growing wireless technology revolution."

Another goal the report details is patent reform. In the near future, the Obama administration will look "to overcome the enormous backlog at the patent office and improve patent quality."

Changes to how the patent office operates "can allow the USPTO to adequately fund its operations through user fees and implement new initiatives to improve patent quality," according to the report.

These shifts, the report continues, could "reduce the average delay in patent processing times from 35 months to 20 months, and to less than 12 months where applicants prioritize their applications."

The report also focuses on diversifying the nation's sources of energy, and sets a goal of drawing America's energy needs from 80 percent clean sources by 2035.

Another means of investing in innovation the report places emphasis on is improving elementary and secondary education, particularly in math and science.

"Administration initiatives will train 100,000 new science, technology, engineering, and mathematics (STEM) teachers over 10 years," the report claims.

Last, the report touts the importance of the Startup America initiative, which aims to promote entrepreneurship and to put a new focus on training Americans to become business leaders.

Select Board approves wine samples, Green Cab Company

SELECT BOARD from page 1

the possible developing of the area that comprised the former fraternity row into housing, and other possible commercial enterprises.

After Musante gave a brief outline of the key points he and UMass Deputy Chancellor Todd Diacon raised at the meeting — noting that the next step in the project is engaging counseling from a consultant — board members briefly mulled over the matter.

"This is the kind of project that makes ... Amherst more attractive than another state university [town]," said board member Aaron Hayden.

Select Board Chair Stephanie O'Keeffe said she felt the ARA meeting was a "real turning point" in the matter, noting that some town residents had fears they wouldn't get much of a say in the process. She added that she feels Musante helped slow the process down when he became town manager last October.

"I think that people will really be engaged in this in a real way," said O'Keeffe.

Hayden added his assessment of the meeting, saying he felt it helped clarify some conclusion about the whole process.

After O'Keeffe noted that the Select Board has been pressed to issue a consensus on the situation, her fellow members gave her the go-ahead to draft a document that would reflect their sentiment — which, last night, appeared mostly positive toward the development.

In other business, Select Board members also granted a license to Green River Ambrosia that would allow they company to sell and give out sampling of wine at a weekly farmer's market. Also, Musante noted that town still has about $68,000 left in its budget for snow removal.

William Perkins can be reached at wperkins@student.umass.edu.

Threat suspect free to travel to Fla., will not face extradition

PINTADO from page 1

Pintado received information while being held at the Hampshire County House of Corrections in Northampton last week that his congregation at First Churches would help fund his legal fight.

Courtesy Martin County Sheriff's Department
Martin County, Fla. Sheriff Robert L. Crowder said he was disappointed that Pintado will not be extradited.

This information reversed his legal course, and Judge Goggins agreed that, had Pintado known he would have benefactors willing to help him, he would not have waived his extradition rights.

"What was very, very unusual about this was that the judge agreed with my argument that there was information that existed last week that, had Mr. Pintado known, would have changed the result," he said. "He had no idea that his church was going to be so supportive, the courtroom was literally full of his church parishioners offering moral and monetary support, it was amazing, I've never had so many people show up for a client before."

Pintado was arrested last Monday night in Northampton after Florida authorities contacted police there and asked for their help in finding him. Martin County Sheriff's Department deputies had traced the unsigned emails sent to Snyder by Pintado through the public access wireless Internet at the Starbucks in downtown Northampton. They arrested him without incident at his Hampton Street apartment around 8 p.m. last Monday evening.

Menu mayhem at UC Irvine

MLK from page 1

just the food being served, but by the sign above it. On his Facebook page, Sparks posted, "Yes, the OC is very racist. There's a bigger picture to all of this because it's more than just giving the okay to an MLK chicken-and-waffles night. There is a system that allows ignorance like this to continue. For Black students on this campus to feel uncomfortable."

The chefs at Pippin Commons, the dining hall at the 22,000 student university which put the meal together at last minute are not being reprimanded for their decision, according to the LAT report. However, Sparks plans to protest the dining commons and hopes his fellow members of the Black Student Union will join, according to The OC Weekly.

Aramark Corporation, the Philadelphia-based company that provides food services to UCI, is also taking the blame for the offensive measure, along with UCI dining services.

Cathy Lawhon, a UC Irvine spokeswoman, stated that the school, which is only 20 percent white and is 49 percent Asian, according to College Board figures, values diversity.

"UC Irvine and Aramark have great respect for the diverse backgrounds, values and beliefs that exist within the campus community. We apologize to anyone who was offended and have taken steps to ensure this does not happen again".

The University of Massachusetts likely won't have to worry about a controversy like this happening at dining commons across campus. Ken Toong, director of UMass' Dining Services, stated that dining services puts its menu combinations through research groups, which ensure no menu items will stir passions as they did in California.

"At UMass, for every menu, especially special themed menus, we have a group that researches the food choices to make sure that what we put out won't offend anyone." Though Pippin Commons' staff may not be remonstrated, Toong said that if such an incident happened in Amherst, his staff would certainly be cracked down on.

"UC Irvine should be more sensitive about this," he said. "We would not do this to offend students, it's common sense," he said.

When asked how the dining commons celebrates cultural holidays without offending students, he pointed out the Chinese New Year menu that was served last Thursday.

"We will have food from every part of the country to represent all different cultures of China, but we won't have just one entrée to represent China".

UMass also celebrates Black History Month, but, Toong said, "Fried chicken will not be on the menu."

Although it may seem like a big deal on paper, most students haven't even heard of it, said Amanda Toothacre, a senior at UCI.

"To me it kind of sounds like an overreaction, and that not much will happen with it. I have to admit that I looked it up online to get a bit more info, that's how little I've heard of it," she stated.

The backlash against the chicken-controversy, said Toothacre, hasn't drawn too much attention on-campus and she said none of her friends had heard about the slip-up, either.

Pintado's family and parishioners at First Churches in NoHo say he is passionate about politics, public higher education

SUPPORTERS from page 1

court Monday morning. "I've known Manny for a few years, and the biggest piece of time I spent with him was on that walk; I just ended up so admiring him, he's someone who, at a relatively late age, enrolled in college, graduated from HCC, and enrolled at UMass. He's a great organizer and a great conversationalist," Wulkan said.

Siefried said he believes Pintado is more comfortable in Spanish than English, perhaps accounting for the intensity of some of his statements.

"I know Manny as a very peaceful, loving, gentle, Christian man, who is also very passionate. He says things that are sometimes surprising, but I think part of that is attributed to the fact that he crosses back between English and Spanish; I think he's more comfortable in Spanish, and I think that accounts for him sometimes being misspoken."

Northampton resident and chair of First Churches' Peace and Justice Committee David Entin described Pintado as an active member of the church and committee who is well-read and eager to participate in community organization.

"Manny joined our committee and has been very active; he comes to every meeting, he comes just about every Sunday to church. He's very friendly, certainly outgoing, very likable, and as a member of the committee he's been very responsible."

Entin said Pintado has lobbied the committee to devote some of its attention to public higher education funding in Massachusetts.

"One activity he's brought to the attention of our committee has to do with public funding for higher education," he said. "He brings PHENOM newsletters to our committee and shares with us their efforts to secure more state funding for public higher education," said Entin, the former president for academic affairs at Holyoke Community College.

Entin said Pintado was married at First Churches last spring by former pastor Ives to Isabel Ortega, a 50-year-old Northampton resident, and has a daughter who is a student at Princeton University. A search of Princeton's directory found no students with the last name Pintado.

Reached by phone at her Northampton residence Monday afternoon around 5 p.m., Ortega declined to comment, apologizing, and said "I'm sorry, I can't help you, I can't talk about it, I apologize," before hanging up the phone.

Entin echoed other friends and supporters' sentiment that Pintado could be called a pacifist.

"The other thing I would say about Manny is that he's a very peaceful person," said the 70-year-old native of Jacksonville, Fla. "I've never seen him get angry or yell or scream."

Entin described First Churches as a fairly tight-knit congregation, though he said not all of the parishioners know each other intimately.

"If you attend for a while you do get to know the names of most people. You don't necessarily socialize with everybody or socialize with the people at the church in terms of going to the movies or playing bridge, but it's certainly a friendly church. People know each other and care about each other," he said, "and that's why we were shocked that this horrible incident happened, and that's why we had 40 to 50 people in court today."

Entin also said the congregation was pleased with Judge Goggins' ruling.

"That's, what we hoped for," he said of the Judge's decision to allow Pintado to travel to Florida on his own, rather than being taken into custody by the Martin County Sheriff's Deputies and U.S. Marshals who were waiting in court to take Mr. Pintado to Stuart, Fla., had Goggins decided to allow Pintado to be extradited. "I was pleased the Judge will let him go on his own feet, without being carried in shackles to Florida. This way he can show up and he can wear a coat and tie and can say, 'I could have tried to escape but I didn't,' and hopefully he'll be free while the case is being prepared."

Entin acknowledged that, given the date Pintado allegedly sent the email, Jan. 8, the same day Rep. Gabrielle Giffords and 18 others were shot outside a Tucson, Ariz. supermarket, the message appeared especially grave.

"It's sad in terms of the timing, and it's a very political issue [in Florida], I think Manny believes, 'Oh, it was so stupid of me, I apologize.'"

Entin said that after Pintado was released, he and other congregation members had the chance to speak with him and embrace him.

"We did speak to him and hugged him later, he was in tears and hugging everybody and thanking us for being there and supporting him."

Espinosa, Pintado's son-in-law who was also in court Monday, also spoke to one widely-discussed element of the case, which some have argued illustrated Pintado's intent to follow through with his threat, his December trip to Florida.

"I've been reading all the online clippings about this story and they all talk about him traveling to Florida last month, where he could have followed through on his cyber threat," said Espinosa. "Him and my mother did travel to Florida [in December] on a sort of belated honeymoon, they were married about six months ago."

As for what the honeymooning couple did while traveling to the Sunshine State: "They spent most of [the trip] bothering me with picture text messages of various 'adorable' cats and beach scenes."

Pintado's sister, Michele Catalano, a resident of Bergen County, N.J., corroborated Espinosa's version of why Pintado traveled to Florida.

"I have seen various videos on the news online and [it] was said that he travel[ed] to Florida back in December for unknown reasons and possibl[y] to carry out a threat," she said, "I haven't read anywhere about the reason why he was in Florida, telling me that the police never asked him why he was in Florida; I'm sorry, but William Snyder is not that special for my brother to travel to Florida. What is special is that Manny went to visit our sister and uncle, who both live in Cape Coral. He spent his vacation with his family for Christmas and introduced his wife."

Hannah Cohen/Collegian
Martin County, Fla. authorities traced the threatening email sent to Rep. William Snyder to the Starbucks at 211 Main Street in Northampton.

Threat suspect Manuel E. Pintado is a deacon at First Churches Northampton (pictured above). Parishioners there describe him as a gentle, caring man.

Catalano also said Pintado suffers from an array of mental issues, which he developed after his time in the Navy.

"My brother came back from the Gulf War, he came back with anxiety, depression and mental illness. He has to take medication for life," she said. "After reading what he wrote, with all the misspellings, I strongly believe that he did not take his medication, and when he doesn't take his medication, he says things that he doesn't mean. He is not a violent person or capable of such violence. He says things without thinking or in the moment."

Espinosa said that, while he understands that authorities must take such threats seriously, he believes Pintado is no more dangerous than other misguided people who sometimes make irrational decisions with potentially violent implications.

"For sure he's a dumba**, right up there with all the teenagers who call in fake bomb threats to their junior high schools and people like Sharron Angle who call for citizens to exercise their Second Amendment rights, or Sarah Palin or people who show up to political rallies with nooses and shotguns, but he is not a killer, not even close," he said.

Two members of UMass' sociology department were also in court on Pintado's behalf Monday.

Sociology professor and director of undergraduate programs Dan Clawson, one of the two faculty members who attended Monday's hearing, also said he knew Pintado as passionate and sometimes capable of getting carried away in his eagerness.

"He is a passionate person who is deeply committed to social justice and eager to talk about it, and he is given to exuberance," said Clawson. "He would go out of his way to help other people in need. He clearly sent an unfortunate email apparently, but in no sense did he actually intend any physical harm to a legislator in Florida," continued Clawson, who also participated in parts of the PHENOM march.

Reached by phone at her office late Monday afternoon, sociology professor Eve Weinbaum, the other faculty member in attendance, said she did not personally know Pintado very well, but that she came out because she was shaken up and saddened by the incident.

Not all that Twitters is gold

Isaac Himmelman

In the middle part of the 15th century Johannes Gutenberg invented the printing press. The effects of the printing press were paradigm shifting. The ability to mass produce the written word shook the foundations of the ruling order. Feudalism fell apart and in its place were planted seeds out of which blossomed the inner workings of the modern state. The ease at which words, gospels and ideas could be produced for a mass audience, spread across borders and consumed by the human race suffering from an unquenchable thirst for knowledge and information, united peoples and created nations.

Yes, the printing press stands as one of western civilization's greatest contributions to the world. Gutenberg's memory is forever embedded in the groundwork of our societies. He was the Prometheus of his time, and for that, humanity is forever grateful.

Now fast forward, say, 560 years. The fluidity of information first tapped into with the advent of the printing press has increased to the nth degree with the globalization of the Internet. A Catholic bishop from the year 1456, once brought to tears at the sight of the Divine word printed a hundred times over on leather bound copies of the Gutenberg Bible, would melt into oblivion at the thought of the woman next to me on a London-bound plane pulling up an Alexandrian library's worth of texts from a tablet she keeps in her purse.

Sadly, what is now often referred to as the "Twitter Revolution," did not bring about any visible change to the corrupted framework of Moldavian government.

If you wish to see clear evidence of Johannes Gutenberg's legacy alive and thriving today hop online, and submerge yourself in that beautiful monstrosity of information that is the Internet.

And yet one wonders, just as the Gutenberg printing press slowly ate away at the once sturdy pillars of Feudal society, perhaps so too might the Internet deconstruct our current paradigm of society. We're seeing the birth pangs of this already. Beginning on the streets of Chișinău, Moldova in April 2009, an estimated 15,000 citizens of this post-Soviet Eastern European country protested the results of a fraudulent election.

Their demonstrations were organized through the then recently introduced social networking site, Twitter. Sadly, what is now often referred to as the "Twitter Revolution," did not bring about any visible change to the corrupted framework of Moldavian government. However, the Twitter Revolution did hint at the web's awesome potential to shake up the ruling order or at the very least unnerve seated rulers of corrupt governments.

Two years later and the Internet is at it again. First on the streets of Tunisia where people protested against the regime of sitting President Zine El Abidine Ben Ali, a leader who managed to garner a majority of votes in every election since coming to office in 1987. This brings to mind the Middle East's most famous post-partisan and serial election victor Saddam Hussein.

The Tunisian protests have resulted in a domino effect in the region. In Egypt citizens have taken to the streets demanding a change in the country's governing hierarchy. Leaders in countries like Syria and Yemen are now keeping an eye glued to Al Jazeera for updates on the future careers of their contemporaries.

In a recent piece written exclusively for the "New Yorker" online edition last week, Malcolm Gladwell argues against the notion that social networking vies-a-vie the Internet is bound to bring about any substantial change in the same vane as the Civil Rights Movement of the 1960s. Gladwell sees the hype around social networking's role in the Egyptian protests to be, well just hype. Yet the fact that the Tunisian unrest comes only months after Wikileaks released U.S. diplomatic cables describing the Ben-Ali family as a "quasi-mafia" should not be seen as mere coincidence. And if the Internet's role in the Egyptian unrest is being exaggerated, why then, did President Hosni Mubarak find it necessary to temporarily disconnect his country from the web simultaneously promising his people another round of free and fare elections?

Hamas, Hezbollah, the Nazis: all these parties were voted into office in free elections. Mubarak - a leader whose job post is left redundant if and when Egypt institutes democratic reforms - will cut off the Internet, but never shy away from a free election. This is because democracies are not born through elections.

Democracies are born through a free flowing of information forming an aggregate of opposing ideas and opinions. The Internet embodies this free flowing of information. With the Internet, dictators will begin finding it increasingly more difficult to stop this free flowing.

Soon censorship will have become as anachronistic as serfdom. Rulers of all countries will be expected to run their governments with the upmost transparency and the citizens of autocracies will take to the streets, demanding fair elections and open web access.

It is in this way that the Internet is the printing press of our age Just as the advent of the printing press eased the transfer of information, thus transforming governments of the past, so too the Internet, in increasing the breadth of information and the speed to which said information can be accessed and communicated, will transform governments of the present. Egypt is just the beginning. Realize as you sit by your computer searching for breaking news updates online that the seated leaders of every corrupt government on Earth - from the crony-capitalists of the former Soviet Union to the theocrats of the Middle East - are sitting in their offices in Moscow or Riyadh, eyes glued to their computer screens, hands trembling in fear.

The perils of democracy

Dan Stratford

Democracy: it is an interesting word. It is one most prevalent in our present political discourse. It is a word that is exuberant yet mystical, glorious yet arcane. It is used as a synonym for all things good, and it is treated, at least by television talking-heads, as a panacea for the world's myriad problems. However, just as often as it is used, it is often misused, inappropriately characterized, and simply misunderstood.

Most Americans recognize that democracy and the ideals it represents, such as liberty, equality, and community - Liberté, égalité, fraternité in the parlance of the French Revolution – are universally accepted as the most ideal and indeed the most utopian form of social organization imaginable.

Despite this, the reality of democracy is much more turbulent and much darker than any member of the public really wants to believe.

For the sake of clarification, it must be asserted that we do not live in a "democracy." Indeed, that notion is enough to attract the ire of most serious students of political science. We do, however, live in a republic. Republics, in short, differ from democracies - the latter of which has rarely been seen in history while the former has been somewhat more common. Both recognize that that man is a fundamentally flawed creature.

This is in direct contrast to a strictly democratic system, where, as one modern adage interestingly states, "two wolves and a lamb" decide what to eat for lunch.

Republicans correctly note that man is given more to emotion and passion than to a cerebral reflection on what must be done to preserve, and expand, the common-wealth of the nation. They are, as such, the champions of a compromise system, which recognize that ultimate legitimacy is derived from the populace, exercised through the right of voting, protest and the petition of government. Natural rights, the rights of minorities, the rule of law and the election of well-educated, prudent and dispassionate representatives to enforce those laws and navigate the treacherous waters of politics are treated in a manner most reverent.

This is in direct contrast to a strictly democratic system, where, as one modern adage interestingly states, "two wolves and a lamb" decide what to eat for lunch. This is not to say that a direct democratic system is not the most ideal system of government. Indeed, Alexander Hamilton once declared in a speech that, "It has been observed that a pure democracy if practicable would be the most perfect government.."

It is just that it is dangerously utopian, designed for a perfect world that does not exist by any stretch of the imagination. It assumes an evenly-distributed perfect political education and that the vast multitudes of people are all-wise, all-knowing, and prudent enough to jointly make critical decisions that affect the future of their country. This is something that, at risk of sounding cynical, is patently untrue.

Indeed, in any conceptual "real" democracy there is no true safeguard for the ideological minority – it is, in modern parlance, a "tyranny of the majority." The frenzied many are able to suppress and even destroy the dissent of the few, contributing to the decay and self-destruction of society itself in the process. This was validated in the latter half of the aforementioned quote by Hamilton, which was given in a speech urging the ratification of the very republican U.S. Constitution - "...Experience has proved that no position is more false than this."

Indeed, even in the present day, with information distributed over a wide range of cultures and languages thanks to modern telecommunications, there seems to be some confusion between and even conflation of the ideas of democracy and republicanism. People oftentimes wrongly refer to them as if they were synonyms, with the United States referred to as one of the world's great "democracies."

The Founders would be repulsed by such libel, as they designed our government based not on abstract, romantic, and ultimately impracticable principles of social leveling, but upon a multi-faceted, constitutional, and moderate conception of the role of government. Our Forefathers government is one that would, through checks and balances and the separation of powers, forestall the tyranny of the frenzied masses just as much as it would the tyranny of governmental overreach.

At the same time, it would provide the adhesiveness necessary to bind together the then disparate states of America. To cite the ever-quotable Hamilton once again, "Real liberty is neither found in despotism or the extremes of democracy, but in moderate governments."

This fear of Hamilton's, of rule by passion rather than by reality, presents itself even in today's complex and labyrinthine foreign policy arena.

A centerpiece of American foreign policy over the past decade, and a cornerstone of neo-conservative thought, has been the idea that the United States possesses the best systems of government and social organization imaginable.

Furthermore, it should be exported, by force if necessary, to recreate the world in our utopian image. Simply stated, this desire to "spread democracy," aside from being technically incorrect as discussed at length in the above paragraphs, clouds actual matters of national interest. These include stability in key energy-producing regions and trade issues, with the opiate of a crusading romanticism.

The great irony of all of this is that the Founders would stand aghast as utopian speculators tear apart not just the moderate, balanced form of government that they labored to create, but the realist, sensible statecraft that especially the Federalists endorsed.

This argument is strengthened by the reality of "democratization" on the ground – many so-called "democracies," especially manufactured ones such as Iraq, only become so after a long, arduous, and expensive struggle. This is proof that republics, as great as they are, are not the universal standard of governance for all people in all circumstances. Gloomy as it may sound, we must deal with the world as it is, not attempt a large-scale revolutionary reform.

As made evident by the success of the American Revolution, the chaos of the overly-democratic French Revolution, and the horror of the Reign of Terror, forming a republic is like threading the eye of the proverbial needle. They are certainly more practicable and functional than democracies.

Republics are evolutionary, rather than revolutionary, suited to a specific time and place. However, their beauty lies not in their over-romanticized glory, but in their practicability, modularity, and ability to deal with the world as it really is.

ARTS@DAILYCOLLEGIAN.COM

James Cameron goes down under

By Brian Canova
Collegian Correspondent

With a marketing campaign resting heavily on James Cameron's insignia, "Sanctum" has a lot to live up to. The name-dropping is misleading, however, as Cameron is executive producer and Alister Grierson directs the film. From the early sweeping shots of a helicopter flying over the rain forests of Papua, New Guinea en route to the deepest cave on Earth, "Sanctum" resonates with the familiar epic cadence Cameron's narratives are apt at tapping into.

In Grierson's sophomore film, preceded by 2006's "Kokoda," he finds the subject for this 3D thriller in a fictional underwater cave system, shot on location in Queensland, Australia. Defined by Webster's as both a sacred place and a place where one is free from intrusion, "Sanctum" is ripe with religious imagery and allegory. From the religious fanaticism these divers steadfastly hold in cave diving to the naming of the crew's initial underwater discovery as St. Jude's Cathedral, their thirst for exploration comes to supersede their instincts for survival.

Josh (Rhys Wakefield), more a climber at heart than a diver, follows his father Frank (Richard Roxburgh) on his many cave explorations around the world, despite their strained and hostile relationship. Frank's hard-nosed, unyielding personality stands at odds with Josh's emotional and strong-willed persistence. Nevertheless, they come to rely on each other as they trek through the interminable cavern, cyclone rains pouring in. Father and son come to recognize their similarities, and the instincts Josh has inherited.

The diver's live by what seems like a heartless code. In this sacred cavern two kilometers beneath the surface of the Earth, nothing is as it seems, all dignity is lost. No one is more taken aback by this than Josh, but as the push to find an escape grinds on, the others grow weary as well. Everything changes in the cave and in this adventure. If there's one mask and two people, one person lives and one person dies. Two members won't be lost, with acts of heroism becoming acts of recklessness and negligence, putting everyone's lives at risk. From Baptismal drownings of wounded divers to the choices of one life over another, the audience is converted to the coldhearted mindset the cave teaches.

The cave can be acknowledged as another member of the cast in this movie, with its ominous lessons, forbearing sounds and sanctimonious lurching, the cast refers to it as if it were alive. "She goes," the characters say throughout the film, which is to say that a certain tunnel is worth exploring, a throughway and not a dead end.

The cave "feels" and the cave "understands," Frank pronounces to the weary and the weak of heart. Frank's determination and drive, once admirable to his colleagues becomes his pitfall as his actions and motives continually put their lives on the line in the name of exploration. "Down here I can make sense of this. It's like my church. I can hold a mirror up and see who I am," Frank explains to his son.

Cameron himself has become somewhat of an underwater aficionado in recent years, directing the documentaries "Expedition: Bismark" and "Ghosts of the Abyss 3D" in 2002 and 2003, respectively. "Sanctum" reflects this, with the National Geographic feel of the film akin to "Avatar" or even "Jurassic Park." In an interview with Australia's "Sunday Times," Cameron stated his intention to film scenes for the "Avatar" sequel at the bottom of the Mariana Trench, the deepest part of the world's oceans. "Sanctum" in large part feels like somewhat of a trial run for that lofty endeavor. Cameron also explains that "Avatar 2" will largely focus on the oceans of Pandora.

If the fear of drowning makes you squeamish, you're better off avoiding this one, as this fear understandably looms overhead throughout the movie. The gore for the most part is kept at bay, with one minor scalping and a couple mutilated bodies. The score, from Australia's David Hirshelder will do well to keep you in it, rounding out the orchestral pieces with eerie and original world music.

Brian Canova can be reached at bcanova@student.umass.edu.

The latest film to bear the James Cameron insignia, "Sanctum" takes viewers into the depths of an underwater cave system. The film stars Rhys Wakefield and Richard Roxburgh, both pictured above.

Cult makes comeback

Oscar-winner Anjelica Huston (pictured) stars in "Prizzi's Honor," a forgotten cult classic that warrants rediscovery. The film also stars Jack Nicholson and Kathleen Turner.

By Mark Schiffer
Collegian Staff

With the recent resurgence in popularity of such films as "The Holy Mountain" and "Suspiria," the cult film is a phenomenon that won't be dying any time soon. For audiences looking for the most unusual films of yesteryear, here is a guide that includes everything from a mostly-forgotten Oscar winner to a madcap 1960s extravaganza.

8. "Prizzi's Honor"- Despite its Oscar-winning performance from Anjelica Huston and blisteringly brilliant character roles from Jack Nicholson and Kathleen Turner, this darkly-comic John Huston mob movie has been mostly forgotten by today's audiences. It's too bad, because with the current popularity of such films as "In Bruges" and "The Ice Harvest" one would assume a film such as this would catch on.

7. "Lord Love a Duck". Everybody loves a good madcap British 1960s comedy. So why has this Roddy McDowell and Tuesday Weld lifestyle pastiche fallen by the wayside? With cameos from Ruth Gordon – who you may remember as Maude, from "Harold and Maude," and the nosy neighbor from "Rosemary's Baby" - and Harvey Corman, who you may remember better from basically every Mel Brooks movie – this film is sure to be a hit at your next movie party. You"ll never look at a Cashmere sweater the same way.

6. "Morvern Callar"- Samantha Morton's supporting roles in "Synecdoche, NY" and "Mister Lonely" gained her much acclaim, at least to a certain extent. But what many people don"t know is that in 2002 she had a starring role in this spiritual exploration of a Scottish woman whose boyfriend killed himself moments before the film begins. We follow her wandering through her hometown, going to parties, even traveling to Ibiza; all while listening to the mix-CD made for her by her boyfriend. This is a deep, contemplative kind of film which admittedly won't be for all tastes. But the emotional heights this film eventually reaches are sure to connect with some kind of audience.

5. The Mick Travis trilogy- Whatever your opinion of the film"s quality may be – Kubrick isn't for everyone – it is difficult to question the fact that Malcom Macdowell's performance will live forever in the realm of cult classics. What you may not be aware of is a series of films made over the course of a decade by British auteur Lindsay Anderson. These films, titled "If...," "O" Lucky Man!," and "Britannia Hospital" all serve to deconstruct and undermine British society in the late 60s and 70s. And boy, are they bizarre. Musical numbers, dream sequences and near-nihilistic themes all combine to create wonderfully disorienting film experiences.

4. "A Canterbury Tale"- No, this isn't a direct adaptation of one of Chaucer"s famous stories. Rather, it is a film made by Michael Powell and Emeric Pressburger, the creators of the ballet films "The Red Shoes" and "Tales of Hoffman." What we have is a WWII propaganda piece disguised as a village mystery disguised as an allegory for spiritual connection with countryside. It is a profoundly odd and beautiful work.

3. "The Magic Christian"- Richard Lester's "A Hard Day's Night" will endure forever as a classic example of 1960s British comedy. Unfortunately, this quirky 1969 Terry Southern-penned adaptation of his own novel has fallen by the wayside. It tells the tale of an eccentric billionaire played by Peter Sellars, who adopts a street boy played by Ringo Starr. Featuring some of the oddest cameos you"ve ever seen – Roman Polanski doing a striptease while reciting Shakespeare is a highlight – this film is heartily recommended to every 1960s fanatic.

2. "After Hours"- It almost feels like Joel Schumacher"s "Falling Down." A commercially viable director – in this case, Martin Scorcese – got his hands on an incredibly strange and almost disturbing script and managed to push it into the mainstream film market. While it wasn't exactly a commercial success, it still features bit parts from Rosanne Arquette, Catherine O'Hara and even Cheech and Chong. But make no mistake – while this film does have its funny moments, for the most part this Gulliver"s Travels-esque adventure into Downtown New York, NY will leave you unsettled and nerve-racked. Perfect for a night of popcorn and friends.

1. "The Yakuza Papers: Battles Without Honor & Humanity" - For the marathon film-viewers, it"s hard to do much better than this five-part Japanese crime saga. Betrayal, blood-tics, lopped-off limbs and an oddly pleasant sense of morality at the conclusion make this series of films a must-see. And devotees of cult film should take note: The entire series was directed by Kinji Fukasaku, creator of must-see "Battle Royale."

Mark Schiffer can be reached at mschiffe@student.umass.edu.

Games that get in your head

By Tim Jones
Collegian Staff

An all too common trend among video games in today's culture is the stereotype of the renegade soldier/space marine/war veteran whose primary desire is to destroy every single thing in sight, which is generally Nazis or aliens. It doesn't help that stories are being condensed into a formulaic pattern where something bad is taking over and the heroes get to curb stomp or plasma sword slice everything into submission.

Call of Duty is essentially the same game every time, and the ability to jump two inches higher and wear a purple suit of armor is enough for many Halo fans to dish out another $60 on a "new" game.

For gamers looking for a more in-depth story or characters who have more personality than buttered bread, they often have to search for more obscure titles, ones that actually add elements of unique plot to the mix. Here are a few examples to get people on the right track.

Persona 4, a rare gem from Atlus, for the Playstation 2 isn't easy to find, and there are good reasons for that. This Japanese role playing game has players controlling a protagonist as he attempts to save his new hometown from an onslaught of kidnapping. How do he and his friends do so? Well, by entering the TV world and summoning creatures manifesting from their emotions and personalities to fight the darkness inside of people's hearts. Confused yet? It gets better.

Players must manage their relationships with their friends during their spare time in order to make these personas stronger in battle Becoming better friends outside of dungeons makes you more powerful inside of them. The end result is a unique gem that really fleshes out strong characters. Clocking in at about 70 hours, players can expect to grow attached to the murder mystery and teammates that break the typical mold. The battle system is fantastic as well. Every character has an inner demon, and overcoming these issues is what makes this game truly shine. A word to the wise though, it's tough as nails, so the casual gamer won't like the difficulty.

Silent Hill 2, for the PS2, Xbox and PC, is a survival horror game with the emphasis on horror. James Sunderland gets a letter from his dead wife telling him to meet her at Silent Hill and it's all downhill from there. What James sees along withas the monsters he encounters are products of his psyche. Every single aspect of the town comes from his mind. Expect an abundance of metaphors. Players don't really get a sense of who James is until little clues indicate that he is not well. The people he encounters are equally screwed up. Open to interpretation, there are many possibilities for what is actually happening.

Of course, he controls like a tank and camera angles are sometimes the most terrifying thing, but for an emotionally draining story, it's very difficult to go wrong with this game.

A little more on the light side is the platformer, Psychonauts, by mastermind Tim Schafer, which was missed by most of the mainstream community. Players follow Raz, a kid who runs away to a summer camp for psychic warriors. After everyone suddenly has their brains extracted from their head, Raz must literally go inside their heads to save them from being stupid.

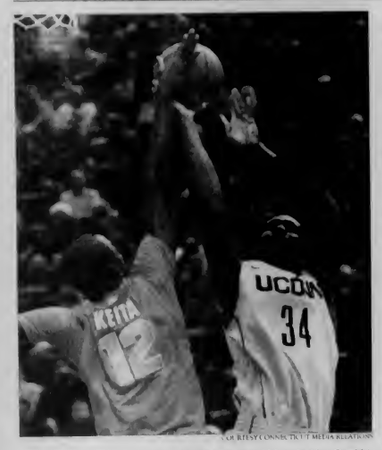
Worlds are shaped by how the person thinks and what their personality is like. Besides fighting off manifestations of strong emotions, Raz must collect emotional baggage in the form of movie-reel memories and image icons. From a board game called "Waterloo World," obtained from a man who thinks he is fighting Napoleon, to an espionage mission inside a milkman who thinks the girl scouts are out to kill him, levels are varied and each grabs attention faster than the last.

Funny beyond belief and with originality that really shines, Psychonauts shouldn't have been cast aside so quickly, and should be tried by anyone who consider themselves "gamers."

Take a break from fighting yet another war. Ask yourself if you really need to simulate yet another football game when it's almost the same thing every time. Take a risk and try something original to broaden your horizons. Maybe one will get stuck in your head.

Tim Jones can be reached at timothyj@student.umass.edu.

While everyone else is busy with the latest Call of Duty (pictured), games like Silent Hill 2 and Psychonauts break away the usual formula for an entirely new gaming experience.



Syracuse's Baye Moussa Keita blocks a shot by UConn's Alex Oriakhi. Keita had 11 rebounds, six steals and two blocks in the victory.

'Cuse wins historic matchup

By Eric Mansfield
Collegian Staff

The Syracuse men's basketball team avoided what could have been its first five-game losing streak in coach Jim Boeheim's 35-year tenure by defeating No. 6 Connecticut, 66-58, last Wednesday night.

The No. 17 Orange was led by senior forward Riek Jackson, who recorded his 15th double-double of the season, posting 13 points and 13 rebounds. Sophomore guard Brandon Triche and junior forward Kris Joseph added 16 and 11 points, respectively. Freshman Baye Moussa Keita also played well, grabbing 11 rebounds to go along with six steals and two blocks on defense.

Top 25 Basketball

The win brought the Orange's Big East record to 6-4 and their road record to 4-2. Overall the Orange stand at 20-4.

The game set a record for most combined wins by two opposing Division I head coaches. Boeheim and UConn's Jim Calhoun have combined to win 1,688 games and both are members of the Naismith Memorial Hall of Fame. The win brought Boeheim's total to 848.

As time expired in the first half, Jackson hit a jump shot to give the Orange their first lead of the game at 26-25. Syracuse opened the second half on a 10-4 run before the Huskies made a 7-0 run themselves, tying the game at 36 apiece. The Huskies would close in on the lead again late in the second half, coming within three points, but the Orange held on. Junior guard Scoop Jardine sealed the game from the free-throw line.

OSU upsets Washington

Oregon State snapped its three-game losing streak by beating No. 20 Washington in Corvallis, Ore. last Thursday night.

The win was the Beavers first against a ranked opponent since 2006, when they defeated the No. 24 Arizona.

Oregon State was led by sophomore Jared Cunningham, who finished with 19 points on 3-for-7 shooting from the field and 13-for-17 shooting from the charity stripe. Senior Calvin Haynes added 11 points and a career-high seven rebounds, while fellow senior Omari Johnson went for six points and 11 rebounds.

Washington was led by junior guard Scott Suggs who finished the game with a career-high 18 points, 15 of which came from beyond the arc.

The Huskies were coming off of a loss at rival Washington State that dropped them two spots in the rankings. All of Washington's losses have come on the road.

This was the first win for the Beavers over Washington since Feb. 22, 2007 when Oregon State won, 73-65, in Corvallis.

The win put the Beavers overall record at 9-12 and 4-6 in the Pacific-10.

Arizona wins thriller

Arizona defeated California in triple overtime, 107-105, last Saturday night.

Sophomore Lamont Jones led the way for the Wildcats, netting a career-high 27 points. Jones was able to hit the go-ahead lay-up with one minute, three seconds remaining in the third overtime to seal the victory for the Wildcats. Jones also tied the game with a 3-pointer with five seconds left in the second overtime. Sophomore Kevin Parrom also had a career-high 25 points for the Wildcats.

The defending Pac-10 champion Golden Bears were led by junior forward Harper Kamp, who scored 33 points, seven of which came in the second overtime.

The win was Arizona's fifth in a row and it's eighth in its last nine games. Cal, meanwhile, was riding a four-game win streak before the loss.

The contest also marked the Golden Bears' longest home game since 1977 when they beat Oregon, 107-102. In January of 2009, Cal defeated Washington in a triple overtime game.

First conference victory eludes lowly URI after pair of losses

A-10 from page 8

URI still winless

With the loss suffered against GW last Wednesday, a winless conference record is becoming more likely for URI.

Facing a Colonials squad that also did not own a win in the A-10, the Rams squandered a great chance to end their drought. They lost to the Colonials by 18 points and put up an unimpressive total of 35, their second-lowest scoring output in a game this season. URI also fell by four to Saint Joseph's three days later. It was also the Rams eighth-straight loss and the 12th contest they have dropped in their 13 games.

The Rams have six chances left on their schedule to produce a conference win. Of those six games, URI's best opportunity will come against SLU and UMass. They face the 1-7 Billikens this Sunday at home and the 2-7 Minutemen on Feb. 19 in Amherst.

Xavier scoring margin

Winning has come easily all season long for Xavier. The Musketeers are currently 19-2, sit at an undefeated 8-0 in A-10 play, and have ripped off nine consecutive wins.

The play of senior forward Amber Harris and center Ta'Shia Phillips anchored Xavier, but the Musketeers have received strong play from numerous contributors. These contributors include senior guard Special Jennings, junior guard Tyeasha Moss and sophomore guard Katie Rutan.

Currently they are second to Dayton in scoring by putting up 78.7 points a game and they are tied for second with Charlotte by surrendering 55.5. Xavier's plus 18.6 scoring margin is the reason why it has been outstanding this season and is expected to not only win the A-10 conference title, but to also be a player in the national championship.

Matt Catizone can be reached at mcatizon@student.umass.edu.

After dropping games against George Washington and Saint Joseph's, Rhode Island has lost eight-straight conference games and 12 overall in its last 13 contests.

Goalkeeper Rob Madore recorded 31 saves for Vermont in a win over Providence in a Hockey East matchup over the weekend.

UNH defeats Maine to keep streak going

By Matt Strong
Collegian Correspondent

Senior forward Paul Thompson contributed a game-winning effort for the second consecutive weekend on the road to help the New Hampshire hockey team to a 5-4 victory over Maine Saturday night at the Whittemore Center.

With less than a minute remaining in play, Thompson swiftly skated with the puck into the offensive zone and charged toward the left post, tucking his body as he wrapped around the net letting a shot go. The shot, taken from a negative angle, went off the back of Maine goalie Shawn Sirman's leg pad and into the goal with only 15.3 seconds remaining in the third period. The game-winner served as sweet revenge for Thompson, who was denied on a breakaway just 45 seconds into the first period.

Hockey East

The great play of the No. 6-ranked Wildcats (17-5-4, 15-2-2 Hockey East) have earned them a spot among the best teams in the country. UNH is now riding a four-game winning streak and has claimed sole possession of first place in the conference. Maine, (11-9-6, HE 8-7-4) while retaining their No. 15 rank, is now winless in five-straight games with approximately a month remaining in regular season play.

Wildcats goalkeeper Matt DiGirolamo withstood 13 first-period shots and 15 more through the next two frames. DiGirolamo's counterpart Sirman was credited with 22 saves.

Four different Wildcat players had multiple-point games Saturday, including freshman John Henrion who tallied four, tying his career best. Maine's offense was led by three different Black Bears who all registered multi-point games as well.

Lowe's Senior Class Award nominee Tanner House added two assists. House is the only Hockey East player nominated for the award which rewards excellence on and off the ice. The winner will be announced April 7 at the Frozen Four in Minneapolis, Minn.

UNH returns to action Friday, Feb. 11 against rising Hockey East title contender Merrimack. Face-off is scheduled for 7 p.m.

Hat-trick leads Warriors

Senior Joe Cucci carried the weight for Merrimack Friday night en route to a 4-3 overtime victory over Northeastern on the road at Matthews Arena.

Cucci led the No. 12-ranked Warriors (17-5-4, Hockey East 11-5-3) past the Huskies with a four-point effort that saw the senior net a game-winning overtime goal as well as a hat trick. Cucci displayed his hockey smarts and quick instincts with a goal off a carom and multiple well-timed slapshots, one being the overtime game-winner.

In a penalty-plagued matchup, both teams reaped the benefits, scoring two power-play goals apiece. The teams combined for a seemingly unfeasable 108 penalty minutes throughout the game. Northeastern saw plenty of opportunity in the first frame, skating with an extra man for five power plays but converted just one.

Despite making 35 stops, Huskies (8-11-6, 7-8-5 HE) sophomore netminder Chris Rawlings took the loss. Joe Carnata outlasted Rawlings in a tightly-contested goalie war, stopping 23 shots and outlasting a constant offensive advantage from Northeastern throughout the first period.

Senior players carried both teams in terms of scoring. Seniors Tyler McNeely and Steve Silva each added goals of their own for the Huskies.

McNeely, riding a four-game point streak, recorded his fifth multi-point game of the season and 19th of his career. The British Columbia native should be interesting to follow as he is eight points shy of notching his 100th career point in collegiate play.

Catamounts dominate Providence

Vermont had 13 players register points against the Friars Saturday night at Gutterson Fieldhouse. Five different skaters recorded multi-point games and the Catamounts continued their mastery of Providence on the ice, extending their unbeaten streak to 10 and winning streak to six.

Vermont (6-15-5, 4-11-4 HE) scored three goals in both the first and second periods. Goaltender Rob Madore collected 31 saves and extended his great play against the Friars, now holding a goals-against average of 1.28 in seven contests.

Providence (7-13-6, 3-11-5 HE) goalie Alex Beaudry finished his stint in the net with 19 saves before being relieved of his duties. Junior Justin Gates played the final period, recording 12 saves and allowing just one goal.

After a first period Catamount penalty sent defensemen Josh Burrows to the box, left winger Matt Germain found himself wide open off a feed from Kyle MacKinnon for the first and only goal of the game for the Friars.

Drew McKenzie picked up a power-play goal for the second straight night to give Vermont a 3-1 lead heading into the first intermission. Sophomore Anders Franzon added an impressive unassisted wrist shot goal to build a 4-1 lead six minutes into second period play.

After a weekend series that saw Vermont kill 10-of-11 power plays, coach Kevin Sneddon spoke of his pleasure with the team's decision-making and execution, claiming the power play energized the team as the game progressed. Multiple Friars contributed the decisive victory to selflessness and dedication to the game plan.

The win for the Catamounts catapults them ahead of Providence in the Hockey East standings. Vermont visits No. 15 Maine for a two-game series this weekend.

Busch ties own record

UMASS from page 8

(2003). The Stow, Mass. native's performance Saturday earned him a trip to the IC4A Championships.

"Sean did a great job on building upon what he's done so far this season," O'Brien said. "[He has] already qualified for New England's and IC4A, I look for him to work out kinks next week, like footing on the mat and other things along those lines."

Already qualified to compete in the New England and IC4A Championships coming up, senior Tyler Cotto posted a time of 8.12 in the 60 meter hurdles, placing first in the event.

"[Tyler] is an extreme competitor, who, like Sean, we've relied on to perform every week and he delivers," O'Brien said.

The 500-meter sophomore tandem of Paul Grafov and Joe Doyle placed ninth and 10th, respectively, with times of 1:05.17 and 1:05.27. Doyle's time qualified him for the New England Championships in the event.

Four Minutewomen qualified for future competition with impressive performances on Saturday. Junior Chrissy Silvar sueeessfully posted a height of 11-03.75 in the pole vault, placing second in the event and qualifying her for the NEC in the event. Silvar's mark was good enough for a new season high.

Other UMass women that qualified for the NEC were Elizabeth Fisk (mile, 5:05.93), Meghan Leahy (400 meters, 59.44), and Michelle Jenssen (500 meter, 1:18.05.) Senior Stephanie Aguguo won the triple jump over the weekend, posting a mark of 38-06.25.

Both squads will be back in action next weekend, competing at the Valentine Invitational in Boston. The event will prepare both squads before they head to North Kingston, R.I. to compete in the Atlantic 10 championships the weekend of Feb. 18.

UMass competes at Yale in Giegengack

Many qualify for NEC, ECAC, IC4A regionals

By Scott Cournoyer
Collegian Staff

Despite the chilling weather and record snowfalls this winter throughout the Northeast, the Massachusetts men's and women's track and field squads were red-hot this weekend, as they competed against some of the best schools in the area at the Giegengack Invitational, hosted by Yale.

"Overall, I was very pleased with the way our team performed," UMass coach Ken O'Brien said. "We had some more guys qualify for [New England] and [IC4A] events and that's important when thinking about going even further."

The two-day event on Friday and Saturday proved to be successful for both UMass teams, as many have already secured a spot in both the New England Championships later this month and IC4A Regionals in early March.

Despite most events not coming until Saturday, Day One proved to be successful for the Minutemen and women that did perform.

Senior Kevin Spieler placed fifth in the weight throw, with a distance of 54-1.25. The Attleboro, Mass. native was coming off the Reebok Indoor Games the weekend before, where he placed third and set a personal-best with 54-2.75.

The duo of Zachary Koncki and Daniel Wu placed third and fourth, respectively, in the long jump, posting marks of 22-4.50 and 22-3.50.

With only six performances on the first day for the Minutewomen, some the representatives had impressive performances that set the stage for Day Two. Sophomore Rebecca Banker stood out, posting a high jump of 5-05.00, good enough to win the event and also rank fourth highest all-time in school history.

In the 5,000 meter event, junior Karen Roa joined Banker in the UMass record books. Roa ran a time of 17:30.77, placing third and posting the fifth-best time in school history for the event. Redshirt junior Colleen Wetherbee placed fifth in the same event with a time of 18:09.80. Both Roa and Wetherbee will represent UMass at the New England and ECAC Championships, as both performed well enough to qualify.

Saturday's performances built upon the already successful first day, as individuals qualified for future competitions. Others, who already qualified based on previous performances this season, continued their strong seasons.

Senior Sean Busch led the way for UMass, competing in the pole vault. Busch tied the indoor school record in the event, posting a height of 15 feet, 9 inches, which he already was tied for with former UMass star, Ken Schneider

See UMASS on page 6

JEFF BERNSTEIN/COLLEGIAN

The Massachusetts men's and women's track and field teams had several competitors qualify for the New England and ECAC Championships, as well as the IC4A regionals, at the Giegengack Invitational.

MAXWELL SPAIN/COLLEGIAN

UMass goalkeeper Tim McCormack tries to save a shot on goal. The Minutemen wrapped up their preseason with a scrimmage against Siena.

Minutemen play last tune-up

By Scott Cournoyer
Collegian Staff

It was cold, wet and misting, but Massachusetts men's lacrosse coach Greg Cannella had his team out on the field bright and early Saturday morning for a scrimmage against Siena.

No. 15 UMass played up to its caliber in the exhibition against the Saints, controlling the ball with timely passes and playing a lot of defensemen up near the mid-to-offensive zone.

The Minutemen took control from the start, with early goals by seniors Ryan Liebel and Ryan Hantverk. Liebel's goal came in the middle of the zone, where UMass weaved a bunch of attackers near the top. Liebel eventually came right down the middle, seeing a mismatch with a lack of defenders in numbers and plenty space to run into.

In 2010, the Longmeadow, Mass. native started the first 11 games on attack, scoring 14 goals. Overall, the then-junior contributed 19 points on the season, helping UMass advance to the Colonial Athletic Association playoffs in its first year in the conference.

Late in the second quarter, with UMass pushing the ball deep into the offensive zone, attacker Art Kell received a pass, found an opening and room to run with the ball on the left. He quickly charged in, fired a shot and found the back of the net.

Last season, the junior notched 33 points for UMass, scoring 21 goals in only eight games. As the team's third-leading returning goal scorer from last season, Kell looks to contribute even more on the offensive end in 2011.

In the wet conditions, the Minutemen were able to control the ball and move it up and down the field at their own pace, forcing the Saints back deep in their zone for much of the match. The middle of the field was virtually left untouched, as both teams worked the sidelines, generating passes towards the middle, once in their respective offensive areas.

The defense was solid from start to finish, a possible staple for this year's squad. Seniors Travis Tripuka and Mael Walkowiak controlled the area for UMass, pressing Siena backward when on attack. Forced to play back, the Saints mostly took deep shots and were hardly allowed inward towards the middle.

Senior Dan Lawson took four shots on net, with one coming from the right of the net as he slipped past a screen of UMass defenders. He received a pass and put a shot on goal, only to be denied by goaltender Tim McCormack.

McCormack, a junior who started all 14 games last season for the Minutemen and held a .523 saves percentage, looks to build upon what he did last season.

With two scrimmages now in the books, the Minutemen look ahead to this Saturday as they will open their regular season against No. 12 Army at Garber Field.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

Davenport nails game-winner for Bonnies

By Stephen Hewitt
Collegian Staff

A 3-pointer sunk by guard Michael Davenport with 1.6 seconds remaining in regulation catapulted the St. Bonaventure men's basketball team past Duquesne, 64-62, on Saturday.

The loss for the Dukes (16-6, 8-1 Atlantic 10) ends their undefeated conference mark as well as stopping their winning streak at 11, the longest since their 1970-71 squad reeled off 15 straight victories.

Davenport led the Bonnies (12-10, 4-5 A-10) with 16 points, including going 4-for-7 from 3-point distance. Andrew Nicholson and Matthew Wright also chipped in 15 points each in the victory.

With 10.9 seconds left and coming out of a timeout, Damian Saunders found B.J. Monteiro for the go-ahead layup that put DU up 62-61.

After T.J. McConnell stole the ensuing inbounds pass and stepped out-of-bounds, SBU was given a last chance to come up victorious.

With time winding down, Demitrius Conger drove the length of the court and found Davenport who drained the game-winner and sent the Bonnies student section to wildly rush the court.

Monteiro led the Dukes and all scorers with 17 points in the loss.

The Bonnies will look to build off their thrilling victory this Saturday when they host La Salle, while DU welcomes Xavier on Sunday in a battle for first place in the conference.

A–10 Basketball

Xavier stays dominant

Xavier extended its league-record A-10 home winning streak to 37 games as it defeated Saint Louis, 76-68, before a sold out crowd on Saturday.

Tu Holloway paced the scoring for the Musketeers (16-6, 8-1 A-10) with 24 points, while Mark Lyons added 15 points and seven assists in the win.

Second-chance opportunities were the difference as XU outrebounded the Billikens (8-14, 3-6 A-10) 11-1 on the offensive glass and came away with a 14-0 advantage in second-chance points.

The Musketeers led 31-24 at halftime, but SLU battled back and forced several lead changes early in the second frame.

XU, however, would never relinquish the lead after a Lyons basket put the home team up 53-52 with just under 13 minutes remaining in the contest.

The victory improves the Musketeers' home record at the Cintas Center, now in its 11th season, to 146-18, including 75-10 against A-10 competition.

XU's last conference home loss came on Feb. 26, 2006 when it was defeated by Saint Joseph's, 69-58, in the season finale.

The Musketeers will take a three-game road trip beginning this week when they travel to play Georgia and the Dukes.

49ers fall short

Fueled by Tony Taylor's game-high 25 points, George Washington survived a late second-half charge from Charlotte and improved its standing into a four-way tie for fifth place in the conference, winning 73-67 on Saturday.

After the teams were knotted up at 39-39 five minutes into the second half, the Colonials (12-11, 5-4 A-10) pulled away and increased its lead to 62-47 with two minutes, 51 seconds remaining in the game.

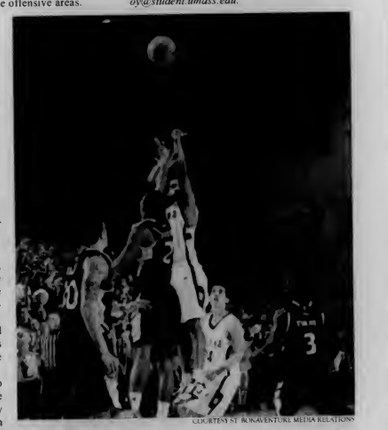
It was all but over, however, as 49ers guard Derrio Green went on a furious scoring spree, pouring in 15 of his 22 points in the last 2:01 of the game to pull UC within five at 72-67 with 19 seconds left.

It would be too little too late, though, as free-throws and little time remaining would keep the 49ers (10-13, 2-7 A-10) from completing their comeback attempt.

An'Juan Wilderness produced a double-double, scoring 14 points and corralling 10 rebounds in the losing effort.

Next up for the 49ers is a trip to Rhode Island this Saturday, while GW hosts Richmond on Wednesday before traveling to Amherst to take on Massachusetts on Sunday afternoon.

Stephen Hewitt can be reached at shewitt@student.umass.edu.



COURTESY ST. BONAVENTURE MEDIA RELATIONS

Guard Michael Davenport sunk a 3-pointer with 1.6 seconds remaining to help SBU topple Duquesne on Saturday.

COURTESY GEORGE WASHINGTON MEDIA RELATIONS

George Washington stopped an 11-game skid with back-to-back victories over Rhode Island and Saint Louis. With the win, the Colonials passed Massachusetts, the Billikens and the Rams in the A-10 standings.

Colonials leapfrog A-10 teams after wins over Rams, Billikens

By Matt Catizone
Collegian Correspondent

Strong back-to-back games have made the George Washington women's basketball team relevant again in the Atlantic 10.

After suffering through a brutal 11-game losing streak which saw the Colonials (7-15, 2-6 A-10) lose their first six conference games, they now appear to be onto something. With their two wins, the Colonials jumped Massachusetts, Saint Louis and Rhode Island in the conference standings.

A–10 Basketball

George Washington went into its game last Wednesday against Rhode Island with more on the line than it appeared. Both teams have struggled tremendously this season with neither owning a conference win until this game.

The Colonials came out strong, taking a 12-point lead into halftime and ultimately winning by 18. Their matchup against the Billikens produced a similar outcome. Again, the Colonials jumped out to a large halftime lead of 16 and coasted the rest of the way en route to a 49-36 victory. The result sent SLU to a third-consecutive loss and knocked them out of the current tournament picture.

George Washington's win now puts it into contention for the A-10 tournament which starts on March 4 in Lowell. With only the top 12 of the possible 14 teams making the tournament, these wins have come at a crucial time for the Colonials. With games still to come against Duquesne and Xavier, the road to a tournament birth is difficult but certainly not unattainable.

Majority of Americans sympathetic towards demonstrators in Egypt

By Michelle Williams
Collegian Staff

According to a Gallup poll released late Monday night, nearly two-thirds of Americans support the protests that have been rocking Cairo, Egypt for the past two weeks. 66 percent of Americans polled said "political changes occurring in Egypt will be mostly good for that country, and a similar percentage (60 percent) say the changes will be mostly good for the United States," according to the Gallup poll report.

82 percent of participants in the survey said they are sympathetic towards the protesters (with 42 percent responding that they are very sympathetic), while 11 percent said they are unsympathetic.

69 percent of respondents said they were following the news about the political situation and demonstrations in Egypt very, or somewhat closely. Those who were closely following the news of the situation did not differ from others in their views of the situation's impact on Egypt or the U.S.

The poll found that Democrats were more likely to be sympathetic to the protesters, and also more likely to call for Egyptian President Hosni Mubarak to step down.

77 percent of Democrats felt the political changes are good for the nation, and 71 percent of Democrats polled said they felt the political changes are good for the U.S.

Of participants in the survey, 59 percent who identified as Republicans said they felt the political developments are good for Egypt, 22 percent less than polled Democrats. 51

Protesters in Egypt are demanding a say in their government, and a majority of Americans agree.

Wilco to Easthampton

Wilco, a Chicago-based rock band led by Jeff Tweedy (shown above), announced that they are starting their own record company dBpm Records. The record label will be based in Easthampton, Mass.

By Michelle Williams
Collegian Staff

Every year the rock band Wilco ventures into the Pioneer Valley to headline the Solid Sound Festival at the Massachusetts Museum of Modern Art in North Adams. Now the band is setting roots down in Easthampton.

Wilco, a Chicago-based rock band led by Jeff Tweedy, announced that they are leaving Nonesuch Records, their longtime label, to start their own record company dBpm Records.

"This is an idea we've discussed for years," Tweedy said in a statement. "We really like doing things ourselves, so having our own label feels pretty natural to me."

The band detached themselves from a record label two years ago, after the release of their 2009 album, "Wilco (The Album)."

The headquarters for the new record label will be in the Eastworks Complex on 116 Pleasant St., in Easthampton, approximately 13 miles away from the University of Massachusetts campus. Eastworks is already the headquarters of Ecstatic Peace!, a record label founded in 1981 by Sonic Youth member Thurston Moore.

This location is also home to Tony Margherita, Wilco's longtime manager, and newly appointed head of dBpm Records. He moved his office to Easthampton 18 months ago.

In an interview with Reuters, Margherita said, "Wilco's independent streak is well documented and nothing new."

"And this is the culmination of what we've been working toward for the last 15 years. As we reached the end of our last deal, it felt like it was time for a change and the one thing we were certain we did not want to do was to sign another traditional recording agreement."

In an interview with The Republican, Margherita said establishing the record label in Easthampton would be a smooth transition for him and the band. "We knew this expan-

Record snowfall blankets Valley

Many University of Massachusetts students took advantage of the record levels of snowfall last month.

By R.P. Hitt
Collegian Staff

"Let it snow, let it snow, let it snow" has changed to "Make it stop, make it stop, make it stop" for some students at the University of Massachusetts.

According to a press release from the Office of News and Media Relations at UMass, January saw record levels of snowfall with a total of 39.9 inches on the town of Amherst, causing several school closings and delays. Storms of sleet and rain mixed have mixed in with the snowfall, making the roads slick.

"It kind of sucks having to walk around in the ice," said Christopher Krapf, an undeclared freshman who had to dig out his car for hockey practice after the storms.

According to UMass Climatologist Michael Rawlins, the snow storms are part of a trend of larger amounts of precipitation in winter.

"The region has seen record snowfalls," said Rawlins in an e-mail. "However, January precipitation (combined snow, sleet, and rain) while above average, did not break records. This is a reflection of the high snow-to-water ratios."

Some have pointed to the higher amounts of precipitation as proof of a highly politicized topic: global warming. Rawlins didn't confirm these beliefs, but pointed out there could be a correlation between warming climates and higher levels of precipitation. "The high snowfall totals and above average precipitation

GOP candidates wait and see

By Steven Thomma
McClatchy Newspapers

WASHINGTON – To run, or not to run, for president. That's the question facing a horde of Republicans who are weighing whether to seek their party's 2012 presidential nomination and the chance to take on President Barack Obama in the general election.

What appeared to be a slam-dunk opportunity last year - when Obama's poll numbers stank - isn't quite so clear anymore. The political terrain is shifting. Obama is rising, albeit slightly. There's an economic recovery under way, though slow and fragile. No one knows what will happen in Egypt.

Some Republicans are plainly angling to run, including former Minnesota Gov. Tim Pawlenty, former Massachusetts Gov. Mitt Romney and former Sen. Rick Santorum of Pennsylvania. None have formally launched a campaign yet.

One has taken himself out of the running. Rep. Mike Pence, R-Ind., recently decided not to run, despite his solid standing among conservatives and a draft-Pence movement that signaled an independently financed ad campaign that might help him in the primaries.

Most, though, are biding their time, neither in nor out. That group includes Rep. Michele Bachmann of Minnesota, Mississippi Gov. Haley Barbour, Gov. Mitch Daniels of Indiana, former House Speaker Newt Gingrich, former Arkansas Gov. Mike Huckabee, former Utah Gov. Jon Huntsman, former Alaska Gov. Sarah Palin and Sen. John Thune of South Dakota.

The waiting game is a sharp contrast to this stage four years ago, when there was no incumbent president to face and candidates already were lining up. By this point, for example, Hillary Clinton had already formally declared her candidacy, on Jan. 20, 2007. Obama announced his candidacy on Feb. 10. Romney followed on Feb. 13, and John McCain jumped in on March 1.

Why are the hopefuls holding back this time?

"They're starting to look at the cold, hard reality of running against an incumbent president," said Dennis Goldford, a political scientist at Drake University in Iowa. "It's nice in the abstract, particularly if you've been surrounded by adoring partisans who say Obama is the Antichrist. But actually doing it becomes a hardheaded, rational calculation."

Santorum told supporters Friday that he was close to a formal declaration. "Soon, I must make a decision," he said in an e-mail. Daniels also says he's close to a decision. "I think I have got to make up my mind fairly soon," he told the Northwest Indiana Times

University of Massachusetts and Springfield church to honor the legacy of W.E.B. Du Bois

In a promotional campaign for the writings of W.E.B. Du Bois, the University of Massachusetts has signed a five-year partnership with St. John's Congregational Church, located in Springfield, Mass.

The partnership will kick off with several events to raise awareness of the work of W.E.B. Du Bois, a founder of the NAACP and author of many essays, books and articles, many of which are undergoing a digital preservation process in the library on the Amherst campus.

In a news release from UMass, Rev. Calvin J. McFadden Sr., senior pastor of St. John's said, "This partnership supports St. John's commitment to enhancing our community by promoting scholarship and excellence, an understanding of history and its relevance to modern society, and Du Bois' connection with the church. Du Bois's timeless message of hope and excellence has many similarities to the Christian values promoted by St. John's."

St. John's, located on Union Street in Springfield is a 165-year-old church, as well as one of the oldest black churches in New England.

The news release stated that the goals of the partnership include, "promotion of the legacy of W.E.B. Du Bois' work in relation to the black church, engagement of Springfield K-12 students in cultural and educational opportunities, and development of an international

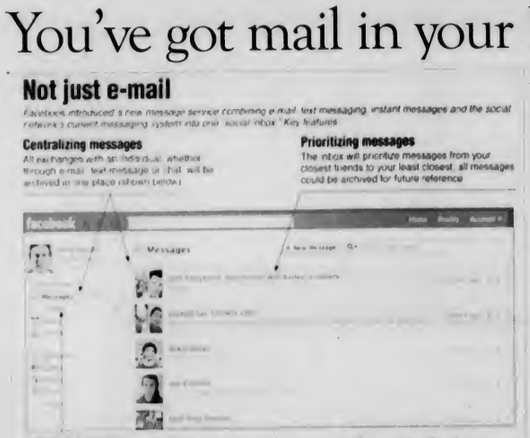
You've got mail in your Facebook inbox



Not just e-mail
Facebook introduced a new message service combining e-mail, text messaging, instant messages and the social network's current messaging system into one "social inbox." Key features
Centralizing messages
All exchanges with an individual, whether through e-mail, text message or chat, will be archived in one place (shown below)
Prioritizing messages
The inbox will prioritize messages from your closest friends so your least closest, all messages could be archived for future reference
Message filters
Messages from people outside your Facebook circle will be sent to an 'Other' message page
Signing up
The service will roll out to Facebook's more than 500 million members over the next several months; users need to be invited to subscribe once invited, you can invite others
Personal email address
Users can obtain an @facebook.com e-mail address; the address could be shared with people who do not subscribe to Facebook
© 2010 MCT
(MCT)

Facebook will be introducing @facebook.com email addresses to their 500 million users. The service combines email, text messaging, instant messages and Facebook's inbox into one social inbox.

BY MIKE SWIFT
SAN JOSE MERCURY NEWS

Facebook fans hungry for an @facebook.com address, get ready.

The much ballyhooed Facebook Messages, where e-mail, text messages and instant messages are linked in a "social inbox," will be offered to a majority of the more than 500 million Facebook users over the next two months.

"The reason we're taking our time with it is we're not starting from scratch. We're starting from being one of the top messaging systems on the Internet," said Andrew Bosworth, the Facebook engineer who lead the team that, with extensive input from Facebook CEO Mark Zuckerberg, developed the new Messages product. "This is a new product with 500 million existing users."

Messages was launched in November, amid media buzz that it would be a "Gmail killer" that would render traditional e-mail obsolete. Initially, however, Facebook gave relatively few people access to the new product. Over the past two months, the Palo Alto company has been painstakingly moving existing content over to the new service, a transition that will ultimately encompass more than 100 terabytes of data - or about half the total digital archive held by the Library of Congress. Bosworth said Facebook software has been checking every character within every message, scanning for discrepancies as each user is switched over to the new service, and assigning an engineer to manually check every error it discovers.

"We have billions of messages in the existing system that we have to move over to the new system," he said. "These are intensely meaningful, personal messages that people expect to have access to, and we have to do this with some care."

The new service treats every communication between people as part of an ongoing conversation that began with their first interaction on Facebook - a string that in many cases goes back for years.

"Facebook is not just about what's happening right now, it's also the history of what we've done before," said Bosworth, a native of Saratoga.

The system is intended to allow people to carry on a single conversation over a variety of devices, perhaps starting an interaction on e-mail through their office desktop computer, then moving to text message on their phone as they head outside, or moving into Instant Message as they come back to their office PC.

Zuckerberg took a direct role in the shaping of the new Messages product, starting with a series of conversations with a group of teenagers during a Thanksgiving break in 2009, where the younger people told the Facebook CEO that they favored text messages because e-mail is "too slow." "That was the catalyst," Bosworth said, and his team held extended weekly meetings with Zuckerberg through the spring of 2010 as they built prototypes of the new service.

The night before the service launched in November, Zuckerberg even camped out with the Messages team, working through last second bugs.

"Zuck, most of all, realized that the thing we were trying to do is connect people across media and devices and make it really easy and simple to talk to a person," said Bosworth, who has known Zuckerberg since he was the Facebook CEO's teaching assistant at Harvard.

Messages has not been universally well received by analysts, who say it is not functional enough for business and other uses. Matt Cain, an analyst who follows e-mail trends for the research firm Gartner, believes Facebook is working on a new version of Messages that would incorporate many of the features of Google's Gmail, Yahoo Mail and Microsoft's Hotmail, such as subject and cc: and bcc: lines.

Cain said that because e-mail remains such a big source of time spent online, and Facebook wants people to spend more time on its network, a more functional e-mail service is a business imperative.

"It would be at truly bad business decision on the part of Facebook not to aggressively go into the full-blown e-mail market, because they can immediately capture a very substantial chunk of the consumer e-mail population," Cain said. "There are tremendous monetizing opportunities."

Other than saying Facebook is "always working on ways to improve the system and make it so people can send messages faster" a spokeswoman declined to comment on whether it is working on another generation of Messages with more features. But Facebook has begun offering Messages to users outside the United States, and over the next month, an increasing number of users in all countries will be offered the new service.

"Over the holidays things were moving a little slower. We wanted to make sure we were taking the appropriate care migrating those messages over," Bosworth said. But now, "we're really starting to move on the invites."

UM and St. John's to honor Du Bois

DU BOIS from page 1

educational component to bring together Du Bois scholars and black church leaders from around the globe."

Plans will coincide with Black History Month and set off a string of events. The first event will be on Sunday, Feb. 27, titled "The Soul of W.E.B. Du Bois: A Tribute to the Black Church." The event will be held at the church, and will feature artists from UMass and St. John's for a night of performances and music.

Saturday, Feb. 28 in the Campus Center, Bettina Aptheker, professor of feminist studies and history at University of California, will present the 17th annual Du Bois lecture, titled "W.E.B. Du Bois: Personal Stories/Political Reflections." Santa Cruz members of the St. John's community will also be honored guests at an open house at the W.E.B. Du Bois Library beforehand.

Collegian News Staff

W.E.B. Du Bois is being honored during Black History Month in the Valley.

EGYPT from page 1

percent of Republicans said they think the political developments are good for the U.S.

Overall, regardless of partisan orientation, a majority of respondents were sympathetic to the protesters and view the changes to the Egyptian government positively.

The results of the poll came out the same day that a number of Democrats in the House of Representatives sent a letter to House Speaker John Boehner (R-Ohio) requesting an emergency resolution in support of pro-democracy Egyptian protesters, according to Politico.

The poll results were based on phone interviews conducted by Gallup from Feb. 2 through Feb. 5, 2011, "during a time when protests and reactions in Egypt dominated the international news," said Frank Newport, who wrote the summary of the report, in a statement.

The poll interviewed 1,015 adults living in the continental U.S. Those interviewed were selected using random-digit-dial sampling. It has a margin of sampling error of plus or minus 4 percentage points.

Michelle Williams can be reached at mnwillia@student.umass.edu.

Americans Sympathetic to Egyptian People

A Gallup poll found Americans support Egyptian protesters and think the outcome will be good for Egypt and U.S.

	Republicans	Independents	Democrats
SYMPATHY TOWARD PROTESTERS	%	%	%
Sympathetic	—	82	88
Unsympathetic	16	12	8
Don't know/No opinion	—	—	3
RESULTS FOR UNITED STATES			
Mostly good	51	59	73
Mostly bad	34	28	18
No opinion	15	12	11
RESULTS FOR EGYPT			
Mostly good	59	61	—
Mostly bad	25	21	13
No opinion	16	18	10

A Gallup poll found that majority of Americans are sympathetic to the protesters in Egypt. Democrats were more likely to be sympathetic than Republican.

No candidate yet for GOP

GOP from page 1

last week. "There are a lot of people waiting and I owe them an answer."

But most signal that they'll wait to decide, perhaps until spring.

The first time that candidates will face one another is May 2, in a debate at the Reagan library in California.

Before then, they must decide whether they can appeal to the party's conservative base - several will test that at the Conservative Political Action Conference in Washington this Thursday through Saturday - and also appeal to independents, who will decide the general election.

They also must decide whether they can raise enough money to compete against one another and then Obama, who could raise a staggering $1 billion or more this cycle. In 2008, he blew off the spending limits that come with public financing and raised a record $745 million, vastly outspending Republican nominee McCain's $368 million.

"The person who is going to be the nominee will face the Obama fundraising machine," said Dante Scala, a political scientist at the University of New Hampshire.

"They saw what Obama did to McCain in 2008, and that makes these candidates even more averse to risk," Scala said. "If you're John Thune, and you're 50 or 51, and saying in most cases the incumbent is going to win, why not wait until it's an open field in 2016?"

Indeed, many are young and could easily wait until 2016.

Thune is 50. Huntsman, who just resigned as Obama's ambassador to China, also is 50. Palin will turn 47 on Friday.

Some have other outlets. Palin is making millions from her contract with Fox News, speaking fees and book sales. What's more, polls suggest that she's the weakest of the major candidates in a head-to-head matchup with Obama. Huckabee also has a Fox paycheck. Thune is moving up in the Senate.

Romney, who turns 64 on March 12, might find 2012 his best shot. He still has a network of contributors and supporters from his 2008 bid for the nomination.

A key question that potential candidates face is whether the 2012 election will be akin to 1992 or 1996.

In the 1992 cycle, President George H.W. Bush looked strong early, driving many big-name Democrats to sit it out, thinking they could wait until the seat would be open in 1996. Former New York Gov. Mario Cuomo, perhaps his party's biggest marquee name at the time, anguished over his options until the last possible moment, then decided not to run.

Then Bush's popularity faded as the economy sputtered and little-known Arkansas Gov. Bill Clinton captured the Democratic nomination and the presidency. Cuomo never got another chance.

In 1996, the opposite happened. Clinton entered the campaign looking weak. Like Obama, he'd lost the House of Representatives in his first midterm election and his poll numbers were anemic. But he gained strength through late 1995 and 1996, and eventually cruised to easy re-election.

Tim Pawlenty, the former Gov. of Minn., and possible GOP candidate, has been attracting media attention during his recent book tour.

GOP stirrings

Although not declaring presidential ambitions, several prominent Republicans have effectively begun to campaign, financing travel and staff through political action committees and other personal ventures.

Potential candidate	Money raised in millions	Money sources	Strengths
Former Gov. Mitt Romney (Mass.)	$9.2	Federal and state political action committees	Early front-runner; has snagged top Republican fundraisers who are now actively wooing the party's key donors
Former Gov. Sarah Palin (Alaska)	$5.5	Federal political action committee	Celebrity status brings her seemingly unlimited media attention
Former Gov. Tim Pawlenty (Minn.)	$3.6	Federal and state committees	Doggedly courting party activists while enjoying a burst of media attention for his book tour
Gov. Haley Barbour (Miss.)	$1.8	Federal and state committees	Former lobbyist and longtime party fundraiser; has connections and clout throughout the GOP
Former House Speaker Newt Gingrich (Ga.)	$0.7	Federal and state committees	Network of private organizations promotes his views, conducts outreach to key constituencies and provides access to donors

NOTE: Money totals are for the 2009-10 political cycle

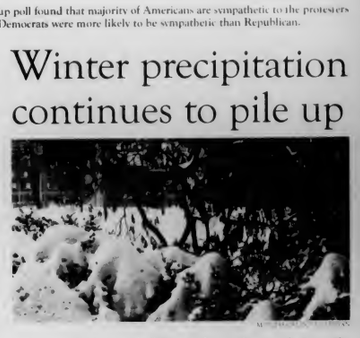
Several candidates are being considered front-runners as Republican candidates for president in the 2012 Presidential Election.

Winter precipitation continues to pile up



Snow covered trees, buildings and sometimes students at the University of Massachusetts for much of January.

SNOWFALL from page 1

are not inconsistent with a warming climate, since the moisture-holding capacity of air increases as temperatures increase," he said.

Rawlins explained that people should expect different types of climate changes for different areas due to a worldwide shift in climate. He did not venture to give a concrete cause for these changes, but explained computer models that show changes due to greenhouse gas emissions are similar to the types of weather patterns we have seen in recent years.

"Researchers examining the historical climate record have found that winter precipitation increased over the past several decades. Climate models project future increases, with larger changes suggested in simulations with the highest greenhouse gas concentrations," Rawlins said.

Some students think the recent storms may be an effect of global warming.

"I've never seen so much snow in my life," said Christine Fitzgerald, a junior business management and public health major. "Global warming doesn't necessarily mean warmer weathers," she said.

"It's possible [the storms are related to global warming]," said Krapf. "The world goes through different [climate] periods."

Rawlins pointed out the storms need to be taken on a case-by-case basis; one winter of heavy snowfall cannot prove the existence of a warming climate. He said there is no reason to expect the heavy snowfalls to continue for the rest of the winter.

"There are no indications that we'll see as many storms or as much snow as we did in January," said Rawlins.

Amherst hasn't been the only town to get hit with colossal amounts of snow. According to the UMass Office of News and Media Relations, researchers from atop Blue Hill Observatory in Milton recorded 48.2 inches this season.

According to Rawlins, Amherst has received 49 inches in total this season, Boston also has received 49 inches and Worcester has received a whopping 60 inches.

The Harford-Bradley International Airport in Windsor Locks, Conn. received 57 inches in January alone, and a total of 80 inches of snow so far this season. According to Rawlins, 80 inches of snow is equivalent to 6.7 inches of water, enough to fill 5,825 Olympic swimming pools.

Forty-seven inches was recorded at Pittsfield Municipal Airport breaking a 65 year old record, according to the UMass press release.

The 39.9 inches received by Amherst broke the January record held for 118 years. The record dates back to 1893 when snowfall observations were first recorded in the town. In that year there were only 4,600 residents in Amherst, just 13 percent of its 2007 population, according to Rawlins. Grover Cleveland was U.S. president at the time, and according to Rawlins, Nabisco Foods invented Cream of Wheat.

Some students are anxious to see the snow melt away and are already looking forward to the spring months as they feel the snow and ice is impeding their ability to get from place to place.

"You can't see around the corner at the end of the streets," said Nicole Reynolds, a junior communications major referring to the large snow banks. "It's a hazard."

"It's just been a really snowy winter," said Krapf.

Wilco calls Valley home

WILCO from page 1

sion was coming, and I wanted to do it in a place that was less stressful, financially and otherwise, than New York City had been."

Margherita said the 500,000-square-foot Easthampton location, offered a large open space that would be compatible for the new company, with very reasonable rent, especially compared to the rent of his former New York City managing offices.

The other businesses in the complex where dBpm Records now calls home are the Apollo Grill restaurant, the Women's Fund of Western Massachusetts, and numerous studios for local artists.

"We basically shopped around the Northeast looking for hospitable communities lifestyle-wise, business-wise, etc. My wife is a New Yorker so proximity to New York City was a plus. I on the other hand, am originally from the Midwest, and for reasons I can't really explain, this area felt very comfortable to me right away."

For the moment, Wilco is the only band on the label for now, but in a press release Margherita said the label will release "all future Wilco recordings and more," though did not specify what more will entail.

Wilco will continue to call Chicago home as they work on their new album that is planned to be released during the late summer of this year, and is not yet titled.

Michelle Williams can be reached at mnwillia@student.umass.edu.

Rock band Wilco is starting a record label, that will be based in Easthampton. As of now, Wilco is the only band on the label.

EDITORIAL@DAILYCOLLEGIAN.COM

Eminem used to be cool

Isaac Himmelman

One week in March my sixth grade class took a field trip to the Cabrillo Marine Aquarium. Two important things happened on this trip. First, my classmate Eddy G. fell head-first into the stingray pond and thus head-first into the nebula of middle school social exile into which he would descend deeper and deeper with each passing year. Second, on the bus back from Cabrillo Leon Safra – the coolest kid in sixth grade if not the entire Harkham Hillel Hebrew Academy – introduced me to Eminem.

A few months before Eddy fell into the pond, I'd overheard my parents discussing Eminem one night in the kitchen, both of them wondering how a fellow musician and friend of my father's who had recently played bass on my father's album and was now working with Dr. Dre co-producing Eminem's records, justified being an accomplice in the production of music so morally objectionable.

All that rage and raw fury I felt and made my own that afternoon on the bus will become a relic of a specific moment in the history of music, like the lost glamour of jazz or the dangerous allure of early rock.

That was all I knew of Eminem the afternoon when Leon Safra let me listen to a copy of the Marshal Mathers LP on his Sony Discman (a move which bumped me up a good two notches on the ladder of middle school coolness because it was Leon Safra's Discman). I'd never actually heard Eminem's music before. I pressed play on the Discman and listened to the album's introductory track. Before even a single musical note was played, a bureaucratic sounding voice opened with, "This is another public service announcement brought to you in part by Slim Shady." After the intro began the track "Kill You" with Eminem breaking out into song over a twisted chord progression and a bass heavy beat that would soon come to define an entire era of rap music, "When I was just a baby boy my mother used to tell me these crazy things / She used to tell me my daddy was an evil man / She used to tell me he hated me." I come from a very loving and functional family, yet for a reasons inexplicable insofar as I can only describe them as wholly visceral, I related to that song – to that entire album – on a very deep level. Eminem was speaking to me.

A year later, I spent the summer working as a serf for Paul Young's Sports Camp for Boys. I got paid $50 for an entire month of lugging ice around and chasing after misbehaving Jews ages 6-11. Once in a while Paul would bless me with park bathroom duty wherein I was able to sit outside the public restrooms and listen to the then just released "Eminem Show," every so often making sure no young Jews had fallen pray to a hoodlum or worse, soiled themselves (the Eddy G.'s of the camp were soiling themselves daily.) One morning before camp my mother stumbled upon the pirated copy of "The Eminem Show" in my backpack. I have no doubt that what followed was my parents discussing the appropriate parental course of action in a series of late night conversations. On one hand, they weren't enamored with the idea of their son (a few months shy of his bar mitzvah, mind you) listening to lyrics so utterly profane. But on the other hand perhaps coming from a family so entrenched in rock music (a genre once labeled as "devil's music" by the morality police) it would seem hypocritical, if not entirely counterproductive, to forbid him Eminem.

My parents made their decision. A few days later on the drive to camp my father suggested we listen to Eminem together in the car. My father and I would continue listening to whatever it was that was in my Discman, and later my iPod. On the day I got my license, my father said he was going to miss listening to music with me in the car. That first time driving myself to school I realized we both would.

In high school I grew out of Eminem. I'd moved onto indie rock, sixties rock, backpacker rap, the "Garden State" soundtrack; all genres I'd felt made girls more inclined to make out with me in the back of my Corolla (oh, high school). Still, last year when Eminem released his sixth studio album "Recovery" I went out and bought a copy.

The album is good. Eminem is a master of language and the spoken word, and the production, while in no way groundbreaking, is utterly appealing. Yet, listening to the album I realized something was missing. That day on the ride back from Cabrillo, sitting with Leon Safra in the back of the bus, basking in his coolness, Eminem sounded so dangerous, his anger, so thrilling and wholly relatable. And for whatever reason, even a young Jewish boy who came from a nurturing family and attended a school that took him on yearly aquarium trips could relate to that anger.

For a while I wondered if perhaps the violent rage of "gangsta rap" spoke specifically to the white Jewish male who'd spent years believing nothing could be worse than living with the threat of pogroms and bayoneted babies, only to have this belief crushed, along with every other belief. But then of course, Eminem was the top-selling artist of the last decade. His music, his anger, spoke to millions of people, of all races, religions, origins. All these people were able to make Eminem's rage their own.

Eminem is a strong contender to win "Album of the Year" at the 53rd Grammy Awards on Feb. 13. If Eminem does win in this category, it will mark the point in time when the mainstream will have finally accepted him. All that rage and raw fury I felt and made my own that afternoon on the bus will become a relic of a specific moment in the history of music, like the lost glamour of jazz or the dangerous allure of early rock. His status as the twisted voice of America's warped shoulder angel, the circus mirror image of pop-stardom and crazed post-9/11 paranoia, will be a thing of the past. And it is with that in mind that I hope he loses. In fact, I might even root for Lady Gaga.

Keep your laws off my body

Victoria Knobloch

If you are a man, you will never be faced with the choice of whether or not to have an abortion. It is an experience that simply does not apply to you. You will never be pregnant, your life will never be in danger because of a pregnancy and you will never be pregnant as the result of rape. There is no place for you in abortion debate. So when a whole bunch of men sponsor an amendment that takes away federal funding for a rape victim's abortion if she isn't bruised and bleeding, I feel unhealthily infuriated.

Due to the hard work of internet activists, the "No Taxpayer Funding for Abortion Act" has died, taking the ambiguous "forcible rape" cause with it (as if there is another kind). But popping up in its place is the "Protect Life Act." Because if there is anything the Republicans care about, it's life.

The "Protect Life Act" allows Medicare participating hospitals to deny lifesaving treatment to pregnant people if that treatment includes an abortion. A doctor would have the right to let a woman die instead of aborting her pregnancy, essentially saying that a woman's life is not as important as your control over her body.

Bodily autonomy is critical in the fight for women's equality. Until a woman's body is her own, there will be no justice. As long as conservative men continue to make laws redefining rape to benefit rapists and making life impossible for a woman who makes a choice about her own body, we will not be free. Our personal appearance, our weight, our dress, our sexuality and sexual activity will be policed and judged by the world around us. The actions of our lawmakers set a precedent that men not only can but also have the right to make choices about women's lives.

But as anger and blame on this issue is heaped onto the male Republicans in Congress, let us not forget the misogyny in the liberal community.

It was not long ago that Michael Moore and Keith Olbermann went all-out 'white knighting' for Julian Assange, to the point of accusing the rape victims of lying and revealing one victim's name to the public, putting her in danger of more physical violence. Here's the thing that so many liberals could not reconcile: Wikileaks is great, Julian Assange is great for starting Wikileaks, our government is using the rape accusations as an excuse to go after Assange, and Assange is a rapist.

Bodily autonomy is critical in the fight for women's equality. Until a woman's body is her own, there will be no justice.

All of those things can be true simultaneously. But I heard one man after another defend him. How could a rapist possibly do something as cool as Wikileaks? Attitudes like these only reinforce rape culture – a culture that allows men like John Boehner to propose misogynistic laws and still get re-elected.

I've established that men have no place in abortion law making, but the fact remains there are a whole bunch of women who support laws like these, at least until it happens to them. I can't say, "Only people who agree with me should be allowed in the abortion debate."

I'd like to, but I understand the problems inherent in that. At least if the debate were made up exclusively of people who could become pregnant tomorrow, there might be something of an even playing ground. I don't believe it's any more acceptable for women to police each other's bodies than it is for men to police women's bodies, but a diverse coalition of women deliberating on abortion law is far more comforting than a diverse coalition of men (and definitely better than the white, rich, straight men who are coming up with these ridiculous laws).

Now, before you get your boxers too much in a twist, I do want to mention fathers. Abortion is a fantastic example of the personal being political, and the personal interactions of a couple must be seen in a political context.

Speaking very generally, there is nothing wrong with the potential father expressing his opinion on whether or not there should be an abortion. It is only if he insists, demands, or forces the woman to go one-way or another that this becomes a problem.

The very language of pregnancy reveals who culturally has the power over the child: "She's pregnant with his baby," or "Who's baby is it?"

Obviously language like this shows our willingness to grant ownership to a man over a woman's body. You're pregnant with your own child – or not pregnant with child, should you choose.

And the possible father who says "I want to keep it, I want to raise it, I want to be a father, I want us to be parents," is not the enemy, and is not who I am rallying against. The man who says, "You must keep it, you must raise it, you must give me fatherhood," is the problem.

Get your laws off my body.

Welcome to Scotland: whisky, hiking and men in tutus

Tappan Parker

Studying abroad in the city of Edinburgh, Scotland, has been teaching me a lot about Scottish culture, whisky and the basics of living in a foreign country.

First off, getting to the country your studying in is probably the worst experience you will have on your trip. Flight delays almost made me miss my second flight, for which I had given myself a generous three hour layover. I have also learned that on a red-eye, never, ever take the window seat unless you plan on sleeping on the way over. Sure you may not get to see the view when you land, but because it's a red-eye the passengers next to you will be sleeping until the very last minute. And yeah, they get angry when you wake them up so you can use the lavatory.

But arriving in the United Kingdom was fantastic. The first thing you see upon arriving in Edinburgh is the small mountain they have in the center of their city. And for those of you somewhat familiar with the city, I do not mean the castle. They actually have a giant hill-like rock in the center of the city called Arthur's Seat which you can climb; I've done so twice, and both times were at night.

The Scottish Highlands themselves are absolutely gorgeous. My second weekend out I joined a few friends in hiking some of the smaller hills near the city, smaller being a relative term. The "hills" were at least 1000 feet high and involved quite a hike to get to.

Our hike ended up taking us over six hours and involved almost 10 miles, quite a journey for experiencing only the smaller hills of Scotland.

I decided to see what the pubs were like during the first night of my stay. The first thing I saw was a man wearing bright pink snow gear and a tutu. Not a kilt, a tutu. Keep in mind, this was a Sunday, one of the slowest days at the pub. I later saw this same man at another pub that night and found out he was taking part in a stag party.

Surprisingly, I went the first five days without making friends with a single Scotsman (or Scotswoman). There are a lot of Americans in Edinburgh though. I met some Germans, a few French, but for the most part it has been Americans. It's often surprising how many foreigners are in Edinburgh, but it certainly makes the experience all the more unique.

The first day in Scotland I decided it was a good idea to see what the pubs were like.

Surviving in a foreign country is not as tough as it would seem. It quickly becomes clear that the currency here has a system to it, and I even find myself enjoying the one and two pound coins that they have instead of notes. The accent, while a little hard to understand at times, quickly becomes easy on the ears and communication is hardly hampered. It is, without a doubt, more expensive to live here than in the states but it isn't something that has yet to damper my enjoyment of the country.

The overwhelming use of the word "cheers," however, is one thing that I have definitely gotten used to and even started to adopt into my own vocabulary as well. "Cheers" is said almost as a simplified way of saying thank you, goodbye, and governs many simple transactions throughout the day to day basis. It may be a small thing, but it's probably my favorite part of Scottish culture.

My course load is still somewhat of a mystery to me. At my University, we are not required to do work on a week to week basis, but rather we are expected to read to prepare for an end-of-the-semester exam and a paper that is due in the middle of March.

However, much of the reading that is given is suggested reading, meaning there isn't required reading for any particular week. On top of that I only have to meet for lecture and a discussion session once a week. I managed to get most of these onto Thursday, with only one other class on Monday, leaving the rest of my week more or less free.

I have yet to travel outside the country but largely that's because Edinburgh is so fascinating all on its own. With things like ghost tours that take you through the hidden passageways of Edinburgh, the castle on top of the hill and events like masquerades (I'm going to one this Thursday) there is so much to do that it's easy to forget that there are other places to visit.

Scotland is definitely a country worth visiting. The country is beautiful, the people are friendly (for the most part), and there is hardly a dull day or night in the city of Edinburgh.

Washboard Band takes listeners back

By Chris Gross
Collegian Correspondent

In 1952, a group of young ladies from the Phi Mu Sorority's Alpha Alpha chapter got the idea to raise money for a new sorority house by starting a band. Technique and experience weren't a priority for the group, as plenty of the members took up playing instruments such as the rack, a bucket, sticks and a washboard. According to a note written by one of their ukulele players, Lynne Akin, the newly formed "Phi Mu Washboard Band" would go on to play television, banquets, conventions and benefits. A testament to their popularity, Akin writes, "One of our most memorable trips was one made to Trion, Ga. We all piled into the Bookstore Bus, went to Trion and played for 450 men." When the band separated and the girls moved on, they left behind something absolutely wonderful – their record, "...Just Because."

Glenn Smith (spoons), Atlanta; Julianne Frahbert (sticks), Thomasville; Mary Ann Avery (comb), Moultrie; Gayle Stocks (bongos), Atlanta; Celeste Shoffner (bucket), Calhoun; Mary Katherine Smith (jug), Waycross; Anne Wade (uke), Marshallville; Lynne Akin (uke), Atlanta; Connie Kirk (uke), Moultrie; Cornelia Grasty (washboard), Atlanta; Susan McGarity (tambourine), Moultrie; Dean Hall (rack), Thomasville; Susan Valentine (shakers), Los Angeles, Calif.; Carolyn Keefer (tub and broom), Miami, Fla.

COURTESY BLOG.WFMU.ORG

The Phi Mu Washboard Band was formed by a group of musical sorority girls in 1952. Performing such standards as "Love Hurts" and "This Land is Your Land," it manages to both transcend and transport.

The record surfaced in 2003 when blogger Bob Purse posted the song "Love Hurts" from the album on a blog/obscure music collecting project called 365 Days. Interest began to grow, and by 2008, Purse released the entirety of the record online at WFMU's "Beware of the Blog." Plenty of outsider music enthusiasts would finally be able to listen to "...Just Because," and to it's credit, the record contains some of the most honest and genuinely sweet recordings out there.

There's no way ignore the sense of excitement these girls have for getting the chance to record. Feelings of sincerity echo from the singers' mouths as they perform a mixture of covers and home-grown tunes. The album opens with the title song "Just Because," serving as a terrific introduction the spirit of the band and the album itself. The girls make a plea in wonderfully off-key harmonies to the listener about forgiving their ridiculousness by remembering how awesome it is that they are playing in a washboard band. It's hard not to want to support them; the amount of unbridled energy and jubilance they sing with is nothing short of admirable.

A cover of Boudleaux Bryan's "Love Hurts" is one of the most striking and notable songs on the album, with the singers harmonizing oh-so-sweetly. It's hard not to feel a little bashful. The girls sound so endearing and honest that they break your heart when they sing lines like "it takes a lot of pain." Even though the song is a cover, Phi Mu completely owns the words. When they say that love hurts, there is no way they don't mean it.

Though still important to the album, the next few songs are less notable. "Seven Daffodils" has a Vashti Bunyan quality to it, and there's a cover of "When the Saints Go Marching In" some might find interesting. Becky Kravnow and William Lovelock's "Chilly Winds" is sung wonderfully and is another highlight. The song is sung by only one singer and once again sincerity permeates through the recording. Every word sung is either breathtaking or heartbreaking. Other covers such as "Mama Don't Allow," "You are My Sunshine," and "This Land is Your Land" could certainly stand out to folks who want to hear something familiar. The covers serve as a reminder that this band isn't trying to do anything except sing songs as sincerely as they can.

The album's peak moment might be "I Can Smile," which is actually a brief cover of Paul Evan's "Happy Go Lucky Me" – some might remember for its use in John Water's "Pecker." There's a distinct quality to the song, it's sung by a lone singer accompanied by only a ukulele. The song increases in pace as it goes on and each time she sings the line, "Oooh oooh happy go lucky me," it sounds like she's losing it, struggling to get through the verse with a breath left in her body. The passion and drive that went into recording this one song for her must have been punishing, and it matches the subject matter perfectly. As a lone singer, she is able to connect with the audience more personally, and because the lyrics are so easily digestible and sung so passionately, "I Can Smile" is about more than just the song itself – it's about the performance.

The album closes with "Phi Mu Suwannee," a well-earned cheer for their sorority. The girls made this record out of the love for their sisterhood and it shows. The songs never feel like they've been forced at all. The prospects of fame and fortune seem so far away from this record, putting their desire to sing wonderful songs and have fun into the spotlight. Do yourself a favor and head over to the WFMU blog and take a listen to some of the tracks at http://blog.wfmu.org/freeform/2008/05/the-phi-mu-wash.html. You can always grab the album too, you really won't regret it.

'King Night' needs a designated driver

By Austin Dale
Collegian Staff

Chicago-based band Salem is delirious, and completely so. They don't hesitate to let people know about their love for synthetic drugs – their first EP was titled "Yes I Smoke Crack" – and seem in a state of continuous disregard for their own well-being. They've been booed off stage, and one member slept through an interview with The New York Times while his band mates showed up slurring and dozy. They may not even be aware they've become famous. This all makes it hard to write about Salem, because despite all of this, there is much to love about their new album "King Night." They can only be encouraged to keep up whatever it is they're doing, because they're doing something right.

King Night is a doozy of an album, and it's fairly impossible to properly describe. Imagine the musical equivalent of cough syrup. It has that awesomely intoxicating color, but it's thick and slow-moving, gooey and gross and you can't even imagine what in the world went into it. Spend enough time with a bottle of the stuff and you will get really, really high.

All of this also goes for King Night, a completely self-destructive slice of musical evil, seemingly assembled by a professional orchestra playing only with garbage cans, over-driven harpsichords and Satan's kneecaps – and over that, what sounds like drugged geriatrics rhyming about violence, God, and most memorably, nothing.

This should be the worst album ever, yet it attains some twisted kind of classical beauty in the simplest and most unexpected ways. The best example is its opener, the title track, which is actually just a choral recording of "O Holy Night" manipulated to such a sick extent that it sounds less like a Christmas carol and more like what you'd expect as elevator music on your journey to Hades.

Buy this album. Do not play the album over speakers. Do not play this album to your friends, family, acquaintances, relatives or strangers. Do not, for goodness' sake, play this record if you are a DJ, because next to toxic waste, it might be the best way to create liver-eating zombies. Everyone you play this album for will be getting ready to tell news reporters they never saw it coming.

No no no. Just play this album on headphones, allow it to take you on a bender . . . And in its wake, try to forget you ever heard the damn thing.

Austin Dale can be reached at aadale@student.umass.edu.

Salem has developed a rather curious reputation since their recent surge in popularity, mainly by showing up for interviews and performances intoxicated.

How to turn ideas into RSOs

Pictured above is a touching moment from the UMass Theater Guild's recent performance of "Rent." Registered Student Organizations are vital elements of student life here at UMass, but many students aren't aware of the complicated series of steps needed to create an RSO.

By Alissa Mesibov
Collegian Staff

In just one month, a simple idea can be transformed into a community of goal- oriented individuals with similar interests, a Residential Student Organization (RSO).

In the spring of 2009, UMass senior Ross Zuckerman led the effort to create the UMass Triathlon Club. The process, though compacted into only a few weeks, was complicated and not without adversity.

Zuckerman began competing in triathlons, which involve a foot race, a swimming race and a bicycle race, in the summer of 2009. When he came back to school for his junior year, he was dismayed to find that there had not been a team or club for triathlon participants to train and compete with for several years.

"That's why I started the club," Zuckerman said. "It's easier to train with others."

With a clear goal in sight, Zuckerman went to the Student Government Association (SGA) to begin the journey of creating the UMass Triathlon Club.

Tyler Langhis, the SGA Secretary of the Registry, and Janam Anand, the Associate Secretary, handle the creation of new RSO's and taking students like Zuckerman, through the process.

According to Langhis, once a potential RSO contacts him and Anand, they are given a checklist of items that need to be included in the group's constitution.

Along with this, a list of signatures of at least 10 interested students, one to two paragraphs on the groups future plans, and an explanation on why RSO status is necessary must be submitted.

"It [the process] was a pain. We looked at the old Triathlon Club's constitution. We had to update it, because it didn't account for attending events or having a Facebook page," Zuckerman said.

"A lot of students don't realize it's a serious process," Anand said.

Then comes the waiting. The potential RSO's have no choice but to wait, while Langhis and Anand deliberate over whether or not the group will be able to last, and if it truly has a need for RSO status.

According to Langhis, "RSO's are groups that specifically want funding or space," as opposed to groups that remain unrecognized by the SGA, because they require neither.

The new Triathlon club met the requirements as they need to practice space and money to attend triathlons that they compete in. An email was sent to Zuckerman when the decision was made.

"It was nice getting that letter after all the work," Zuckerman said.

Once the new RSO receives official recognition, they begin a month of training sessions with the Center for Student Development (CSD).

"You have to go to a sports one [training session], a campus pulse, a summit, and one or two other electives, and they're about an hour each," Zuckerman said. "You can split it up among your officers, but it can be difficult to find officers. I found a guy, and we attended all the trainings together. They do help you get a better idea of the system."

Upon completion of the training, the Triathlon club was notified of their room for meetings. So, Zuckerman and the one other officer prepared for their first meeting.

"Honestly, it was nerve-wracking. You reserve a room and have everything set up, but you don't know who's going to show up and what's going to happen."

10 people showed up for the Triathlon Club's first meeting. They laid out exactly who they are, what they do and their future plans.

"The hardest part is after the first meeting, getting members who will pay to be in the club and remain with the club," Zuckerman said.

It took over a month for the Triathlon Club to get a consistent group to show up, but they did, and the club is going strong still, despite some bumps in the road.

For one, they were not allowed a budget during the first year, which is a rule for all RSO's. This created a problem for Zuckerman's club.

"We were told we couldn't have the pools at all at first. We had to go to the Finance Committee, so we could hire lifeguards and have the pools for practice," Zuckerman said. The club finally got time in the pool after Thanksgiving break.

Zuckerman still has to deal with problems from time to time, like keeping up with the paperwork, or making sure he orders shirts from a UMass-endorsed company.

"If they're enhancing the campus community by existing," said Langhis, "it's worth it."

Alissa Mesibov can be reached for comment at amesibov@student.umass.edu.

UM prepares for battle with 3rd place Flyers

MICHAEL WOOD/COLLEGIAN

Emilie Teuscher, Jasmine Watson and Megan Zullo walk back from a timeout against Temple. Zullo is one 3-pointer away from the old UMass record, 58, which was shattered by teammate Mosgrove earlier this season.

W.HOOPS from page 8

well as 150 of the squad's 327 rebounds.

Despite the offensive play of the starters, Lanpher said he is more concerned about defense against a team like Dayton.

"[We worked on] defensive transitions [in practice]," Lanpher said. "We're playing teams in the next few games, particularly Dayton, who are great teams.

"Hopefully we can try to limit them to one shot," Lanpher added. "Because a lot of times if you can hold them to one and they shoot less than 40 percent, you've got a chance to be in the basketball game."

The Flyers will be a significant test for this Minutewomen team down the stretch. UMass' play against one of the best in the conference could play into any momentum it might carry into the A-10 tournament, if it qualifies. Head coach Sharon Dawley recently questioned the determination of her starters, and their ability to perform well under pressure, but Lanpher said he believes the team has responded well to that criticism and is playing better.

"I think for the most part they've responded to [the comments]," Lanpher said. "Particularly Cerie Mosgrove, who's been playing tremendously since conference games began. Jasmine Watson had a great second half against Charlotte, and Dee Montgomery had a good couple of games. The effort is there, we've just got to be more consistent."

Michael Wood can be reached at mcwood@student.umass.edu.

Schedule lightens for UMass as it prepares to face URI, GW

By David Martin
Collegian Staff

As a team makes its way down the final lengths of the regular season, one of its biggest challenges to making the postseason cannot be found on the floor at the start of the game.

Rather, it lies in the film room, the locker room and on the practice court.

As the Massachusetts women's basketball team heads towards its final five games of the regular season, the preparation it undertakes will be critical in deciding whether or not it can win the games needed to advance their placement in the Atlantic 10 standings.

As it stands, the Minutewomen (6-18, 2-6 A-10) currently hold the 12th seed, the last of the possible playoff-worthy teams. In comparison to the teams hovering around their placement, George Washington and Fordham both have identical 2-6 A-10 records, while Saint Louis is close behind at 1-7. Rhode Island, which is winless in the A-10, currently occupies the last conference spot.

Looking ahead to the next three games, the Maroon and White will have to anticipate and counter every strength in their opponents' arsenal, starting with Dayton.

The Flyers (15-8, 6-3 A-10), who are already one of the stronger teams in the conference, have not lost to UMass in their last three contests. A critical component to their success lies in their scoring prowess.

Dayton is the highest scoring team in inter-conference play with 663 points. Its opponents combined have 574 points in comparison. Justine Raterman, the forefront of the offensive game plan and the most recent recipient of the A-10 Player of the Week award, has 386 points and has started every game this season.

By comparison, Cerie Mosgrove, the Minutewoman's highest scorer, leads the team with 330 points.

As they prepare to face an explosive Flyers offense, assistant head coach Steve Lanpher knows that containment is going to be key.

"Dayton scores a lot of their points in transition," Lanpher said. "We're really focused on getting back defensively and then just getting a little better in our defensive rotations and our half-court defense. They're all very skilled players and they're all more than capable of scoring several points a game."

Though the Flyers will be the best team that UMass will face within the next two weeks, they certainly will not be the only team confident in their playing abilities.

GW, which the Minutewomen will be visiting this Saturday, is starting its week hot out of the gate. The Colonials (7-15, 2-6 A-10) are coming off back-to-back wins against URI and Saint Louis, their first wins in conference play. In their wins, the Colonials dominated the game with strong defensive play, limiting their opponents to 35 and 36 points, respectively.

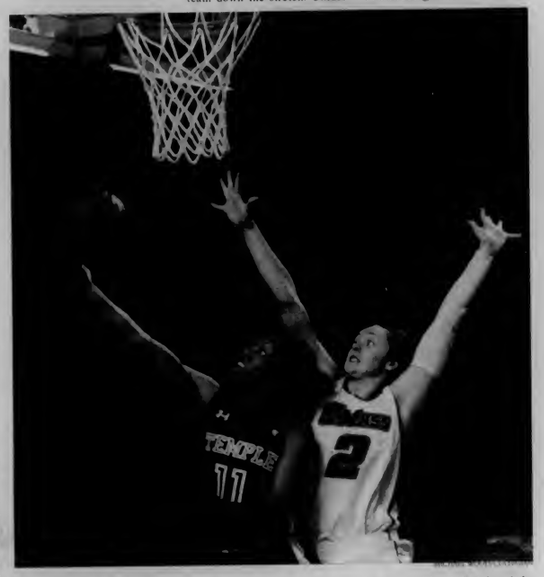
In addition, one of the Maroon and White's six wins of the season has come on the road, and even though GW is one of the lower scoring teams in the conference, they certainly have momentum on their side heading into their next few meets.

After Saturday's game, UMass will have a week off before they face Rhode Island at the Mullins Center on Feb. 19.

The Rams (6-16, 0-8 A-10) are bogged in a month-long, eight-game losing streak that started back on Jan. 8. With that, however, comes the desperate, nothing-to-lose attack plan that can lead a team to pull out a surprise win in the final minutes of the game.

As the Minutewomen look to gain ground in the coming weeks with a lighter schedule, it remains clear that in order to control their destinies at season's end, they must prepare for the very worst that the season can possibly throw back.

David Martin can be reached at dmmartin@student.umass.edu.



Emilie Teuscher bodies up with Shey Peddy against Temple earlier this season. The Owls defeated the Minutewomen, 76–48, in one of UMass' six home losses.

Minutewomen lose 5 games without Dawley at the helm

DAWLEY from page 8

Before she left the team, Dawley publicly questioned the determination and grit of her everyday starters after a loss to A-10 powerhouse Temple. The team committed 32 turnovers in the contest and looked off-balance and sloppy throughout the game.

In a postgame interview, Dawley said her starters were, "just no good," and stated that if they continued to play poorly, they would see significantly fewer minutes.

This threat, while often made by coaches when their teams are playing poorly, may have had some lasting effect on the Minutewomen. That speech, and the subsequent practice, was one of the last times Dawley addressed her team before departing to care for her father.

Though the team has not been known for dominating victories this season, its performance since her departure has not been the same. In the two games that Dawley has missed, the Minutewomen have allowed 164 points and turned the basketball over 32 times. To make things worse, almost half of those turnovers came from steals, something the sure-handed UMass guards don't usually allow.

Dawley won't be back on the court for another two games. With only five remaining on the schedule until the A-10 tournament, her presence would be a lift for the Minutewomen as they fight for a spot in the postseason.

Michael Wood can be reached at mcwood@student.umass.edu.

COURTESY UMASS ATHLETICS

Steve Lanpher watches the game against Charlotte from the bench. Lanpher has substituted for two games in Dawley's absence, and has yet to lead the Minutewomen to victory.

Traynham, team agree on leave

JEFF BERNSTEIN/COLLEGIAN

Former Minutemen guard Daryl Traynham shoots a floater against New Mexico State. Traynham and the Minutemen staff reached a mutual agreement for him to leave the team, which was announced on Jan. 31.

By Herb Scribner
Collegian Staff

(This article was originally published on Jan. 31 on Dailycollegian.com)

As of Jan. 31, Daryl Traynham is no longer a member of the Massachusetts men's basketball team.

Traynham and UMass coach Derek Kellogg came to a mutual agreement regarding the freshman guard's future. According to UMass spokesperson Jason Yellin, Traynham was not dismissed from the team, and it was a mutual agreement by both sides.

Yellin also said that Traynham is no longer on campus. According to the UMass registrar's office, Traynham is still listed as an active student.

Yellin said that although Traynham's leave of the team is "probably forever," Kellogg is going to try and help Traynham in anyway he can in all of his future endeavors.

Traynham was first suspended from the team back on Jan. 6 after a violation of team rules, according to Yellin. The last contest Traynham competed in was three days prior to his suspension when he scored two points in a 93-62 loss to Central Connecticut.

Traynham's most memorable performance came in the Minutemen's first game of the season, an exhibition game in which the Maryland-native score 15 points in route to a UMass victory.

Traynham averaged 4.7 points, 3.1 assists, and 1.6 steals per game as a Minuteman. Traynham still leads UMass in steals and assists averages on the season, with 10 games played.

American Cheese Is Not Real Cheese

Dead Philosophers in Heaven
This week: Tolstoy's amazing mono-colour whinge-coat
Lord, the world you created has fallen into shameful, violent disarray. It's a world full of abusive parents, drug addicted children, remorseless murderers, corrupt politicians, war-mongering sadists...
People have everything they need, and they're more miserable than ever; they have all the knowledge in the world, and yet they don't know anything.
Culture is dead, morality is redundant, justice is a fraud, love is a battlefield, battlefields are a battlefield.
Why prolong this mountain of pain and suffering and pointlessness? Isn't it time to wash it all away, to wipe the slate clean and begin anew?
©2010 MATT RUSSELL & NICK GIBB WWW.DEAD-PHILOSOPHERS.COM
Why do you withhold your divine judgement?
FOR GOD'S SAKE, I NEED TO KNOW... WHY DO YOU LET IT GO ON LIKE THIS?! WHY?!?!
Well Leo, it's like this: I'm still waiting for it to turn a profit.
AAAAAAAAAAAA AAAAAAAAAAAAA AAAAAAAAAA AAAAAAAAAAA AAARRRRRRRRRR RRRGGGGGGGGHH HHHH!!!!!
Plus I really want to see the last Harry Potter.

Folk Fiddling Across Sweden
A Smörgåsbord of Musical Traditions

Friday, February 11, 2011
4:30 p.m. | Herter Hall 227

Join Linda Fregni and Andrew Lamon on a five-week tour of Swedish fiddle traditions. Meet Sweden's national instruments, the six-hollowpipe flute (nyckelharpa), learn to fiddle among rock-wall harmonies, and watch a silhouette of dancers to sounds like horses. Enjoy a smörgåsbord of history, music & storytelling, all instructive, indulgent, and delicious from different villages, cultures of the national touring and holiday—and more. Pt 2 reserved seats now for graduate and doctoral students.

THE MASSACHUSETTS DAILY COLLEGIAN

SPORTSWEDNESDAY

WEDNESDAY, FEBRUARY 9, 2011

SPORTS@DAILYCOLLEGIAN.COM

Signs of FBS in recent signees

Amidst rumors of a jump to the Football Bowl Subdivision (FBS), the Massachusetts football team is still operating under the pretense that it's heading into the 2011 season where it will again take on a brutal Colonial Athletic Association slate.

Nick O'Malley

While the buzz stemming from recent reports indicating communication between UMass and the FBS' Mid-American Conference remains, the biggest thing for the football program is that the Minutemen continue to have high success at the Football Championship Subdivision (FCS) level if they have any hopes of moving up. And where that all starts is in the recruiting class.

The difference between FBS and FCS usually comes down to three things: size, speed and depth. During the past decade, the Minutemen have had the size. Perennially, UMass' line can usually stack up to almost any FBS program in terms of weight and height. The Michigan game last year was a great example of this.

In terms of speed, though, the Minutemen haven't been as successful. In recent years, UMass has put out a small group of guys who can run with the big boys. Anthony Nelson was that guy this year. Victor Cruz and Jeremy Horne, both of whom are currently on NFL rosters, did the same.

However – and this is where depth comes in as well – most FBS programs don't have the athletes at each position that an FBS program does. For UMass, this comes in terms of wide receiver depth and athleticism of the secondary. Once again, the Michigan game last year was a great example of this.

So if the Minutemen are allegedly going to make the jump to FBS, they need to inject talent to fill in their holes in order to compete on that level. Fortunately for them, the 2011 Minutemen recruiting class went a ways in doing that.

This year's class features three transfers from FBS schools, along with a more highly-touted freshman class. Going by ESPN.com's rankings, the Minutemen signed one three-star recruit (a tight end), three two-star recruits (a quarterback, cornerback and wide receiver) and one one-star recruit (a tailback).

It may not sound like much, but it's a solid haul for an FCS program. It features more gems than Delaware, New Hampshire or Appalachian State's classes.

Here's a quick overview of the key additions this year:

TRANSFERS

UMass is a team that has always thrived on transfers. The 2010 Minutemen surpassed expectations in large part due to big-name transfers from now-defunct CAA schools, an FBS transfer in linebacker Mike Mele and a quarterback from a junior college program in Kyle Havens.

Next season, the Minutemen will bring in three players from FBS schools: Chris Burns, a redshirt junior running back from Pittsburgh, Kellen Pagel, a junior quarterback from Bowling Green and Ryan Campbell, a redshirt sophomore defensive back from Mississippi. Also coming in next season will be junior receivers Chase Danska, from Diablo Valley, the same school from which Havens transferred, and Andre Hall from Los Angeles Harbor Community College.

QUARTERBACK

Probably the biggest thing this recruiting class brings is more fuel to the fire for the ensuing quarterback battle. As opposed to the 2009 faceoff between Scott Woodward and Havens, the 2011 battle could be a four horse race.

Coming in next season will be 2-star recruit Mike Wegzyn out of Tennessee and the FBS transfer Pagel. Already in camp for the Minutemen are transfer Ian Shultis and three-star quarterback Brandon Hill from last year's class. I shouldn't bother with adjectives, since each of these players have "highly-touted" or similar labels often given to them from people that, honestly, have never seen them play a snap.

RUNNING BACK

It appears Jonathan Hernandez will, once again, probably not be a pure feature back due to a transfer.

Burns, a highly-recruited back out of Pennsylvania, was mired in the No. 3 spot on the Panther's depth chart last season before making the jump the FCS. The former No. 15 tailback recruit in the country according to Rivals.com didn't get a whole lot of playing time at his old school and, like virtually all FBS transfers, will be looking to get some playing time in Amherst.

The Minutemen also added one-star running back Brian Dowling, along with unranked backs Jamal Wilson and Jordan Broadnax. Never underestimate a great name.

SECONDARY

Last season's secondary, which saw underclassmen getting significant playing time is getting a huge boost in Campbell from Ole Miss and 2-star recruit Quayshun Smith.

Young players like Darren Thellen and Mike Lee played valiantly last season, but the secondary as a whole suffered against top-tier passing teams and in crucial moments. Michigan and New Hampshire's passing numbers, combined with the late game collapse against Richmond's freshman fourth-string quarterback were signs of what happens with a young secondary.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

Javier Hernandez will have some competition in receivers Andre Hill and Elgin Long, recent signees.

Minutewomen travel to Dayton

JEFF BERNSTEIN/COLLEGIAN

Forward Jasmine Watson drives to the hoop against Duquesne on Feb. 2. Watson is one of the top three scorers on the Minutewomen, who play Dayton tomorrow.

By Michael Wood
Collegian Staff

With only a handful of games remaining on the schedule, the Massachusetts women's basketball team will try to step up its play with the hope of gaining ground in the Atlantic 10 and securing one of the final spots in the conference tournament at the end of the season.

The Minutewomen face Dayton on Wednesday, which stands at third in the conference table. The Flyers currently lead the A-10 in total scoring with 663 points on the year and 73.7 points per game. UMass, by contrast, is seventh with 569 total points and 63.2 points per game.

"Dayton is the highest-scoring team in the conference," UMass associate head coach Steve Lanpher said. "They score a lot of their points in transition, so we really focused on getting back defensively [in practice]."

"We have to get better in our defensive rotations and half-court defense, and offensively, we just need to start taking care of the basketball and getting good possessions," Lanpher added.

Junior forward Justine Raterman leads the offense for the Flyers. She leads in rebounding and scoring on the team, with 7.3 rebounds per game and 16.8 points per game.

Raterman was also just named A-10 Co-Athlete of the Week for her performance against Xavier on Monday. She recorded her third double-double of the season and shot 79 percent from the floor, including 2-for-3 from beyond the arc. The performance also moved her up to 11th all-time in scoring at Dayton.

"They've got three or four players who are really skilled players," Lanpher said. "We're not really going to focus on an individual; we're just going to try to make them work a little bit harder for their shots. Raterman is going to score, but we're hoping to get her to take more shots to do it."

Behind Raterman, senior guard Kristin Daugherty is averaging 13 points per game and junior guard Patrice Lalor averages just under 10 points per game.

For the Maroon and White, senior Cerie Mosgrove has continued her recent hot streak, and recently broke the school record for 3-pointers in a single-season (58). Mosgrove has not slowed down, and now has over 60 on the season. She is ranked nationally in 3-point percentage (50.8 percent) and is third in the A-10 in 3-point field goals per game.

Center Jasmine Watson and guard Megan Zullo have rounded out the offensive attack. Zullo is right behind Mosgrove in 3-pointers this season, and looks poised to break it herself any day. She is also fourth in the A-10 in 3-point field goals per game, one behind Mosgrove. Watson and Mosgrove have combined for 277 of the team's 569 points this season, as

Dawley's father passes away; Lanpher coaches during leave

JEFF BERNSTEIN/COLLEGIAN

UMass coach Sharon Dawley watches her team against Temple earlier this season.

By Michael Wood
Collegian Staff

Massachusetts women's basketball team coach Sharon Dawley has been noticeably absent from the team bench for the last week.

According to UMass Athletics spokesperson Jillian Jakuba, Dawley has left the team due to a family emergency and will not return until next week at the earliest. Associate head coach Steve Lanpher has temporarily taken over Dawley's responsibilities in her absence.

Lanpher later explained that Dawley's father, David Dawley, passed away on Monday night from an apparent heart attack. David was a resident of Revere, Mass., where he and his wife, Ginger, raised their three children. Sharon Dawley has been away from the team for about a week to tend to her family.

Dawley will not be in attendance this week, but Lanpher is optimistic that she will return in time for the upcoming Atlantic 10 tournament, should UMass make it. The team plans to have her back at the helm next week, after going most of the month of February without her.

"She should be back soon," Lanpher said.

The Minutewomen are on the road this week, taking on Dayton on Wednesday and George Washington on Saturday.

UMass has not won a game since mid-January and has dropped seven out of its last eight. The team is currently in the midst of a five-game losing streak in which it has scored more than 50 points only twice.

See DAWLEY on page 6

Kellogg, UM call for fans to return

MICHAEL WOOD/COLLEGIAN

Fans cheer for the Minutemen as they defeat URI. UMass coach Derek Kellogg asks these fans to return the Mullins Center now that the Minutemen are back in Amherst after a two-game road trip.

By Herb Scribner
Collegian Staff

All season long, the Massachusetts men's basketball team's coach Derek Kellogg has called for fans to pile into the Mullins Center to watch his team perform.

On Feb. 5, the Minutemen fell to Saint Joseph's, 67-64, which hadn't won a game in conference play until its clash with UMass. Despite the loss to the once-bottom-ranked team, Kellogg is still reaching out for fans to support.

"I'm hoping that the students we're striving for have some school pride," Kellogg said. "That they come because they go to UMass, because we're their basketball team, and you know what, there's not much else to do on a Sunday."

This Sunday puts the Minutemen against George Washington, which is a game against two of the mid-level teams in the Atlantic 10. UMass' previous game at the Hawks, who were at the bottom of the league, featured a roaring crowd for the Maroon and White to take on.

"[SJU's] student-section was jam-filled," Kellogg said.

Along with what he's been preaching about all season, as the Minutemen return home Kellogg is asking for UMass students to return to days of the past.

"I think we've just got to get back to where we have school spirit and school pride," Kellogg said.

Part of the fan appreciation was seen at the end of the Rhode Island game, when the team on the floor walked over to the fans and thanked them for their continuous effort to support the team.

"I think we're trying to do everything the right way to make sure they feel the right way about these kids while down on the floor," Kellogg said.

FINISHING THE SEASON

Even though the Minutemen's season is coming to an end, their schedule is about to pick up.

With seven regular season games left, UMass prepares for its final stretch of games that could lead them to an Atlantic 10 postseason berth.

The Minutemen's first opponent in the final stretch will be the Colonials (12-11, 5-4 A-10), who rest one spot below UMass in the A-10 table. In a battle between similar teams, much like an earlier Minutemen game against URI, UMass will be looking to find out just where its season is heading.

Following the game against GW, UMass takes on the top team in the league, Duquesne, which has one loss during conference play against St. Bonaventure. The Minutemen previously beat the Bonnies, 78-69, after some hectic travel issues.

Before its rematch with SJU, UMass will compete against long-time rival the Rams again. Last time the Minutemen took on URI, they pulled out a 10-point victory behind Anthony Gurley's 21 points. This will mark the 136th time these two sides have met.

Following their next match against the Hawks, the Minutemen will take on La Salle for the second time this season. Last time the two sides met, they competed at the MassMutual Center, with UMass scoring 54 points in the paint and having four players in double-digit scoring.

The last two games of the season will be polar opposites for the Minutemen. The first game will be against the historically-strong Temple, which has yet to play UMass this season, and has a 7-2 record in conference play.

After the match against the Owls, the Minutemen will close out the season against the bottom team in the league, Fordham.

RILEY'S RUN

Freddie Riley willed UMass back into the game against the Hawks on Saturday.

With the Minutemen down 13 points, Riley helped out the UMass rally, scoring a triplet of 3-pointers. He finished the game 4-for-9 from beyond the arc.

"I just want come and play my role," Riley said following the SJU game. "If I'm making shots, then I'm making shots, but if not, then [I've] just got to wait for my time to come."

Over the course of the season, Riley is averaging just over 30 percent from the 3-point arc on 36-for-119 shooting. Before the game against the Hawks, Riley's threes hadn't been sinking since he went 50 percent against Charlotte.

Herb Scribner can be reached at hscribne@student.umass.edu.

UMass research ranked in nation's highest

By Matthew M. Robare
Collegian Staff

The University of Massachusetts system ranked eighth in the nation in technology transfer income for fiscal year 2009, according to a survey by the Association of University Technology Managers and reported in Inside Higher Ed.

That year, the University earned $70.5 million against a research budget of $489 million, compared to Northwestern University, which earned $161.6 million. According to the Amherst campus' Office of Commercial Ventures and Intellectual Property, UMass Amherst contributed $861,500 that year, with the bulk of the money being earned by the medical school.

For fiscal year 2010, UMass Amherst has received around $2.4 million in technology transfer income, with the amount from the full system not yet available.

Technology transfer is the process where discoveries and inventions made by faculty are licensed out to businesses. Sometimes new businesses are even started, such as with microbiology Professor Susan Leschine's discovery of the Clostridium phytofermentans bacterium with lab technician Tom Warnick.

C-thy, as she calls it, is an organism that can eat any cellulosic matter – wood and bark, as well as leaves and stems – and make ethanol from it. "The good news about C-thy is that you can feed it waste paper," Leschine said, adding that municipal solid waste is 50 percent paper.

They discovered the bacterium in the soil and it could originally produce a solution of two or three percent ethanol before the concentration killed it, however by feeding it more nutrients, more mutants able to tolerate higher concentrations of ethanol were bred, so ethanol tolerance is not a problem.

Leschine said that when she joined the faculty, she signed an agreement giving the rights to her discoveries to UMass and has to disclose all of them to the University every year in case they can be commercialized.

In 2006 C-thy was commercialized by starting a company called SunEthanol on University Dr. in Amherst, but in 2008 the company moved to Marlboro, Mass. and changed its name to Qteros. They also branded C-thy as The Q Microbe. The company is in the process of raising more money and improving the organism so it can be commercially viable. According to Qteros' website, UMass Lowell Chancellor Martin T. Meehan is on their Board of Directors while Valero, British Petroleum, Venrock Associates – which provided venture capital to early electronics companies such as Apple – and Soros Fund Management have invested in them. Last month they secured an additional $22 million in funding, according to their website.

Qteros recently announced a partnership with Praj Industries of India. CEO John McCarthy Jr. told BioFuels Digest that Qteros partnered with Praj because they have "a top quality management team, for one – and the fact they have built more than 450 plants around the world. No one has more expertise."

Leschine said that she has been doing more research on C-thy because the reason it makes ethanol in the first place is a mystery. Most microbes don't make ethanol because they still have a high energy content and, since it's poisonous to them, makes it wasteful. But she thinks that C-thy has an unusual way of capturing energy that would make its ethanol production economical. She said that Qteros is also doing more research on C-thy, mainly in getting rid of DNA from its genetic code that commercial operations won't need.

However, UMass still owns the microbe and so Qteros pays a yearly licensing fee to work with it. Some of the money goes into funding Leschine's research. "On the patent I'm named as an inventor," she said. "Part of the licensing fee comes back to the inventors."

Matthew M. Robare can be reached at mrobare@student.umass.edu

Susan Leschine of the microbology department discovered a strain of bacterium capable of producing ethanol. This discovery helped UMass place among the nation's highest in technology transfer income.

New dean of students appointed

On Wednesday, Enku Gelaye was appointed associate vice chancellor for student affairs and campus life and dean of students at the University of Massachusetts.

The decision has come after a national search.

In a press release from the University, Vice Chancellor for Campus Affairs and Student Life Jean Kim expressed her approval of the choice.

Gelaye, who holds a law degree from the University of Georgia and a Bachelor's of Science degree from the University of Tennessee, is currently the executive officer for the vice chancellor for student affairs at the University of California, Los Angeles. Gelaye will succeed Jo-Anne Vanin, who is retiring after 22 years.

"Enku has significant expertise as a student conduct administrator, policy and research advisor, incubator of new projects, crisis management specialist, student advocate and gifted collaborator with students, faculty, staff and the community," said Kim in a release. "She has broad experience in student affairs, university management and an unwavering commitment to student success. I am delighted to have such a talented, engaged professional to join the leadership team of the student affairs and campus life division."

According to Kim, Gelaye will take her new position on April 4.

Before joining the UCLA staff, Gelaye served as interim director of student judiciel affairs and community standards at the University of Southern California.

The Division of Campus Affairs and Students Life include programs and services relating to the student experience on campus, including Career Services, Housing and Residential Life, New Student Orientation and University Health Services.

DAILY FILE

Enku Gelaye has been appointed associate vice chancellor for student affairs and campus life and dean of students at UMass.

University breaks snow removal budget limit

RYAN TROTT/COLLEGIAN

The University has already spent the budget limit on snow removal for the year in an attempt to deal with the recent string of winter storms and now must plan for the remaining weeks of winter.

By Micah Levine
Collegian Correspondant

The University of Massachusetts campus has already had a number of delayed openings and early closings as well as a few all-day closings due to snowy weather, and the recent storms are making a massive on the school's budget. In a recent news release from the University, UMass Climatologist Michael Rawlins said this January has had the second highest accumulation of snow for the month, totaling around 39.9 inches, the highest snow total since 1893. A total of 16 snow-related events have occurred as of February 6.

He added in the release that, when asked about climate change in relation to the record snow, it can't be sourced directly to a warming atmosphere.

"New England has seen an increase in winter precipitation in recent decades, and heavy snowfalls have also increased in the East," said Rawlins. "Looking forward, there may be more of the same, as climate model projections suggest wetter winters, and perhaps more heavy snowfalls in coming decades," he continued. The snow has turned many of the UMass pathways into slush and ice obstacle courses, making the trip to and from classes an exercise in caution.

Sophomore Shaylyn Conroy said the conditions of some of the walkways are dangerous, "Walking to class in the snow is a challenge. The walkways are slippery, and it's hard to tell where the icy patches are underneath the snow," she said.

Like most of the surrounding communities, UMass has melted through its snow removal personnel budget of $250,000. As of Sunday, UMass has spent a total of $261,546 on snow removal personnel. To pay for the difference, UMass will limit spending in other areas as required, said Campus Spokesman Ed Blaguszewski. In addition to the personnel budget, UMass has a snow removal budget of $200,000 to use toward equipment repairs and salt, and a melting agent called Ice B' Gone.

UMass has a total snow removal staff of around 250 people, including 160 custodial staff members, and 90 grounds people who are in charge of operating equipment like plows and snow blowers. Snow removal entails both removing snow from walkways and streets as well as trucking the snow off to other places, to make room for more snow. People working at the physical plant monitor weather patterns and also provide internet updates and television reports, then evaluate information like the path and nature of a storm as well as the length and accumulation that may occur. Then a recommendation is made to the Vice Chancellor of Administrative Finance, Joyce Hatch, about whether or not to close campus. A decision about campus closing is usually made by 4 a.m. "The physical plant has been doing a fantastic job," said Blaguszewski. "They've had to deal with back to back storms, and they are doing great work."

Micah Levine can be reached at mlevine@student.umass.edu

ALANA fair comes to UMass

MARSHA GELIN/COLLEGIAN

Students met with prospective employers and learned about various career options available at the 2011 ALANA Career Fair on Feb. 8. The fair in an annual event organized by career services.

College grading plan for magazine revamped

By Stephen Sawchuk
Education Week (MCT)

WASHINGTON - The organizer of a plan to review all 1,400 schools of education and publish the findings in U.S. News & World Report is altering several key aspects of its methodology - an attempt, officials for the group say, to respond to mounting complaints about the study.

The National Council of Teacher Quality posted its grading criteria online Wednesday morning to address concerns among education school deans that the review wouldn't be transparent or accurate. It also plans to supplement the content-based analysis at the heart of its methodology with information on candidate classroom performance culled from "value added" data.

Finally, the organization will not, as previously planned, issue a failing grade to institutions that don't provide the information requested.

Much about the ambitious study, due out next year, is still in flux - including whether such changes will be enough to persuade schools of education to participate in it. The situation underscores the tensions brewing as conversations about teacher accountability gradually permeate higher education.

"I think it's good that they are addressing some of these methodological issues," said Mary Brabeck, the dean of the Steinhardt School of Education at New York University. Brabeck, along with dozens of other deans, signed letters protesting the study. "Nobody's against rankings, nobody's against evaluation, nobody's even against high-stakes evaluations. But if the methodology is flawed, how does that serve the public?" she asked.

The president of NCTQ indicated that the changes were meant to encourage participation, but she was adamant that the study continue.

"These are folks for whom this is their life's work. It's a very emotional issue. We totally understand why people are inclined to get upset about this," Kate Walsh of the Washington-based advocacy institution said in an interview. "But, on the other hand, we're asking folks to put that to the side and recognize what we all recognize: that there are many institutions in the U.S. not preparing teachers adequately, in addition to many doing a great job."

Robert Morse, the director of data research for U.S. News & World Report, which will publish the NCTQ's findings, confirmed that the outlet will continue the review.

"We're used to people having negative opinions about what U.S. News does," he said.

The two organizations officially launched the project on Jan. 18, but it has been in the works for nearly a year. Its main purpose, according to the NCTQ, is to provide school districts and other education consumers with more information about the training teacher-candidates receive.

The report's methodology is largely based on pilot reviews conducted last year of education schools in Illinois and Texas, and as such, its methodology differs markedly from that used in other U.S. News projects.

Rather than rankings, the council will rate all programs on an A-to-F scale on up to 17 standards. They include whether teachers are adequately trained in the science of reading and math; the length and coherence of their field experiences; and whether their programs include training on working with English-language learners.

After the council sent initial requests to education schools in late January, two distinct groups of deans organized and publicly objected to the review in letters to U.S. News.

One of them was signed by about 35 education school deans belonging to institutions within the Association of American Universities, an organization of elite research institutions.

A smaller group of education school deans at institutions that have receiving teacher-training grants from the Spencer Foundation, sent another complaint. Additional letters could be forthcoming from state-oriented groups of deans in New Jersey and Illinois.

Among other complaints, the deans alleged incomplete standards, a flawed research methodology and scoring criteria that were not transparent.

"The data-collection process must itself be transparent and clear, the assessments must be reliable, and the presentation of findings must be honest and fair. Without these characteristics, the rating will be meaningless," the deans wrote in one of the letters.

The AAU deans compared NCTQ's standards unfavorably with teacher standards crafted by the National Council for Accreditation of Teacher Education and the Council of Chief State School Officers.

Both groups of deans were galled at the NCTQ's plan to give institutions an F grade on the standards if reviewers could not obtain information on which to base a rating.

"We worry that this implied coercion will cast doubt on the results of the entire evaluation," the AAU deans wrote in the Feb. 3 letter.

Walsh said Tuesday that the council will address some of the criticism. Instead of issuing failing ratings, it will give an "incomplete" rating while seeking the information through other means.

In addition, she said, the council has now placed its scoring criteria on its website so it is accessible to all.

"We're making those changes because we want institutions to feel they can trust this process. It will work so much better," Walsh said.

She defended her group's standards, saying the alternatives presented in the deans' letters were too vague to serve as guidelines.

"It's an external review. These are not standards developed by the teacher education community, and that itself is a challenge for them," she said. "Previous reviews (in Texas and Illinois) have shown high rates of failure against these standards, and that creates nervousness."

In a webinar on Wednesday, NCTQ representatives said that, once the ratings were computed, the council would show how its scorers arrived at their determinations and allow schools to provide additional evidence to contest them, possibly leading to a ratings change. Such details would be publicly posted on the council's website. During the Illinois and Texas reviews, some deans changed that the council wasn't responsive to additional evidence.

Previous NCTQ reports have been poorly received by education schools, perhaps explaining why their appeals have been directed at U.S. News and not the NCTQ.

A 2006 study of reading preparation in a sample of teacher colleges, for instance, led to complaints that the reviews were flawed or incomplete.

More recently, findings from the pilot reviews conducted last year were met with a boycott from Texas education school deans and created consternation among deans in Illinois.

The American Association of Colleges for Teacher Education, a national membership group based in Washington, has not taken a public stand on the report because it does not want to influence member institutions' decisions about participating. But it is closely watching the process, and e-mails from AACTE officials indicate that the organization has expressed concerns about the review both to its members and to the editor of U.S. News.

Not all education schools have condemned the study. The NCTQ's technical advisory panel includes some from inside education schools. One such panel member, the dean of Southern Methodist University's education school, in Dallas, said he didn't agree with all the standards and results in his school's review last year, but the content analysis provided some useful information overall.

"I believe there should be other ways to evaluate the effectiveness of our programs as well, but that doesn't negate NCTQ's efforts to review programs for their content," David L. Chard wrote in an e-mail.

As a result of the review, Chard added, SMU will put more of an emphasis on math-content instruction and on special education.

Education school deans acknowledged that their protests are coming at a time in which public perception of teacher education's strengths is tenuous.

"I fear that if anyone protests or refuses to participate in the review, they are sending a message that they are not responsive to the public," Chard said.

Deborah L. Ball, the dean of the University of Michigan's education school, said in a statement that protesting the study would distract from conversations about how to improve the quality of teacher training.

"Spending our time fighting about a survey of our syllabi and requirements is a distraction," she said in a statement. "Claiming over and over that we know what we are doing and that we should control training looks foolish to our critics and, in the face of weak or nonexistent evidence, only discredits our claim to expertise."

Many deans are in the position of Richard De Lisi, the dean of the education school at Rutgers University, in New Jersey, who is still weighing whether to take part in the review.

"It's unfortunate that this can be painted as shying away from evaluation," De Lisi said. "But that's not what it's really about. You have to have judgment criteria that are clear and evidence everyone can see."

Brabeck of NYU echoed that sentiment.

"I don't know what NYU will do," she said.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

THURSDAY, FEBRUARY 10, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all."- Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Kindness to inspire

Melissa Mahoney

You would think that after three and a half years of driving, I would have known what a flat tire felt like. I should have known that the suspicious, gyrating rattle from behind me was not my radio antenna struggling to assert itself against its rusting socket and the January wind. I should have realized that just because the mysterious vibration disappeared as I picked up speed, did not mean it had gone away. And so, with the certain naiveté of a 19-year-old who was unaccustomed to car troubles, last month I drove to work on a, very obviously, half-flat tire.

With only mild concern, I parked, pulled myself out of the car, walked around the trunk and inspected the antenna. I eyed it, rattled it and satisfied, reached down to tie my shoe when – there it was, hello flat tire. With seven minutes to go before I had to clock-in at work, I knew I had no time to change it myself or wait for AAA, and the prospects of self-help or roadside assistance on a night in the dark and cold seemed rather dismal. However, at this time a large, white utility truck with a flatbed trailer was parked perpendicular to my car, and was across about five parking spaces. Had I noticed this from the beginning, I might not have been so surprised when someone behind me said, "D'you want me to fix that for you?"

Brian, as I later learned his name, was hanging out of the truck's open door, looking eager to help. And I, a damsel in drstress with a deadline, decided it was best to take the help of a stranger. I quickly ran into the restaurant I work at, told my boss the situation and returned to find Brian inspecting the flat and rubbing his hands for warmth in the January air. He was in his 30s, a ginger with a crew cut and a green-plaid flannel coat. His face was of the type that people always said looked familiar, with an easy smile and a cordial, Southern drawl. I popped the truck to get to the spare, and would have pulled out the equipment myself, but Brian politely insisted that he do the work, and I was obliged to stand by and let him do the job.

"You don't sound like you're from around here," I remarked.

"No, miss." he said with a smile, "I'm from Arkansas." And with the ice broken, he was happy to drown out the squeak of my strained jack with his story.

Brian had driven approximately 1500 miles in three days, hauling a trailer full of home air conditioning systems (a bit ironic for the weather). He had a wife and a daughter back down South, who from the warmth of his stories he must have loved very much. He asked me if I went to school, and when I replied, "Yes, UMass Amherst" (his face comically registered no recognition) he urged me firmly to finish my education. His wife had gone to school for business, but he never had, "and I make more haulin' loads than she does with a degree. Ain't that just the way it goes?"

He had just started a college fund for his 7-year-old daughter, which he said sadly wasn't much. At this point, completely endeared by his happy nature, I quickly assured him that someday it would be enough.

"Hey," he said suddenly "You hear about all those birds found dead in Arkansas?"

"Oh, yeah," I said, "I read about it the other morning online."

"Ain't that just a shame. And a few weeks ago, they found all those fish dead too, out by Ozark, near me."

I hadn't heard of that yet.

"People, they're tellin' me the world's endin!'" He smiled to himself. "But I tell 'em, No, sir, not in Arkansas." Brian chuckled at his own joke, and I couldn't help but laugh too about a state I'd never seen.

According to the Gallups-Healthways Well-Being Index, Arkansas is the fourth most unhappy state in the country. Even Arkansan birds are falling out of the sky and the fish are beaching themselves, which might actually be the doing of fireworks and natural population die-out, according to CBS News. But Brian was just about the nicest, most helpful stranger I had ever met. He was friendly, talkative and ultimately, I felt that he truly cared about my well-being.

He instructed me not to drive on my spare tire over 40 miles an hour, and to get a new tire as soon as possible.

"These idiots on the highway with their spares are gonna get themselves killed!"

He urged me to work hard and was always adamant that I finish school. No minor acquaintance that I had met in Massachusetts – ranked 11th most happy – ever cared that much.

As we lugged my flat into the trunk and put away the wrenches and jack, I could not help but feel more than gratitude for this man. I felt like Brian was an old family friend rather than a transnational trucker I had met by chance in a parking lot. In 20 minutes, this stranger meant more to me than half the staff at my daily job. And the experience of changing a flat tire, which could have been a frigid ordeal waiting for AAA in the dark trying to make the rusted wheel-nuts move, was actually the highlight of my day.

I offered copious thanks, to which he said it was nothing. He was waiting for the call to go pick up a car that had to be moved back down south, and he was happy to have something to do.

"Well, if you're waiting much longer, you should come in. I'll fix you up with some lunch," I said. It was really all I could do to repay him.

"Well," he said, "I just might."

With that, we shook hands. He wished me luck, and I wished him a safe drive back. I gathered up my things and headed in to wait tables. As the afternoon wore on, Brian never did come to lunch. The white truck across the parking lot had gone, and was probably humming along the highway with its new haul. I couldn't give him a meal, but I could give him a story

a story of human kindness fit to inspire us all.

S.P. Sullivan

Fear within NFL

Nicholas O'Malley

With the bonanza surrounding the Super Bowl dying down and the conclusion of the NFL season upon us, there's even less getting in the way of the elephant in every football fan's room. The festering fear that's been lying in wait for every football fan is now becoming clearer than ever.

There may be no NFL football played next season because the players and owners can't allocate billions of dollars in a way that makes everybody happy.

That's the short of it. The long version is that the two groups are at odds, the owners of the 32 NFL franchises – along with NFL Commissioner Roger Goodell – and the NFL Players Association (NFLPA). The problem? The collective bargaining agreement, which was agreed upon between the two groups in 2006, expires on Mar. 3, 2011, and neither side is budging on demands.

To be clear, the players are not going on strike or even attempting to. It's a lockout, which means that the players can't play until either a deal is made or the players' union is de-certified (not going to happen). That means no scab players or re-enactment of "The Replacements."

Much of the hard information out there on the labor dispute is coming through NFLPA Assistant Executive Director for External Affairs, George Atallah. According to a piece he wrote for ESPN.com, the owners are calling for an overhaul of the collective bargaining agreement between the two groups because the "economic model in the NFL doesn't work."

This is one of the most insane things I've ever heard.

The NFL Players Association does a great job of selling themselves as the oppressed workers in this argument ... except for one little thing: They're millionaire celebrities.

The NFL, easily the most profitable sports league in the United States, is raking in money while the rest of the country mires in recession and the NBA is hemorrhaging money. Just look at the NBA's New Orleans Hornets, who were recently taken over by the league.

In this economy, it would normally be easy to believe that the owners are struggling. This, of course, would be easier to argue were it not for the $2 billion renewal of Monday Night Football between ESPN and the NFL, according to Attalah's piece.

That's right, one game a week.

Other interesting tidbits Atallah put out there: "In 2010, 65 of the top 100 watched sporting events in the U.S. were NFL games. Eighteen of the top 20 viewed telecasts this television season were NFL games, and we haven't even seen the playoffs yet. Revenues are up. Sponsorships are up. Every television ad for this year's Super Bowl was sold months ago. All signs and indicators point to extraordinary success and rapid growth for the business of football."

But how much of the total revenue are the players actually getting? Just over 57 percent of "total revenue," according to a letter the NFLPA sent out to sports editors nationwide, clarifying the labor situation. That, of course, is after NFL owners have already taken out a sizeable amount for "expense credits." Before that amount is shaved off, the players actually get 50.6 percent of "all revenue." Both of those percentages are down more than 4.5 percent since 2000.

What are the owners asking for? One billion during the first year of the new collective bargaining agreement, according to Attalah's piece. In addition, they're also asking for two regular season games to be added to the schedule, while removing two preseason games.

This, meanwhile, is occurring while the league is flaunting its new "player safety" rules that fine players for illegal hits. Sometimes. Usually just when receivers and quarterbacks get hit. Watch a replay of a game, and you'll see running backs get speared in the side of the head with no mention of it from the refs or announcers.

So, in this back-and-forth between the players and owners, what do the players want? To play football and get paid money for it, the same way they have in the past.

While the owners are asking for a rehaul with the deadline for the new deal approaching, the NFLPA has offered to simply extend the current deal for another year while they work out a long-term solution.

The Owners: "Nope. The NFL (read: the owners) isn't making money. What, proof? Don't worry about it. Look, the players are threatening a work stoppage. Go talk to them."

Don't worry about the owners though. They'll still make money through the TV deals, even if the players don't play a down.

The NFL Players Association does a great job of selling themselves as the oppressed workers in this argument. By all accounts, they should be in the right. Instead, the owners are sitting back and waiting for NFL fans to turn on them in the case of a lockout. Theoretically, one would think they had all the leverage, except for one little thing: they're millionaire celebrities.

I understand the plight of the players, I really do. These are people who train for an occupation since they're in elementary school, often forgo education to focus on this career and often either don't make it or stick around for a couple years trying to stay on a team. Add to this the fact that, according to a piece for the New Yorker by Malcolm Gladwell, they suffer brain damage similar to an Alzheimer's patient later on in life.

But I just don't care.

A lot of other fans don't care either; they just really want to watch football. The website NFLLockout.com, sponsored by the NFLPA, as already garnered a lot of attention – particularly with its ad that ran during the Super Bowl – and a lot of signatures for its petition to "block the lockout."

NFLPA Executive Director DeMaurice Smith isn't going to get an improved deal for the players. There's no leverage. The fans will turn on the players once there's even a hint of missed games for the 2011-12 season and the owners will be sitting pretty, telling them "We told you so."

So all that fans can really hope for is that the NFLPA just tries to get something out of a new bargaining agreement rather than everything. It could be not extending the season, or a much-needed rehaul of benefits of former players. Both sides will probably agree on a retooling of high-priced rookie contracts.

All that matter's though is that it gets done by Mar. 11. If it doesn't, the lockout begins.

OBJECTIVE OBLIGATION

Dear Editor,

I was very impressed with the article from Feb. 1, "Mubarak Protests Continue." It was refreshing in this time of biased journalism to read such a fairly written and nonjudgmental piece. Writer Tim Jones gives an impartial portrayal of the events in Egypt including perspectives of both sides of the issue. He uses numerous and appropriate sources, citing them only where their expertise allow them to speak and not including overreaching and unfounded statements. The impressiveness of this article is made apparent in its comparison to the turn most journalism has taken today.

Objective journalism seems to have ended. Lately, reading or watching the news means getting an opinion rather than fact. Even in hard hitting stories, many journalists deliver the news in such a way that the audience is manipulated into what to think. A more positive picture would be painted of the people and events supported by the given newspaper or network. This unfair media often times highlights the negatives of the opposing side. When the facts of an event go against what the paper or network support, they are often buried in the story or are disguised with language that diminishes their importance.

I have often found myself searching for the same news stories from opposing sources in order to stitch together some form of the real story from the corresponding information. In Tim Jones' article, I felt I was getting all the information from one place.

Seeing this quality and impartial writing in a college newspaper gives me hope that the next generation of journalists will bring us back to a place where the information in the news is unbiased and reliable.

Sincerely,
Sarah Chefitz
UMass student

HARD WORK PAYS OFF

Dear Editor,

A recent article has been floating around numerous periodicals, the internet and radio stations, talking about how college students have become too "lazy". The NPR article "A Lack of Rigor Leaves College Students Adrift" cites a book called "Academically Adrift", where a study followed over 2000 students at 24 different universities tracking their academic progress.

The study showed that nearly a third of the students showed no academic advancement in their time at school. This poses the question why are students around the country and here at UMass becoming lazy and not putting forth the effort in college?

There are two answers to this question. One, college students around the country and here at UMass are lacking effort. Many students have been brought up to do the bare minimum and their work ethic has carried over to college.
They do just enough to get by and in the end they end up with a college degree. This brings me to my second point that college professors around the U.S. are just becoming soft and many take it easy on students because they are looking for a high approval rating which will lead to high scores on evaluation papers at the end of the semester. This is not to say there are thousands upon thousands of students out there who work extremely hard and in the end get what they deserve, but as a society our generation has been coddled by our parents and this has lead to poor work ethics.

It is not hard to walk around UMass and find students that are working hard but everyone knows multiple students who don't go to class and take the easy way out of doing their work. This translates to college students going out into the work force and struggling to handle the "real world." As graduation approaches for me and thousands of other students, you can't help but think about how we are graduating into a poor economy with a high unemployment rate. Millions of college graduates today are unable to find jobs in this economy. A professor at UMass reminded me today to think about how much effort you put into your school-work and to always remember that there is someone out there that is working harder than you are.

It is simple, in today's economy if you do not put forth hard work and effort into achieving your college degree you will be left on the side while others look at you as they pass by.

UMass Student

STRESS ON STUDENTS

Dear Editor,

The article, "Freshman now stress the most in 25 years," published on Feb. 7, 2011 brings up an issue that many college students would like to hide from: stress.

I was diagnosed with anxiety and depression at the age of 17, and at the time I was very reluctant to admit it, even to myself. However, by bottling up my emotions I was only becoming more stressed out, and this greatly affected my freshman year at UMass.

My concern is that students experiencing such feelings may not deal with them correctly, or even more wornsome, may not deal with them at all. The problem is that most students do not want to voice such mental health concerns, or even more upsetting, they are simply undereducated on the subject matter and do not understand that the way they are feeling warrants outside help.

It is important for the entire student body to know that there are counselors and psychological health professionals on the UMass campus that are here for the sole reason of dealing with such mental health issues.

Even more importantly, students must realize that they are not alone in dealing with such mental health issues, making it possible for us to help one another.

Nicholas Bellofatto
UMass '12

STRATEGIC SHORTCOMINGS

Dear Editor,

Dan Stratford rightly praises the current SGA for achieving visible victories for students, such as installing new bicycle racks and reducing prices for some textbooks. He rightly notes the difficulty in balancing a focus on campus-level advocacy with a focus on statewide or federal advocacy; the SGA's resources are limited, and taking on multiple campaigns is challenging.

But Mr. Stratford expresses a perspective both strategically and morally nearsighted. His strategic vision does not see that an issue decided on Beacon Hill or in Washington, D.C. can have just as real consequences in students' lives as an issue decided in Whitmore or the Center for Student Development. In the last three years, for example, students in the SGA have won hard-fought increases in state and federal need-based financial aid by working with national and statewide organizations that have secured many such victories for students. These organizations exist because student leaders of past decades saw that to fight for their constituents, they would have to go beyond campus; indeed, the SGA has the powers it enjoys today because students demanded them from state-level policymakers.

More than being strategically shortsighted, Mr. Stratford does not see that worthwhile political involvement requires a large-scale perspective informed by a clear moral vision. His curious choice of Nixon and Bismarck as political models suggests an inability to see the terrible damage that can be done by leaders whose love of power blinds them to what is right. His dismissal of the role of idealism in politics writes off history's great struggles for justice, all of which included individuals with no personal stake in the fight but the ability to see that taking part was the morally correct thing.

Here on campus, moral vision can allow us to see that attending university is a privilege unfairly denied to so many of our hard-working peers, and that as we work to improve the quality of life on campus, we must also use our position on the inside to expand access to higher education.

Latest HIMYM lacks sharp wit

By Ellie Rulon-Miller
Collegian Staff

This past Monday, Katy Perry joined the cast of the popular CBS show "How I Met Your Mother." Perry played the cousin of Zoey, a recurring character as of late.

It was not Perry's first foray into television. She has appeared in several series, including "The Young and the Restless" and as the voice of herself on "The Simpsons." This episode of "How I Met Your Mother" was the first time she has played the role of a character instead of herself in a television series.

Perry is also lending her voice to a production of "The Smurfs" this year. She will play the character of Smurfette. If it is anything like her character in Monday's "How I Met Your Mother," it may be a promising role for her. She does naïve well, so playing a little blue cartoon character may go over very well.

Zoey, played by Jennifer Morrison, first appeared in the series as an activist who appeared regularly to protest protagonist Ted Mosby's various architecture ventures. Prior to her time on "How I Met Your Mother," Morrison was best known for her role in the popular series "House," on which she played Allison Cameron.

Perry's character is referred to throughout the episode only as "Honey." This is because the gang can't remember her real name. They talk to her like a child throughout the episode because she is extremely naïve and everything she says makes them say, "Oh, honey."

Honey's naïveté is not very believable in part because of the reputation Perry has built up as a performer. Her look is too edgy for this childish character – she wears a sexy, low-cut shirt and her tattoos are visible throughout the episode. Visually, she looks more like Mandy Moore's character Amy when the other pop star made a guest appearance on the show as a dangerous-looking woman in 2007. It would have been more appropriate for Moore's character to be like Honey, and for Perry's character to be more like Amy.

After the last episode – in which Marshall's father passes away – aired, viewers needed "How I Met Your Mother" to be lighthearted again. The episode was a buzzkill, even in its final moments when Marshall managed to smile and joke again. While the new episode was a happier one, viewers were reminded of Marshall's loss.

The plot of the episode was told to Marshall over the phone by different members of the gang. He went back to Minnesota to spend time with his family. He sits in his childhood bedroom playing Clue by himself as Robin calls him. While she tells her version of what happened when Honey came to visit, her phone call is interrupted by a call from Barney, then from Lily, and so on.

Each version of the story is told in ways that are characteristic to each of Marshall's friends. Barney talks of the girl in sexual terms, Lily gets all worked up and makes a comment about sexting with Marshall, and it seems that Robin tells the story in the most realistic way.

Despite Perry's relatively minor role in the episode, it is a fairly bland one. Perhaps this is the reason a popular old joke was brought back: the friends planning interventions for each other. In this case, an intervention was planned for Ted.

Among the funniest things about the episode is the way that Marshall and his family interact. They revert to childishness, and his mom and brother are constantly interrupting his lengthy phone call.

Though the episode had its funny moments, it seemed to lack the typical humor usually associated with "How I Met Your Mother." Jokes were not as sharp or as well-executed as they typically are. The show will have a chance to redeem itself on Monday, Feb. 14, when the next new episode airs.

Ellie Rulon-Miller can be reached at ellie@dailycollegian

KATIE PERRY/COM. RETROPOP

Katy Perry made a guest appearance in Monday's episode of "How I Met Your Mother" as the beautiful but extremely naive cousin of Zoey. This was the first time Perry played a character on television. She will provide the voice for Smurfette in an animated feature later this year.

Cult following for 'Invader Zim' lives

By Tim Jones
Collegian Staff

Television programming today just doesn't compete with the shows of the '90s generation. Nickelodeon and Cartoon Network have transformed from networks with variety to those with live-action shows and teen angst to play to the current "hip" generation. Many shows have unfortunately died, shows that have a special place in the hearts of those who grew up in the 1990s.

But now there's a chance to revive one of those shows: the truly epic "Invader Zim."

"Invader Zim" is by no means a show for children, which is one of the reasons Nickelodeon was so quick to pull it from programming. With many dark themes and immature humor, the show wasn't well-suited for fragile, little minds. It was also very dark and violent and didn't play into political correctness or concerns about hurting kids' feelings.

But those who understood the show and loved the sick humor devoured every bit of it.

Zim, an alien from another galaxy of an invading species, is sent on a joke mission to take over Earth with his robot companion, GIR.

Every episode involves him adapting to human life and pursuing his goal to take over the Earth. But there are complications. Mostly the fact that he's a complete idiot bumbling through a foreign land, his rival Dib is always on his tail, and the bizarre citizens of Earth ruin all of his plans in the most unexpected ways possible.

There really aren't any attempts to be subtle with the material. It is flat out disgusting at times, and that's what makes it shine. The truly random and dark humor of "Invader Zim" was too unique to be copied, but a nice representation of the kinds of programming seen at the time, with shows like "Rocko's Modern Life" and "Are You Afraid of the Dark?" pushing the boundaries of what was considered acceptable children's television.

From Zim growing a massive pimple with hypnotic powers, to the class pet hamster, Pipi, evolving into a colossal beast known as "Ultra Pipi," to the glorious introduction of Mini Moose, the show had enough originality to last it a decade.

Now it seems as if every show geared towards kids is all about love or pre-pubescent children singing of their misery and strife. Although some shows manage to actually convey some of this twisted humor, they are few and far between.

"Invader Zim" has gained a cult following. DVD sales have gone through the roof since their release. Many people still popping them in to reminisce. Even GIR has his own following online, and for good reason too.

Of course, when the show was cancelled in 2002, long before most of its viewers actually understood most of what its crazy metaphors meant, people went nuts.

Online petitions went up everywhere, and people rallied for the return of their favorite show, and those followings have become stronger over time, especially with the advent of the Internet.

Despite all of the pleading and crying, it seemed as if there was no hope whatsoever for the banished gem – that is, until now.

Nickelodeon has announced "Operation Doom" for release Feb. 22. The DVD will contain the highest-rated episodes of the series. It's all part of a plan for revival. The rumor is that if the DVD sells enough copies, Nickelodeon will heavily reconsider renewing the series. For anyone who has seen the show and loved it, this may be the only chance.

For the people who have seen MTV turn from a network about music into a network about shows with idiots and crybaby baby mamas, or Disney Channel turn into a network with crying boys without any facial hair, the revival of a classic show, one that evokes powerful childhood memories, "Operation Doom" is too good to pass up.

For those who want to fight for another chance, this DVD begs to be bought. It's only going to run at a price less than $20, which is a steal, considering that many of the sets are running around $40-$50 due to the DVDs' rarity.

For "Invader Zim" to return to air would be a dream come true for many loyal followers. And who know, it could start a trend of the revival of good programming.

Local artist kicks off semester at campus gallery with map art

By Kelsey Laning
Collegian Correspondant

The University of Massachusetts' Augusta Savage Gallery plays host to Massachusetts native Amie LaPrade Seuthe this February. LaPrade Seuthe is the director of the Hampden and Central art galleries at the university.

The Augusta Savage Gallery entertains four professional and four student exhibits each year. LaPrade Seuthe, who has been featured in UMass galleries for years, is the first professional to grace the gallery this semester. Located in the New Africa House at the bottom of Clark Hill Road, LaPrade Seuthe displays her project, "Clean Slate."

Beginning with discarded maps, LaPrade Seuthe uses layers of colors and figures to demonstrate a reinvented image. The longitude and latitude lincs stretching across the maps entertain the thought that everything is connected, which seems to be a prominent theme. This main piece reflects something new yet clearly shows what it had been as a clean slate. The painting poses as the basis for the whole collection as it was the first piece LaPrade Seuthe started in 2009.

In the description posted at the entrance, LaPrade Seuthe states how the piece began with the remaking of the map, but as she progressed, the media's changed and the paintings ended up becoming the maps.

The largest painting in the collection was entitled "Twinkle I." The dark background contrasted against light blue and white round spots portraying the stars from miles away. These were scattered across the piece surrounding a central cloud of pale white that inspired the viewer to look closer.

"When I stood a little farther away, I could take in the whole painting and interpret it how I'd like to," sophomore anthropology major Casey McNee stated while admiring "Twinkle I." This painting had quite a crowd for this exact reason. Everyone was able to see something in this painting that another could not.

LaPrade Seuthe created a sequel to "Twinkle I" appropriately calling it "Twinkle II," which was easily the piece that gained the most attention. She placed a bright red baby grand piano toy on a canvas and underneath she posted the directions on how to play the infamous song "Twinkle, Twinkle Little Star" on the toy. The functional keys and the open invitation to touch the art was enough to draw a crowd.

The vintage toy had reminded LaPrade Seuthe of the one she once had. It had a sticker displayed in the center of the piano depicting children singing and playing around a grand piano and in the top two corners were two tiny songbirds. It was enough to bring anyone back to their childhood.

The 1930 "Atlas of the World" was remade into a spectacular painting called "Open Book." LaPrade Seuthe painted over pages of an ordinary atlas but with a slightly translucent paint allowing the viewer to see her image as well as the image from the 80-year old atlas. A particular favorite was a painting of a target over a scenic picture from the original pages.

"It was almost like viewing an optical illusion, where I had to focus on her image to really see what was behind it," sophomore civil engineering major Gary Hinds remarks about "Open Book." This piece had multiple pages that all intrigued the viewer to look just a little harder.

LaPrade Seuthe summarized the exhibit beautifully in the final lines of her description, stating, "Maps are the tools needed to accomplish the most fundamental of geographic concepts: to locate. For me, paintings do the same." Her exhibit will be open at the Augusta Savage Gallery in the New Africa House at 180 Infirmary Way until Feb. 28.

Kelsey Laning can be reached at klaning@student.umass.edu.

Track and field teams heading to Boston

By Eric Mansfield
Collegian Staff

The Massachusetts men's and women's track and field teams will head in the same direction Friday as both will compete in the Valentine Invitational in Boston, Mass. at 1 p.m. However, the teams' competitive directions have differed slightly over the last week, a fact that will have a significant impact on both squads.

Right now, men's head coach Ken O'Brien believes his team to be in midseason form.

"I think the last couple of weeks they've shown that they can feel themselves approaching a little better level of competitive experience [and] ability," O'Brien said.

Not only has O'Brien seen improvement with the team's level of performance and competitiveness, but in his athletes' confidence levels as well.

"Not only is it happening physically, but there's a mental or emotional increase in confidence and enthusiasm," O'Brien said. "Further times you're working hard and the increases in enthusiasm sometimes are a little bit stunted because you're working hard and haven't had that much improvement. All of a sudden you start to feel the ball rolling."

O'Brien said he and the coaching staff will be looking to narrow down what events certain athletes will be competing in during upcoming meets. Many of the athletes at the beginning of the season compete in multiple events to see where their strengths lie. The coaching staff now feel it is a matter of getting the athletes ready for a single event.

O'Brien has seen the most improvement in field events. Seniors Sean Busch and Kevin Spieler have been impressive with the pole vault and throws, while juniors Daniel Wu and Zach Koncki have also been consistent top five finishers in the long jump.

Surprising the coaches have been a group of 500 meter runners. Sophomores Paul Grafov, Joe Doyle, Nick Otis and juniors Michael McDonough and Evan Donadi have all qualified for the New England Championship meet and could prove useful for the relays. According to O'Brien, all of them can run the 800 meters, as well.

It is unknown exactly what teams will be competing in Boston, but it is likely to be crowded with an estimate of 75 teams participating. O'Brien said that he's seen a large variety of teams show up in years past, including Florida State, Georgetown and Duke.

Julie LaFreniere, head coach of the women's team, said that while the team has been getting solid performances out of their athletes, several of them have recently fell ill. This will change their preparation for the meet on Friday.

"For the healthy athletes we are trying to cut it back and focus on just sharpening up," LaFreniere said. "Last week, some of the athletes might've done three events over a two-day period. Now we're going to just do one or two [events]."

Despite their poor health, the athlete's willingness to improve hasn't dwindled.

"They're begging to come back to practice," LaFreniere said.

Wednesday's practice will have given LaFreniere a better idea of who will be travelling to the meet.

LaFreniere acknowledged it is not unusual to see several athletes get sick at this point in the season but also said illness was something they will have to adjust to. It will become even more important to adjust while getting closer to the Conference Championships, where some athletes will have to compete in four races over the course of two days.

Both the men's and women's team are expecting Friday's meet at BU, which features a fast track, to be a good test for upcoming meets.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

Both the men's and women's track and field teams head to Boston on Friday for the Valentine Invitational. The Minutemen feel like they're in midseason form while the Minutewomen are recovering from illnesses.

Xavier senior forward Jamel McLean (22) dunks the ball in a game earlier this season. Xavier (17–6, 8–1 Atlantic–10) currently leads the A–10 and will travel to Pittsburgh on Sunday for a game against Duquesne.

Xavier, Duquesne atop A-10 as season comes to homestretch

By Joseph Tempesta
Collegian Correspondent

After leading Temple to two straight conference wins to move them into third place in the conference, junior forward Scottie Randall was named the Atlantic 10's Men's Basketball Player of the Week. Randall earned the accolade by leading the Owls (17-5, 7-2 A-10) to two hard-fought victories last week over the La Salle, 71-67, and Rhode Island, 80-67. He averaged 20.5 points and 5.0 rebounds per game in that span.

After adding three rebounds and assists to his 14 points at La Salle on Feb. 2, Randall returned home on Feb. 5 to play the Rams in a performance that truly earned him Player of the Week honors. After accounting for more than half of Temple's points in the first half with 19 en route to a 36-30 team lead at break, he went 10-13 from the floor and hit a career-high six 3-pointers off nine attempts, finishing with 27 total points, seven rebounds, an assist and a steal in the victory. He ended the week shooting 65.2 percent from the floor and 66.7 percent from behind the arc.

The hometown hero from Philadelphia, Pa. is a big reason why the Owls have won 18 straight at home in the Liacouras Center. The team returns to action on the road on Saturday to take on Dayton at 1:00 p.m.

St. Bonaventure upsets Duquesne

Duquesne (16-6, 8-1 A-10) traveled to the St. Bonaventure (12-10, 4-5 A-10) in A-10 play on Feb. 5 and saw their 11-game winning streak – their longest streak in 40 years – end a heartbreaking 64-62 loss.

The Dukes took a 62-61 lead with 10.9 seconds left in the second half. After a Duquesne attempted steal ended up out of bounds, the Bonnies gained possession with only a few seconds left. On the next play, St. Bonaventure sophomore guard Demitrius Conger drove to the foul line and passed to junior guard Michael Davenport who hit an open 3-pointer from the right of the key. With little time left, the Dukes attempted a failed heave as time expired to seal the victory for the Bonnies.

Junior guard B.J. Monteiro led the Dukes with 17 points, 6 rebounds and an assist. Davenport led the Bonnies with 16 points, 5 rebounds and an assist.

The Bonnies remain at home to play the La Salle at the Reilly Center on Feb. 12 at 4:00 p.m. Duquesne looks to avenge their first loss in 11 games as they take on A-10 leader Xavier at home on Feb. 13 at 2:00 p.m.

Xavier Defeats Georgia

Atlantic-10 leading Xavier (17-6, 8-1 A-10) defeated the Georgia Bulldogs on Feb. 8 (16-7, 5-4 SEC) in their final non-conference matchup of the 2010-2011 season. In a back-and-forth contest that featured 14 lead changes and two ties, neither team had a clear advantage throughout most of the game. However, the Musketeers went on an 11-2 run midway through the second half to pull ahead. Even after a late push, which saw Georgia cut Xavier's advantage to four points on three separate occasions, the Musketeers never relinquished their lead. The cushion was solidified for the remainder of the game when junior guard Tu Holloway, the A-10's leading scorer, sank a pair of free throws with just over four minutes remaining to make it 52-46 Musketeers. They held off the Bulldogs' late efforts and sealed the victory by a score of 65-57.

Holloway led all scorers with 18 points, 5 rebounds, 5 assists and 3 steals. Musketeers senior forward Jamel McLean contributed his eighth double-double of the season with 12 points and 10 rebounds.

Xavier will travel to Pittsburgh, Pa. on Feb. 13 to take on Duquesne at 2:00 p.m. in a battle for first place in the A-10 Conference.

UMass hosts Army in lax season-opener

By Herb Scribner
Collegian Staff

Garber Field will host one of the top men's lacrosse games of the 2011 season on Saturday.

The matchup features two Top 25 teams, the No. 16 Massachusetts men's lacrosse team and No. 12 Army, as they will compete to open up both of their seasons.

The Minutemen enter into Saturday's game riding on the heels of an impressive debut against Siena. In the scrimmage between the two sides, UMass scored some early goals and worked out some defensive kinks in preparation for the upcoming game against the Black Knights.

What makes the contest between Army and the Minutemen so interesting is that for the past five years, the Black Knights have been the typical preseason scrimmage team for UMass. The last time these two teams met in a competitive, regular-season game was in 1998.

"[It's a] totally [different mentality]. You're not as worried about the result, you just want to be able to play well and find out more about your team," UMass coach Greg Cannella said on the difference between a scrimmage and regular season game.

With a 13-year gap since their last competitive match, the Minutemen still lead the series, 10-9, and are 3-1 against the Black Knights since Cannella entered in as head coach.

This season, both teams have something to prove following their respective mishaps at the end of last season.

For UMass, a good start to last season crashed when the team lost four of its last five, including a Colonial Athletic Association semi-final game against Towson.

Meanwhile, Army's mishap came in a beating taken in the NCAA quarterfinals against Cornell, which finished the Black Knights' run with a 14-5 win.

With their seasons' conclusions still fresh-in their minds, both the Minutemen and Army enter into this season looking for vengeance.

For the Minutemen, sophomore attacker Will Manny will make his return to Garber Field after earning CAA Rookie of the Year honors last season. Manny will look to improve on his 27 goals and 18 assists from 2010 as he also tries to build on his leadership ability.

"I expect him to be a better leader," Cannella said. "We're going to ask him to contribute in that manner too. Settle things down, be a composure guy [and] be a guy that can settle people down and relax a little bit every once in awhile … It's going to be a challenge for him. Will's a guy who enjoys making plays."

Still, Cannella doesn't want Manny getting content with how he played last season and use that as an excuse for the unfolding schedule.

"Now it's 2011, it's a different year," Cannella said. "You have to go out and prove it again. You have to make sure you can play at a high level."

Manny's biggest test on Saturday may be against Bill Henderson, an All-American defender for the Black Knights. Henderson was also named the 2010 Patriot League Defensive Player of the Year, and will be a dominate force for Manny to deal with to open the season.

While Manny will try to build up his leadership, UMass is currently led by its three captains in goalie Tim McCormack, defenseman Casey Rahn and midfielder Ryan Hantverk.

The trio will look to work well against one of Army's top players in Garrett Thul, who, like Manny, was a top freshman last season. Thul was named 2010 Inside Lacrosse National Rookie of the Year with 41 goals in the gold and black jersey.

Thul and the rest of the Black Knights will enter Garber Field on Feb. 12, which was the same date as the season-opener for UMass last season. Unlike last season's opener against Sacred Heart, Saturday's affair will pit the Maroon and White against a top-tier opponent.

"You kind of force yourself to get everything in and be ready, which I don't think is a terrible thing," Cannella said. "Now talk to me on Saturday afternoon when the results come out, and then I'll probably feel differently if we lose. If we win, I'll probably feel like 'Hey, this is pretty good for us.'"

UMass players have been practicing on Garber Field for the past few weeks, even through the dismally-cold weather that has plagued the Western Mass. area. While some may get discouraged and beaten by the severe weather, the Minutemen felt much differently.

"When you play a team like Army, who's ranked No. 12 in the country, you have some motivation," Cannella said. "The guys have your attention; they know they have to get ready in a short period of time."

The game kicks-off at 1 p.m. at Garber Field.

Herb Scribner can be reached at hscribne@student.umass.edu.

Sophomore guard Dee Montgomery (25) takes a foul shot in a game earlier this season. Montgomery tallied a career-high 13 rebounds to go along with eight points and five assists in UM's loss against Dayton.

Minutewomen's comeback not enough as they fall to Dayton

By: Michael Counos
Collegian Staff

The Massachusetts women's basketball team climbed back from a double-digit deficit in the second half but was ultimately unable to pick up the victory against Atlantic-10 conference rival Dayton.

The two teams tipped off at 11 a.m. in Ohio as UMass played its first of two consecutive games on the road. The Minutewomen (6-19, 2-8 A-10), pulled within one with 2:25 minutes remaining but could not secure the victory against the Flyers (16-8, 7-3 A-10) as they went on to lose, 66-58.

Dayton	66
UMass	58

"Dayton is definitely one of the perennial top teams in the A-10," associate head coach Steve Lanpher said, according to umassathletics.com. "Our effort was there, we just came up short unfortunately."

UMass came in 7-10 all-time against the Flyers since the series began in 1996. The loss was the fourth-straight to Dayton in the series and their sixth consecutive A-10 loss overall. Lanpher continued at the helm for the Minutewomen as head coach Sharon Dawley is still out for personal reasons.

The Minutewomen jumped out to an early 7-5 lead, but the Flyers followed the momentum of Brittany Wilson's 3-pointer to make an 11-0 run, stretching their lead to 19-10. The Minutewomen went into halftime with a six-point deficit, 31-25.

"In the first half I felt like we missed some shots that we normally make," Lanpher said, according to umassathletics.com.

"[We could've had] the lead … but unfortunately we missed too many easy ones and we really turned the ball over too much."

The Flyers led by 12 with 15:19 remaining before UMass rallied with 6-0 and 9-1 runs to make the score 59-58. Dayton's Samantha Mackay then hit a 3-pointer with 2:11 left to extend the lead to four. After a missed opportunity by the Minutewomen on offense, UMass was forced to foul De'Sarae Chambers and Brittany Wilson, who both converted at the line to put the game out of reach.

"I thought we really cleaned it up in the second half, and we had a great run at them," Lanpher said, according to umassathletics.com. "We were only down one with two minutes to go [but] we just didn't execute down the stretch. It's disheartening and disappointing obviously to play extremely well against the upper echelon of teams and come up a little short."

The Minutewomen lost despite outshooting the Flyers in every aspect of the game. UMass shot 40.7 percent from the floor, 41.7 percent, from beyond the arc and 75 percent at the foul line. Dayton shot 35.9 percent from the floor, 26.3 percent from beyond the arc and 71.4 percent at the foul line.

Mosgrove posted her 14th-straight game in double figures for the Minutewomen, leading all scorers with 13 points. Megan Zullo followed with 12 points and four assists, while sophomore Jasmine Watson contributed eight points, six rebounds and three blocks. Sophomore Dee Montgomery grabbed a career-high 13 rebounds to go along with eight points and five assists.

"I think if we continue to grow and get better we're going to become a dangerous team," Lanpher said according to umassathletics.com.

Mosgrove and Watson have accounted for nearly 50 percent of UMass' points and rebounds this season.

Justine Raterman was the only Flyer player in double figures, scoring 12 points and also snatching up six rebounds. Mackay and Wilson chipped in with seven points each, while Casey Nance recorded six points, while grabbing six rebounds and having three blocks.

"We've got four winnable games to end the season that we are looking to win and move up in the A-10 standings and hopefully be ready to go in the A-10 tournament," Lanpher said according to umassathletics.com.

UMass travels to play George Washington, ranked eleventh of the A-10 standings while UMass is currently twelfth in the conference. The must-win game against the Colonials kicks off at 2:00 p.m. on Saturday afternoon.

Michael Counos can be reached at mcounos@student.umass.edu.

Swimming and Diving teams prepare for A-10 Tournament

By Nicholas Belfiglio
Collegian Staff

The Massachusetts swimming and diving teams wrapped up their regular season schedules last Saturday afternoon, but they still have a great deal to accomplish in the Atlantic-10 Conference Championships.

With the regular season concluded, and the A-10s about two weeks away, head coach of the Minutewomen, Bob Newcomb, explained the new training regimen that the teams have put into place.

"We are into what we now call a taper," Newcomb said. "This is a special word that I only use this time of year, and we go from this large volume [of practice] that we were doing and we gradually taper it down."

The idea behind the taper is to allow the swimmers to train with fewer yards, so the body can get more rest in preparation for the Championships. A full taper schedule for such an event lasts three weeks, as Wednesday marks the second week.

For distance swimmers, their usual 12,000 yards will be cut to 10,000 yards, and then 8,000 yards in order for their bodies to rest and recover.

Even though both the Minutemen and the Minutewomen had successful regular seasons, it is all about what they do, come Feb. 23 in Buffalo, N.Y.

"No races that we have done have any bearing on how we will do. It helps with the seeding, but that is it. They have to do it there," Newcomb said.

The meet is composed of 40 events spanning four days, and the general idea is the more athletes swimming in each of the seven sessions, the better the team is doing at the tournament. Ideally, what the coaches would like to see is their swimmers posting their best times of the season at the A-10 Championships.

"We are talking about swimming over four days with the winning team scoring between 800 and 900 points, and some teams are only being separated by 25 points," Newcomb said. "I have seen meets won by a point or even half a point, it really is amazing how close things can be." Coach Newcomb also noted that the A-10 Championships harbor intensity that is unlike any of the meets the teams have taken place in thus far.

"[It's] one of the absolute best athletic events, of all athletic events, that I have ever been [involved with]," Newcomb said regarding the A-10s. "As exciting as these Conference Championships may be, it is also a very emotional time for some of the athletes.

For many of the senior swimmers and divers, this will be the last event that they compete in. So Newcomb and the rest of the staff make sure things are standardized so the swimmers can come in, warm up and just enjoy these last few weeks of the season.

Not only have most of these swimmers been competing and challenging themselves for the last four years, but they've been doing it while propelling UMass to victories.

Come Feb. 23, the Minutemen will try to defend their title from last season, while the Minutewomen will go for their first win in the last 10 seasons.

"I would not sacrifice [anything] at the expense of A-10s," Newcomb said. "It's just not what we want to do with the program, it is all about what you do at the end of the season."

Nicholas Belfiglio can be reached at nbelfiglio@student.umass.edu.

1st-year students found more confident by survey

By Kara Clifford
Collegian Staff

A recent survey administered by the Higher Education Research Institute found that this year's first-year students have greater ambitions and academic ability than years before. The survey revealed that 71.2 percent of first-years said they have "above average" academic abilities. In addition, 75.8 percent of first-years said they have an "above average" drive to achieve.

First-year student Chris Baza has met many hardworking peers.

"In my classes, I've seen some very smart kids. Some of my peers are very dedicated to schoolwork. Most students that I've met are hardworking, but the work doesn't come easy to everyone," said Baza.

Max Curran, a peer mentor for first-year students, thinks that first-year students have greater ambitions when it comes to participation in on-campus activities. He said first-years "noticeably participate in more opportunities such as clubs, campus jobs and internships much earlier than I feel myself or my peers did when we were their age." However, he does not see a rise in long-term ambitions. "Most first-year students that I've spoken with do not have a clear idea of what they'd like to do after graduation or even what they'd like to study here at UMass."

Sara Weaver, another peer mentor for first-year students, says she hasn't noticed such ambitions. "I think that, overall, this year's first-year students have lower ambitions for success. For many students, attending college was never an option; it was just the next step after high school," said Weaver.

"Because of this attitude and the media's portrayal of college I think the social aspect of college is more of a priority for most students."

First-year students may be right to classify themselves as having greater academic abilities. At the University of Massachusetts, the class of 2014 came in with a higher high school GPA and SAT scores than any class before them. Anita Ganesan, an RA in a first-year dorm, noticed that "the residents on my floor have taken advantage of completing their college credits during high school so that they can graduate faster."

The survey also found that this year's first-year students tend to have lower emotional health than previous classes. Specifically, 3.4 percent less students in 2010 reported good emotional health than in 2009, a hefty decline.

During her three years as a peer mentor, Weaver has interacted with three different classes of first-year students. This year specifically she has "noticed lower levels of emotional health among first-year students." Weaver thinks this is because "the stress of college continues to grow each year and affect more and more students."

Curran noticed a lower level of motivation among first-year students, which is a possible consequence of low emotional health.

"They're typically easily frustrated when assignments aren't simple or easily completed and tend not to want to put in extra effort to understand them fully or think critically," he said.

The state of the economy has also affected the mindset of the first-year class. The survey found that a comparatively high percent of students are using loans to pay for college and more students are using scholarship and grant money as well. At UMass, Financial Aid Services is active in helping approximately 18,000 students receive some form of financial aid.

In addition, first-year students were more likely to take costs into account when choosing a college, with 62.1 percent saying that the economy greatly impacted their college decision.

This was the case for first-year student Sam Stepanian.

"I got the John and Abigail Adams scholarship, so that was a factor in my decision. Since this was the only state school to accept both the scholarship and had astronomy as a major, I decided to go," he said.

Stepanian is not alone. UMass experienced a record amount of applications in the past year, which is not surprising considering the low cost for Massachusetts residents. The school is ranked 99 on the U.S. News and World Report's 2011 "Best National Universities" list, giving students a good education at a comparably low price.

Kara Clifford can be reached at kmcliffo@student.umass.edu.

Newman Center is site of tragic death

Emergency services were called to the Newman Center late Tuesday night for an unresponsive man, who was later pronounced dead.

The man was identified as Craig Lorraine, a 45-year-old man, said Mary Carey, the spokesperson for the office of District Attorney David Sullivan, in an interview with The Republican. She said he was believed to be homeless, and lived on the streets of Northampton.

Officers of the Amherst Police Department responded to the call that reported an unresponsive man in the center. The officers transported him to Cooley Dickinson Hospital where he was pronounced dead.

His name was released after authorities contacted Lorraine's relatives.

The Amherst Police are still investigating the cause of death, and the results of his autopsy, said Carey to The Republican. Officers said there is no sign of foul play in his death.

The Newman Center, located at 472 North Pleasant St. near the University of Massachusetts campus, is a place for Catholic students to attend mass, prayer sessions, and group meetings. The center was open until 10:30 p.m. on Tuesday night.

SGA funds snackbar, votes on RSOs

By Ashley Berger
Collegian Staff

The agenda of the Student Government Association's Wednesday meeting was to address issues concerning the student body and vote to help student organizations. The Committee for Student Academic Affairs presented a short presentation detailing their current efforts in providing more bike racks around campus. The proposal has been submitted to the department of landscaping development and includes maps of residential areas and other crowded areas on campus. Suggestions for improvement include adding bike racks outside of Melville, Patterson, MacKimmie, Field, Brett and Brooks residence halls. The committee also plans to put in new bike racks in between the North Apartments and add on to existing bike racks in the Hangis Mall, near Mahar Lecture Hall and near Isenberg School of Management.

Arguably the most important motion on the table at the meeting was giving appropriations to the Sylvan Snack Bar, a student run business that has grown and expanded since its creation in 1971. Secretary of Finance Ben Johnson and SGA President Brandon Tower introduced students from the business and described a need for more funding.

President Tower pleaded his case to the room full of senators saying, "Student business and the Sylvan Snack Bar show professionalism and commitment to serving students. They are models for emulation and the SGA has a responsibility to reward those who so capably represent this University."

According to the presentation, the snack shop has an independent budget, which allows the student-run organization to run without outside funding. However, the business has struggled to keep up with business. Since the building of the North Apartments, traffic has exponentially grown. The student workers feel that, in order to live up to its fullest potential, the snack bar needs money from the SGA to hire two more employees.

The motion for additional funding passed the Senate.

Sponsored by Senator Blaine Stillerman, another motion was brought forth for a seemingly good cause. The motion called for support of the Bands for Arms cause, a volunteer project where bracelets are made to raise awareness and support the United States military. The motion further described the cause, explaining that the bracelets are all different and unique.

Some senators felt differently about the cause. They interpreted the motion as an endorsement and saw it as advertisement for the group. Senator Ellen Moorhouse began the questions and then motioned to strike it down because of an apparent appeal to advertisement. Senator Josh Davidson also said the group is not a nonprofit organization and typically the SGA only supports nonprofits in their endeavors.

Ultimately, Senator Stillerman defended his position and said he used the term "endorse" as a synonym for "support," not as a means to give money to the group. After his reassurance, the Senate voted to pass the motion.

The final motion of the night was in accordance with the theme of supporting student groups. According to current regulations, the University of Massachusetts Boxing Club is unable to spar without the supervision of a coach. Though the group has a professional coach, the team cannot to spar if he isn't present because the involved students don't have the proper training to clean up blood in a situation. The motion, sponsored by President Tower and Senator Jarred Rose, would allow the Boxing Club to fully spar at all practices.

"If the Boxing Club can't spar, then they basically can't participate and simulate game conditions. If you can't scrimmage and practice for a tournament, then essentially, what's the point?" said Tower.

Senator Rose explained that the authority to help out this group lies with the Student Affairs Committee.

"Student fees paid for the construction of the Rec. Center and we think that we should have a say in how it is run and operated," said Tower after the meeting.

"The Boxing Club is a club with almost 100 members, a dedicated staff of officers and coaches, who want to be able to partake in the sport of their choice. I feel it is my responsibility as president to go to bat for these groups." The final motion passed by a large majority.

The SGA will hold its next meeting next Wednesday in the basement of Campus Center.

Ashley Berger can be reached at abergeri@student.umass.edu.

Wednesday's SGA meeting saw voting to fund the Sylvan snackbar, support for Bands for Arms and revision of the UMass Boxing Club's sparring rules.

This year's excessive wintry conditions have caused several problems across the country, and the Massachusetts women's rowing team can now add their boats to the list of damage inflicted by the record snowfall.

Sometime between this past Saturday night and Sunday morning, approximately four feet of amassed snow and ice brought the roof down of the UMass boathouse, destroying 13 boats that belonged to the team.

Head coach James Dietz said that the damage done to the boats is estimated to cost a total of about $175,000, with each boat costing between $10,000 and $30,000, according to a MassLive.com report.

In total, the Minutewomen lost three eight-person boats, two doubles, five singles, and two coaching launches.

The remaining boats that survived the incident will be stored on trailers underneath McGuirk Stadium, the University's football stadium, until another more suitable location is available.

According to MassLive.com's report, a permanent boathouse has been planned to be built for years, but nothing has been put into action.

"Things just sit on people's desks and stop," Dietz said in a MassLive.com interview. "If I see a boathouse before I retire, I'll be surprised."

The roof collapse could not have occurred at a worse time for the Minutewomen, who begin their spring season on March 19th and are aiming for their 14th Atlantic 10 championship in the last 16 years.

Dietz, however, says that the spring season will not be affected, but that the 2011 fall campaign may be affectcd due to the lack of equipment that would be available to new crew members.

The team will look to alumni to raise money for new boats, who have funded many past purchases for the team, according to the MassLive.com report.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

A roof collapse destroyed 13 UMass boats over the weekend.

Why conservatism is good for America

Matthew M. Robare

The Conservative Political Action Conference began yesterday. According to Politico, more than 11,000 conservatives are attending. I passed up an offer to go from former Collegian columnist Brad DeFlumeri because of my classes, but even so I've been doing a lot of thinking about American conservatism.

On the one hand, I can't help but feel that American conservatism is getting up in age and starting to pay more attention to its 401k, planning the mortgage-burning party and hoping it'll leave its dependents enough money for funeral expenses because it was so excited by the Coolidge administration it never bought life insurance.

As Reason's Nick Gillespie wrote yesterday, "There's been a lot of talk recently about conservatism as a 'three-legged stool,' a popular Reagan-era analogy positing that the small-government movement includes fiscal cons, social cons and defense cons. If these legs aren't the same length, runs the implication, you get a wobbly seat."

Gillespie went on to say that fiscal conservatives have been revealed to be as big spenders as their liberal counterparts, defense conservatives "did nothing well" and "social cons have lost, period."

The tea party movement was like one more burst of activity just after retirement, but it won't last for long. A Republican might even win the presidential election in 2012, but conservatism will be dead within 25 years, I'm certain. You see, like the Soviet Union in the late 80s, the movement is lying to itself.

Basically, conservatism today is trying to use cosmetic techniques and wishful thinking to stay young, but one more go on the dance floor could cost it a hip. It refuses to admit its frailty or mortality and its Botox and bad toupee will become even more noticeable as time goes by and the country changes demographically.

I can't help but feel that American conservatism is getting up in age and starting to pay more attention to its 401k, planning the mortgage-burning party and hoping it'll leave its dependents enough money for funeral expenses because it was so excited by the Coolidge administration it never bought life insurance.

To be blunt, conservatives are too white and not nearly nerdy enough. That's one of the reasons xenophobia has started outweighing sense in the debate on immigration policy.

Over the next few years conservatism will enter its grumpy old man stage, yelling at the neighborhood kids to stay off its lawn and wondering why its children (who have grown up and now live in the suburbs of Philadelphia and California's Orange County, respectively) never call or visit.

And America will have lost one of its greatest assets.

The conservative will to dominate, to force conformity and make people do things that may be abhorrent to them, such as school prayer or jingoistic and even racist and misogynistic American history curriculums, impose restrictions on sexual activity, censor music and literature – all this and more has combined in the American public pool of excess, capitalism, exploitation and imperialism into the most profound outburst of cultural innovation not seen since drugs were legal.

There is no rebellion in an open and tolerant culture – there's just no need for it. It's one thing to be an itinerant folk-rock musician singing Iraq War protest songs and recording them with a MacBook to sell on iTunes or post on YouTube and it's an entirely different thing when at any moment the draft board could send you to Vietnam, or the police could arrest you for "obscenity" for reading Allen Ginsberg poems out loud or using a word referring to waste excreted by humans in a newspaper.

The need to mock and cut authority figures down to size runs deep in the human psyche, but it's so much more fun when those people are resistant to the idea of change and get tripped up in their own self-righteousness.

The end of conservatism harms us young people the most. The generation that came of age in the mid-60s to mid-70s still defines the idea of rebellious youth. Student protests are still measured against the standard of Columbia University, youth activism is measured against Students for a Democratic Society and "Lost" is measured against "Lost in Space."

So farewell, American Conservatism and may a flight of angels sing thee to thy rest. Enjoy the afterlife's verdant fields and coal-filled hills to strip mine, bask in the warm sun of the heavenly country club before retiring to drill for oil and build a heterosexual, Christian and Americans-only city upon a hill. We'll shroud your body in a good Republican cloth coat and plant an American flag at your tombstone every Memorial Day.

With you gone, I don't know what will be left to form a counterculture to, but I'm sure we'll find something. Corporate media will always be here.

And don't worry; we'll bury you with your favorite Reagan doll.

POINT-COUNTER-POINT

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

Everybody join hands, start a love train

Make bike paths, not rail

Isaac Himmelman

Alright, now before everyone goes squawking away about all the benefits of the Obama high-speed dream rail system allow me to anticipate the arguments in favor of the proposed rail and proceed to slam each one to the dirt with my obnoxious witticisms.

Proponents say, it'll pour money into the economy. I say, it sure as hell better with the amount of scrilla it's proposing to drain from it. Last I checked our economy has been drained plenty over the past few years having been sucked dry from our friendly neighborhood too-big-to-fail corporations.

Others point to all the theoretical environmental benefits of the proposed high-speed rail system. Listen hippies, I don't know what you've heard, but no one – not even good 'ol Amtrak Joe Biden – is saying this high-speed rail system is going to be running on some kind of magical earth-friendly biofuel.

Furthermore, let's all take a moment to fathom the enormous carbon footprint 20-plus years of high-speed rail construction is going to leave on our already fragile environment. Moment taken? Good.

But Isaac, China has one.

China has one? Is that supposed to be some kind of selling point? China has a Great Wall; maybe we should get one of those. And while we're at it, America, maybe we should start capping the amount of kids we let our citizens have, because hey, China does that too. It seems to me that we as a country need to do some national soul searching and come to terms with our weird infatuation with China. It's like we're a bunch of competitive private school girls.

We are not in competition with China. That place is a bubble ready to burst. Just wait until that one-child policy comes back to bite the Chinese national behind. You'll have a population of sexually frustrated men, no children, no future and a sweet high-speed rail system. I'm over it.

Finally America, let's be honest, the last thing we need is more high-speed things. The world we live in – 3G networks, Internet access in our pockets – is high speed enough. We're going to high-speed ourselves into oblivion.

Obama proposing we pour billions of taxpayer dollars into a high-speed rail system is like trying to get rid of a population of squirrels by opening a squirm farm. America has enough squirrels, which is to say, we have enough high-speed stuff.

What we as a country really need is a way to slow things down. We're wired in 24/7, checking Facebook walls, watching our favorite pundits jabber on a mile-a-minute, drinking so much caffeine we practically cry tears of pure Monster Energy Drink; we seldom take time out of our lives to take in the beauty and joys of simple existence. A high-speed rail system will get us places faster. But so what? Is life about making sure we get places really fast? The beauty of rail travel has always been that it gives you time to sit, to wonder, to read a book.

Now if Obama feels we've got billions to spend and manpower ready to work, I propose this: bike paths. First, start building them in our cities: Los Angeles, New York, Chicago and Boston. And then once that's sorted out we move onto phase two: trans-continental bike paths. All our cities should be linked up through well-paved well-kept bike paths.

This would provide plenty of jobs seeing as it takes a lot of man (and woman) power to build bike paths, and nothing is more environmentally friendly then riding a bike. Furthermore, high-speed rail doesn't eliminate car travel. Once you get off the train you still need to take a car to wherever it is your going. Riding a bike, you don't have this problem. You can ride your bike right to your intended destination.

In conjunction with the trans-continental bike paths, the Obama administration should dive full-force into a national campaign informing citizens of the tried and true health benefits of biking because along with our country's economic problems (which history has shown, we can overcome) we have an alarming and rapidly increasing obesity problem.

High-speed rail does nothing to address the fact that while America is getting faster she's also getting a whole lot fatter. In fact, the proposed high-speed rail system would merely enable the average American's sedentary existence.

Trans-continental bike paths would help our economy while at the same time encouraging a fit and active lifestyle where people can enjoy the fresh air of the great American outdoors at any pace they please.

Isaac Himmelman is a Collegian columnist. He can be reached at ihimmelm@student.umass.edu.

I love trains

Victoria Knobloch

There are many reasons behind my support for high-speed government subsidized nationwide trains. But first and foremost, it's because trains are cool. After boats, trains are the hippest form of transportation. Trains have hobos and Agatha Christie murder mysteries, Alfred Hitchcock sexual innuendo and that fun montage in "Slumdog Millionaire." If you don't understand the instant allure of trains, you're probably just not cool enough, and you might be driving a hummer.

Seriously though, trains are the answer to our uncool hummer problem in this country. Or more generally our car/CO2 emission/oil guzzling/dependence on the Middle East/traffic jam problem in this country. You know what's better for the planet and the economy than 100 people driving cars? 100 people on a train. You know what's faster than 100 people driving cars? 100 people on a train. You know what's cheaper than 100 people on an airplane? Hopefully, after we get our super bicoastal American train network, it will be 100 people on a train. If it can be faster than a car and cheaper than an airplane, there will be a market.

On the subject of trains solving all our country's problems, let's get to the root of the issue. America is a big place. There are a lot of different people, different cultures, different opinions, and different prejudices.

All too often I hear my fellow Massholes lamenting their association by nationality with the redneck conservative racist South. Or Southerners complaining about the stuck up, mean North. Or New Yorkers complaining about everywhere that isn't New York. Or the entire East Coast's inability to place Idaho on a map. All I'm saying is that we might be one country but we are far from united, and this is partially due to the complete lack of understanding we have for each other's regional lives. Imagine if you could pay 20 bucks, hop on a train and be in Louisiana by dinnertime.

I'd certainly see my sister, who goes to school down there, more than two or three times a year. And think of the food! We would all probably travel a whole lot more simply because we could, and nothing promotes understanding like experiencing the foreign and different first hand. If Americans felt a bit more united, maybe we wouldn't have so many problems passing legislation to help each other out. If people from across the country became faces instead of ideologies, it might be easier to agree to universal health care or nationwide educational reform.

As far as bringing people together, trains are also a great communal space.

Sometimes you get to talking to the person next to you on an airplane and it's pleasant, but more often than not you begin to feel slightly trapped with them. Heaven forbid you become air sick. On a train you are free to roam about the cabin whenever you'd like. There are often tables with seating for four, and a dining car where you can grab a bite to eat. In theory there would be sleeper cars on these trains too. What a fantastic way to meet new people and structure community.

The networking possibilities are endless. Having been a solo backpacker traveling in foreign countries, I can attest to how easy and fun it is to meet fellow travelers if the conditions are right. On a train ride from New York to Los Angeles you would meet people from a whole swath of America, and if you like them, that's a whole bunch of couches you can crash on across the country.

It's true that this endeavor is very expensive in a time when our country has no money. But a massive project like this would create a ton of jobs, both in the construction and the operation afterwards. I think the benefits outweigh the costs when it comes to repairing our fractured nation. It's not a coincidence that Barack Obama mentioned the high-speed trains with the expansion of high-speed internet in his State of the Union Address. These things are about bringing Americans together, putting us on the same page, helping us to understand our differences and work through them.

I must admit, I have wanted a high-speed public train network in this country for a long time, long before Obama made it cool. But I honestly believe it could be a step in the right direction for so many of the issues this country faces today. It's not just about getting where you're going. It's about the journey. Second to an epic sea voyage where a big white whale destroys your boat, train journeys are the most beautiful, intriguing and social way to experience a country. Perhaps it is the way we will relearn exactly what makes the United States of America so cool in the first place.

Manifesto to light up Noho

By Ellie Rulon-Miller
Collegian Staff

Streetlight Manifesto will be headlining at the Pearl Street Ballroom in Northampton tonight. Fredo[illegible]. The show, one stop of the officially named "Short Fools" tour, will also include A Loss For Words, Lionize and Terrible Things.

The band began playing shows [illegible] the end of 2001 and has been touring regularly ever since, drawing increasingly large crowds each year. Originally formed by members of Catch 22 and lesser-known New Jersey ska band One Cool Guy, the members of Streetlight Manifesto each contribute different influences and therefore different sounds.

Their most recent release was a compilation of cover songs. The album, "99 Cents of Revolution Volume I" includes covers of Postal Service's "Such Great Heights" and NOFX's "Linoleum." The latter has been acoustically performed by singer and guitarist Tomas Kalnoky in the past when the band takes brief breaks. The album is to be the first in a series of albums through which Streetlight covers a song by another one of the band's favorite bands. Provide[illegible] for the Perfect Accompaniment That You Will Paint on the Insides of Your Eyelids."

While it is [illegible] always perfectly clear what each of their songs is about, they are all somehow extremely easy to relate to. Line after line, it is evident that these are not made-up feelings, conjured solely for the purpose of the song. They are unabashedly truthful.

A Loss For Words, a pop-punk band from Boston, has gained popularity for their covers of various Motown songs. Their version of "I Want You Back" by the Jackson 5 is fun and well-developed. They make use of typical melodic punk gang vocals, which adds a new edge to each cover. Their original songs are just as well done as their covers.

Maryland's Lionize plays a mix of reggae and punk that sounds like something entirely different from the definition of ska. Their incorporation of an organ into their music makes it sound like something new and different. A lot of punk bands feature an organ at times, but not in quite the same way Lionize does. Some of their songs also have a bl[illegible] feel, utili[illegible] harmoni[illegible] for a [illegible]

Terrible Things is a straight-up rock trio comprised of rock and punk rock veterans Andy Jackson, Fred Mascherino and Josh Eppard, from Hot Rod Circuit, Taking Back Sunday and Coheed and Cambria, respectively. Each of their songs is beautifully composed.

It is always a good thing when Streetlight Manifesto performs with opening acts that do not play as hard and fast as they do. This is the type of punk show at which people can get injured. Streetlight Manifesto has a huge cult following which has been building up since their inception and fans hear the first notes of every song played and somehow, it's always better than the last one, and this warrants a great deal of screaming and shoving. Some find that unpleasant; others live for the pit.

Regardless, Streetlight Manifesto never fails to disappoint with their live shows. The atmosphere is not unlike other punk shows, but Streetlight's energy is unsurpassable. This is a big part of why they draw such huge crowds with each show.

Ellie Rulon-Miller can be reached at ellie@dailycollegian.com.

Ukes & Yoyos in Noho

By Kate Evans
Collegian Staff

Remember back in the day when the coolest kid on your block impressed everyone by "walking the dog" with a Yo-Yo? This trick isn't just for kids, and Yo-Yo professionals prove how artistic the toy can actually be.

Sunday, Feb. 13 at the Academy of Music Theatre in Northampton, a series of successful ukulele and Yo-Yo performers are putting on what sounds like a unique and entertaining show that will be filled with surprises.

Jim and Liz Beloff, Greg Hawkes, Tripping Lily, Ruth Ungar and Joel Eckhaus are the scheduled ukulele performers. Jim and Liz Beloff are a married couple who founded Flea Market Music, Inc. after discovering a ukulele at the Pasadena Rose Bowl Flea Market in 1992. Their music company published a series of "Jumpin' Jim's" ukulele songbooks which are sold worldwide. The Beloff's live by their company's motto: "Uke can change the world!"

Greg Hawkes, keyboardist and co-founder of the band, The Cars, has more recently been busy producing instrumental ukulele covers of Beatles songs. Working with producer Perry Geyer, the two released "The Beatles Uke" in 2008, which is a cover of Hawkes' favorite Beatles hits.

Tripping Lily, a quartet consisting of brothers Demetrius and Alex Becrelis, Monica Rizzio and Laird Boles, combine a series of instruments including ukulele, guitar, fiddle, mandolin and stringed bass. The band's popular song "Alone" was featured on Showtime's series "The Big C" last October.

Ruth Ungar of the string band, The Mammals, usually performs with husband and band-mate Mike Merenda. The duo sings and plays the fiddle, banjo, guitar and, of course, the ukulele. Ruth and her husband's soft but lyrically-strong musical ability portray their journey of perseverance and success.

Joel Eckhaus founded Earnest Instruments in 1976 shortly after he began building instruments in '73. In addition to the ukulele, Eckhaus also plays the mandolin, tenor guitar, banjo and musical saw. Eckhaus was a founding member of the "Arm and Hammer String Band," and studied ukulele and banjo with Roy Smeck of the "Wizard of the Strings."

Sunday's show will also feature Yo-Yo performances by John and Rebecca Higby and Eric Koloski.

The Beloff's aren't the only power-couple in the lineup. The Higbys are responsible for spicing up classic Yo-Yo tricks such as "Walk the Dog" and "Rock the Baby." The Higbys' incorporation of humor into their energetic act earned them an appearance on David Letterman. The duo has performed around the world and currently holds a Guinness World Record and a 2008 Yo-Yo World Champion title.

Eric Koloski, a member of Team YoYoJam, is the Massachusetts State Yo-Yo champion and placed third in the Single A division for the 2006 World Yo-Yo Contest. Koloski was also a finalist on "America's Got Talent."

Additional performances by the A2Z Yo-Yo Team and the A E I O Ukes will be sure to spice up the show. The A2Z Yo-Yo Team is Northampton's very own Science and Learning Store's Yo-Yo team. The A E I O Ukes, or Another Elegant Instant Orchestra of Ukuleles, is directed by Joe Blumenthal of Downtown Sounds.

This compilation of talent hits the stage at 2 p.m. this Sunday. Tickets can be purchased for $15 at the door or $12 in advance. The Academy of Music Theatre is scheduled to open at 12:30 p.m. for sales and doors will open at 1:30 p.m. for the show. Tickets are also available at Food for Thought Books in Amherst, Cooper's Corner in Florence, State Street Fruit Store in Northampton, and Guild Art Centre in Northampton.

Kate Evans can be reached at kevans@student.umass.edu.

Colourful Revolters

By Mandy Pote
Collegian Correspondent

After years of typical band break ups and member conflict, Colour Revolt hits the stage once again with a sound greater than ever. This time, the band is bringing more than just keyboards and guitars to the show. It's bringing years of life experience told through dynamic melodies, poetic lyrics and loud, forceful vocals. This indie rock group is coming to shake down the Iron Horse this Saturday, Feb. 12 at 10 p.m. with the support of Fiesta Brava, a local Northampton rock group.

Having jammed together since high school, the band first originated in Jackson, Miss. under the name Foxxe. It soon changed to Fletcher while the members were attending the University of Mississippi. Fletcher released their first full length album, "Friends Don't Speak" in 2003. Following more band strife, the band name finally changed to Colour Revolt.

The band merges the folk sound of the midwest with rock influences such as Neil Young to create a unique, powerful sound. Colour Revolt released their first official EP "Makeshift" in 2005 and their first album "Plunder, Beg and Curse" in 2008. Shortly thereafter, Colour Revolt was named the Best New Band from Mississippi by Boston newspaper, "The Phoenix." However, more internal conflict ensued within the group. In 2010 original members Jesse Coppenbarger (vocalist, guitarist, pianist, harmonicist) and Sean Kirkpatrick (vocalist, guitarist, pianist) overcame the group disrupt and released their Sophomore album "The Cradle." Current members also include Brooes Tipton on keyboard, Patrick Ryan on drums, and Luke White on bass.

After enduring plenty of hardship and strife, Colour Revolt shows no shame. "The Cradle" delivers more emotion and passion than listeners have heard before. The band explores new styles of song writing with a high energy combination of instruments. Colour Revolt's performance will create a soaring harmony from the head-banging beat of the drum, echoing the emotional pulse of the guitars and driving vocals.

Look out for mind blowing songs such as "8 Years," "Our Names," "Mattresses Underwater," and "She Don't Talk" at the Iron Horse this Saturday. The indie group brings a whole new meaning to music with their album "The Cradle" with several hidden layers of meaning with every lyric and chord.

The Iron Horse is a smaller venue, but a perfect place to get up close and person with this cool band. Get just an arm's lengts away from the Colour Revolt on the floor, or observe the performamem from the upstairs balconies. Listen closely to their message as it bounces off the Iron Horse walls and fills the room with an incredible atmosphere.

Colour Revolt will leave New England after Saturday and continue its tour Westward back to its roots. The tour includesy many free showr, as well as the Conferette Festival in Denton, Texas and the Mission Creek Festival in Iowa City, Iowa.

Mandy Pote can be reached at mpote@student.umass.edu

Mass Attack looks to get back in win column

By Dan Gigliotti
Collegian Staff

With eight games left on the schedule, the Massachusetts hockey team is fighting for survival in the Hockey East conference.

After enduring their worst loss in nearly two decades, though, the Minutemen are playing for more than a spot in the postseason; they are playing for their pride.

UMass dropped its last two games by a combined score of 16-2, including a shutout at No. 1 Boston College 5-0 and allowing the most goals in 17 years in a 11-2 drubbing at No. 12 Merrimack.

Though it is difficult for Minutemen coach Don Cahoon to find a silver lining, he believes his players will have the confidence to look past the dark clouds that loom over the UMass locker room following last weekend's losses.

"The locker room atmosphere is a humbled one. That was a tough nut to swallow last weekend. The truth be told, although we have to recover from a humbling and humiliating loss, if you want to call it that, on Saturday, truth be told, it's no different than losing two games by a goal. At the end of the day, we didn't get any points and we lost two games.

"I believe in the guys in that locker room," Cahoon added. "I believe that they have [pride], so I expect that everything is going to be as it needs to be to make up good representation."

Friday's shutout loss was the third of the Minutemen's season and until Saturday, UMass had not allowed 11 goals since it gave up 12 to Maine on Feb. 14, 1998.

Sitting at seventh place in the standings, two points ahead of Vermont, the Minutemen (6-15-4, 5-10-4 HEA) play two games at home this weekend, against No. 14 Boston University (13-8-7, 10-5-5 HEA) and Providence (7-13-6, 3-11-5 HEA). The Minutemen are now 0-10-2 against ranked opponents this season, with seven of its remaining eight games against such teams, beginning with the Terriers on Friday.

BU is coming off of a 3-2 overtime loss to Boston College in the annual Beanpot tournament semifinals on Tuesday.

UMass has a loss and a tie in two games against the Terriers this season. On Oct. 16, the Minutemen scored two third-period goals to rally for a 2-2 tie. Then, on Oct. 22, BU overcame a 1-0 deficit, tallying three goals in the second period to win 4-3.

Facing a short week of practice and travel, Terrier coach Jack Parker will try to avoid seeing any letdown in his team's play, just as Cahoon and his players attempt to refocus from last weekend's losses.

"There's no question [Parker] is worried about the hangover from the Beanpot," Cahoon said, having spoke with the BU coach over the phone during the week. "I'm not worried about their ability to rebound; I'm more interested in our ability to rebound."

UMass has an opportunity to gain separation in the standings against the Friars on Saturday. Providence ranks ninth in Hockey East, three points behind the Minutemen and are in the thick of postseason contention.

UMass went winless in a home-and-home series against the Friars earlier this season. On Oct. 29, The Minutemen fought to earn a tie at the Mullins Center after holding two separate leads. The Friars scored a goal in the last second of the second period to knot the score at 2-2 before taking a one-goal less than three minutes into the third. With 3 minutes, 43 seconds left, sophomore Darren Rowe scored a game-tying goal to earn UMass a point.

The following night, the Minutemen fell 3-2 to the Friars in Rhode Island.

Saturday is the final meeting between the two teams and will be a decisive game if the two squads tie in the final standings.

The conference tournament is looming and with its implications amplifying each game, Cahoon is keeping his perspective on earning a postseason bid.

"Our goal is to win [Hockey East], but at the very least, we've got to be able to be a playoff team at a minimal standpoint," Cahoon said. "We just have to get ourselves in a position to be able to compete and bring our best to the table and have confidence that that's going to serve us well."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Minutewomen hope to halt skid vs. Colonials Sat.

By Michael Counos
Collegian Staff

The Massachusett's women's basketball team is in desperate need of a win, and getting one this Saturday could possibly save their season.

UMass (6-19, 2-8 Atlantic 10) is currently in 12th place in the conference as they are set to play on the road against George Washington this Saturday. The Colonials (7-16, 2-7 A-10) are currently ranked 11th in the A-10, as they squared off against Charlotte on Wednesday night.

The 49ers downed GW 71-55 in a game of two halves. The Colonials held Charlotte to 29 percent shooting in the first half for a 27-21 halftime lead, but the 49ers exploded for 50 points in the second half to defeat the Colonials at Halton Arena. Junior Tiana Myers led the team with 19 points, while sophomores Danni Jackson and Brooke Wilson each scored nine, with Wilson grabbing a team-high nine rebounds.

While the defense was stout in the first half, holding the 49ers to their lowest point total in a half this season, Charlotte responded in the second half beginning with a 20-5 run and never looked back. With the win, the 49ers sit in fourth place amongst the A-10 standings.

The Colonials began conference play winless but picked things up with consecutive victories over Rhode Island and Saint Louis. UMass is trying to snap their six-game skid and avoid falling deeper in the A-10 standings.

The Colonials' offensive numbers are pretty spread out amongst the hardwood. The team's top three scorers are Tara Booker and Jackson, both averaging double-figures, and Myers averaging just under 10 points a game. Booker and Myers are GW's greatest threat from the perimeter, leading the team with 36.8 and 34.7 percent 3-point shooting , respectively. Booker is also second on the team in rebounds with over six a game, behind Ivy Abiona who grabs nearly eight a game.

UMass dropped their sixth-consecutive game on Wednesday against Dayton. Senior Cerie Mosgrove posted her 14th straight game in double figures for the Minutewomen, leading all scorers with 13 points. Megan Zullo followed with 12 points and four assists, while sophomore Jasmine Watson contributed eight points, six rebounds and three blocks. Sophomore Dee Montgomery grabbed a career-high 13 rebounds to go along with eight points and five assists.

The Flyers led by 12 with 15:19 remaining, but UMass rallied with six unanswered points before stringing together a 9-1 scoring run with the help of a Mosgrove three-point play to bring the game to 59-58. Samantha Mackay hit a 3-pointer with 2:11 left to extend the lead to four for the Flyers. After a missed opportunity by the Minutewomen on offense, UMass was forced to foul De'Sarae Chambers and Brittany Wilson, both of whom converted their pair of free throws to put the game out of reach. The Minutewomen dropped the game 66-58.

"We were only down one with two minutes to go we just didn't execute though down the stretch. It's disheartening and disappointing obviously to play extremely well against the upper echelon of teams and come up a little short," UMass associate head coach Steve Lanpher told UMass Athletics.Last season, UMass fell to the Colonials by double-figures 64-54. Watson had a double-double in that game scoring a team-high 16 points, while Zullo contributed with nine points and six boards.

Action gets underway at 2 p.m. on Saturday at George Washington before UMass returns home to face Rhode Island, who is ranked last in the A-10 standings, at the Mullins Center. The Minutewomen finish out the season against at Fordham and against La Salle at home again on Feb. 26. Neither of those teams is currently ranked above ninth in the A-10 standings.

Michael Counos can be reached at mcounos@student.umass.edu.

Sophomore Javorn Farrell goes up for a rebound against Richmond earlier this season. UMass hosts the Colonials this Sunday in the Leaman Legacy Game.

Denying 3-pointers key for Kellogg, Minutemen

By Herb Scribner
Collegian Staff

Shots from beyond the arc are killers, at least for the Massachusetts men's basketball team.

In their last two losses, the Minutemen (13-9, 5-4 Atlantic 10) suffered a downpour of 3-pointers.

"They hurt, at crucial times, times when we're making runs, times [when] we're looking to get back into the game, 3s are daggers," senior guard Gary Correia said. "They hurt a lot. Once they hit one and we come down and take a bad shot and they hit another one, as the course of the game goes on, those start to add up."

Against Saint Louis, back on Feb. 2, it was a combined team effort in 3-pointers, but last Saturday's affair against Saint Joseph's was an individual effort from freshman Langston Galloway (6-for-6).

"It's two different scenarios," UMass coach Derek Kellogg said. "I thought Saint Louis made some really good baskets and did a really good job. I thought Saint Joseph's Langston Galloway hit some really good shots. He hit three with really no time on the shot clock and we had played some good defense."

The SLU game marked rock bottom for a UMass team that is ranked seventh in the conference in 3-point defense as the Billikens (8-15, 3-7 A-10) nailed 30 of their 69 points from the perimeter.

UMass takes on George Washington Sunday, which is a team that ranks fifth in the A-10 conference in 3-point field goal percentage (34.3 percent).

In shots from beyond the arc, GW (12-12, 5-5 A-10) boasts top numbers from freshman forward Nemanja Mikic, who is shooting over 40 percent this season.

Mikic scored a career-high seven 3-pointers against UNC-Wilmington, as the team combined for 11 3-pointers throughout the contest. The Colonials scored the same numbers of baskets against Oregon State back in December. Both are season highs.

"That's something we definitely have to make a conscious effort to get down on 3-pointer shooters especially the good ones," Kellogg said. "You can't have a guy going 6-for-6 or shoot a high, high percentage because that carries over to the rest of the team."

While Kellogg has watched GW on tape and knows how the team plays and acts around 3-point territory, he is focused on the game itself and how it'll pan out.

"I'm hoping that we can be a little more fortunate, have the ball bounce our way a few more times and we also have got a week to practice to get more prepared to make sure that we don't give up any open 3s."

With GW's 3-point accuracy looming, as well as the A-10's second-best 3-point shooting team in Duquesne on the horizon, the Minutemen aren't looking allow open shots from beyond the arc. For Correia, who is a leader on both sides of the court, it's about paying attention to detail and not losing players during the play.

"I think we need to pay more attention to detail," Correia said. "I feel like some guys are taking a lot of shots, guys that we knew were going to hit shots that we just lost them during the course of a play or a late shot clock or we didn't switch or we didn't do something we normally do."

Kellogg, meanwhile, wants to see his team end games with "hands high," in order to close down on shooters.

"It's something that we need to be conscious of," Kellogg said. "Biggest thing is when we close out we have to close out with hands high which means the shooter sees your hand coming at him as he's raising up. Right now, we've done a poor job of closing out on shooters."

UMass returns to the Mullins Center on Sunday afternoon at 4 p.m. The Minutemen have allowed 76 3-pointers throughout the season while playing at home.

Herb Scribner can be reached at hscribne@student.umass.edu.

UMass hosts GW

By Jay Asser
Collegian Staff

Coming home and getting a week of rest might be the best medicine for the Massachusetts men's basketball team, as it looks to put two-straight conference road losses in the rearview mirror.

Standing in the way of the Minutemen getting back on track is Atlantic 10 foe George Washington, which will take the floor against UMass (13-9, 5-4 A-10) on Sunday at the Mullins Center.

After a difficult road trip in which they lost games to Saint Louis and Saint Joseph's – teams with worse records than theirs at the time – the Minutemen were passed by Rhode Island in the conference standings, dropping to sixth.

The stretch of five games in a week was draining in the eyes of UMass coach Derek Kellogg, who was pleased to have a week off to practice and heal.

"This week's kind of practice, where you're not playing any games, gives you a chance to recuperate mentally and physically and I'm confident we're going to take advantage of that and get a little bit refreshed and refocused and ready to go," Kellogg said.

Along with the time off, the Minutemen are benefiting from being back in Amherst, especially after dealing with adverse travel conditions in the past month.

"So now we have, since school started, where the guys are on a normal schedule, where the guys are going to class, we've got practice time," Kellogg said. "So I'm hoping a bit of normalcy off the court will bring us some normalcy back to us on the floor and we can get back to playing well and winning ball games."

The Colonials (12-12, 5-5 A-10), meanwhile, are in contention for one of the eight seeds that will earn a bid to the A-10 tournament. Currently, GW sits in seventh, tied with Dayton.

The season so far has been streaky for the Colonials, with two four-game losing streaks mixed in with a stretch of eight wins in nine games.

After playing the majority of its conference schedule, UMass and Kellogg have already got a glimpse of the GW on tape.

"Because we've played so many conference games, when you're scouting one team normally, you see just about every team in the league and I've been able to watch GW three or four times already," Kellogg said.

Minutemen will need to be cautious of junior guard Tony Taylor, who leads the Colonials and ranks 11th in the A-10 in scoring at 14.8 points per game. Taylor is also tied for third in the conference with Duquesne's T.J. McConnell in assists per game at 4.5.

The contest will tip off at 4 p.m. on Sunday and will serve as the annual Leaman Legacy Game to honor former UMass coach Jack Leaman, who passed away in 2004 after leading teams with Julius Erving, Al Skinner and Rick Pitino.

Obama announces budget for FY 2012

President Barack Obama spoke yesterday about his plans to fortify the nation's economy at a Baltimore middle school.

By Sam Butterfield
Collegian Staff

President Barack Obama released his 2012 budget proposal Monday, taking aim at trimming America's multi-trillion-dollar deficit by freezing discretionary spending for the next five years.

Continuing to trumpet his message of "winning the future," the President emphasized the necessity of investment in education, specifically in science and technology, and, in remarks Monday at a Maryland middle school, made his case for making innovation in business and technology a top national priority.

"Now that the threat of a depression has passed, and economic growth is beginning to take hold, taking further steps toward reducing our long-term deficit has to be a priority," the President said in his budget proposal.

The $3.7 trillion budget projects a total deficit of some $7.2 trillion by 2021, including about $1.1 trillion in deficit-reduction measures the President outlined Monday. Cumulatively, the proposal is illustrative of many of the themes of the Obama presidency; pushing spending in certain growth areas like education, technology and green energy and cutting from targeted areas which the government can no longer fund, as it attempts to pay off a continually growing debt. A large share of the budget, 16 percent, according to New York Times figures, is now going to paying off the nation's creditors, both domestically and, increasingly, overseas.

In his appearance at Parkville Middle School and Center for Technology in Baltimore, flanked by Secretary of Education Arne Duncan and the director of the Office of Management and Budget, Jack Lew, the President continued to call for America to "out-innovate" the rest of the world to again help the country become the world's foremost economic power.

"Over the last few weeks I've traveled the country, talking about what we need to do to win the future; talked about the need to invest in innovation, so that the next big idea is discovered here in the United States of America," he said. "I've talked about the need to invest in high-speed rail and high-speed Internet, so that companies can move goods and information faster than ever. And this week, I'll be talking about the need to invest in education - in places like Parkville – so that every American is equipped to compete with any worker, anywhere in the world."

Where the President's message broke from previous statements was in his call for a major overhaul of government spending and creating a target of reducing domestic spending

Amherst rep. introduces bill to legalize, tax pot in Mass.

By Matthew M. Robare
Collegian Staff

Rep. Ellen Story (D-Amherst) introduced a bill to legalize, regulate and tax marijuana to the current session of the Massachusetts General Court last month. Last November, 69 percent of the Third Hampshire District voted in favor of a public policy question instructing her to support such a measure.

A bill introduced to the State House by Amherst Rep. Ellen Story would allow those who purchase a license to cultivate and sell marijuana.

The bill, titled "The Cannabis Regulation and Taxation Act," was drafted by Richard M. Evans, an attorney from Northampton. The bill would legalize the possession, consumption and sale of marijuana for people over 21 and establish a series of licenses requiring annual fees. A cultivation license would cost $500 per year and enable holders to "possess, propagate, grow and cultivate cannabis and carry on such other horticultural activities as are reasonably required for the commercial cultivation of cannabis." Growers, however, could only sell to the holder of a processing license. A processing license would cost $1000 and would only allow licensees to obtain marijuana from a cultivator or an importer. Processors would have to make sure each cannabis package had proper tax stamps, warnings about a $5000 fine for driving while under the influence of marijuana and a label indicating each strain's tetrahydrocannabinol (THC) level.

Processors would also only be able to process marijuana into one ounce packages. They could sell seeds to cultivators if the seed was "capable of producing cannabis preparations having a THC content of more than 0.5 percent." A third step of regulation would create a stage called trade. People with trade licenses would be able to act as middle men, running warehouses and transporting processed cannabis to stores, for a yearly fee of $3000. Stores would need a retail license, purchased for $2000, and could only sell to "adults not visibly intoxicated or otherwise in such a condition as may present a threat to public safety" and could only sell cannabis indoors and at a location specified by the license. Import licenses would also be available, for $2500 a year, and combined cultivation-processing-retailing licenses would be available for the same amount, as long as the entire production process took place at one location.

Evans, a former National Organization for the Reform of Marijuana Laws (NORML) board member, said he first wrote the bill in 1981 "under the delusional view that what we needed was a plan."

He said when he first submitted it to the legislature using the right of citizen petition, he went to a hearing on the bill on Beacon Hill with a few friends. "The room was packed with opponents," he said. "We were grossly

Faculty group supports CHASS

In Jan. report, Staros outlines pros and cons of merger proposal

By Sam Butterfield
Collegian Staff

A group of University of Massachusetts faculty members and staff convened by Provost James Staros has recommended consolidating the College of Humanities and Fine Arts (HFA) and the College of Social and Behavioral Sciences (SBS) into one unified College of Humanities, Arts and Social Sciences (CHASS), according to a Jan. 20 report authored by the Provost recently obtained by the Collegian.

The college would encompass all of the departments, programs, institutes and centers currently under the auspices of HFA and SBS, and would be in existence by July 1.

The report summarizes dialogue on the widely-discussed evolution of the plan, which initially arose in late 2008, soon after the creation of the College of Natural Sciences, in response to concerns about the financial future of the University. In 2009, the Provost convened an initial task force to "study issues surrounding a possible merger of those two colleges." As reported last fall in the Collegian, that group identified a litany of logistical, financial and personnel issues which could arise from such a merger, delivering a report which found that "the benefits of merging these two colleges would have to be quite substantial to outweigh the considerable costs."

Despite the largely negative first report, Provost Staros decided to form a second group, composed of 10 heads and chairs from HFA and SBS, to study the issue further and draft "a provisional vision and mission statement for a new College."

When the task force was formed two years ago, faculty members especially expressed concerns about redistribution of teaching loads, reconfigurations of advising staff and alumni relation programs, and the potential complications of streamlining two large bodies with different business practices, methods of organization, computer software, office space and support staff. In his report, Provost Staros acknowledges those realities, writing that "I have come to understand better how the current structure works and why faculty members might be concerned that they risk losing relationships and investments that they value." However, the Provost reported, "I see the benefits of the new college outweighing the benefits of continuing with the current organizational structure."

One issue the merger idea would not improve is saving money.

"The creation of a new college is not a means of implementing budget cuts," Staros wrote in his report.

Another area which created concern for some was staffing. After the idea for a consolidated CHASS was originally floated, some faculty and staff feared they might lose their jobs if the new

See CHASS on page 2

UM raises amount of financial aid available

In a recent report to the University of Massachusetts Board of Trustees Committee on Administration and Finance, UMass system President Jack Wilson stated his intention to set aside $130.5 million in funding to student financial aid.

President Wilson was unavailable for comment Monday night, but in a release, said that, "We understand that higher education is the path to a better life for students and is critical to our future as a Commonwealth, and therefore the University of Massachusetts is doing everything it can to maintain access and affordability."

According to the same press release, financial aid spending eight years ago amounted to just $35.6 million. Now, Wilson's newly proposed spending plan makes for an increase of 267 percent.

Wilson was further quoted as saying, "Our mission at the University of Massachusetts is to keep high-quality education within reach for the sons and daughters of Massachusetts and that is why we are making more than $130 million in grants available to our students."

In addition, Wilson praised the individual leadership at the universities in the system.

"Our ability to direct an ever-increasing amount of UMass funds to financial aid is a testament to the leadership and policies of our Chancellors and to the commitment and priorities of our Board of Trustees," he said.

James J. Karam, chairman of the UMass Board of Trustees praised the aid as a welcome source of funding for needy students and their families.

"As a UMass alumnus who had to work hard to make ends meet during my student days, I know these are the right actions and the right policies, and I am proud that this University is taking the steps to keep the doors of opportunity open wide," Karam said. "To live up to this commitment during these challenging economic times makes this accomplishment all the more impressive."

Wilson unveiled this proposal at a meeting of the Board of Trustees financial panel, which served as a preliminary to the Feb. 23 meeting of the full Board of Trustees meeting at UMass Lowell. At that meeting, the board will vote on a number of other important topics, including audits on athletic programs, faculty promotions and tenure awards.

Will weed be freed?

BILL from page 1

outnumbered."

They were so outnumbered and the committee was taking the hearing so lightly that, when each side had finished its arguments, the chairman asked the audience to vote and the proposal was soundly defeated.

Evans again proposed the bill using citizen petition in the spring of 2009 and that time the bill was actually discussed by the committee – a first, he said. He added that they were respectful, too.

Legalization has gained more support in public discourse lately, as several states have passed laws permitting people to own and grow marijuana for medicinal use, and other states have decriminalized possession of small amounts of marijuana for personal use. Massachusetts did so in 2008, with 65 percent voting in favor of it.

However, Evans is not optimistic about the bill's chances.

"I don't think it's realistic to expect the current legalization bill to become law," he said. "I'm real pleased that Massachusetts is in the vanguard. I have to commend Rep. Story; it's very courageous of her.

"The important thing is that all the details are up for discussion. Its purpose is to promote a smirk-free discussion. We're shifting from a discussion of 'why' to 'how.'"

The bill would also establish a Cannabis Control Authority composed of seven part-time directors appointed to seven-year terms with a salary of 20 percent of the governor's, or about $28,600. Some of the directors would be appointed by the governor with the approval of the governor's council, some of them would be appointed by the president of the state senate and some would be appointed by the Speaker of the House of Representatives. Directors would be barred from serving for more than 14 years.

The authority would supervise the cannabis industry in Massachusetts, create the rules and regulations participants would be required to follow and be able to revoke licenses for not following regulations, although they would have to hold a hearing. The authority would have to approve all license holders and they would have to keep careful records and file monthly reports with the authority. There would be an excise tax of $10 per one percent of THC content

MATTHEW ROBARE/COLLEGIAN

State Rep. Ellen Story (D-Amherst) introduced a bill which would legalize and tax marijuana.

If a bill recently introduced in the State House succeeds, Bay Staters could buy marijuana in stores.

per ounce, collected from the processors and "Subject to approval by the General Court, such excise shall be adjusted by the authority from time to time as necessary to maximize the revenue derived therefrom, and to minimize the incentive for the sale of cannabis not in accordance with the provisions of this chapter." No municipality would be able to issue more marijuana retail and farmer-processor-retailer licenses than it could issue liquor licenses.

"We definitely support the bill," said University of Massachusetts Cannabis Reform Coalition Treasurer Adam Freed. "We're glad Ellen Story also got on board with it. This is obviously a big thing for us, because she's a representative from Amherst. We've had some dealings with her in the past; she hasn't always supported the legalization movement, but I think that she sees that her constituents in Amherst support the movement, especially after we voted . . . in favor of legalizing marijuana last year. We feel like for a representative to come forward with a legalization bill, it's a big step."

Evans shared that perspective.

"Hopefully it's the first word and not the last word," he said. "Think of it as a prototype, a concept car from Detroit."

Evans said he believed the legislature "won't touch the legalization bill with a 10-foot pole." Many supporters of legalization, he said, are afraid to speak out for fear of being labeled as drug addicts, so he thinks a ballot initiative will be necessary to make legalization a reality. Evans said a successful ballot initiative would have to wait until 2014, because "substantially similar" proposals can't be filed within four years of each other and he believes that Attorney General Martha Coakley would successfully challenge one in 2012 as being substantially similar to the decriminalization proposal.

Representatives for Governor Deval Patrick and Coakley were unavailable for comment, but both opposed decriminalization in 2008 on the grounds it would increase violent crime, traffic accidents and benefit drug dealers, according to reports in the Boston Globe from 2008.

Evans will be giving a talk on prohibition and what cannabis legalization activists can learn from efforts to repeal the 18th amendment in Campus Center Room 162 on February 28 at 7:00 p.m.

Matthew Robare can be reached at mrobare@dailycollegian.com.

Group recommends merging HFA, SBS

CHASS from page 1

college were to be created. In his report, Staros said there would be no such cuts.

"The creation of a new college does not imply reductions in staffing," he wrote. "The new college will bring together the existing staff in CHFA and CSBS."

Though Staros said no one would lose their job, he wrote that staff would have to prepare itself to perhaps serve different roles or functions.

The fact that no jobs would be cut "does not mean, of course, that every job will remain the same," he wrote. "Roles may shift and opportunities may arise as two organizations come together."

Since Chancellor Robert Holub took over at UMass and since Provost Staros joined him in 2009, the two have pushed interdisciplinary research as a campus priority.

This is one of the goals of the proposal, Staros wrote, as he made the case that disciplinary regions will remain distinct, although interplay and overlapping would be signature features of the new college.

In laying out his argument for the new school, Staros said he believes a mission like CHASS' "to promote the study, understanding, and expression of what it is to be human," is "intellectually sound and timely."

"The disciplined study of 'what it is to be human' could have no greater relevance or urgency," he wrote.

One of the greatest goals of the proposal, Staros wrote, is promoting faculty cooperation and cross-disciplinary research and teaching.

"It is likely that a considerable increase in connectivity will occur as faculty members engage in everyday activities related to college business," he wrote. "Faculty members from various departments will encounter each other on the College Curriculum Committee and will make connections that they would not otherwise make."

Another argument which came out of the formation of CNS was that the creation of the new school actually pushed faculty and staff outside that college further away from the sciences, rather than promoting cross-disciplinary cooperation. Learning from that issue and facilitating more overlap, then, would be a goal of the proposed merger.

"The campus did not address how the new College of Natural Sciences would relate to other parts of the campus, however they might be organized," he wrote. "This left many programs in the social sciences – and some in the humanities – with the legitimate concern that the first round of organization may actually have left them more distant from existing and potential collaborators in the sciences."

Staros said he feels a CHASS would not suffer from those same alienating effects.

"This proposal is made in the firm belief that the connections and opportunities spanning the liberal arts and the sciences will be more clearly articulated, more readily supported, and more effectively pursued if the existing, unified science college is joined by a strong college that brings together the arts, humanities and social sciences."

The report also addresses concerns about a potential loss of distinct identity which the merger could cause, a prime concern from faculty.

"There is no doubt that having a college 'of' social science or a college 'of' humanities provides a certain amount of distinctive identity," he wrote. "However, if we are seeking to promote transdisciplinary connections and interdisciplinary approaches to scholarship, that homogeneity can also be an impediment."

Ultimately, Staros wrote that he believes a potential CHASS may not deliver the degree of coherence and interscholastic unity that a College of Arts and Sciences, another previously-discussed option, might, but that it could deliver great dividends for facilitating more interplay and cooperation among faculty.

"By calling upon both CHASS and CNS to build the mechanisms necessary to promote collaboration across the sciences and the liberal arts, I believe the campus can realize the essential benefits many hoped for in the proposal for a College of Arts and Sciences," wrote the Provost.

It now appears that the University's administration will seek to implement this proposal, and soon.

"In general, the campus has been in a state of waiting-to-see for an extended period," wrote the Provost, who was previously at Stony Brook University in New York. "We are in a position to make the decision to move forward, and this is the right time to do it."

The Collegian will have more on the proposal as it develops.

UMass system boosts financial aid levels

UMASS EDU

The UMass system has increased the level of financial aid it provides to students by some $95 million during President Jack Wilson's tenure.

AID from page 1

At the same meeting, Wilson presented a report on current financial aid statistics throughout the UMass system. According to the report, 61 percent of the system's in-state undergraduate students are receiving some amount of need-based financial aid this year. In addition, the report's findings also listed university students as having received $673 million in financial aid, about one-fifth of which came from the system's own funds.

2012 budget targets deficit, promotes math and science

BUDGET from page 1

to its lowest share of the budget since the 1950s.

"I'm also convinced that the only way we can make these investments in our future is if our government starts living within its means, if we start taking responsibility for our deficits," he said. "As a start, I've called for a freeze on annual domestic spending over the next five years. This freeze would cut the deficit by more than $400 billion over the next decade, bringing this kind of spending - domestic discretionary spending - to its lowest share of our economy since Dwight Eisenhower was President."

Obama acknowledged that reigning in spending will require cutting from some areas which direly need funding, including some programs for which he has been a staunch advocate.

"Even as we cut waste and inefficiency, this budget freeze will require some tough choices," he said. "It will mean cutting things that I care deeply about - for example, community action programs in low-income neighborhoods and towns, and community development block grants that so many of our cities and states rely on. But if we're going to walk the walk when it comes to fiscal discipline, these kinds of cuts will be necessary."

Although Obama's proposal is ambitious in seeking to cut into the burgeoning deficit, he made it clear that these cuts are only a "down payment," and said hacking away at the colossal debt will require bipartisan cooperation and common sense fiscal prudence.

"Cutting annual domestic spending won't be enough to meet our long-term fiscal challenges," he said. "The only way to truly tackle our deficit is to cut excessive spending wherever we find it – in domestic spending, defense spending, health care spending, and spending through tax breaks and loopholes."

Obama also touched on some targeted areas his administration is seeking to trim, including $78 billion in cuts to the Defense Department, a cessation of tax breaks "for oil and gas companies" and reforms to "wasteful health spending," which the President said will be used "to make sure doctors don't see their reimbursements slashed and that they stay in the system seeing patients."

Ultimately, however, the President emphasized the need to create an economic climate within which the nation can flourish into the future. To accomplish this, he said, America must push forward in entrepreneurship and innovation, and in updating education policy to more prominently focus on science and emerging technologies.

"While it's absolutely essential to live within our means, while we are absolutely committed to working with Democrats and Republicans to find further savings and to look at the whole range of budget issues, we can't sacrifice our future in the process," he said. "Even as we cut out things that we can afford to do without, we have a responsibility to invest in those areas that will have the biggest impact in our future and that's especially true when it comes to education."

Listing engineering and math as among the key areas in which he hopes to foster interest, the President touted a few initiatives his administration has undertaken to make some of those goals a reality.

"We're spearheading a drive to prepare more than 10,000 new math and science teachers over the next five years, and train 100,000 more current teachers in those fields," he said. "We're pushing forward on a Race to the Top in our schools that has led over 40 states to raise their standards for teaching and learning for less than one percent of what we spend on education each year. That's why we're protecting the more than $800 increase that we added to the most widely used federal scholarships, and making the tough choices to put them on a firm footing for years to come. And that's why we're on track to meet the goal that I set when I took office: By 2020, America will once again have the highest proportion of college graduates in the world."

The budget deficit for fiscal year 2011, according to the Office of Management and Budget, is $1.6 trillion. The 2012 proposal is expected to hedge that debt by more than $500 billion, in part because of economic growth, also, according to the President's proposal, because of the last two years of stimulus funding, and especially because of the expiration of the Bush-era tax cuts. The budget office's proposals show the deficit inching down under the trillion-dollar mark this year and falling to as low as $607 billion by 2015.

Although the budget proposes sweeping cuts, it does not fundamentally alter three large programs which have propelled the deficit to its current level. The 2012 proposal would not affect funding levels to Medicare, Medicaid or Social Security, all of which are growing in terms of proportion of the budget and share of national debt.

Sam Butterfield can be reached at shutterfield@dailycollegian.com

In a Monday morning appearance at a Baltimore middle school, President Obama, flanked by Secretary of Education Arne Duncan and Budget Director Jack Lew, outlined his priorities for 2012's budget.

America thrives on two parties

Political parties are some of the most reviled entities to take place in the political arena of American society. Time and time again, we are inundated with commandments to "vote people, not parties." Continuing down this doleful path, the joint values of being a so-called "independent," and adhering to some semblance of an ideological "center," are held sacrosanct by many of our countrymen. Even corporate lobbyists are often seen in a more redeeming light than those sporting donkey or elephant lapel pins.

Dan Stratford

However, political parties are not organizations that should be held in contempt or viewed as intrinsically evil. They are both touchstones and essential building blocks of our republican system and merit reverence for the political cohesiveness they provide.

Politics is unquestionably a communal enterprise, with various people, organizations, and other entities jostling for positions of power and influence. Though the value of the individual in terms of legal rights and freedoms should never be discounted or underestimated, politics and communal participation therein are inseparable concepts.

Just as Andrew Carnegie noted in his "Gospel of Wealth" essays that, in business, "capital is created together," so too in politics are elections won, bills passed and court cases decided in conjunction with one another.

Without political parties, many great ideas for the betterment of the nation could not be articulated and marketed on the scale needed to render them politically viable.

As such, in a society such as the United States - where politics touches every aspect of our lives, and where political participation is greatly valued – people cannot exist outside of politics just as they cannot exist outside of society.

This reality of politics in a republic – as a great communal enterprise that holds sacrosanct stability and peaceful transfers of power – would in itself justify the existence of countervailing groups of the politically-inclined to ensure a dynamic public discourse. Groups that are in opposition in a legislature, after all, typically serve as diligent interlocutors to those in the majority. However, the necessity of political parties is a thesis with far greater depth than the mere vacillation of election cycles.

Political parties serve as vital intermediaries between the government and the governed. For example, they bundle issues held dear by their membership into coherent, palatable platforms that voters – most of whom have not had the time to pursue a B.A. They help to aggregate and advance an agenda which, if in the majority, informs policy-making, and, if in the opposition, serves as the basis for the criticism of the majority party.

They provide an avenue for "common people" of modest means to involve themselves in politics, and aggregate and distribute funds for that purpose, affording a great plurality of the population a chance to run for office without having to self-finance their campaigns. Continuing down this transformational path, political parties afford young people the experience needed to cut their political teeth and build their resumes, allowing them to work their way up into higher places and run for office outright. This typically ensures that those who hold elected office possess some experience in not just the minutia of policy, but also in the fine art of political maneuvering and coalition-building. In this sense, political parties validate the centuries-old observation of Edmund Burke, Member of Parliament and himself a component of the Rockingham Whigs, who asserted that political parties are in a way "[bodies] of men united for promoting the national interest upon some particular principle upon which they are agreed."

Furthermore, in most legislatures around the world, the balance of party power determines who gets to be chairman of what committee, and who gets to assume a higher leadership position such as speaker or its equivalent. Parties also serve as both a guarantor of voting discipline and a reliable predictor of the behavior of a given legislature at a given time.

This is actuated through those occupying the positions of majority/minority leaders, majority/minority whips, and other lesser party officials in a legislature. If parties, or factions of some sort, were not at all present in a legislature, not only would there be no modicum of predictability as to voting patterns, but stability itself could be threatened due to a profound lack of cohesion and experience.

Despite all of these functions performed by political parties, there are those who critique their very existence as a testament to some form of phantom tyranny. There is a widespread perception that political parties are responsible for varying degrees of corruption, cronyism, censorship, inefficacy and almost every other evil to befall humanity since time's inception. There is an equally virulent idea that only through the predominance of so-called "indcpendents" will the salvation of the political culture of the United States be achieved.

To make it abundantly clear, "corruption" and "inefficacy" exist everywhere, in any institution where more than a small group of people interact on a daily basis. However, the claim that political parties actively conspire to stifle debate is naive. Without political parties, many great ideas for the betterment of the nation could not be articulated and marketed on the scale needed to render them politically viable.

The vast mobilization of people that is essential for the existence of political parties. Lone-wolf independents realistically cannot successfully broadcast a winnable agenda. Instead, one must simply concede the awe-inspiring scale of representative politics in general, and recognize the fact that the individual may not have the means, financial or organizational, to do it alone.

The Warning

Eminem was never cool.

The first time I heard Eminem was when I was a very young lad and "My Name Is" first made the jump on the airwaves. I remember specifically arguing with my mother that he said "Slim Shady" and not "Zim Zany." Either way, I remember watching the video for the first time and thinking nothing of this new artist. I was probably too young to really grasp what I was listening to.

Herb Scribner

Fast forward to fifth grade, when my friend Kyle introduced me to "The Eminem Show," an album he stole from his brother and thought was pretty good. Immediately upon hearing the opening songs, I began to understand the power of music. Someone could tell their life's story through the art of music and beautifully shape it into composed majesty. Eminem, despite his swears, his cussing, his crazy antics and pure hate, did just that.

He inspired me to rap. "The Eminem Show" and the release of the film "8 Mile" turned me into a bit of a rapper. Like Eminem, I wanted people to hear my story, whatever it was, and understand that, I too, give off some power from my lyrics.

Next came "Encore" and I loved the album (I later decided it did not match up to his other albums). With the this new release I decided to change my game from a fun-loving, basketball-oriented rapper to something with emotion and heart; it became something more along the lines of "Like Toy Soldiers" or "Mockingbird." For what seemed like an eternity, I waited for Eminem's newest album. I graduated high school before "Relapse" hit record stores. It became my anthem for the summer of 2009.

While the album itself lacked in emotion, reverting back to his old ways of loopy lyrics and crazy, yes crazy, situations, it still felt like an Eminem album because he was telling his story. The song "Beautiful" really grasped this concept; we were finally allowed to see the deepest, depressing parts of Eminem's psyche.

Let's stop and review what we know.

I'll say it again, Eminem was never cool. Although he was lyrically different, he never really made the jump from CD player to hallway talk. He was always that elephant in the room. Everyone knew his songs, everyone knew his lyrics, but when they came up in a popular setting, he was laughed at. His songs became mere jokes.

Eminem is merely trying to become the best in the industry by telling his emotionally tragic story.

Then comes "Recovery," and this new era of Eminem.

Eminem used to be a solo artist and used to make fun of all the pop stars. He was young, he was immature, and he just wanted to make a name for himself by doing these sorts of things.

When he was featured on the song "Forever" with Drake, Lil' Wayne and Kanye West, he immediately made the jump from this immature and younger version of Eminem that was seen in the past, to a more mature man who is looking to beast-mode on everybody in the business and show his talent.

After a near-death experience because of drug mishaps, he isn't going to waste anymore time being that insane, crazy, head-spinning rapper that he always has been. He's unleashing his raw talent; he's releasing the skills he has to show off just how good of a rapper he is. It's not about how people perceive him; it's not about being the "cool" rapper that everybody wants to listen to. Eminem is just looking out for himself and looking to finish telling his story while still giving out the best rapping ability he has to offer.

You can call him out on the commercials he did for the Super Bowl, but can you really blame a guy who hasn't released an album in five years for wanting to make some dough? But for the Chrysler one, I don't think it was about money. For a while, Eminem has been the only celebrity advocating for a Detroit revival – which the city needs in every sense of the word.

Finally, although Eminem didn't win the Grammy for Album of the Year (for the third time), he did win Rap Album of the Year (for the fifth time). The Recording Industry Association of America may have rejected his latest deep, emotional and raw effort, but it is no less relatable and inspiring. The rapper has been through severe struggles, made mistakes and hit rock bottom, only to climb back up and take the game by its throat with a new found maturity.

Again, Eminem was never cool, and he never will be. He'll always be respected and admired for what he has accomplished. He'll throw out a few more albums until he reaches that pedestal and eventually grabs Album of the Year. It's not to make more money or to prove the haters wrong.

Eminem is merely trying to become the best in the industry by telling his emotionally tragic story. He's using his talent to show why he is the best in the rap game, and why he deserves to be at the top of the hill.

Don't believe me? Listen to his lyrics.

The blur between reality and TV

Do you sometimes wish that you were cast in a reality show? You're not alone. Consider the following scenario and attempt to recall how many times you've witnessed it.

The professor is fully concentrated on explaining the structure of molecules. He is oblivious to the student who sits in the back and stares at her laptop.

Yevgenia Lomakina

Let's call her Amy. At a first glance, she seems to be carefully examining her notes. A closer look reveals a less than studious truth. The hood of Amy's University of Massachusetts sweatshirt conceals ear buds; her computer screen is gleaming with the opening credits of "Jersey Shore."

Should Amy be considered an airhead, or is she simply a victim of a trend? The answer is tricky. To Amy, the structure of the water molecule will prove to be of little benefit. On the other hand, the content of the latest episode of "Jersey Shore" will provide the source for numerous posts on Twitter, Myspace and Facebook - all of which will certainly increase Amy's social reputation. At this rate, the only way in which she will be intercsted in any scholastic affairs is if they're filmed, edited, and presented to her in a broadcast-ready format. Before that happens, the adventures of Snooki take precedence over other subjects.

Modern television is full of "reality programs." These shows claim to expose the "real" (or slightly modified) lives of "average" individuals to a similar group of equally average individuals, eliminating the highly-predictable and costly scripted drama. With this setup, Amy gets to view a likeness of herself living the glamorous lifestyle: partying, sitting in a hot tub and spending money frivolously. In real life Amy's schedule is filled with chemistry and calculus. This is not what they teach on "Amcrica's Next Top Model."

Reality TV is a relatively new trend. This genre developed not as an attempt of the studios to accommodate the desires of their audience, but as a desperate effort to find cheaper programming. It costs only $200,000 to produce an episode of a reality show; the bill for scripted shows could run over $1,000,000. It is in the studio's financial interest to produce reality shows than extensively spend precious dollars on traditional programming in the hope of finding loyalty among the target demographic.

Then comes the question of the viewers' response: Are unfamiliar individuals grappling for a prize interesting to watch?

Apparently. A survey of "Survivor" audiences in 2003 revealed that the unpredictable nature of the show and the absence of hired actors were among the highest points of interest for them.

The audience never sees raw footage but only selected events that have been prearranged.

Reality programming is different partly beeause it is being advertised on a false premise. The audience never sees raw footage but only selected events that have been prearranged. Many viewers realize this, but few know the extent to which the shows are altered.

What is included in this engineered reality? Product placement, a staged environment (a set on which the show is taped), a carefully chosen cast, selected challenges (in the case of competition shows) and edited footage. The latter is most important, as the editor has the power to shape the personalities and control the outcome of the show.

Story editors of reality programs have gone to court demanding higher salaries; they claim that the labor of selecting and editing raw footage is so extensive that they should be paid as screenwriters. They are denied the benefits of Writer's Guild of America based on the assumption that their programs are not scripted. For comparison, the stars of reality programming are highly compensated; characters on "The Hills" were collecting six-figure paychecks at the end of their last season.

It is more surprising that, given all of the above, reality television gained such popularity. The "Atlantic Monthly" published an article entitled "The case for reality TV," in which VH1 executive vice president Michael Hirschorn states that reality programming "engaged hot-button cultural issues – class, sex, race – that respectable television… rarely touches." Note the presence and placement of the word "respectable" in the quote. Let's examine exactly how these issues are engaged.

The actions of the "real" characters are often less than glamorous. In interviews subsequent to their fame, cast members admit to inflating or altering their behavior for the cameras. If it was not celebrity, it was the reward that obliged the contestants to "act." Apparently, modern society approves of any behavior as long as it is justified by fiscal means. Any action, no matter how ridiculous, is excused if the individual gains fame as a result.

The conduct popularized by reality programming has become socially accepted. Few people understand that watching television is not a passive activity. The content of certain shows impacts one's perception of reality and the norm. Craig A. Anderson from Iowa State University notes that, "one of the negative things about television is that it gives a distorted image of what the rest of the world is like. TV changes the perception of what is normal."

Should Amy turn off her computer, leaving the episode of "Jersey Shore" unwatched? Perhaps. It will be a little step toward making her world more real and less staged.

Bieber makes fans into Beliebers

By Ian Opolski
Collegian Correspondent

The Justin Bieber documentary will delight fans and irritate everyone else.

Little girls and cougars everywhere, can rejoice, as the film they've been waiting for has finally arrived. "Justin Bieber: Never Say Never," is a hybrid documentary/concert, detailing the teenage phenom's improbable rise to fame from a small Canadian town. The film is spliced with footage of Bieber's sold-out concert at Madison Square Garden.

Anyone who has turned on a radio in the last year has heard of Bieber, so it's unlikely that anyone entering this film hasn't already formed an opinion for or against him. As such, "Never Say Never" isn't going to change minds in either direction. Fans looking to be entertained will be entertained, and those looking to jeer will be given plenty of material to work with.

The film tries to silence would-be detractors right out of the gate by opening with footage of an early Bieber performance. Surprisingly, Bieber has a remarkable level of vocal and instrumental talent, though the film's attempt to pass him off as a musical prodigy is laughable. Still, the videos of his precocious ability, coupled with the humble recollections of his grandparents and single mother, create an endearing portrait of the superstar's early days. The film makes it clear that Bieber is a hard worker and always has been, having performed on street corners in the hope of getting discovered. This type of Cinderella-story is one we've all seen before, but it's uplifting enough to combat even the most cynical attitude. "Never Say Never" also wins points for its insight into modern celebrity. Social networking has become a mandatory avenue toward stardom, and Bieber, whose success was first propelled by YouTube, will likely stand as a relic of that trend.

Whatever merits the film earns in the back-story, however, are completely betrayed by the rest of the movie. It's understandable that a documentary about a cultural phenomenon would contain a fair amount of hysterical fans, but "Never Say Never" takes it to an infuriating extreme. Showing a few clips of girls hot with Bieber Fever is comical; showing a few hundred is obnoxious. The level of adoration becomes frightening as the film shows moms and even adult men who are just as enraptured by Bieber as their children. Humorously, only one adult featured makes a disclaimer that her love for the pop star is not pedophiliac. Such psychotic devotion calls to mind similar occurrences in history, like the rise of the Manson family. Indeed, in one especially chilling moment, a stone-faced girl intones into the camera, "He and I will be husband and wife." Her voice is so full of cultish passion that even Squeaky Fromme would be impressed.

Yet the devotion of these fans has its match in Bieber's own obsession with himself. At times "Never Say Never" becomes such a parade of narcissism that one wonders whether Bieber, credited as a producer of the film, ever intended it to be comical at all. In the film's most ridiculous sequence, Bieber stares seductively into the camera for nearly a full minute, whipping his hair from side to side while Etta James croons "At Last" in the background.

Later, Bieber breaks the fourth wall in order to command the audience to stop texting and start paying attention to him. These moments might be humorous if they didn't demonstrate a startling need for attention. What kind of egomaniac is this kid? Even the massive celebrities who nurtured Bieber, like Usher, seem bemused by his self-assuredness. Bieber certainly has musical talent and, much like a miniature horse, has a natural appeal because of his small size. But "Never Say Never" makes clear that his defining characteristic is his belief in himself. Like Napoleon, Justin Bieber has the confidence of a much taller and much more talented individual and he is using it to conquer the music world.

"Never Say Never," the film documenting the life and musical career of Justin Bieber hit theaters everywhere last Friday to the delight of fans and the dismay of critics.

The film is available in 3-D, though I would advise against seeing it in that format, as it contributes nothing but discomfort. Only the concert portions are in 3-D and the effect is usually used to make you feel as if Bieber is locking eyes with you. Many will find Bieber's music distressing enough, so having him stare you down will only augment that sensation.

In short, "Never Say Never" will give you exactly what you expect to get from it. Fans of Justin Bieber will have ample opportunity to adore him in the company of likeminded fellows, while haters will leave the theater incensed beyond all measure. The insight into stardom is moderately entertaining, as are the film's numerous celebrity cameos, but if you've already formed an opinion of Justin Bieber, expect it to hold once the movie's over.

Lawn ornament love

Margaret Clayton
Collegian Correspondent

You will be Fortune's fool if you see this movie instead of reading Shakespeare's "Romeo and Juliet" before your quiz.

The film admits in the first minute that this is a tale you have probably heard over and over again, but they are going to tell it anyway. There are strong similarities between the original play and this adaptation. For example, the setting is Verona Drive, the feud is between two neighbors whose last names are Montague and Capulet and their respective garden gnomes colored by their hats, the blues and the reds. The hide-away for the lovers is the abandoned Lawrence Garden (reference Friar Lawrence). Dueling becomes lawn-mower races and Juliet's balcony is the roof of a tower at the top of the pond. Benvolio's name evolves into Benny and the Nurse is a frog named Nanette who is a fountain in Juliet's pond. These changes are more accessible to a modern, young audience and use the "Toy Story" method of inanimate objects that are alive, but must freeze when humans might catch them moving.

Rated G and unnecessarily in 3-D, "Gnomeo & Juliet" has some hidden innuendos for the parents and babysitters to laugh at and counter-act the many, "Is this really happening, right now?" moments, such as the slow motion fight scene between Gnomeo and Tybalt in the trailer.

After sitting in the theater for 84 minutes, you realize that Elton John and a sprinkling of female duet partners, including Lady Gaga, has taken over all but 3 tracks on the soundtrack of this feature film. Though he did not write all original songs for the movie, as he did with "The Lion King" and "The Road to El Dorado," it was quite enjoyable to see the lawn hippopotamus and crocodile singing to "Crocodile Rock." Elton John is also an executive producer for the film.

The voice-over cast is a star-studded mix you won't believe until you see the credits: Gnomeo (James McAvoy), Juliet (Emily Blunt), Lord Redbrick (Michael Caine), Lady Bluebury (Maggie Smith), Tybalt (Jason Statham), Shakespeare (Patrick Stewart), Terrafirminator (Hulk Hogan) and the Fawn (Ozzy Osbourne).

Having Shakespeare as a character, a bus destination of Stratford by Avon, and a quote from Macbeth makes the audience very aware of the original source for this animated comedy. The self-awareness becomes a bit cheesy after a while, especially when Gnomeo discovers the original ending of the play and tries to change it.

The star-crossed lovers in this version meet by night, both in camouflage, as Juliet is trying to show how her father, Lord Redbrick, how vigorous she is by bringing back a rare Cupid's Arrow Orchid to make the red garden more beautiful than the blue. The label of "delicate" is not a strong argument on Lord Redbrick's part, as truly all of the gnomes are equally smash-able ceramics. When water washes away Gnomeo and Juliet's disguises, you think they are gasping because they fell from on high and sunk to the murky bottom of a pond, but the surprise comes from the realization of love for their mortal enemy.

"Gnomeo & Juliet" is nothing like its predecessors in the adaptation of Shakespeare's tragedy. It uses mostly modern language, is not based in the human world and changes the plot significantly. It is a brainless comedy, except it hurts your brain when your expectations of what should happen are not met.

For other variations of what some call the most well-known love story of all time, see Zeffirelli's "Romeo and Juliet" (1968), West Side Story (film version, 1961) or Leonardo DiCaprio and Claire Danes in "Romeo + Juliet" (1996).

Margaret Clayton can be reached at mclayton@student.umass.edu.

James McAvoy, Emily Blunt and Ozzy Osbourne lend their voices to "Gnomeo and Juliet," the latest adaptation of Shakespeare's most famous tragedy.

'The Illusionist' casts a spell

By Ian Opolski
Collegian Correspondent

Simple, colorful and haunting, "The Illusionist" is a brief animated film that delivers a heavy emotional impact.

Directed by Sylvain Chomet and adapted from a screenplay by the late Jacques Tati, "The Illusionist" (or "L'illusioniste" in its original French), tells the tale of a French stage magician in the late 1950s. With the onset of television and rock music, he finds himself performing for increasingly smaller and more disinterested crowds. His career in steep decline, the performer is forced to travel across Europe in search of patrons and finds warm reception only on an isolated Scottish island. With the introduction of electricity and the jukebox, however, everyone quickly forgets the magician except Alice, a small girl who becomes his traveling companion and something of a surrogate daughter. The film focuses on their relationship as the girl becomes a woman and the man grows old, exploring the disenchantment that comes naturally with the passage of time.

The most striking feature of the film, which has received an Oscar nomination this year for Best Animated Feature, is its minimal use of dialogue. With the exception of an occasional murmur in French – which is left without subtitles – the film relies largely on the primal sounds of cheers, sighs, laughter and weeping to convey emotion onscreen. This tactic does create a certain amount of distance between the audience and the characters, as it is difficult even to ascertain the characters' names before the credits roll. However, it is a testament to the strength and creativity of the piece as a whole that, even without dialogue, it still manages to be at turns comic, poignant and tragic.

Much of the thanks should go to the film's inviting style of animation. Animation as we know it today has come to mean computer generated imagery and computerization, as evidenced by this film's two Oscar rivals, "Toy Story 3" and "How to Train Your Dragon." Unlike those films, "The Illusionist" is drawn in ink. This throwback to a fading art form is appropriate here, as it echoes the magician's struggle against new forms of entertainment in the film itself. The movie is visually lovely, like a watercolor painting in motion. Particularly strong are its landscapes, presenting scenes of sunny Scottish hillsides and blustery seas in vivid, sometimes breathtaking detail. The film's simple piano score also serves it well underscoring the quiet melancholy of the aging magician's plight.

Just as beautiful, if not more somber, are the themes explored in the film. The magician progresses through a string of increasingly more pathetic venues, beginning by playing at an enormous concert hall and ending by conducting his act in the window of a clothing store. His incapacity to perform even menial day jobs only heightens the tragic arc of a character that cannot make himself fit in the modern world. Several smaller characters share similarly depressing fates, including a clown intent on suicide and a ventriloquist who continues to go through the motions of his act long after he has sold his dummy to a pawn shop. These three characters become increasingly aimless, provoking the major question of the film: what is the artist to do when his art becomes irrelevant? "The Illusionist" also explores what is lost in the passage to adulthood, as Alice, like the magician's audiences, becomes less interested in her companion's stagecraft and more concerned with fashion and romance. The tragedy of the magician is thus twofold, as he is rendered personally and professionally unimportant.

A melancholy rumination on what it's like to be washed away by the wave of modernity, "The Illusionist" is certainly not a typical child-friendly cartoon. But, with its stunning imagery and somber reflection, the film is well worth a viewing. It only runs for 80 minutes and actually feels much shorter, but with its bittersweet conclusion, it still manages to convey an emotional depth, which will linger long after you leave the theater.

Colour Revolt invades Noho

By Miranda Pote
Collegian Correspondent

The Iron Horse had an incredibly exciting and sophisticated vibe this Saturday. Colour Revolt, an alternative rock group from Mississippi, played songs off their latest album "The Cradle." Fiesta Brava, an indie rock group from Northampton provided opening support.

By 10:30 p.m., every table was full of groups of friends gathering for a night of live music. The upstairs was closed, but it felt exclusive to be sitting at a small table mere feet away from the stage. Fiesta Brava, a group of four local guys from Northampton brought quite a crowd for the opening show.

Kindred spirits dressed to impress, Fiesta Brava quickly brought a high energy to the venue. The team of three guitars and one drum mold together into a slightly poppy indie rock. The band members seemed to enjoy themselves and smiled at their synchronized sound that was pumping up the crowd. Overall, the vocals were decent, but made up for by the foot-tapping power chords and exciting guitar solos. After performing a five song set list, Fiesta Brava joined their friends in the crowd for the main event.

Immediately, Colour Revolt took the stage, but not to play yet. Each member did his part setting up his own mike and plugging in wires. One could tell right then that this band is the real thing; a bunch of down to earth guys about to express a lot of real, raw feeling through the power of music. And this turned to be true.

Colour Revolt opened with a bang with "The Cradle." The entire crowd was hit with lots of emotion from lead singer, guitarist and original member Jesse Coppenbarger. Melting perfectly between the incredible sound of the guitars, fast drums, and detailed keyboard, his voice is a vocal bliss. Coppenbarger has an amazing voice and exhibits true passion through his lyrics. His lyrics were hard-core, deep, dark and often angry. Many of the songs included extremely powerful screams that stirred up the vibe in the Iron Horse. It was easy to get engulfed in the anger and become numb to the music.

The band also performed "Naked and Red," "Mona Lisa," and "8 Years" off their latest album. They closed with "Mattresses Underwater," an older song but a favorite of the evening. Apparently the crowd thought the same because Colour Revolt returned to the stage for an encore.

Surprisingly, the crowd thinned out about half way through Colour Revolt's set. It seemed that more were there to support their friends in Fiesta Brava than for the headliner. However, Colour Revolt did not hold back. Eyes shut with emotion, they left it all on stage. Original member Sean Kirkpatrick on vocals and guitar provided a woven harmony with Coppenbarger, with Luke White on bass, Brookes Tipton on keyboard and Patrick Ryan on drums.

Colour Revolt is a difficult band to classify. Coming from diverse backgrounds, the members have faced years of internal conflict. The hardship definitely shines through with their impressive, dynamic sound. Whether their style of music is your preference or not, the band expresses their passion in a way that you can truly feel. All in all, Fiesta Brava and Colour Revolt provided another great night of live music at the Iron Horse.

Fordham remains winless

By Matt Catizone
Collegian Correspondent

With Sunday's 76-70 loss to Saint Joseph's, the Fordham men's basketball team dropped its 13th-straight game.

Playing at the IZOD Center in East Rutherford, N.J., the Rams looked like they were going to break their losing streak early on. At the end of the first half, Fordham led the Hawks by 12 points and was dominating the stat sheet.

A-10 Basketball

The second half told a different story though, as Saint Joseph's started off strong and never looked back. They would score 45 points in the half, well above their average of around 32 points per period. The comeback by the Hawks not only puts Fordham's losing streak at 13 games, but it also keeps them winless in Atlantic 10 play at 0-11.

The beginning of the season appeared promising for the Rams, as they started off 6-4. That stretch included an impressive win against Big East foe St. John's, which gained attention for knocking off one-loss Duke by 15 points and then-No. 10 ranked Connecticut. Since last winning a game on Dec. 22 at home versus Kennesaw State, the Rams have lost all 11 conference games. The worst of these defeats came Jan. 22 at Dayton where they would lose by a season-worst 34 points.

Fordham has five games remaining on its schedule. Of these five, the Rams best chance of getting a conference win will come March 2 against La Salle, which is 4-7 in A-10 play and 12-14 overall. If they cannot manage a win against the Explorers, their final game comes March 5 at home vs. Massachusetts (13-10, 5-5 A-10).

Temple, XU make top 25

Strong play all season has finally delivered merit for the top two teams in the A-10. Both Temple and Xavier have made the Associated Press Top 25 Men's College Basketball poll, as of Feb. 14.

While the Owls have been in the Top 25 for a majority of the season, this week marks the first time that two A-10 teams have made it together as well as the first time for Xavier, breaking in at No. 25.

No. 24 Temple has played well all season long and has its most pivotal game coming up Thursday against Richmond. The Owls (20-6, 9-2 A-10) and the Spiders (20-6, 9-2 A-10) are currently tied for second in the A-10 behind the Musketeers. A win for either team will go a long way towards securing a No. 2 seed in the A-10 tournament, starting March 11 in Atlantic City, N.J.

Xavier also has played well all season long and went undefeated through seven A-10 games. The Musketeers first loss came at the hands of Charlotte (10-14, 2-8 A-10) by four on Feb. 2. Since then, the Musketeers have ripped off three-straight wins, two against division rivals Saint Louis and Duquesne. Although they are currently ranked behind Temple in the AP Top 25, Xavier certainly has the ability to do as well as the Owls in not only the A-10 tournament but the NCAA tournament as well.

Duquesne scoring margin

While its record may not look as impressive as the big boys of the A-10, Duquesne certainly deserves respect in the conference. Through Sunday, the Dukes (16-7, 8-2 A-10), lead the league in scoring margin at plus 13.6, more than four points higher than the next team, which is Richmond at plus 9.5.

The goal for Duquesne all season has been to put up points. They lead the A-10 in scoring with 80.2 points per game. More impressively, the Dukes have erupted for 90 or more points six times and have scored in the triple digits on two different occasions.

High scoring for the Dukes has not meant lackluster defense, however. As of Monday, they sit at seventh in the conference in scoring defense by allowing less than 68 points pea game. Duquesne's defense was on display Jan. 12 when they stifled Saint Louis, allowing the Billikens to score only 45 points on the road.

The ability for the Dukes to light up the scoreboard while also limiting their opponents on offense is going to make them a tough matchup come A-10 tournament time.

Matt Catizone can be reached at mcatizon@student.umass.edu.

Duquesne guard B.J. Monteiro shoots over an opposing player. The Dukes have lost two A-10 games all year and lead the league in scoring with 80.2 points per game.

Farrell doing what's necessary as backup

CORREIA from page 8

Williams in practice this season.

The 5-foot, 9-inch sophomore transfer from Hofstra will have three years of eligibility for the Minutemen after sitting out this season because of NCAA transfer rules.

Even as a practice player though, Williams is helping Farrell prepare for smaller opposing point guards.

"We don't play the same way, like [Chaz] is more of an explosive, quick guy, I've got to use my size to my advantage," Farrell said. "Most of the guards, most of the other point guards that I'll play against are smaller. So having Chaz check me at practice, I know how to use my body to do different things against smaller guards."

Farrell's transition into playing the point guard position hasn't been easy but his assists numbers show that he's looking to be more of a distributor. Farrell's 51 (2.4 average) assists trail only Correia's total of 57 on the team and already surpass his total of 42 for all of his freshman season.

While the point guard position might not to be the strength of UMass this year, the adversity of losing a significant player in the middle of the season has been if nothing else, a learning experience.

Jay Asser can be reached at jasser@student.umass.edu.

UM takes on struggling Dukes

UMASS from page 8

to work even harder than we've been and try and tighten things up on the offensive end," Kellogg said.

The offensive side of the ball was the missing piece in the Minutemen's 59-51 loss to the Colonials on Sunday night, as usual top-scorer Anthony Gurley was held to seven points in the contest. This loss was the UMass' third-straight loss, which is the first streak of losses for the Minutemen in conference play.

"I think our effort has been good, I think our defense has been good, our offensive struggles have been difficult to coach and watch," Kellogg said. "We're going to have to do some things offensively to put some points on the board and get out and run a little bit to make the game more exciting for our team so that they want to play a little bit harder."

The Minutemen will be trying to revamp their offense against a tough Dukes squad who, until Feb. 5, were 8-0 in the conference. They are now 8-2 (16-7 overall) in the conference after two-straight losses to St. Bonaventure and Xavier.

With these pair of consecutive losses by the Dukes and three-straight from UMass, both teams will go to work at the Mullins Center with hopes to snap their losing streaks.

"I'm going to go with UMass [needing the win more]," Kellogg said. "This time of year, every game is paramount and important for spots in the standings and to see if we can get out of a little bit of a rut here. It's one of those ones where I think it's important for both teams. I would say each coach or each team to think it's more important for their squad to come away with the victory."

Coming away with a victory is easier said than done for UMass, as the Dukes sit first in the A-10 in scoring offense and second in both 3-point percentage and field goal percentage.

These high-scoring numbers come from the quartet of double-digit scorers on the Dukes side, including guard Bill Clark, who leads the team with 17.2 points per game, good for seventh in the A-10.

On the defensive front, Duquesne is first in the conference with steals and second with blocked shots. Both of these categories are a specialty of forward Damian Saunders, who leads the team in blocked shots (59) and is second in steals (47). Guard T.J. McConnell leads the team and the A-10 in steals with 67 robberies.

As the defensively and offensively strong Dukes head into the Mullins Center, UMass holds a .500 record for the first time since its first A-10 loss to the Musketeers. The result following the loss at XU was a 74-71 win against La Salle. Kellogg and UMass will be looking for a repeat situation this time around as the A-10 schedule starts to close down.

Massachusetts men's basketball forward Terrell Vinson guards an opposing player in a game earlier this season. Vinson and the Minutemen will attempt to break their three-game losing streak on Wednesday when they host Duquesne at the Mullins Center.

Minutemen look to stop skid

After losing three straight, UM seeks victory against Duquesne

By Herb Scribner
Collegian Staff

As the Massachusetts men's basketball team made its way to the court for practice on Monday, it looked like soldiers returning from battle.

Sophomore guard Freddie Riley stepped onto the court with a stiff limp and then sat down on one of the chairs on the sideline, a result of an ankle injury suffered in Sunday's loss against George Washington. UMass coach Derek Kellogg said that Riley is "going to be out for awhile."

Next onto the court was center Sean Carter, his arm in a sling as the result of a hyper-extended elbow he suffered against GW, according to Kellogg.

Then there was Raphiael Putney who, after waiting on the sideline for one of the UMass trainers to arrive, had his wrist taped up.

The injured Minutemen will join their teammates on Wednesday night at the Mullins Center as UMass hosts Duquesne, which will pit the banged-up Maroon and White (13-10, 5-5 Atlantic 10) against the fourth team in the A-10 conference table.

"It's going to be a tough one because of how good Duquesne is, but at the same token we're going to get back in the gym, try

See UMASS on page 6

Correia takes point burdens

By Jay Asser
Collegian Staff

The point guard position is widely considered to be one of most important, if not the most significant, position in college basketball. Even with a senior at the helm of its offense, the Massachusetts men's basketball team is thin at the position for the remainder of the season.

Following the departure of freshman Daryl Traynham, the Minutemen (13-10, 5-5 Atlantic 10) are left with senior Gary Correia as the only true point guard on the roster. While Correia entered the season as the starter and is the primary ball-handler for UMass, he isn't receiving the benefit of being relieved by Traynham anymore.

"I mean I think it's very difficult, but this is the hand we're dealt right now and [Gary] is the only point guard really in the program," UMass coach Derek Kellogg said. "As a senior and a guy who has been around the program for four years, I think he can take on a little more responsibility and have the ability to play more minutes. Is it asking a lot? Yeah, it is, but this is the situation we're in right now."

Prior to Traynham's departure, Correia was averaging 4.3 points per game and 2.4 assists per contest. Since playing his first game without Traynham against Dayton on Jan. 9, Correia's scoring has relatively stayed the same with his current 4.2 points per game average.

What has changed, however, has been UMass' need for Correia to distribute the ball. In Traynham's absence, the point guard has increased his assists tally to 3.5 per game, which is higher than any of his season-long averages in his time with the Minutemen.

What's more is that Correia has had little opportunity to earn breathers on the bench during games. In games which Traynham played, Correia never exceeded 30 minutes on the floor. Since then, Correia has played 30 or more minutes on six occasions, including the past five contests.

"I don't think it's too much for him, but I mean he can get overwhelmed at times, but it's not too much," UMass guard Javorn Farrell said of Correia. "I guess coming into the season he didn't expect to be playing 32 minutes a game, I mean it's just something he had to take with him. I think he's doing a pretty good job though."

Farrell, along with sophomore guard Freddie Riley and senior guard Anthony Gurley, have filled in at times for the ball-handling duties this year following Traynham's exit.

Nevertheless, Farrell is currently the primary backup point guard and has been working all season to improve his playmaking skills. To do that, Farrell has been going against point guard Chaz

Boney collects lone singles win

By Scott Cournoyer
Collegian Staff

Miscommunication and a lack of teamwork, focus and energy spelled a loss for the Massachusetts tennis team over the weekend as it dropped its contest, 6-1, to Yale on Saturday.

UMass coach Judy Dixon expressed her frustration, stating that, "individuals played well in moments, but this was a total team defeat and we need to work harder."

The Minutewomen (3-2) dropped three doubles matches, including losses by Candynce Boney and Julia Comas (4-8), Yuliana Motyl and Chantal Swiszcz (4-8) and Kaitlyn Carpenter and Jocelyn Providence (2-8).

"They didn't communicate out there and it showed in their performance," Dixon said.

UMass dropped five-of-six singles matches, but not without Dixon acknowledging the efforts of both Boney and freshman Jessica Podlofsky.

"[Jessica], I felt did really well in defeat," Dixon said. "After losing the first set, she made it really difficult for her opponent in the second set, making use of the backhand and didn't give up easy points."

Podlofsky lost to the Bulldogs' Annie Sullivan, 6-1, 7-5 in straight sets but, "Kept her cool out there, even being down on the scoreboard," Dixon said.

On a positive note, Boney, in picking up the lone win for UMass, continued to climb the record books. In defeating Yale's Blair Seideman, 6-4, 0-6, 10-8, the senior continued working up the ladder, winning her 51st match which ties her currently for fifth all-time in school history.

"I'm so proud to see how far Boney has come over the last four years," Dixon said. "She showed it in her win, against a very tough opponent from a very tough team. She shows passion every time out and I look for her to carry us as we continue to gel and find our stride as the season gets into high gear."

Yale	6
UMass	1
UMass	6
NJIT	1

The victory marks the second singles match win for Boney this young spring season, with three wins overall in both doubles and singles play.

In a completely opposite performance prior to facing Yale, UMass came out victorious against the New Jersey Institute of Technology, 6-1, to open up play at home this spring.

"We played well in both doubles and singles, but I wanted to see a little more out of them," Dixon said. "We got away with some stuff, including missed shots by [NJIT] and you'll take that as a coach sometimes, but we need to do better if we're going to compete for a higher prize."

The Maroon and White picked up two wins in singles play, coming off the tandem rackets of Boney and Comas (9-8(5)) and Motyl and Swiszcz (9-7). The lone loss in doubles for UMass was by Carpenter and Tanisha Hodgson (8-5), at the hands of the Highlanders' Monica Graff and Hannelore MacDonald.

UMass picked up five wins in singles play with the only loss coming from the No. 1 seed, Motyl, who was defeated in three well-played sets, 6-3, 6-7 (9), 7-10, by Ksenia Kuzmenko.

"[Yuliana] started off the match very well, and had [Kuzmenko] on the ropes, but couldn't close out the second set," Dixon said. "She's so young and she's really good and will figure out how to close matches. She played like a No. 1 and I expect her to improve her game as things come along."

Notable singles victories came from Comas (6-4, 6-3), Boney (6-0, 6-4), Clara Matias (7-5, 6-4) and Carpenter (6-4, 6-3), all coming in hard-fought matches.

With the next six matches for the Minutewomen coming in a span of 14 days, Dixon will look for her team to, "find their identity. I feel sometimes that, on one day, half the team will have the edgy attitude necessary to win and the next day, the other half will. Being great means that you bring it every time out and they must find a way to be focused if they want more out of this season."

With upcoming matches against Army, Connecticut and Dartmouth no longer on the horizon but knocking on the door, Dixon will look for her team to come together as the season gets into full swing.

"This is the meat of our season, the part where we can separate ourselves, or collapse and fall to the basement of the standings," Dixon said. "This is where we have to find and play our best game."

Dixon still believes that her team is "completely capable" of winning the Atlantic 10 conference title, but things must come together quickly in order for that goal to be met.

"We're still a favorite to win, based on our talent and depth and I don't have any reason to argue with that," Dixon said. "It's a matter of putting together that talent, focus and energy as soon as possible, because now, we're battling time and it will eventually run out."

Scott Cournoyer can be reached at scournoy@student.umass.edu.

ALEX MOJCHER/COLLEGIAN

The Minutewomen struggled against Yale over the weekend, losing 6-1 as senior Candynce Boney earned the only singles victory.

The men's and women's track and field teams competed this past weekend in the Valentine Invitational at Boston University.

UMass competitors earn IC4A, NEC bids

By Stephen Sellner
Collegian Staff

The Massachusetts men's and women's track and field teams featured standout performances and championship qualifiers in the highly competitive Valentine Invitational at Boston University over the weekend.

Both the men and women's teams raised their level of play in front of competition from schools such as Johns Hopkins, George Mason and Dartmouth. The men's squad produced an astounding 21 qualifiers in the meet, which is its best showing of the season.

"I think it's a combination of later development of the team, approaching a nice facility and the people being excited about registering good performances," men's coach Ken O'Brien said, who felt the tremendous facilities and competition brought out the best in his team.

Rising to the occasion was senior Kevin Spieler in the weight throw. The Attleboro, Mass. native continued his standout 2011 campaign, heaving 46-06.00, earning him a 14th-place finish and a bid to the IC4A Championships.

"Kevin's one of those athletes on our team who is…a pretty accurate reflection of…the majority of the athletes on our team," O'Brien said. He later went on to cite Spieler's great work ethic and love for track as contributing factors to his success and an excellent role model for the underclassmen.

The women's unit was led by the continued rise of Nalis Mbianda in the shot put, finishing second on Friday. The sophomore qualified for the ECAC Championships after displaying her second-best mark at UMass with a throw of 44-11.50.

"Mbianda's performance…is just scratching the surface of her potential," women's coach Julie LaFreniere said. "I see a very bright future for Nalis in the throws."

The Newton, Mass. native is riding a hot streak into next weekend's Atlantic 10 Championships, finishing second, third and first in her last three meets. LaFreniere credits assistant coach Darcy Wilson for Mbianda's success, calling Wilson "one of the top throwing coaches on the East Coast."

Zachary Koncki had a day to remember for the men's side in the long jump. The sophomore sprung his personal-best distance of 23-7.75, which is also the team's top showing in the event this season. Koncki's efforts qualified him for the IC4As and earned him a first-place showing on Saturday.

Tyler Cotto was stellar once again, finishing second in the 60-meter hurdles with a time of 8.06 seconds. Meanwhile Patrick McGowan and Daniel Barry qualified for the New England Championships and IC4A's in the 3,000-meter run with times of 8:25.24 and 8:25.56, respectively.

Gina Perno solidified her spot in the UMass record books in the 800-meter run with her second-place time of 2:12.62. The senior's finish was the second-fastest finish all-time in UMass' history.

"Gina trains and competes with passion and is very gutsy," LaFreniere said. She later went on to add that Perno's teammates feed off her attitude, as they "share her passion for success and challenge her in practices."

Sean Busch placed third in the pole vault with a height of 15 feet, following up his selection as last week's UMass Athlete of the Week. Freshman Quinn Ryder carried on his strong rookie season with a sixth-place finish in the 60-meter dash, posting a time of 7.03 seconds.

The women's team produced four NEC qualifiers in the 500-meters. Michelle Jenssen (1:16.15), Deanna Julian (1:16.62), Erika Unger (1:17.46) and Sarah Bitterman (1:17.49) each crossed the finish line in the top 11 spots in an event stacked with 56 competitors.

Up next for both the men and women's units is the A-10 championships in North Kingston, R.I., which is a two-day event starting Friday morning and concluding Saturday.

"This could be one of the most difficult conference meets within the past years," said O'Brien, who believes the men's field of competition has more depth than ever before.

"They will need to compete at their highest level," LaFreniere said about her team. "Anything can happen in the heat of competition and we expect to take advantage of our talent."

After disappointing finish, Minutemen hope to rebound

By Jay Asser
Collegian Staff

It's safe to say that the end of the 2010 season left a bitter taste in the mouths of the Massachusetts men's lacrosse team.

After beginning last year with seven wins in its first nine games, UMass dropped four of its final five contests, including a semifinals matchup with Towson in the Colonial Athletic Association tournament.

This year, the Minutemen are out to prove that they are the team that showed glimpses of being a postseason threat and not the team that faltered down the stretch.

While UMass coach Greg Cannella won't latch last season and this season together, his players can't help but show their eagerness to get back on the field.

"You have just so much pent up from last year, it was not how we wanted it to end," senior long-pole midfielder Casey Rahn said. "We've really established a precedent that we're not going to be in that position."

With the majority of their roster intact from last year, the Minutemen are pegged as one of the top teams in the nations, ranking No. 15 in the Inside Lacrosse/Face-Off Yearbook preseason poll and No. 19 in the preseason coaches poll.

Of its 13 games on the schedule, UMass will take on five teams ranked in the preseason polls, including Hofstra (No. 9 IL poll/ No. 11 Coaches poll), Army (13/16), Brown (17/NR), Drexel (19/17) and Delaware (NR/15).

To get through the stiff competition and live up to the high expectations, Cannella will rely on the leadership of his team, which appears to be a point of emphasis this season.

"Leadership is a point that coach stresses every day," sophomore attackman Will Manny said. "It goes from the freshman to sophomores to juniors, seniors. We're all together, all the time and it really should come through all of us."

Cannella knows it's easy to appoint leaders and talk about it in the preseason. In his mind, however, it's truly built in adverse conditions and when it's needed the most.

"We're building that on the go here, in terms of the leadership," Cannella said. "I think leadership is really forged when there's adversity … So far, we haven't had to deal with any of that, in terms of real games and real issues with our team."

The Minutemen are led by a trio of captains in Rahn, senior midfielder Ryan Hantverk and junior goalie Tim McCormack. Not only will all three be asked to provide leadership, but also to contribute significantly on the field.

The captain tag adds another layer of responsibility and can over-concern a player into worrying more about the play of others than his own. While any player is susceptible to that, Cannella knows McCormack's focus is especially important as a goalie.

"You have to be very careful with Tim, he's been able to balance that out so we do have confidence with him leading that side of the field," Cannella said.

On the offensive end, Manny will anchor a potent unit after posting a team-high 27 goals and 18 assists as a freshman. The 5-foot-9-inch attacker was ranked as the No. 2 rookie by Inside Lacrosse last year and will look to be more of a playmaker this season.

Along with Manny, UMass returns four of its top five scorers, including Anthony Biscardi (21 goals, 14 assists) and Hantverk (15 goals, 12 assists).

While Cannella would like to ideally have eight or nine reliable scorers, he knows that's likely not going to be the case, meaning the attackers will be leaned on heavily.

One player who will add a boost to begin the season is junior attacker Art Kell. Kell missed the final six contests last year with a broken foot after notching 21 goals and 12 assists in eight games.

Aside from Kell, the Minutemen struggled with other various injuries, a definite factor in their late-season slide. This season, Cannella is hoping for better luck with health.

"Right now, I think we lack the depth, especially on the

THE MASSACHUSETTS DAILY COLLEGIAN presents the 2011 Lacrosse preview

McMahon, 10 freshmen join 10 returning starters for UM

By Nicholas Bellofatto
Collegian Staff

The Massachusetts women's lacrosse team enters into the 2011 season by returning 10 starters and 17 letterwinners from last year's Atlantic 10 championship team.

The team graduated three seniors from last year's squad, and has accented current talent by bringing in 10 freshmen to paid the roster.

From the goalie all the way up the field to the attackers, the Minutewomen are filled with both star players and freshman talent. First year head coach Angela McMahon noted that UMass is building on a rich tradition and they could have the pieces in place to 3-peat in the A-10 conference.

"I think the nice thing about our team right now is that we have both leaders and young players in every spot," McMahon said. "On our attacking end we have some veteran leaders that have had a lot of success, and now we have some freshmen that are going into that attack position. I think it has been great to really bring in the freshman to give them the confidence to be out there."

McMahon stressed that it is important for the team to show leadership and chemistry.

"It is nice because we only have three seniors, but each of those seniors plays a different position so we have that leadership all over the field," McMahon said.

The team is not built on one aspect of the game, and with each player understanding their role, it will be easier for the underclassmen to gain the needed experience to grow and evolve through the season.

"I expect our team to be really balanced not only between the defensive-end through the attack, but I really think we are going to see contributors from every single grade – seniors to freshman," McMahon said.

Attack

Jackie Lyons, a senior attacker from Rocky Point, N.Y, will highlight the attack once again this season.

As a junior, Lyons was named the A-10 Offensive Player of the Year and the A-10 Tournament Most Valuable Player for the second-straight season. During the 2010 season, Lyons led the team in goals (49), assists (20) and points (69) and this year she will try to lead the team statistically as well as vocally.

"Jackie Lyons has been great on the attacking end, and has done a great job communicating with some of the freshman and really bringing them in," McMahon said.

Lyons has openly accepted her role as an established leader on the team, and she understands that nothing the team did in the past has any bearing on what the team will do this upcoming season.

"I just want to be an A-10 champ at the end of this season," Lyons said. "I am not worried about any accolades. For now I am just worried about Holy Cross and taking this season one game at a time."

Along with Lyons, top attackers from last year like Lauren Terracciano, Danielle Pelletier and Jesse O'Donnell return for the Minutewomen.

According to McMahon, freshman Katie Ferris is definitely an up-and-coming player to watch on the attack because of how dangerous she can be with the ball in her stick.

"She just has one of those deadly shots, she is just a sniper and can pretty much put it wherever she wants, and I think

Cannella expects leadership

By Herb Scribner
Collegian Staff

As the No. 16 Massachusetts men's lacrosse team (1-0) opens its their 2011 campaign, the team isn't looking for one side of the field to do better than the other, but rather for both sides of the field to combine for a strong team effort.

"[We need to be] a cohesive unit as a team, rather than just offense and defense. We need everyone to be responsible for every responsibility on the field," captain Casey Rahn said. "… It's not just going to be just on the close defensemen … it's going to be offensive guys who are taking reps at practice every day and really trying to improve their game as a defensive player."

As the team prepares for its upcoming schedule, top players from all positions will be asked to help out on all ends of the field in order for UMass to make it back to the NCAA tournament.

Attack

The attack unit features one of UMass' top players in Will Manny, who returns as a sophomore looking to build on his impressive debut season (27 goals, 18 assists).

With Manny being the top attacker for the Minutemen, coach Gregory Cannella wants the team to work with and around Manny, allowing him to make plays while guiding and providing help to other players.

"I want him to make a lot of plays. I just want him to make the right decisions and do the best that he can, and hopefully, people will follow his lead," Cannella said.

UMass starts season with Crusaders Wed.

By Dan Gigliotti
Collegian Staff

Along the hallways of Boyden Gym hangs an elongated banner celebrating the achievements the Massachusetts women's lacrosse team, including its first ever NCAA championship victory in 1982, four trips to the NCAA tournament and three Atlantic 10 championships.

The most recent addition to this banner is the Minutewomens' 2010 A-10 title, written right next to its 2009 conference championship.

On Wednesday, UMass begins its season with a chance to add another line of script to that banner. The Minutewomen ended last season 10-10, with a 5-2 record in the A-10. After beating Richmond, 12-10, in the conference finals, UMass was upended, 15-12, by Stanford in its play-in bid to reach the NCAA tournament. Returning 10 of 12 starters from last season and seven of their top eight point scorers, the Minutewomen appear to have the depth necessary to make another run at the A-10 title this season.

"I really expect our team to be pretty balanced, not only between the defensive end all the way through the attack, but I really think we're going to see contributors from every single grade," McMahon said.

Lyons, the defending A-10 Offensive Player of the Year and the Minutewomen's leader in goals (49), assists (20) and points (69), heads a group of 17 letterwinners on this year's roster.

UMass will play under new head coach Angela McMahon following Alexis Venechanos' departure to Ohio State during the offseason.

McMahon, a former player at UMass (2001) and assistant coach under Venechanos (2007-08), returns to the Amherst campus to coach many players whom she helped to recruit like the eight juniors and three seniors on the squad.

"She was here my freshman year," senior midfielder Haley Smith said. "Me and Jackie and Nazy [Kerr] have actually had her before, and it's good to see a familiar face."

A scouting and recruiting specialist as an assistant, McMahon brought in a group of 10 freshmen this season,

Winterfest blows into Amherst for fourth year

By Claire Reid Kiss
Collegian Correspondent

On Saturday, Feb. 11, young and old alike gathered at the Cherry Hill Golf Course in Amherst for the fourth-annual Winterfest. According to Tony Maroulis, the executive director of the Amherst Area Chamber of Commerce, this year's Winterfest attracted more people than any year before, with somewhere between 1,200 to 1,500 people attending this year.

Maroulis said that the snow played a big part in the attraction of Winterfest. "Last year we had no snow, we had to make our own, so it was more difficult." This year, there were also additions to Winterfest that made the festival more enjoyable. The frontline stage, which was made out of an old Peter Pan bus, staged live bands all afternoon. Maroulis also stated that Winterfest had additional support from Amherst local radio stations.

With the more than 1,000 in attendance, many volunteers were needed. Maroulis said that there were about 100 volunteers, primarily students involved in fraternity organizations at the University of Massachusetts. The volunteers helped with everything from setting out food from the Atkins Farm County Market, organizing the chili cook-off, supervising the sledding and skiing hill, coordinating the cardboard classic, judging the family ice sculpture contest, leading the winter bird watching trek, handling the wine and chest tasting, or evaluating the Frisbee long drive contest.

The chili cook-off was one of this year's most popular events. It was hosted inside the pro shop on the golf course and was packed with fans the entire time. Downtown Amherst's Black Sheep Deli ending up winning the chili cook-off for the third year in a row, adding another trophy to its case.

Maroulis said that they made the competition harder this year by having a blind taste testing. Erika Hoekstra, a sophomore communications major at UMass, said that the chili cook-off was her favorite part of Winterfest. "The whole event was a lot of fun, but the best part was the chili cook-off. All of the chilies were so good; it was hard to choose a winner. I was not that surprised when I learned that I picked the Black Sheep's chili, though."

Winterfest also brought the Hilltown Wilderness Adventures to Cherry Hill Golf Course, who were demonstrating a sled dog mush (race). Marla BB, the professional musher, explained the art of dog racing, and talked about her experiences racing her dogs across the country. Kids gathered around the dogs to watch Marla mush around the golf course's snow-covered hills.

Eight-year-old Oliver Young said the cardboard

Faculty show concern over CHASS proposal

By Sam Butterfield
Collegian Staff

Editor's Note: Yesterday's Daily Collegian article "Faculty group supports CHASS" mistakenly interpreted the Provost's report as being recommended by the University of Massachusetts' faculty panel convened to analyze the possible merger of the colleges of Humanities and Fine Arts (HFA) and Social and Behavioral Sciences (SBS) into one consolidated college. The faculty on the panel have not recommended the Provost's report, and the Collegian apologizes for any confusion this error may have caused.

Although Provost James Staros submitted a proposal to the University of Massachusetts' Faculty Senate last month which would merge the colleges of Humanities and Fine Arts (HFA) and Social and Behavioral Sciences (SBS) into one consolidated College of Humanities, Arts and Social Sciences (CHASS), as reported in yesterday's *Daily Collegian*, members of the group which discussed potential plans for carrying out such a merger say they never were asked to vote on the plan.

While the Provost's Jan. 21 proposal to the Faculty Senate outlining a vision and framework for creating a CHASS supports the creation of CHASS, five members of that group drafted a letter to the Faculty Senate's Rules Committee clarifying what they saw as their role in the discussions.

In the Jan. 27 memo, the five faculty members, Elizabeth Brabec, chair of the landscape architecture and regional planning department, Chair of the Anthropology Department Elizabeth Chilton, Economics Chair Gerald Epstein, Communications Chair Lisa Henderson and John Hird, chair of political science, say the group convened six times in the fall of 2010 with dialogue centering on "a potential structure and possible motivations for a new college."

Other discussion in the meetings was focused on considering what will be critical and developing trends in academe in the near future and what could be potential themes for drafting a vision statement for the new college.

After these sessions, however, Provost Staros formed a subcommittee of three faculty to create a "vision statement" for the new college. While Provost Staros and those three faculty worked on developing this plan, "the entire working group did not vote on or otherwise formally endorse the vision statement," according to the five faculty members' memo.

In the letter, the five chairs do say the group believed there was a need for a concrete implementation plan, were the proposal to move forward quickly.

"There was a general consensus that an implementation plan for a final, vetted vision for the college would be a critical next step," they wrote.

At last semester's final working group meeting, Provost Staros told the professors he planned to submit the plan for the new college "by the first week of the semester."

The group met for the final time Jan. 18, when it was asked to give its opinions of the proposal. Following that meeting, however, the group "was not asked to further comment on, vote on, or otherwise ratify the proposal that was submitted to the Faculty Senate."

In addition to the memo to the Rules Committee, the chairs of SBS' departments and the directors of its centers also sent a letter addressed to the Faculty Senate voicing opposition to the plan.

In the Jan. 31 letter, 12 faculty members, including several who were on the working group, write that the current proposal before the Faculty Senate is not illustrative of this working group or past groups' attempts to examine the implications of merging the two colleges and that they do not support the current proposal.

The professors state that the proposal is not indicative of the views of this group or in the past, and that it also does not "propose an administrative structure or financial plan for the merged college."

Further, the group of faculty members emphasized that since several previous committees had concluded that they did not support the merger and last fall's group had "legitimate concerns," that they could not support the current proposal.

M.V. Lee Badgett, director of the center for public policy and analysis and a professor of economics, was one of the endorsers of the SBS letter to the faculty senate. Badgett, who was not on the provost's working group, said she feels the letter was meant to convey, primarily, that SBS faculty were concerned the current proposal does not stipulate how the transition to CHASS would be funded.

"The point of that statement, in my view, was that a merger of the two colleges is a large and complex undertaking, and there have been committees looking at this issue for several years now, and the problem is that the proposal as it is written doesn't really address the costs [of the merger,]" she said.

Hird, a member of the working group who added his name to both messages to the Faculty Senate, said the members of the group wanted to make sure it was apparent what role the group played in discussing the potential merger relative to the proposal ultimately put before the Senate.

"We just wanted to clarify what the process was that led up to that memo and what role the working group played in creating that proposal," he said.

Economics professor Gerald Epstein, another member of the working group, echoed Hird's sentiment about why the chairs decided to contact the Faculty Senate.

"We just wanted it to be clear that this was the provost's proposal, and that we had not voted on it," he said by email Tuesday evening. "We thought some members of the University community would misconstrue this to think it as a joint administration-faculty proposal, which it is not."

A committee examining the matter last spring found costs associated with the merger would involve providing more administrative staff, combining facilities, archives and payroll information, reorganizing alumni relations and fund raising departments, launching a new branding and identity effort to give the college cohesion, determining priorities for research funding, and other related administrative costs, in addition to potential costs incurred from employees learning the ropes of newly-assigned responsibilities and potential confusion about staffing.

The proposed merger's fate remains undetermined, and this is an ongoing story. The Collegian will have full coverage of the situation as it continues to develop.

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

Research shows energy drinks offer dangers

By Brian Canova
Collegian Staff

The popularity of energy drinks such as Monster or Red Bull has grown extensively on college campuses and among younger people over the past decade; walk through the library and you will see green Monster M's peppering the desks and tables, beacons of frantic studiers hammering away at their keyboards long into the night. However, new research is now revealing that these beverages that are high in caffeine, sugar, and other chemicals may be creating dangerous chemical interactions which could pose potential dangers to the average consumer.

Late Monday afternoon students could be seen walking through Southwest with fistfuls of promotional Monster energy drinks, distributed by UMass student and Monster representative Joanna Papanicolaou, who offers samples of Monster at various places around campus including sporting events, concerts, and parties.

Papanicolaou attributed Monster's success to its convenience. "It is something that is so much more easily accessible for a quick on the go thing to grab out of the fridge, without slowing down a person's busy schedule by running to the convenience store or other coffee shops," said Papanicolaou.

Compared with an average cup of coffee, which contains anywhere between 50 and 100 mg of caffeine, popular energy drinks exceed 200 mg and in some cases reach levels as high as 500 mg. In addition, these drinks contain on average 14 teaspoons of sugar, or a quarter of a cup per can. Caffeine, a chemical stimulant which acts on the cardiovascular system to increase heart rate, heart contractility, and blood pressure, may be dangerous when combined with high doses of sugar and other chemicals such as guarana which are found in energy beverages, according to findings published in the Mayo Clinic Proceedings, a review of all available English language research on energy beverages.

While sugar and caffeine each increase blood pressure, it's yet to be seen whether their effect is additive, said Dr. Sarah Witkowski, an assistant professor of kinesiology who specializes in cardiovascular physiology at the University of Massachusetts. If a person with blood pressure measuring 120/80 consumed an energy drink their blood pressure could increase to prehypertensive levels of 130/90. If a similar increase were to be measured from one year to the next in a patient's annual checkup, it would demonstrate a need for an immediate change in lifestyle, said Witkowski.

The FDA limits caffeine in cola-like drinks to 0.02 percent or 71 mg per 12-oz serving, according to an article in the Journal of the American Medical Association (JAMA). Energy beverages, which are labeled by the manufacturer as dietary supplements, are not subject to the same regulations covering conventional food products and over the counter drugs. According to the Dietary Supplement Health and Education Act of 1994 the FDA is not responsible for ensuring that a dietary supplement is safe before it is marketed.

Since Red Bull was introduced to the United States in 1997, the country has rapidly become the world's largest consumer of energy drinks – and with no end in sight, as overall energy drink sales continue to increase at a rate of 35 percent per year, according to the Mayo review. In 2010 Red Bull's revenue rocketed 15.8 percent to $5.12 billion globally, selling 4.2 billion cans of the popular drink.

This surge in the popularity of energy drinks has been echoed on campus. Sophomore Allison Hope, who sells snacks and refreshments at the Procrastination Station in W.E.B. Dubois Library said students will buy up to four at a time at night or during finals week, staying at the library for days at a time without sleep. Hope said that despite warnings on the back of the can to limit consumption to no more than three a day, nothing can actually be done to control this.

Dr. John P. Higgins, assistant professor of medicine at the University of Texas Health Science Center at Houston and lead author of the Mayo Clinic Proceedings said these drinks are being marketed mainly towards younger people with deliberately deceptive techniques. By placing energy beverages on the same shelves as water and Gatorade, Higgins explains that a great deal of confusion is created, associating energy drinks high in sugar and caffeine with sports drinks containing mostly water and small amounts of salt.

Long term affects of oil spill endanger tuna

By Zachary Weishar
Collegian Staff

The BP oil spill in the Gulf of Mexico was an ecological disaster that has been getting a decreasing amount of media attention since its height during the summer of last year. Although there have been massive efforts to control the spill since then, environmental researcher Molly Lutcavage and her team of scientists believe that there is more work left to be done.

Lutcavage is the head of the Large Pelagics Research Center located in Gloucester Mass., as well as an expert on bluefin tuna. Large Pelagics Research Center is a facility of the University of Massachusetts for research.

She has suggested that money be diverted from the BP recovery fund in order to gauge the long-term effects of the oil spill on the gulf ecosystem, as well as the organisms that call it home. Once the damage is assessed, she said strategies for recovering the affected populations can be developed.

"It is not too late to invest funds from BP to support teams of experts to develop effective strategic plans that identify, prioritize and provide methodologies for collecting essential data," Lutcavage said in the current issue of the journal *Science*.

In particular, Lutcavage is focusing on the spill's effect on the bluefin tuna. She is worried about this species because the spill coincided precisely with the animals spawning period. In an article from the Working Waterfront, Lutcavage said, "If bluefin eggs and larvae come in direct contact with surface oil, it will kill them." She also added that slightly older larvae and juvenile tuna could die from indirect effects through ingesting copepods or other prey.

Prized for its dark, rich meat, the bluefin tuna often sells for high prices to be used in sushi. Overfishing during the past 30 years has nearly brought this species to its knees, and the oil spill is not making things any better.

Many scientists have stated that the Gulf of Mexico is the only spawning area for the Western Bluefin tuna. For a species that was already on the verge of making the endangered species list, this set back could be devastating to future generations.

Last October, the European Space Agency published a study estimating that nearly 20% of the Bluefin tuna population has been eliminated as a result of the spill. However, there is some debate as to the accuracy of this study because the group used computer models to develop their findings, which are often thought to be inexact and dependent upon circumstantial evidence.

A parallel study conducted by NOAA laboratories predicted a much more conservative loss, estimating that only 10% of the bluefin tuna population would be killed.

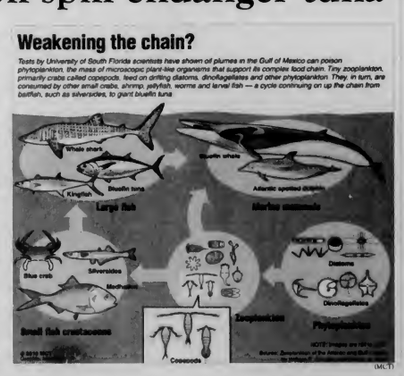
Along with graduate students and fellow researchers from the University of Massachusetts, Lutcavage headed a team that implanted tracking tags on 41 Bluefin tuna off the coasts of Nova Scotia and Cape Cod. Of these 41, 56% traveled to the Gulf of Mexico during spawning periods, according to the study published in the Canadian Journal of Fisheries and Aquatic Sciences.

According to Lutcavage, these results indicate that there may be other spawning areas for the fish that are unknown to researchers. Another possibility is that the organisms do not reproduce each year. In any case, these findings are good news for researchers because it indicates that there may not be as large an effect on the species as once thought.

Though Lutcavage said she is worried about the possible effects on the Bluefin tuna population, she also notes that net impact of the spill is difficult to determine because so much about these animals is still unknown. She said, "The impact of that loss is difficult to assess because bluefin migration paths, reproductive habits and early life history are inadequately resolved."

To further complicate things, scientists do not agree on the effect oil has on fish populations. After the infamous Exxon Valdez spill in Alaska, scientists studied the local populations closely. After the spill, the population of herring dropped significantly, but this drop could not be directly attributed to the presence of oil in the water. According to scientists, the decrease in population could have been a result of a number of different pollutants unrelated to the oil spill.

Zachary Weishar can be reached at zweishar@student.umass.edu.



Weakening the chain?
Tests by University of South Florida scientists have shown oil plumes in the Gulf of Mexico can poison phytoplankton, the mass of microscopic plant-like organisms that support its complex food chain. Tiny zooplankton, primarily crabs called copepods, feed on drifting diatoms, dinoflagellates and other phytoplankton. They, in turn, are consumed by other small crabs, shrimp, jellyfish, worms and larval fish — a cycle continuing on up the chain from baitfish, such as silversides, to giant bluefin tuna.

Winterfest returns

WINTERFEST from page 1

event was his favorite part of the day's festivities. This is a competition where families bring materials and tools to build a sled made only out of cardboard, before racing each other and getting judged in two catagories: speed and people's choice (which is awarded to the favorite sled). The 'Avenger,' which was built like a pirate ship and was the "Biggest cardboard sled we've had yet," according to Maroulis, won the people's choice award. The 'Bud Light' sled, which was made completely out of Budweiser boxes, ultimately was clocked as the fastest sled there. "Watching everyone make the sleds was so cool, but the race was the best! Everyone watched the sleds go down the hill and some sleds even ran into each other, that was funny!" said Young.

At 6:00 p.m., the festival ended with a firework show. People gathered after the long day in the snow to watch the show in the sky. Samantha Pettit, a junior biology major at UMass said, said she stayed just for the firework show. "It was really cold being in the snow all day, but I love fireworks so I just had to stay for the show".

Winterfest was meant to be a day where families and students can relax and actually enjoy the snow for one day. It was intended to bring the community together for a winter celebration, according to Maroulis. "Hopefully it will get more popular as the years go," he said.

Claire Reid Kiss can be reached at creidkis@student.umass.edu.

Too much energy?

ENERGY DRINKS from page 1

Caffeine, which is included on the World Anti-Doping Agency's banned substance list, screened for in Olympic athletes, and banned in high doses in many athletic associations, can increase endurance, concentration, and allow individuals to work harder and longer, according to Dr. Barry Braun, an associate professor of kinesiology specializing in endocrinology and metabolism. Braun added that the amount of sugar found in these drinks provides unneeded calories making it more difficult to manage or to lose weight.

Higgins explained that while short term studies have shown that subjects who consume high levels of caffeine can cycle faster, the importance of proper training for an exercise event cannot be emphasized enough. By consuming these beverages additional stress is placed on the cardiovascular system, making the heart work harder and harming your body.

"I used to think it gives me energy but I don't think so anymore. I would drink them before basketball games in high school," said Chris Surette, a junior at UMass, as he sipped a Monster beside a computer in the Learning Commons. Asked whether he thought his performance increased, Surette said he thinks it actually worsened his performance. "It made me crash late in the game," Surette said.

While energy drinks are marketed heavily in association with extreme sports athletes and high intensity activities, many students like Zach Smith are turning to them as a handy study aid, or a cold alternative to hot coffee. Smith, a theater major, said while he'll take them for certain things he needs to be awake for, he won't for perfonnances because he knows he'll crash.

"One of my TA's from last year was a campus rep for Monster and she came in to class giving them out like candy. Kids were always fired up to have them for sure," said Sophomore Ryan Ghent, who no longer drinks energy drinks. "I used to drink them pretty frequently (three to four a week) but I began to notice that they didn't actually do that much for me in comparison to how tired I felt an hour or two after drinking one," said Ghent.

"They probably aren't as bad as alarmists say," said Dr. Braun. "People are pretty immune to caring what nutritionists say about anything. It didn't work for cigarettes and fast food, it probably won't work for energy drinks either."

Recalling 'Redwall'

Eddie Hand

There a fictional place where mice and other woodland creatures live in a perpetual war with rats and their evil followers. The mice live in an abbey (despite showing no religious tendencies) and occasionally the rats are trying to take over the abbey. Sometimes they're trying to sell the children of the mice and their friends into slavery. Occasionally, they aren't even the main villain and a cat or a fox will take that role for a book (though they will still be working with rats).

This is the world of "Redwall," a children's series by Brian Jacques. For many kids "Redwall" was the first book series that we really could delve deep into.

Jacques died of a heart attack last week at the age of 71. While I can only imagine how sad those who actually knew him are, this is still quite depressing for those that grew up on the books even now that we've stopped reading them as we've grown older.

For me and a bunch of other kids, "Redwall" was the first book series that we really could get into.

My parents used to read me "Hardy Boys" mysteries when I was younger but I was never particularly interested in any sort of literature.

I'd tried to get into the "Goosebumps" series because they were popular, but they were also repetitive and I lost interest quickly. Like most kids, I was dependent on video games and TV for entertainment. In fourth grade, a friend gave me a book with a picture of a mouse with a sword and a mean looking rat with an eye-patch on the cover.

I brought it home and coerced my mom into reading it to me, because I still didn't have the attention span to read it myself. Soon enough, I was hooked.

There's no one thing about "Redwall" that drew me into it. Jacques had a brilliant eye for detail and would spend literally pages just writing about the magnificent feasts the woodland creatures would eat. He knew when to write action and when to slow things down, everything was written with vividness uncommon for a children's book.

On writing, he once described himself as a painter. "Paint pictures with words. That's the greatest advice I can give anybody. Paint the pictures with words. The picture will appear in the imagination so the person reading it can say, 'I can see that.'"

He never held back; not when it came to complicated issues like death and slavery and war. He respected his readers enough to understand that the world is not always a beautiful place and things don't always end the way you want them to, even though most of said readers were only kids.

I remember seeing him on his book tour. It was the fifth grade and I was antsy waiting in line, my copy of "Martin the Warrior" clutched tightly to my chest. The line moved fast and soon we were face-to-face.

As he cheerfully signed it, I impulsively asked him "Where did Martin get his sword from?" and a big smile appeared on his face as he spoke with a surprising amount of enthusiasm considering just how many times he'd probably been asked the question; "He got it from his father Luke, who got it from his father who got it from his father who got it from his vicious grandmother."

He handed my freshly-signed book back to me, still grinning broadly.

This is my sole memory of him in the flesh, though I am told he made numerous appearances in the animated version of the series that made its way to PBS years ago.

I continued reading the series, eventually becoming competent enough that I didn't need an adult's help; "Mattimeo" (the sequel) and "Mossflower" (the prequel) came next. Then I started reading other series like "Animorphs" and "Harry Potter."

Like most, I stopped after I felt I outgrew the series and moved on to bigger and better things. But "Redwall" is where is all started.

Whether it was Orlando the Axe vengefully cutting down his enemies, Ambrose Spike, the alcoholic hedgehog sharing his ale with all the other woodland creatures during a great feast, or Matthias the Warrior Mouse's final showdown with Cluny the Scourge, Redwall opened me and so many others to worlds of adventure the likes of which come by only once in a rare occasion.

The silver lining is that these books will last forever. There's only one thing those who grew up with "Redwall" can say to that to the man that it to us now:

Thank you.

Democracy isn't everything

Harrison Searles

With the riots and political unrest in Egypt, many Western governments have called for more democratic reform there, and those that have not encouraged such actions have been chastised for refraining from doing so. It is difficult to not sympathize with those who protested against Hosni Mubarak's regime. Nevertheless, it cannot be forgotten that democracy is a means, not an end. A democratic society is simply not what the goal of liberal reform should end at; rather that goal should be to work toward a freer and more open society.

The view that a democratic society is a sufficient condition for both has been a common doctrine in Western political thought for over a century. Not only have Western governments used it to justify a hodgepodge of laws, but it has also been the foundation of the foreign policies of many presidential administrations, from Wilson's Fourteen Points to Bush's recent attempt to democratize the Middle East. The impression created by words like "democratization" is that a nation is heading towards the direction of freedom and that all that is needed to help them along the way is even more involvement of the people in politics. Indeed, often all that is thought to be necessary for freedom to flourish is a government, according to that time-honored phrase, "of the people, by the people, for the people," and that the rest will simply sort itself out.

However, it is dangerous to equal an open society with a democratic one because those pillars of freedom and liberalism, including private property, freedom of religion and free speech, are not guaranteed by the existence of a democracy. This can be seen in the disastrous fate of the French Revolution and the Weimar Republic, but even more generally in the greater assumption of power that the modern state has made ever since World War I. As not only many of the Founding Fathers realized, but also European classical liberals like Edmund Burke and Lord Acton, even though greater participation of the people in politics may be desirable, it can lead to undesirable and tyrannical conclusions if things like civil liberties are not enshrined in law. It does not matter if 95 percent of voters decide that freedom of speech is an outdated obsession, if a democracy votes to rescind that liberty, it is acting contrary to the values of an open society. While democracy may very well be able to solve how laws ought to be created, and the concrete terms may differ from nation to nation, it cannot be looked at as a guide as to what laws ought to be legislated.

Once upon a time, things like honor and sportsmanship weren't so cliché and tacky (I even felt pretty lame for writing that last sentence).

Instead, the operation of democracy must be guided by rules and institutions that demarcate the spheres of society that legislation can be passed in from those that cannot.

Without such lines in the sand there would be nothing to prevent a majority in a democracy from stripping away the rights of those in the minority or even the majority outright abolishing the democracy. Herein lies the genius of the Constitution, not only does it explicitly list the powers that have been delegated to the federal government, but also contains a Bill of Rights that ensures that certain liberties cannot be infringed upon even if an overwhelming majority were to call for such an action. Absolute power over society does not lie in the hands of the voters in the United States, but the power of the ballot is limited and even that is checked by other centers of power like the courts. While democracy may be a very important pillar of the American system of government, the limited government envisioned by the Founding Fathers is just as important.

When the situation in Egypt is considered, and this holds true for any possibly emerging democracy, it is important to not only to consider the enfranchisement of the common person and the fairness of elections, but also whether there are the other factors there necessary to maintain an open society.

Are there cultural norms, institutions and leaders sufficiently dedicated to not only an Egypt where laws are legislated according to democratic means, but an Egypt where the laws are legislated towards the end of preserving the liberties of each individual Egyptian? This is a question of great importance, because it will determine if a truly democratic Egypt would even be worth praising because there is little difference between a democracy that does not recognize human dignity and liberty and a dictatorship that does. However, I will not pretend to know the answer to that question here, but nevertheless it should help define one's view of the prospects of Egyptian democracy.

What is needed for an open society to succeed is not merely the existence of democracy, but also the limitation of that democracy. To forget that and to naïvely state that democracy is a sufficient watchman against the malaise of tyranny is to threaten the very foundation of the open society. Instead, it is necessary to be mindful that the commitment to democracy must also be matched by the commitment to limited government and the respect of the fact that there are certain areas of life where laws should not tread. Lessons like this should not be forgotten when a popular revolt against an unpopular strongman flares up.

Harrison Searles is a Collegian columnist. He can be reached at hsearles@student.umass.edu.

Five Reasons Why Your Valentine's Day sucked

1) "The Social Network" isn't very romantic.

2) The DC ran out of fondue.

3) Two words: Bed bugs.

4) Your roommate was completely oblivious.

5) She sprung a leak.

6) You're chronically single.

The laptop-buying circle of hell

Matthew M. Robare

It's that time. I've entered a new and frightening and very risky stage of life; I've started looking for a new laptop. I'm thankful that my friends have kept me in their thoughts and prayers throughout my ordeal.

The consumer electronics market is a lot like modern art: faddish, nonsensical and so focused on the new that it doesn't bother trying to make things work unless the "Next Big Thing" hasn't shown up. In terms of providing a positive consumer experience, the only way Beelzebub could have designed it more to his specifications is if the screen squirted highly caustic acid into your eyes every time you made a spelling mistake.

I've had my current machine since I graduated from high school four years ago. It runs Vista and I've never had any problems with it. Unfortunately the battery doesn't hold a charge anymore, and it weighs more than some pieces of furniture I own.

These are liabilities in a field like journalism, because most editors frown on a beat that only includes places with outlets.

Research is difficult and is not aided by the people paid to be on staff at tech magazines writing reviews. I'll be reading an informative review about the different colors I can get this laptop in, all the features I can get, like Bluetooth, HD screens and the lifetime's supply of driver CD's I'll never use because I'm looking at netbooks which don't have optical drives. Important things, however, like battery life and price have been left out. I really don't want a computer that performs like the overachiever on the back of a Doritos bag, but lasts as long as the Doritos in the bag.

No, what I really want is a MacBook Air. Unfortunately, I was told in a class last week that I need to start saving for retirement now if I don't want to spend my golden years in a cardboard box, hunting stray dogs for food, so I guess I can exclude the Air from my options.

No, it'll have to be a netbook for me.

Before I started looking at the laptop market, I didn't believe in the tyranny of choice theory. I always figured that more choices were better, and that if you disagreed you could go to North Korea and see how well they get by with limited choices. But there are as many different kinds of netbooks out there as there are stars in the sky or angels dancing on the heads of pins. Even narrowing the field down by my criteria – battery life, price, weight and ability to further world domination plans – only reduces the choices to a few hundred Asus and Acer machines. Not that I have any world domination plans, it's just a good criterion for a computer system.

Of course, as I was looking, Google comes along and announces Chrome OS netbooks to be released later this year. Since all the heavy lifting is done by Google's servers and the thing is just a browser, it should be cheap and have good battery life. Then there was the Consumer Electronics Show 2011 and the host of tablets cascading down from development departments.I was drowning in a tableau of tablets.

Then fate came along and it turned out that most of them were, like last year's non-iPad tablets, pieces of junk.

Even within my price range there are still millions of permutations of computer configurations, each one changing as often as Lady Gaga's costumes and just as bizarre. If I use one of those customer service chats like Dell has no matter what configuration I ask about they always say something like, "That's our super-premium configuration. Buying that one will liberate a Middle Eastern country from its long-lasting dictator, restore portions of the rain forest, ensure your children are accepted into the colleges of their choice and make you a smarter, more handsome man. Dell recommends Windows Seven."

If I got really drunk and instead of logging on to the Dell chat by mistake I went on to Omegle, I'm sure the person would end up saying something like this, "You can thrust your love-rod into the new standard USB 3.0 and the FireWire Ethernet will be all the hotness you'll ever need. Dell recommends Wind-Ohhhhs Seven."

However, my liver is still pretty good. Maybe I can trade it to Steve Jobs for a MacBook Air.

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.

In terms of providing a positive consumer experience the only way Beelzebub could have designed it more to his specifications is if the screen squirted highly caustic acid into your eyes every time you made a spelling mistake.

Top 6 spring break pitfalls

By Lindsay Orlov
Collegian Staff

In the midst of chilling winds, early sunsets and infinite snow storms, one beacon of hope shines for college students across the nation: Spring Break. That time when down jackets and ugly, salt-stained boots can be exchanged for bathing suits and flip-flops, when homework can be forgotten (or at least ignored), when freedom and youth reign supreme — that is what awaits us in one month, when the vacation week begins. However, the glories of spring break are often diminished or lost due to completely avoidable errors. Here are some things to avoid when planning for your epic spring break.

Procrastination

This point is coming first because it's the most important point on the list. Any trip, no matter how simple the logistics, can be ruined by procrastinating. Yeah, that Caribbean cruise is an awesome idea - but it's already almost March, and all of the cheap tickets are gone. Want to backpack across Europe? Too bad the plane tickets will set you back a thousand bucks because you waited until the weekend before to buy them. Plan your trip as early as humanly possible.

Inviting too many people

While inviting your entire hallway on your road trip to Cancun might sound like an awesome idea, it is, in fact, a recipe for disaster. The more people involved in a trip, the more difficult it is to plan things as a group. If you've already committed to a large group, try to keep things flexible enough so that everyone stays happy; otherwise, try for a smallish group of people you know you'll have a fun time with.

Forgetting to look up local laws of your destination

Some things that are illegal here in Massachusetts may very well be legal in whatever state or country you'll be spending Spring Break. For example, many other states allow alcohol to be sold in grocery stores and gas stations. On the other end of that spectrum, things that are legal (or decriminalized) here in Mass might be illegal elsewhere, with the potential for severe legal repercussions. Luckily, any information needed about local laws is probably easily obtainable on the internet.

Underestimating transportation

The easiest way to shut down an awesome plan for spring break is to leave transportation as the last item to figure out. Imagine the scene: you've found a cheap hotel in a great neighborhood with easy beach access and clubs everywhere - just south of San Diego. All seven people in your group are excited, and then the realization hits: plane tickets are ridiculously expensive, and there's only one four-door sedan available for use between the seven of you. Make your plans based on transportation, not the other way around.

Obsessing over the details

Yes, it's important to make sure the logistics of your trip are figured out in order to avoid being stranded in West Virginia with no gas and dead cell phones. However, once those logistics are figured out, try not to spend all of your time poring over pictures of whatever tropical destination you've picked out. Trust me, it will only make the weather outside seem colder and the time between now and March 11 seem longer.

Assuming that you have to travel (far) to enjoy spring break.

It's true that classic spring breaks involve warmer climates than a New England winter, but the beach isn't for everyone. Visiting a nearby city can also make for a great vacation, as can staying home and catching up on backlogged Dexter seasons on your Netflix instant queue. Staying closer to home will definitely help you save money, and you might run into an opportunity to make some money too.

With these tips in mind, let the countdown begin — 24 days until the blissful, warm-weather, homework-free shenanigans commence (but who's counting?).

Lindsay Orlov can be reached at lorlov@student.umass.edu

The beach is a popular vacation spot for college students during spring break, but if you don't plan carefully you may find yourself stuck.

Grammys rack up the ratings

Mick Jagger took the stage in tribute to the late soul-legend Solomon Burke. His was one of many flamboyant performances during this year's Grammys, which also included Cee-Lo Green and Lady GaGa.

By Margaret Clayton
Collegian Correspondent

The 53rd Annual Grammy Awards was held this past Sunday, Feb. 13 at the Staples Center in Los Angeles, Calif. Broadcast on CBS, the show was a drawn-out 3.5 hours of live performances, awkward presenters and the dozen or so of the 109 gramophones that are given out live.

The show began with LL Cool J introducing an Aretha Franklin tribute medley performed by Florence Welch, Jennifer Hudson, Yolanda Adams, Martina McBride and Christina Aguilera who recovered from her fumble of the National Anthem at last week's Super Bowl XLV. After receiving a "Thank You" in a taped segment from the Queen of Soul who is still recovering from her recent hospitalization, the ladies announced the recipient of the Grammy for Best Pop Performance by a Duo or Group with Vocals – Train. Their song, "Hey, Soul Sister" reached #1 on the Billboard Top 100 and is their first big single since "Calling All Angels" (2003). Lead singer Pat Monahan thanked Justin Bieber for not being nominated in their category, and also Howard Stern.

Ricky Martin then introduced Lady Gaga for a performance of her new single "Born This Way." Gaga came onto the red carpet incubating in an egg carried on a chaise and did not emerge until her act that afterwards was criticized by some for its similarities to Madonna. Later in the night, Gaga won the award for Best Pop Vocal Album and thanked all her 'Little Monsters' and Whitney Houston.

There were many couple introductions the day before Valentine's Day. Blake Shelton introduced his fiancé, Miranda Lambert, before her performance of "The House that Built Me" which she dedicated to "all of the great artists who have come before us, who set the stage for us to be here … right now." She won for Best Female Country Vocal later in the evening. A more uncomfortable staging was between Jennifer Lopez and her husband Marc Antony when he started singing in their script before announcing Record of the Year.

Lenny Kravitz introduced Muse's performance of "The Resistance" where their lighting had American and British currency on fire, vocalist Matthew Bellamy had a double neck guitar while an anarchic scene played out in front of the trio. Another performance turned win, this time for the U.K. group for Best Rock Album.

TV viewers experienced a different reality from inside the Staples Center when Ryan Seacrest introduced Bruno Mars, B.o.B. and Janelle Monae for their segment. Everyone could see B.o.B.'s monocle which he gave up on very quickly, but Bruno Mars introduced a soulful version of his single "Grenade" shown in black and white on CBS.

After that new artist mash up, we had a Justin Bieber, Usher and Jayden Smith show. At the end, Will Smith with a standing ovation and reading his lips, one could almost hear him say, "That's my baby!" The following Mumford & Sons performance was one of the best by far. Bob Dylan joined the boys with a tired, raspy rendition that needed a throat lozenge, but we still clapped when he brought out the harmonica.

The Grammy's tried to win over some sports fans when they paired Lea Michele ("Glee") and Packers Quarterback Clay Matthews, announcing their announcing with the NFL song. Michele muddled her words with "Grammy wimmers" before presenting the overall winners for the evening, Lady Antebellum. The group from Nashville who performed "Need You Know" at last year's Grammy's took home five awards.

Jamie Foxx introduced Cee-Lo Green, the Muppets & Gwyneth Paltrow for a rendition of Green's "Forget You." Nicole Kidman was caught singing along to Katy Perry's "Teenage Dream." Norah Jones, Keith Urban and John Mayer joined together for a tribute to Dolly Parton. Seth Rogen called out Miley Cyrus on her Salvia scandal. Half of Eminem's performance was bleeped out. The Grammy for Best New Artist went to Esperanza Spalding.

The show finally started winding down with a poetic speech backed by the Grammy Jazz Ensemble. A quick "In Memorium" was done, with the focus on Solomon Burke, the King of Rock 'n' Soul. Mick Jagger appeared for the first time on the Grammy stage, in a cape and green jacket, to pay respects to the fallen king.

Eminem won Best Solo Rap Performance for "Not Afraid" and Arcade Fire closed the evening with their Album of the Year win for "The Suburbs."

Streetlight shines on

By Ellie Rulon-Miller
Collegian Staff

Streetlight Manifesto stopped in at the Pearl Street ballroom on Friday as part of their Ship of Fools tour. While the headlining act impressed as usual, the show's openers were consistently disappointing.

The first opening act was Lionize, a painfully boring reggae-rock act. There is a serious disconnect between this band's recorded music and their live shows. Lionize's act was surprisingly tight, but their energy was seriously lacking. They barely moved, as if doing so would affect the way their songs sound. There was no personal connection to be felt between band and audience, and it made their set almost painful to watch.

The following act was worse. Boston pop-punk band A Loss For Words sounds eerily like Four Year Strong. They were more annoying than anything else. A Loss For Words' Myspace profile takes pains to talk about how they are the hardest working band in the industry; a statement which rings untrue unless they are working so hard to sound exactly like the bands they emulate.

The worst opening act by far was, ironically enough, Terrible Things. They lived up to their name with relative poise, considering the things being shouted at them from very large portions of the unmoving crowd. Like Lionize, Terrible Things gives off one vibe with their recorded music and a completely different one with their live performance. They sounded like a bad version of Taking Back Sunday when they took the stage and could barely hold anyone's attention; throughout their set, dozens of full conversations could be very clearly heard over the music. The band failed to garner enough respect from concertgoers to even demand that they be listened to.

The men of Terrible Things are no longer the boys they were in their previous bands, though they still dress the same. The industry has aged these men, and they no longer look edgy as they dress in full emocore attire, but instead look extremely out of place, almost like ironic Halloween costumes of their former selves. They looked tired.

Streetlight Manifesto's set turned out to be wholly different from each of these openers. People spent their time during Lionize, A Loss For Words and Terrible Things cementing their standing space at the very front of the venue in an attempt to have a spot for the headlining act.

The atmosphere at this particular Streetlight show was significantly different than it has been at shows in the past. It seems as though it has somehow become "cool" to call yourself a fan of the band. Most people wore new Streetlight Manifesto gear, and at least one quarter of the people there wore identical sweatshirts.

There was a wide variety of people contributing to this atmosphere, from small children to "biddies" - such as the two sitting on a railing, blocking the view of not only this reporter but a crowd of people behind them and waving a cell phone like a lighter in the air during songs which do not warrant such an act - to kids' parents, there to see the band and not just act as a chaperone.

There were so many small children that singer and guitarist Tomas Kalnoky went over the intercom before their set began to ask that the audience tone down their usual rowdiness in order to make the experience a safer one for their younger comrades.

Despite the strange mix of people and the admittedly less-than-enjoyable atmosphere they created together, the band put on a stunning show, as usual. They played hard and fast, creating so much heat and sweat that the venue opted to open up the windows despite the freezing temperatures outside.

Streetlight didn't play a single cover song, which was both refreshing and disappointing; hardcore fans like to hear original music, both old and new. However, Streetlight Manifesto plays an exceptional version of "Such Great Heights" by The Postal Service, and it would have been a welcome addition to their set, as would their version of NOFX's "Linoleum." Among the highlights were "A Better Place, A Better Time," "Here's To Life," "The Big Sleep" and "Watch It Crash."

The band's attitude was noticeably different from previous performances. Kalnoky made little jokes throughout the night, and the band seemed to genuinely have more fun than usual.

In the end, though, the show was a typical one for Streetlight Manifesto. This is not meant to be a negative statement; there is nothing the band could do to change the outcome of their shows unless they suddenly begin to play terribly or change their style altogether, never playing older material ever again.

Ellie Rulon-Miller can be reached at ellie@dailycollegian.com.

Despite a lineup of mostly forgettable opening bands, Streetlight Manifesto played an energetic and engaging set this past Friday at Pearl Street, and made special concessions to their younger fans.

Minutewomen look to retain A-10 title

W. SEASON PREVIEW from page 1

six of them midfielders. She will rely on her trio of seniors to provide guidance to the first-year players.

"I think we're trying to put a lot of the leadership and the ownership on the players themselves, as opposed to it constantly coming from the coaches," McMahon said. "I think they hear from us enough during practice and games that it means a little bit more when it's coming from one of their teammates because they know that they're going through the same thing."

The Minutewomen are the favorites to repeat as conference champions, according to a poll taken by A-10 coaches (62 points, four first-place votes).

Similar to last season, the road to a third-consecutive conference title will likely go through the Spiders, who finished second in preseason voting (61 points, three first-place votes).

UMass hosts Richmond on April 17 in its final home game.

La Salle, third in the preseason poll (46 points), hosts the Minutewomen on April 3 and Temple, the only other team to receive a first-place vote (36 points), will travel to Amherst on April 1 for the UMass conference opener.

Their 11-3 record dating back to 2009 evidences the Minutewomen's success in conference play and McMahon is no stranger to Northeast play, given her past experience with UMass and as a head coach at Connecticut (2009-10).

"Having coached here, I know every single Northeast team that we play or local team that we play is a battle," McMahon said.

Yet the Minutewomen finished the 2010 season 5-8 in non-conference games, and the new head coach is pinpointing that area as one in need of improvement.

"I think that we're always right in every single game with the top non-conference opponents, but I would really like us to now have the upper hand in that and hopefully now the girls have that confidence that they can really start putting teams away, as opposed to letting teams staying in games," McMahon said.

UMass faces three NCAA tournament qualifiers from last season, including five-time NCAA champion No. 2 Northwestern at McGuirk Stadium on March 26. For McMahon and assistant coach Sarah Albrecht, it will be their first game coaching against their former head coach Kelly Amonte Hiller and the second game played under the lights in the program's history.

We're trying to not look past any opponent. Right now, we're focusing on Holy Cross and hopefully coming out on top with that game."

As a motivator for the Minutewomen, Lyons expressed similar emotions regarding their first non-conference game.

"Every year is a new year and every year a new team, different styles of play and I think we just need to take it one game at a time," Lyons said. into tournaments, we can focus on that, but for now we just have to take it a game at a time."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

McCormack, veteran defense provide stability for UMass

M. ROSTER BREAK from page 1

One of the attackmen he hopes will follow in Manny's footsteps is junior Art Kell, who returns after suffering a broken foot against Hofstra last season. Kell already opened it up offensively in UMass' season opener against Army by scoring a goal, resulting in an 8-5 victory for the Minutemen.

"[By] having Art back this year, its going take a lot of pressure off a lot of people," Manny said. "He's a great player and he takes a lot of eyes from the defense."

Also following Manny's lead will be Colin Fleming, Steve D'Amario and Mike Fetterly, all of whom scored a goal against the Black Knights (0-1). Fleming and Manny hooked up twice in the season-opener, which Canella said is what he is looking for out of his attack this season.

"I think that kind of thing is contagious," Cannella said. "You hope that some of the experiences these guys have had, Willy's had, Arty's had, the guys in the midfield have had, will be able to settle things down at times."

With experience and a high-range of goal scorers, Manny was quick to admit the attack will gel nicely with all sides of the field.

"With the firepower we have – we have a lot of guys who can put the ball in the net – I'm just hoping we can all contribute and help each other out," Manny said.

Midfield

One of the strengths the Minutemen had against Army was their ability to lockdown on the defensive front. The midfield also moved back and disallowed the Black Knights from carrying the ball down the field consistently.

This season, UMass returns with a deep midfield lineup made up of both offensive and defensive middies, players which could help ease the transition from attacking to defending. Cannella said Fleming, D'Amario and Fetterly are capable of converting to the midfield.

Midfielders Ryan Izzo, Anthony Biscardi and captain Ryan Hantverk will help generate scoring opportunitiesopportunities whileas they push and keeping the ball up field. Biscardi found the back of the net against the Black Knights, which fits directly into what Cannella wants the midfield to improve on from the end of last season.

"You hope everybody can chip in a little bit and contribute," Cannella said. "We weren't able to create out of the midfield at the end of the last year, and we're hoping we can do that this year."

While offensively the midfield is structured and deep, the defensive midfielders will be called for by the defensive line on a regular basis, according to Rahn, a long pole defensive midfielder.

"[We're] absolutely looking for help from the midfield," Rahn said. "Midfielders are two-way players, and we have offensive and defensive and two-way guys. That's always going to be a part of the defensive unit and you're always going to need to rely somewhat on your midfield."

Defense

Rahn will look to lead the Minutemen's defense this year, which already off to a hot start. Against Army, UMass allowed four goals, then and locked down on the Black Knights and allowed them little possession time.

Defending the ball with Rahn will be Tom Celentani, Greg Anderson, Jake Smith, Travis Tripucka and Brett Tobin, among others. Tobin kicked off the season with a groundball against Army, and he will look to work with the rest of the Minutemen defensive unit which, Rahn explained, needs to focus on communication above all other strategies.

"We really are stressing individual play as well as team play [and] communication as a group," Rahn said. need to be a cohesive unit going and without that, without the cation, without the talking and relationships that we have as a unit, we don't have what we're for."

From the cage, goalkeeper Tim McCormack is looking for help from the defense in securing goals, and said that it's all about playing good individually as well as team-oriented defense.

"Just get out there and cover your guys individually, one-on-one, play good one-on-one defense and play great team defense, which is what we go out and practice everyday," McCormack said.

Goalkeepers

As a captain, McCormack will lead the goalkeeping position as he looks to help freshman Reed Goodhue build upon his game. This is a running theme for McCormack, who has had to step up as a leader.

"The leadership I think I bring is kind of keeping them aware, keeping my defensemen up on what's going on," McCormack said. "Clearing game is a whole other role. I've got to direct and give certain ways to pass it or throw it or [who] to throw it to."

McCormack already began showing strength in the net with nine saves against Army. These saves were crucial against a very offensively-strong Army side, and McCormack hopes this will be indicative of his performance the rest of the season.

Herb Scribner can be reached at hscribne@student.umass.edu.

MARTIN STARK/COLLEGIAN

Goalkeeper Tim McCormack will look to be a presence in the cage this season for UMass.

Cosgrove's exit leaves vacancy

W.L.A[illegible] she is start[illegible] and play [illegible] McMahon s[illegible]

Midfield

There's no[illegible] will miss Meer[illegible] from the midfield last season.

The midfield [illegible] this season by one of [illegible] in Hayley Smith. Sm[illegible] 20 games last season [illegible] goals.

Another top midfield[illegible] for UMass will by Dayl[illegible] who scored five goals [illegible] 22 groundballs in the 2010 [illegible] Defliese started all but two games last season against New Hampshire and Richmond.

Sophomore Kelsey Palmer will also dawn the Maroon and White jersey again after a successful freshman season in which she played in eight games against opponents such as Northwestern and Maryland.

McMahon had her hand in a great deal of recruiting before she was named the head coach at UMass after former coach Alexis Venechanos took the head coaching position at Ohio [illegible]. McMahon, who played for the Minutewomen, her freshman year [illegible] transferring to Northwestern, recruited six midfielders because of the added depth it gives to the team as a [illegible].

"We are one of the teams that really like to have depth in our midfield, some women's lacrosse teams like to run shifts, but in order to do that you have to have depth to play that many people," McMahon said.

Defense

UMass has two very vocal leaders to help secure the defense.

Senior Nazy Kerr is another experienced team member that has been working with the younger athletes to make sure that the defense is one cohesive unit. As a junior, Kerr started all 20 games on the season and posted 20 groundballs, eight draw controls and eight caused turnovers last season[illegible].

Junior goalkeeper Katie Florence, who started all 20 games during the 2010 season, will look to communicate with the defense this season.

"Communication is definitely a big thing for us and it is something that we are trying to work on every day," Florence said.

This communication comes not only on the field during practices or games, but also off the field when the younger players get a chance to engage some of the upperclassmen in a social environment.

"Not only on the field is she [Florence] constantly talking and communicating but off the field she is one of our captains and was one of our captains as a sophomore," McMahon said. "I think it says a lot about her leadership capabilities and how much the players on the team respect her and look up to her. She is the glue for us."

Nicholas J. Bellofatto can be reached at nbellofa@student.umass.edu.

Kell, Manny, Mooney improve UM offense

M. SEASON PREVIEW from page 1

offensive end," Cannella said. "I think that we certainly need to maintain our health. That will be critical to our success this year."

The incoming freshmen will also be looked at to contribute. Attacker Connor Mooney highlights the incoming class, proclaimed by Cannella to be an outstanding goal scorer who will make an immediate impact.

"Typically, a lot of the guys we get, we need to develop them over a certain amount of time," Cannella said. "[Connor] came in and was a guy who's ready to go right away."

Facing a test in its first game of the season against No. 12 Army, UMass earned an 8-5 victory. The Minutemen dominated on offense, outshooting the Black Knights, 50-22, while the defensive unit forced Army into 20 turnovers.

Sophomore Colin Fleming scored two goals while Biscardi and Manny each posted a goal and two assists for three points on the day.

McCormack recorded nine saves in the cage and shut out Army in the first and third periods.

Cannella and the Minutemen were pleased with their performance in the season-opener but realized it's a long season. While one win, especially against a ranked opponent, can result in momentum, it can easily disappear unless the strong play is maintained.

"We have to come harder and harder every single game and slowly climax towards the end of the season which we would like to think is a national championship," Rahn said.

Jay Asser can be reached at jasser@student.umass.edu.

THE MASSACHUSETTS DAILY COLLEGIAN

SPORTSWEDNESDAY

WEDNESDAY, FEBRUARY 16, 2011

SPORTS@DAILYCOLLEGIAN.COM

'Gorilla Lax' uncaged

This year's team reminiscent of '06

David Brinch

This could be an interesting year for the Massachusetts men's lacrosse team.

A type of year that UMass coach Greg Cannella, his players and Minutemen fans have been hoping for since that magical run in 2006.

Five years ago, the Minutemen reached the finals of the NCAA tournament, becoming only the second unseeded team in Division I lacrosse history to appear in a NCAA final. Behind a freshman goalkeeper, a stout defensive unit and a slew of both underclassmen and upperclassmen scorers, the Minutemen advanced to the finals for the first time in program history, defeating No. 6 Cornell in Ithaca, N.Y., and then executing an 11-10 overtime win over Hofstra to reach its first-ever NCAA semi-final.

But they weren't done.

UMass went on to upset Maryland, the No.4 team in the country and two seed in the tournament and faced No.1 Virginia in the national championship game. While the Minutemen were routed by the Cavaliers, who went a perfect 17-0 that year, 15-7, Cannella and his team proved something that season: that a New England public university could compete and mightily defeat Ivy League schools as well as Mid-Atlantic ones in big games and on the road.

After a 500 season in 2007, the Minutemen were looking forward to getting back to the NCAA tournament in 2008. With players left over from the 2006 national title run in goalkeeper Doc Schneider, defenseman Diogo Godoi, midfielder Evan Blum and attackman Tim Balise combined with a promising incoming freshman class, it seemed as if Cannella's team was poised for another run at a national championship title.

That all changed on Feb. 1, when eight players were suspended from the team for violating team rules stemming from an off-campus fight that sent three people to the hospital with facial injuries. Three players were arrested in the incident a few weeks before the Minutemen opened its season with a convincing 8-4 victory against the Pride. But the team fell way short of expectations, finishing 3-4 in the Eastern College Athletic Conference and 5-9 overall, missing both the conference tournament and not even having a shot at earning a bid to the national tournament.

After a season filled with off-the-field controversy and disappointment on it, UMass rebounded in 2009 with Schneider leading the team in his senior season in net and Jim Connolly, one of the eight players who were suspended but was later reinstated to the team, having a career year on attack for the Minutemen. UMass reached the first round of the NCAA tournament but ultimately lost to Princeton, 10-7.

A change came for Cannella's team in 2010. It would leave the ECAC and enter the Colonial Athletic Association, a conference filled with top-tier talent in teams like Delaware, Towson and Hofstra. This was a step in the right direction for the program because playing in a conference with these teams would garnish more national exposure. Point in case: the Minutemen are scheduled to play five games which will be aired on television this season. UMass finished 8-6 last season, but dropped four of its last five contests, falling in the semifinals to the Tigers in it's first-ever CAA tournament appearance and not receiving a bid to the national tournament.

So how is this year's team like the 2006 team?

Every season, Cannella preaches leadership as the main catalyst for the success of his team.

The team as 2006 had it. The squad in 2011 does, too.

The direction of the team won't be difficult to find, with seniors Casey Rahn and Ryan Hantverk sharing captain duties along with junior goalkeeper Tim McCormack. McCormack showed a lot of resilience in his first season as a starter after Schneider, arguably the best goalkeeper in UMass history, graduated (he's now an assistant). Add seniors Steve Zorkert, Brett Newgaard, Travis Tripucka, Mael Walkowiak and Mike Wilus, and the Minutemen have a team filled with experience, much like the 2006 team.

The 2006 team also had scorers. This season, UMass will rely on sophomore Will Manny, who won the CAA Rookie of the Year and had a team-high 27 goals and 18 assists. The Minutemen will also look to Art Kell, who returns from injury, consistent play from Anthony Biscardi and Hantverk and underclassmen like Kyle Smith and Colin Fleming. The defense in front of McCormack showed how potent it can be, forcing 20 turnovers in an 8-5 season-opening victory over Army on Saturday. The defense in 2006 musted 144 turnovers and had a clearing percentage of .835 on the season.

It isn't a question of if or where the Minutemen are ranked in the Top 20 teams in Division I lacrosse, but how and when UMass will return to national spotlight like the 2006 team.

Ask 10 students on this campus the last time a UMass team was in a national championship final and I guarantee you that not one person will recall the Minutemen team that shocked the collegiate lacrosse world five seasons ago.

Perhaps this May, they will have a different answer.

David Brinch can be reached at dbrinch@student.umass.edu.

MAXWELL SPARR, COLLEGIAN

Ryan Hantverk and the rest of the UMass men's lacrosse team are referred to as gorillas, a nickname dating back to legendary coach Dick Garber.

Minutewomen accolades warrant attention

Nick O'Malley

When a school features both a men's and women's team for a particular sport, what sometimes happens is that one team dominates the other. That much can be said for the Massachusetts softball team over the baseball team or the men's basketball team over the women's basketball team. Usually, it's because one team's success overshadows the other program.

Such is not the case for the women's lacrosse team.

While the Minutemen dominate the spring sports headlines and usually has a nice, shiny national ranking next it, the Minutewomen's accomplishments are nothing to scoff at.

Coming off back-to-back Atlantic 10 titles and a NCAA tournament play-in game last year and appearance in 2009, women's lacrosse's track record is more along the lines of field hockey and softball rather than baseball and men's basketball. They may not be a heavyweight going toe-to-toe with the powerhouse conferences year after year, but they get the job done.

It's easy to forget a program like women's lacrosse. Lacrosse is a quickly growing game and is starting to take root in New England. However, UMass students don't have the same mind for the game as students in Mid-Atlantic schools like Duke, Delaware or Maryland.

In her first year at the helm for the Minutewomen after leading Connecticut for two years, UMass coach Angela McMahon is seeing the fruits of that success around the athletic department.

"I think in terms of support, at least from the administrative side, what I've seen so far [illegible] said. "People are definitely [illegible]

Back in 20[illegible] opportunity to play their first night game under [illegible] Stadium against then-No. 1 Northwestern. That [illegible] record with 893.

Since then, [illegible] full advantage of the unused turf at McGuirk. [illegible] are playing host at McGuirk six times compared to just two [illegible] Cooley Field.

The situation has been indicative of [illegible] McMahon has seen around the program recently.

"Having the opportunity to play in McGuirk [illegible] has been great for us," McMahon said. "It's a great facility, now [illegible] it's great for us. We're really happy with where we're at as a program for sure."

UMass opens their home slate Saturday against Vermont at McGuirk, and McMahon said that she's happy with what she's seen across campus, but knows that fans aren't going to come out of the woodwork right away.

"It's tough getting people's attention in the middle of February," McMahon said.

It's particularly difficult to start buzz around sports programs when the spring season at UMass doesn't have the headliners like football, basketball or hockey. It's even harder when those sports are still-growing sports like the two lacrosse programs or baseball, which doesn't get the attention as a college product the way that basketball and football do.

In a way, men's lacrosse is the headliner for spring sports almost by default, especially with the difficulty that comes with selling women's sports to college students (sorry softball). Women's lacrosse, meanwhile, still has to grow its market share if it wants to make up ground against other programs.

Then again, lacrosse doesn't exactly have the legacy of most programs on campus do, particularly in the New England region.

By the time I graduated high school, the men's lacrosse team at my school had just finished its first winning season. By winning I mean that they had won at least one game. The women's team, meanwhile, was struggling to meet varsity status.

So when I came to UMass, it was a surprise to see the two programs run so successfully, especially with the issues the programs have had in recent years. The men's team has put its off-the-field incidents behind them while the women have maintained consistency, even with the program's third coach in six seasons and some players leaving the program during then-coach Alexis Venechanos' tenure.

As much success as the program has seen, there remains a glass ceiling of sorts for women's programs on college campuses, unless you're UConn women's basketball. Those 839 fans that attended the first game at McGuirk may be as far as the program's potential can take it attendance-wise, barring some explosion in wins during McMahon's tenure at UMass (possible, but unlikely).

In the meantime, women's lacrosse has moved from a niche sport to one that's entrenched itself at UMass and more and more so in the New England region and, more importantly for the program, atop the A-10.

After long road, Walkowiak settling into leadership role

By Stephen Sellner
Collegian Staff

Mael Walkowiak is not athe typical defensive midfielder for the Massachusetts men's lacrosse team.

The senior decided to replace his goalie stick for a short stick last spring, giving up his lifelong position as goalkeeper for good. Walkowiak, who transferred from Queens University in Charlotte, N.C. in 2009, made his drastic personal change when he realized he was behind starter goalkeeper Tim McCormack and former Minuteman Steve Mahle on the depth chart.

"It was really hard. Especially at this level where you start playing, and everyone starts gunning for you," said Walkowiak about the adversity he faced early in the process of learning his new position.

The Salem, Mass. native felt his goalkeeping skills aided his transition. His high school lacrosse coach required him to use a short stick in drills and during his goalkeeping days, he would run out of the net to initiate fast breaks on offense.

Walkowiak was forced to cradle one-handed far more frequently than he did during his days in net, which included using his left hand for the first time in the sport. He also mentioned that something as simple as positioning on the field was a drastic difference.

"The coordination's completely different, from knowing where you are in the net and seeing where everyone is on the field to knowing where you are on the field in relation to where the net is," he said.

Walkowiak saw limited playing time last year during the process of settling into his new position, with much of his play coming in the latter half of the season. This year he will be used primarily on the man-down team, in addition to providing leadership and a sense of energy on the field.

UMass coach Greg Cannella had nothing but praise for the senior.

"I think he's earned everything that he's gotten and it does say a lot about him as a person," he said.

McCormack believes Walkowiak's goalkeeping past gives him an edge over the other defensive midfielders.

"He's always on the same page as I am," McCormack, a captain of the 2011 squad said.

Walkowiak believes that knowing the mindset of a goalkeeper is a tremendous help, and he is also willing to risk his body to deflect a shot attempt at McCormack. That sense of fearlessness is his unique contribution to the defensive zone.

"I'm starting to fit my role much better," he said. Walkowiak later went on to say that he expects to "kill penalties, clear the ball, play good defense and … try to set Tim [McCormack] up with the best possible outside shots."

In the early going, the transition was rough for the newly appointed defender. Changing positions at such a late stage in his career initiated doubts about his decision and ability.

Opponents would frequently seize opportunities to attack Walkowiak, repeatedly putting his skills and progress to the test. However, the spike in repetitions helped him in the long run as he was able to critique his 1-on-1 defense.

Playing for UMass has been a dream-come-true for the 22-year-old.

"I've been coming to UMass lacrosse games since I started playing," he said.

He was even in attendance at Garber Field for the Minutemen's overtime thriller over Syracuse, 14-13, in 2005 during his first year of playing lacrosse.

"That memory … of them going after one of the top teams in the country and … being relentless about it has always stuck with me," he said. "I always imagined myself as a Minuteman when I got older."

That dream had to be put off until 2009, as the first wave of recruiting did not yield an offer from the team. Walkowiak played one year at the Division II level before capitalizing on an opportunity to play for UMass.

"Even with the position change, it's been the best decision I've ever made in my entire life."

Stephen Sellner can be reached at ssellner@student.umass.edu.

McMahon returns to UMass

By Jackson Alexander
Collegian Staff

Angela McMahon, former player and assistant coach for the Massachusetts women's lacrosse team, seeks a trip to the finals as a head coach this time around.

McMahon took the head coaching job on July 9 and has since spent her time settling down in a community she is very familiar with.

"I love being here. I think it's a great community both locally and within the university, everyone's so supportive of all the different programs," McMahon said.

She will replace former head coach Alexis Venechanos, who fled to Ohio State for head coach position following the Minutewomen's second-consecutive conference championship.

McMahon spent her freshman season at UMass as a member of the lacrosse team, before transferring to Northwestern. She helped rebuild Northwestern's previously dormant program into a powerhouse. In 2007, she found herself back in Amherst, this time as an assistant coach on Venechanos' staff.

Two years later, she landed the women's lacrosse head coaching job at Connecticut. Again she rebuilt a stagnant program, but this time as a coach.

"It was a great experience for me to get my feet wet, having to go through the experience of building a program from the ground up," McMahon said.

She came to the rescue of a Huskies team that had gone 1-15 before her arrival. McMahon helped UConn improve its record to 3-13 in her first season. The following year, the Huskies completed their first winning season since 2007, going 9-8, all while competing in the powerful Big East conference.

McMahon's current situation contrasts her stint with UConn in every way.

For starters, the Minutewomen have won the last two A-10 titles and were elected preseason favorites to repeat this season. No rescue mission is necessary here.

Secondly, having worked with the team in 2007 and 2008, McMahon is familiar with some of the leaders of a relatively inexperienced team that features a whopping 16 freshman and sophomores.

The lone seniors on the team, Nazy Kerr, Haley Smith and Jackie Lyons, have all spent time with McMahon as a coach.

"Angela was my assistant coach freshman year so for the seniors it's kind of like a flashback," Lyons said.

"Jackie, Nazy, and I have had her, so it's good to see a familiar face," Smith said.

She also had a hand in recruiting many of the juniors. Unfortunately, she left before any of them had the privilege of playing under her.

"I love her," said junior goalie Katie Florence. "She recruited me and having her back is awesome, Sarah Albrecht and Eileen [Finn] are great too, as a unit, they're really great coaches."

McMahon herself was thrilled to receive the opportunity to coach players she has recruited in the past few years.

"To be able to come back and help them elevate their game and see how much they have grown since I left has been great," McMahon said.

When McMahon was given the job, she hired Finn as her assistant coach. Finn attended Syracuse where she was a standout defensive player on the lacrosse team before graduating in 2010. McMahon talked about Finn's contributions to the team thus far.

"She's been doing a great job on the defensive end. She's been helping Sarah [Albrecht] be more innovative with our defense and coming up with some new ideas and brainstorming some tactics defensively," McMahon said.

"She's very smart, she's great in the office, very technologically savvy, well organized, and very well spoken," McMahon said.

Most of UMass' success will be contingent on transitions from the previous year. McMahon agreed that team leadership and chemistry would certainly be an integral part of this team's success.

"I think that through spending time together both on and off the field they just create tighter bonds and better relationships," McMahon said. "We're trying to put a lot of the leadership and the ownership on the players themselves as opposed to it constantly coming from the coaches."

Following up Venechanos' success at UMass will not be an easy task, but McMahon is up for the challenge, and very ambitious about her goals for the future.

"Not just in a conference or a Northeast standpoint but on the national level I really think there's so much potential for this program to really take off," McMahon said.

Amherst resident fights against noise bylaw

By Nancy Pierce
Collegian Staff

Amherst resident David Abrami has denounced an unlawful noise bylaw in effect since 1987 as unconstitutional. The bylaw was recently upheld in court, and Abrami is fighting against it for previous charges against him.

According to the Town of Amherst Litigation Status/Billing Report from 2009, Abrami filed a complaint in Hampshire Superior Court in October 2009 claiming his arrest in 2006 and subsequent warning in 2009 was a civil rights infraction, and that the noise bylaw is unconstitutional. He also established a website intended to raise awareness about the noise bylaw.

Public documents available on the official town of Amherst website recording a Select Board meeting last Feb. 22 indicate there was opportunity for the public to express opinions about a potential bylaw change, which would increase the first-time fine for noise bylaw violations from $100 to $300. At the meeting, John Coull, a founding member of the Campus and Community Coalition to Reduce High-Risk Drinking, expressed that he feels the change would facilitate a more positive environment for UMass and the community. Abrami presented his perspective that the bylaw has good intentions, but targets students.

The bylaw allows for punishment of up to a $300 fine, court summons, and arrest. The bylaw also constitutes what noise is considered to be punishable, which includes loud music and television, shouting and annoying use of electronic devices.

According to the Amherst arrest log, there was one arrest last month for unlawful noise violation. Last fall, from Sept. 2 to Nov. 2, there were 49 arrests associated with unlawful noise.

Stephanie O'Keeffe, chair of the Amherst Select Board, said the bylaw was modified May 17, 2010 in order to update the language of the law and in the hopes of decreasing destructive behavior. She said the Campus and Community Coalition brought three changes to Town Meeting to increase penalty fees for noise, keg and open container violations to $300 for first and subsequent offenses. O'Keeffe said the changes were to "make it more clear, consistent and to update."

O'Keeffe emphasized what she thought was the importance of updating the fines, which were nearly 20 years old. She said the value of the fines needed to be updated to match current economic realities.

She added that the Select Board will be receiving a report by the end of March on the effect of the changes to the bylaw.

According to Captain Chris Pronovost of the Amherst Police Department, there have been about 200 to 300 incidents a year related to unlawful noise.

Pronovost spoke about discretion when figuring out when to arrest and when to issue a citation.

"If it's a party that is out of control where it takes a long time for people to clear out, arrest is probably going to be in order," he said.

Pronovost explained this year has been a particularly violent year in terms of fights at parties and accidents involved with drinking. He believes the bylaw is necessary for residents of Amherst.

Parties and any form of loud behavior in the town of Amherst can result in a fine and possible arrest. Some residents are currently fighting this law, deeming it unconstitutional.

"When there's excessive noise, it affects [residents'] quality of life," he said. Further commenting on what he thinks of the necessity of the bylaw, Pronovost said, "Most communities have one," he said. "Here, we have a large concentration of young people who tend to want to party around residential neighborhoods."

One student who felt particularly passionate about the noise bylaw was Edeam Pickholz, a psychology student living off-campus. He said the bylaw has affected him and his roommates multiple times this year.

Mike Pabalki, a sophomore communications major, is planning to live off-campus next year, and was aware of the noise bylaw. He agreed with the sentiment that it is unconstitutional.

Enrollment processes evaluated for change

By Michelle Altman
Collegian Staff

What makes a school truly great? That's the question that Sandy Baum, a professor of economics at Skidmore College in New York and Michael McPhearson, president of the Spencer Foundation, asked themselves after they recently attended a conference at the University of Southern California. Their conclusion: a great endowment. Baum said he was "motivated by the sort of arms race of college admissions," to consider this question, and the conference suggested there had been an increase in the number of freshmen admitted to the top 20 schools in the country.

"They have so much money at these [types of] institutions, the top 20 schools, you know, like Harvard and Princeton, have huge differences in endowments versus if you look at schools like Vassar," Baum said, "So they're always trying to think of new ways to spend money on students, when they could use this money to enroll more students, hire more faculty, and provide the same high quality education, while still having the highest endowment in the country."

Baum and McPhearson "looked at the Chronicle of Higher Education's list of endowments per student," as their definition of the top 20 schools in the country. "We've looked at the endowments per students at these schools and figured that even if they increased their enrollment by 50 percent it wouldn't even be a drop in the bucket," Baum said.

As of Jan. 27, according to the Chronicle of Higher Education, the top 20 highest endowment institutions have

Salon showcases talent

Guests of the monthly Hillside Salon were exposed to a variety of local artists and their accomplishments and were treated a presentation on the various techniques they use.

By Zachary Weishar
Collegian Staff

Chancellor Robert Holub's wife, Sabine Holub, welcomed members of the University of Massachusetts community to their on-campus home Tuesday as part of the Chancellor's family's ongoing Hillside Salon arts series.

At the Salon, the Holubs treated visitors to an array of local art, including the works of Michale Zide, a landscape photographer, Nancy Winship Milliken, a weaver who shows her local colors by incorporating the intestines of Valley farm animals into her work, and two painters, Randall Diehl, a former New York Times editorial illustrator, and his wife, Nancy Hill, who specializes in painting knick-knacks she has found at flea markets.

The event commenced with a joint cocktail reception and the art presentations, which were followed up by a group discussion with the artists.

During the artists' presentation, each was allotted about six minutes to present slides of his or her work.

After the reception ended, Hill presented the audience a portfolio of work ranging from some of her earliest paintings to the work she is currently doing. Hill attended Smith College and earned a bachelor's degree in painting and art education through the University Without Walls program at UMass. She demonstrated her evolution as a painter through each carefully chosen slide she chose to show.

Hill's early years were devoted largely to painting still life, mostly compositions of trinkets she had picked up at area flea markets. Through these oddball objects, she provided what she feels is a form of social commentary about the nature of possessions. As the years progressed, she realized these paintings had a limited audience and started to drift in a new direction.

"It's very classical, it's sort of an offering," Hill said about her current work. These days, she spends her time working on her technical paint-

Students studying abroad should take cautions

By Charles Curley
Collegian Correspondent

With students studying abroad this semester and countless others preparing for spring break trips, reviewing safety and travel information is essential to help ensure their trip is safe and enjoyable.

"The best place for students to go for travel abroad safety information is the U.S. State Department's "student abroad" website," University of Massachusetts Director of Education Abroad Dr. Erika Schlunz said via email. "There you will find lots of good, up-to-date information."

At the State Department site, students can find out what travel documents they will need for departure and reentry into the country and what to do if their passport is lost or stolen. Traveling students can also find out who to contact in case of an emergency, how to find the nearest U.S. embassy and how to avoid causing a scene.

Students will also be able to find some advice from State Department public affairs officer John E. Echard Jr., and recommendations to all students traveling, studying or residing abroad.

According to the site, "One of the most important things students should know is that they should sign up online for our Smart Traveler Enrollment Program (STEP). STEP enrollment makes it possible for the State Department to contact the student traveler in the case of a family emergency in the United States or because of a crisis in a foreign country."

The site also contains a section specifically for spring break travelers. Here, students will be able to access information which can help them prevent dangerous situations and avoid legal issues. This includes advice on excessive alcohol and drug consumption, local laws and what suggestions for activities students may want to avoid.

And for those planning on traveling to Mexico for spring break, which pulls in over 100,000 visitors per year,, the Department of State has created a site which contains information about popular destinations, such as Cancun, U.S. Embassy and Consulate contacts and Mexican laws.

Students are advised to familiarize themselves with a website from the Department of Homeland Security, getyouhome.gov, which provides information on passport requirements, or, in the event a student has lost their passport, other approved documents needed to reenter the United States after traveling abroad.

Schlunz said substance abuse is often an activity which leads to problems for students during spring break vacations.

"Looking through the sites, many will notice a recurring theme, alcohol and drug use," said Schlunz.

According to a recent press release from the Department of

See ABROAD on page 3

Students are advised to check several sources for information about the location they are visiting, including local laws, as well as ways to take precautions against possible dangers.

Florida college allows pets in dorms

By Luis Zaragoza
(MCT)

ORLANDO, Fla. - Jasmine Parham's new college roommate is a dear friend from back home.

The roomie responds to "Leo" and never goes to class, but can perform some neat tricks. Leonora, a frisky border collie, and her owner, Parham, are among the first residents of the first pet-friendly dorm at Stetson University in DeLand, Fla.

About 20 students and their pets - dogs, cats and a few caged gerbils and rats - are taking up residence at Nemec Hall, an established dorm, as the fall semester begins this week. Stetson is not the first college to have a pet-friendly dorm, but it's among the relatively few schools - perhaps a dozen or so across the country - that have formal policies and accommodations. Stetson officials say the dorms could become a recruitment tool that helps set the school apart, just as big schools such as the University of Central Florida entices students with football stadiums, basketball arenas and trendy eateries.

The idea behind the dorm is to give students - freshmen, in particular a familiar presence as they make the sometimes stressful transition from home to campus. "What better way to do that than to have a family friend there to greet you when you get out of class?" said Justin Williams, the university's director of housing and residential life.

Having a pet along for the college journey makes a dorm "a home away from home," he said. Parham, a freshman from Palm Coast, Fla., agrees. "I love having my best friend here with me," Parham said.

Eckerd College, a private school in St. Petersburg, Fla., has had pet-friendly dorms for years. So has Stephens College, a private school in Missouri that was the previous home of current Stetson President Wendy Libby.

Libby brought the pet-friendly-dorm concept with her to Stetson a year ago. Stetson staff members visited Eckerd and Stephens to get ideas on how to set up similar living arrangements. Although small, independent colleges such as Stetson dominate the list of pet-friendly schools, powerhouses Caltech and the Massachusetts Institute of Technology allow certain small pets in some campus dorms.

Many schools, especially public ones, may shy from pet-friendly dorms because of liability worries connected to animal attacks or building maintenance, Stetson officials said. Students sign an agreement that sets out terms. Obedience training is required for dogs. Aggressive or noisy animals can be sent home.

(MCT)

Stetson University is among a growing trend of colleges allowing certain animals to resides in dorms with their student owners to create a better sense of home.

In establishing policy at Stetson, the welfare of the animal was a priority. So inspections will be held to make sure students are caring for their pets properly. Students pay a $400-a-year surcharge to get a pet-friendly dorm room, with $200 of that refundable if the room is kept in shape. Part of the fee goes toward pet-related costs, such as establishment of a fenced dog walk near Nemec Hall. The rooms designated for pets are singles instead of standard double-occupancy rooms to avoid having cats and dogs as roomies.

Not all animals are allowed. Dogs 30 pounds and less are OK, as are cats and caged rodents such as rats, gerbils and hamsters. Small fish and turtles that can reside comfortably in small water tanks are fine, too. Because of potential odor issues, birds, most reptiles and rabbits are not on the approved list. Depending on how things go this year, however, the list may be expanded and the dog-weight limitation could be relaxed.

It's too soon to tell whether Stetson's pet-friendly-dorm experiment will expand. Nemec Hall can accommodate up to 34 students with pets. Two additional rooms for resident staff also are pet-friendly. Arthur DeFilippo, a residential-life coordinator on staff who lives in Nemec Hall with his wife, came to work at Stetson in part because of the pet-friendly living accommodations.

There was no way the couple was going to give up Elphie, their pet puggle – a canine mix of pug and beagle."For a lot of people, pets are like members of the family," DeFilippo said. "It's about quality of life."

Samantha Weber-Collegian

College applications stressful for students

FRESHMEN from page 1

reserves stretching well beyond $3 billion, with the highest (Harvard's) coming in at close to $ 28 billion.

"One option would be a cooperation among these colleges," Baum said, "we suggested some kind of consortium where you could apply to a group of universities and colleges.

"For instance, suppose you had a 1500 SAT score and a 3.7 average, they would promise you admission into one of these consortium schools. And, of course, the student could rank the schools they wanted more," she added.

Caroline Cummings, a freshman at the University of Massachusetts, based her work in high school on what would be expected of her in college, including volunteering at a local hospital and running for class president.

"I tried to take advantage of every opportunity I got to do something that would 'look good on a college application' [in high school]," she said. "If I hadn't been so aware of what colleges wanted, I doubt I would have put myself through as much as I did."

According to Baum, cooperation would allow students more freedom in their education.

"This decision would make for less intense competition, and more students would be picking classes where they could do the most learning instead of just focusing on getting into college," she said. "It would make for a richer learning experience."

Cummings added that she lost confidence in where she would wind up and became more stressed while applying.

"There was certainly a lot of pressure during the whole college application process," she said. "A lot of classmates were applying to the same top schools as me, so I lost a lot of confidence."

"The application process was stressful," she added. "I was so afraid of making mistakes or accidentally leaving something crucial out."

According to U.S. News and World Report, the fall 2009 acceptance rate for the top three schools was Harvard University, with seven percent, Yale University, with eight percent and Princeton University, with 10 percent. Most of the other 17 schools don't hit anywhere near 40 percent, with the exception being the University of Michigan, with an acceptance rate of 50 percent. However, the top 20's collective acceptance rate average comes in at around 20 percent.

"Some institutions could have a lot more students because they simply have a bigger campus, like the small liberal arts schools really don't have the room for many more students," said Baum.

"You also get the response, 'Well there's no space for more buildings on campus,' but it seems to me colleges are always building more," she added.Baum said with different colleges having different make-ups and configurations, a straightforward answer to how many freshmen schools should admit isn't clear.

"So the answers to this question would be very different at different colleges. That said, this is important because these are very high-quality institutions," Baum said, "and they offer some of the best education and turn out some of the most productive citizens."

Melting away

Marielle Finish-Collegian

A recent string of warm days has caused much of the area's snow to melt away. With several weeks left of winter, the snow can be expected to fade in the near future.

Local artists exhibited at monthly gathering

SALON from page 1

ing skills. She creates still life paintings which are strikingly realistic in both lighting and proportion.

The next artist, Randall Diehl, presented a different approach to painting. Since his time as a sketch artist, Diehl has progressed into the world of fine art, and currently works with a group of local artists specializing in depicting accurate, earnest scenes of local life called the Valley Realists. Diehl is a prominent painter and has work hanging in the Metropolitan Museum of Art and the prestigious Clark Gallery in nearby Williamstown.

Diehl is known for his ability to bring to life sometimes forgotten brackets of society. He explained that he enjoys painting restaurants and other public places, because he finds beauty in everyday settings.

The least traditional artist of the bunch, Nancy Winship Milliken, a native of Amherst, was next to present. The only sculptor of the group, Milliken uses materials she gathers from local farms to create outdoor exhibits. These materials include sheep's wool, honey and animal intestines. Milliken's unconventional materials are a result of what she said is her deep commitment to the environment. She said she never brings toxic chemicals into her studio and prefers to work outside whenever possible. One of the main goals she keeps in mind with her work is to bring people into nature as much as possible; an activity she believes is undervalued in today's world.

As part of her artistic process, Milliken will leave her sculptures outside in the elements to weather in the hopes of attaining a more natural look. This brings her art even closer to its base form, and cements its root in nature.

"I embrace imperfection; allowing vulnerability is my steepest learning curve," she said.

The final artist, Michael Zide, presented his award-winning black and white landscape photography. Zide's work is prized by some collectors for his ability to selectively frame scenes, capturing in his images what he sees as the ambiance of the scene.

What sets Zide's photography apart is that he uses film cameras that have large format exposure sheets, he explained. This allows him to gain multiple exposures of single images, creating a unique perspective.

Currently, Zide is working on a series of photographs focused on apple trees and their vine-tangled extremities. He is doing much of this work locally, which he believes is congruent with his philosophy on his work.

"I try not to travel far," he said. "I like to challenge myself by finding beauty in the familiar."

As the presentations ended, Zide justified his choice to be an artist with a statement that summed up the night well.

"We do what we do because there is nothing we would rather be doing."

Zachary Weishar can be reached at zweishar@student.umass.edu

Guests conversed with Sabine Holub (far right) before the presentations of the night. The Hillside Salon is a monthly event that the Chancellor's wife hosts at their home.

Alcohol consumption a concern when abroad

ABROAD from page 1

State, each year, more than 2,500 American citizens are arrested abroad. Half of those arrests are on narcotics charges.

Drug charges, which encompass the importation, purchase, possession or use of drugs, can carry severe consequences in some parts of the world, including imprisonment.Schluntz also said that binge drinking can be a latent cause of problems for students reveling abroad.

"The overwhelming majority of 'safety incidents' involve alcohol consumption," she said.According to the Department of Homeland Security, alcohol is a primary contributor in many arrests, accidents, violent crimes, rapes and deaths suffered by American students abroad.

Disturbing the peace, lewd behavior, littering, driving under the influence and drinking on the street or on public transportation may all be considered criminal activities by foreign authorities, as they are in the U.S., and can be punishable with fines and imprisonment.

"You don't often hear the phrase, 'Gee, I did something really smart last night when I was drunk,'" added Schluntz. The Department of State also recommends that if a student is on prescription medication, to make sure it's not considered an illegal narcotic, as well as carrying a letter from a doctor describing conditions and medications.

Students can also contact the International Programs Office on campus and the Department of State's Bureau of Consular Affairs for additional information and questions regarding travel and safety abroad.

Charlie Curley can be reached at ccurley@student.umass.edu.

Students should consider safety risks and precautions before embarking on spring break trips.

On the runway

Daily Collegian

Students turned up to the "Sisters on the Runway" auditions on Feb. 16. The fashion show is an event used to help raise money for a local domestic shelter.

Bylaw gains some opposition

BYLAW from page 1

"If I pay for my property, I have the right to do what I want to a certain extent," he said. He also spoke about a friend who was affected by the bylaw; in addition to being fined. According to Palski, that friend also had to meet with the Dean of Students' office. Palski believes the school should not be involved with something that occurs off-campus.

Noel Ravitz, a junior communications major living in the Townehouses apartment complex said he's never received a noise complaint and noted it's easier to get one in certain places, especially places with dense family populations. Ravitz believes a warning issued to the offender is fair, but thinks an arrest is harsh. Ravitz said any noise violation should not go on one's record and should not affect one's academic career.

Nancy Pierce can be reached at npierce@student.umass.edu.

Amherst police have cited almost 50 cases of noise violations within a short period of time, and many people are against these citations.

EDITORIAL OPINION

THURSDAY, FEBRUARY 17, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." - Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Unfriendly Facebook

Ashley O'Neil

What does it mean when someone is your Facebook friend? How many "friends" on Facebook do you have? It has been reported in the New York Times that Facebook users have an average of 130 friends, or 500, 1,000 or even 2,000. Here's a challenge: go through your list of so-called "friends" and see how many of them you can actually remember. Guaranteed you'll click on names and think, "Where did I meet that guy?" You may realize some of these people that have full-access to looking at your wall posts and pictures are people you don't even speak with in the real world.

So why is this important? I have plenty of nondescript people on my friends list, so why should I care so much? You could be surprised when you confront yourself with your own reasoning behind being someone's "friend."

There are a few different kinds of "friends" on Facebook.

Obligatory friends (includes family members). These are people you went to school with or have known for years. You may not ever speak to them, or just not outside of Facebook, but it would be plain rude to have not accepted their request. We all have them. Maybe some of them you like to catch up with once in a while because you haven't talked since high school biology, but most of them are just sort of there.

Well, ladies and gents, whether you signed up or not, you are actually playing a game called, "Every Man for Himself."Facebook has transformed into a giant paintball game.

Work friends. Self-explanatory, but even if you wouldn't talk to them also outside of a work situation, you add them because you don't want to look like the office snob when runny-nosed Steven from accounting tells gossiping Cheryl from HR you denied his request.

Acquaintances (also somewhat obligatory). A classmate or someone that runs in the same circle as you, but whom you only share small talk with once in a while. You would ask them how their weekend was, but you're not close. Maybe you even hung out once or twice, and you think they're a nice person. Or maybe you just plain hate them, but you don't want your real friends to ask you why Karen can't seem to find the pictures you posted from your birthday six years ago.

Actual friends. That's right. Real life, they know your loves, hates and worries, they are someone you spend time with and they know the real you and not the person whose pictures they were creeping the other night at 3 a.m. You scroll down the wall and see they posted almost everything you have on there and half of the pictures you're tagged in.

Back to where we started, how are these categories important for our social lives outside of Facebook? Well, ladies and gents, whether you signed up or not, you are actually playing a game called, "Every Man for Himself." Facebook has transformed into a giant paintball game.

No matter how many friends you have, anything those friends do in this cyber world can feel like a paintball right to the gut.

For example, you write on someone's wall or send them a message and they don't write back? POW.

The dreaded ex has a new lover and their kissy photos are all over his wall? BANG. Did you go to look at someone's page or tag them in an old photo and realize they defriended you? BULLSEYE.

How do you rationalize when someone defriends you? 'Well, I'm not really friends with them, so whatever.' A click of the mouse and it will never cross their mind again. But it's possible that your anger is raging, 'What made them so high-and-mighty to do such a thing?' 'How could Jenn from freshman year chemistry 111 lab defriend me when we did so many equations together?'

How does this differ from the real world? Because if you bump into someone from a while back, you may actually stop and chat. You would also maybe wonder where the time went and why you couldn't keep in touch. In Facebook world, you would just creep on their pictures and never even bother with a wall post.

Or, when you have a class or hang out in a group with a person that doesn't actually even like you, they'll probably still be pretty nice to your face, because that's how people are. But in Facebook world, anything goes. They can be as mean as they want, because they don't have to feel the repercussions of it. Heck, they can go ahead and de-friend you, but maybe they don't want to make it that obvious. They'll wait until graduation, or for one of you to move away, before getting that risky.

What are we all doing about this problem? We're contributing to it and would all have to plead guilty.

Delete. Goodbye to Marcy from middle school that may or may not have a premarital child by now.

Delete. So long to that guy with the weird mustache who hit on you at a coffee shop and somehow found me online.

Delete. Farewell to the dreaded ex you no longer wish to see on your news feed.

There is a treasure trove of reasons behind this gutsy move – blocking someone. You could be trying to cut out a stalking ex or sending out an impersonal "eat my shorts" to a harassing roommate who tagged you in a picture when you were hung-over and felt like death.

What we keep forgetting is, if Facebook didn't exist, we simply wouldn't keep in touch with anyone we don't care that much about.

So what should you do if you have been caught up in this whole mess of emotion?

Realistically, you may do nothing. You could take a break from the site. Slowly but surely, your memories of how the social world worked pre-Facebook would be actually quite refreshing. But you may not want to deactivate your page; someone may think you defriended them and get very upset with you.

Like I said, every man for himself.

Ashley O'Neil is a Collegian contributor.

Congrats, protesters

Eli Gottlieb

On Dec. 17, 2010, Mohamed Bouazizi had his vegetable cart confiscated. He was 26-years-old, only a little older than most of us, and already he had to act as the sole income earner for a family of eight, including putting his sister through university. He faced, in his city of Sidi Bouzid, an unemployment rate of 30 percent, and had never graduated from high school. The police confiscated his cart, his only means of making a living for his family, almost every day, and on Dec. 17, 2010, Muhammad immolated himself in protest. His sister later summed up the family's situation in an interview with Reuters: "In Sidi Bouzid, those with no connections and no money for bribes are humiliated and insulted and not allowed to live."

His death sparked protests to overthrow the corrupt, totalitarian government of Tunisia, headed by "President" Zine El Abidine Ben Ali. The protests grew into a movement against corruption, for liberal democracy, and, after a little less than a month, they succeeded in overthrowing the totalitarians Ben Ali fled to Saudi Arabia.

Revolutionary liberal democratic protests by the people of Tunisia and Egypt have overthrown totalitarian and authoritarian governments that had reigned for a generation.

Next, the rioting and the revolutionary spirit spread to Egypt. Millions of protesters spent weeks in Tahrir Square and Liberation Square, in the major cities of Cairo and in Alexandria, trying to bring down the authoritarian government of "President" Hosni Mubarak. The protesters marched against ultra-high unemployment, high food prices, political repression, the police state and lack of democracy. Trade unions played a large part in the organization of these protests. More attempted self-immolations occurred. In the end, Mubarak actually resigned and left the country.

Currently there are protests in Yemen, Jordan and Algeria.

Or in other words, revolutionary liberal democratic protests by the people of Tunisia and Egypt have overthrown totalitarian and authoritarian governments that had reigned for a generation. To repeat: civilian protests have overthrown governments in the Arab world with liberal democracy as their goal. "Revolutionary" is the word I use for this because there can be no other. After decades of repression, liberals in the Arab world have risen up and claimed their rightful place on the political stage of their countries. This is awesome, amazing, and awe-inspiring. The new government (or rather, slightly reorganized government) in Egypt has even said that they will maintain their peace treaty with Israel.

This revolution has overturned the predominant Western view of the Middle East. This view is: Islamists (on the left), authoritarian nationalists (on the right). This view is: the West must choose to either support authoritarian nationalists for the sake of our foreign policy interests or suffer the people's anti-American, anti-Western, anti-Enlightenment wrath of totalitarian Islamism. This has been the excuse for supporting Jordan's monarchy, Egypt's dictatorship, Tunisia's dictatorship and the corrupt, terrorism-mongering Saudi Arabian oil monarchy. This was the excuse that gave us Saddam Hussein, the Shah Mossadegh of Iran, and Musharraf of Pakistan. This was the excuse that gave us a generation of Arab and Persian youth who cannot make livings for themselves and who cannot afford to get married.

It has lasted far, far too long, and this revolution annihilates it once and for all. Not one question remains: the United States and the Western world must stand behind liberal democracy in the Arab world and the Muslim world. We must stand up for liberal democracy, for religious pluralism, for economic equality and opportunity, for solidarity and for social democracy. Arabs, as it turns out, are people just like us. They want opportunity to make a living, they want to have families and they want a government that follows their voice and their ideals.

Hillary Clinton, for the American response to this genuine upwelling of liberalism, ought to retire. Rather than support the peoples of Egypt and Tunisia, she stood on the sidelines and shook her head at the loss of the dictator's stability. I have a message for her: democracy is not "stable," it is free, and her longing for "stability" really indicates a lack of fitness to serve in the government of a democratic nation. She and the two parties, Democratic and Republican, deserve to taste the actions of a free people rather than a stable situation.

Some will undoubtedly answer that we should not support democracy in the Middle East because it will bring Islamism. This is silly. If it brings Islamism, it brings Islamism, though the Muslim Brotherhood has at least said that it will not field candidates in the upcoming presidential elections. If it brings Islamism and the newly Islamist governments of the Middle East attack Europe, America or Israel, we shall defend ourselves from the attack. Obviously we don't wish for war, but if, God forbid, Islam-fascists do take power in an Iranian-style coup, we can bravely face them down and defeat them.

However, we have no right to hurt the actual rights and solidarity of real people today for fear of an event that not only might never happen, but that we cannot prevent, if it will happen. Despite all inadvertent efforts by the Bush administration to poison the well, it honestly appears as though liberal democracy is winning the war of ideas in the Middle East. We owe victory to our principles, at home and abroad.

LETTERS to the EDITOR

Editorial@DailyCollegian.com

Dear Editor,

After reading the article "Curves of Controversy" by Chelsea Whitton, I could not agree more with her argument that media sends messages that conflict and confuse us concerning body image. We are constantly bombarded with headlines in magazines that are stating "Lose 10 pounds in two weeks," then, when we turn to the next page, an article will rant about celebrities with their eating disorders and how grotesquely thin they look. When are we going to reach a happy medium?

At 5-feet-9 inches and 118 lbs. I am constantly self-conscious that people will believe I have an eating disorder, though I eat more than any other female I associate with. The media repeatedly highlights opposite sides of the spectrum, sending us conflicting messages about how we should look and how we shouldn't. Regardless of which body type a woman occupies, they are unhappy and are constantly working towards an unattainable goal that the media sets for us.

Saving swipes for later may save students money

Seyi Obasa

Are you tired of many of your meal swipes going to waste after the semester is done? Most students have 40 or even 60 going doing down the drain. Well, there are a lot of people who have the same sentiment about this on campus. The Student Government Association (SGA), despite being hugely successful with pushing for the rental book program, is spearheading a movement to allow for excess swipes to be reused for the next semester. They are becoming quite vocal, as there is a Facebook group called, "Let Us Save Our Swipes and Our Dollars: Support Better Meal Plans at UMass."

The group already has over 877 members supporting the proposed change, despite the fact that there are many different options for meals plans like the value plan, unlimited and your campus meal plan (YCMP), just to name a few. Not all the swipes from any student's given meal plan in a semester may be used. This leads to a great waste of money.

The SGA is advocating for meal swipes to be rolled over, with options to combine reused swipes with smaller incremented meal plans. Students, according to this proposal, would also have the option of reusing swipes at convenience stores around campus to help students stock up their fridges on and off campus, or for allowing willing students to donate their YCMP swipes to buy food for charity. Such a measure would be very useful and practical for students.

As of Feb. 3., SGA members have already spoken to Director of Auxiliary Services Ken Toong. They have also brought up what they see as positive features of other institutions' meal plans like Colgate University, University of New Hampshire and the University of Missouri. A reformed and revised plan would likely roll over pretty well with many students.

Often times, people are ordering delivery food during the weekend and sometimes during the week. During hectic midterms and finals weeks there are opportunities to go to the dining commons and use a swipe. It's inevitable for many people, especially those that work part-time, full-time or participate in many Registered Student Organizations, to have numerous unused swipes.

As a junior, I am currently on the Platinum YCMP plan I had over 40 swipes left at the end of the last semester. After finals, I ended up going down to 10 before I left home for winter break. But in previous semesters, I wasn't as fortunate, and had about 40 to 60 swipes left. With each meal being worth about $8.50, that can add up to an upsetting amount of wasted money.

This is money that could be used to pay for books, gas, car expenses and general spending money. In my experience in previous semesters, as I'm sure with a lot of people, this could add up to $340 to $480, money I'm sure a lot of you would like to get back in some form or another.

Another policy that has been of some debate that the SGA is trying to fix is a new policy that was enacted last semester, which mandates that students living on-campus, except within the North Apartments, must obtain a meal plan.

Honestly, I'm fine with having an on-campus meal plan, but mandating it upon legal adults, many of whom are working part or full-time to pay their way through school is absurd. Most college students are presumably of legal age to make such decisions. If students are trusted with the ability to borrow loans to help pay tuition and expenses, the ability to feed oneself should be an individual decision.

The only potential problem that may arise is how the school can realistically pull this off without the fees of other services going up. A sustainable plan of maximum benefit to both parties must be well-crafted and implemented in order to fully satisfy all the parties involved. It has yet to be seen how this may realistically pan out, but such a proposal has been a long time coming.

With a little bit of planning and thought, our meal swipes won't have to potentially go to waste. A new and comprehensive plan that allows for more freedom and choice for members of the student body can be instated. Compulsory meal plans for on-campus students can be negated once again, and the students can be treated like the responsible adults that they are.

ARTS@DAILYCOLLEGIAN.COM

Meester outshines co-stars in 'Roommate'

By Herb Scribner
Collegian Staff

Going into "The Roommate," one would expect it to be a modern-day horror movie offering cheap thrills and an aching stomach from the buttery popcorn serving as a distraction from the film itself.

Instead, the film's above-average acting and modeling of its villain provides an enjoyable experience for both college students and those who aspire to be one. Like any film, it has its faults, which mostly stem from comical situations that are supposed to be taken seriously and the film's ending, but it succeeds in giving viewers something to consider after the credits roll.

The premise is simple enough: a good-looking, well-to-do girl, Sara Matthews, goes to college and has a psychotic roommate, Rebecca. Rebecca is more than a Frienderz (the social-networking website in the film) creeper and tries to destroy Sara, her college friends and Sara's boy-toy, Stephen.

As Sara, Minka Kelly (who acted in "500 Days of Summer") does well in providing the audience a relatable character. She's new to college, she's oblivious to things happening around her, and she's normal, above all else. Her normality stands out above anything, especially with her uncontrollable roommate sitting a bed away.

Kelly's opposite, Leighton Meester (of "Gossip Girl" fame), plays the insane roommate Rebecca. Meester's performance outshines the rest of the cast as she flawlessly, and, in some ways, beautifully displays a crazed nut. Meester owns the crowd in the film with swift line delivery on two separate occasions (a shower scene and a gas station scene) which shows just how much of a boss her character is.

Another leading character is played by Cam Gigandet (of "Twilight" and television's "The OC"), which shows quality casting by the filmmakers. Gigandet's "bad-boy-yet-kindhearted" image works well for the character of Stephen, as this is exactly what the character is made out to be. Additionally, Gigandet holds the viewer's eyes as he not only provides comic relief (with actual comedic lines), but also makes audiences wonder what he'll do next.

Though the acting is one of the superb parts of the film, the movie's true genius comes in the lack of a real motive for Rebecca. It isn't some past obsession, jealousy, revenge or weird family history that drives her; Rebecca is legitimately crazy, and that's it. This is an element commonly absent from recent horror movies, as there is almost always a motive for characters' insanity present in contemporary horror flicks.

The film sends us into the heart of Rebecca's psyche, which is that of a maddening woman bent on wrecking havoc. She's a straight up insane human being, and that strikes hard at any viewer of the film. It's one of the memories viewers will likely hold onto after the film, as it is chilling to think that all of the film's terror is the result of one unstable person.

Rebecca's cracked antics are somewhat limited because of the PG-13 rating, but the film offers fine alternatives to work around the rating and still drives home some effective plot points. Whether it's murder, self-gratification, animal cruelty or belly button ring detachment, the film delivers clever substitutions for scenes that could, if shown bluntly, easily pushed the movie to an R rating.

The way audiences will discover Rebecca's craziness is the film's demise however. It's almost a throwaway line coupled with a hysterical delivery by Rebecca's mother. While the delivery is laughable, detracting from the importance the scene is meant to hold, the message stabs at the audience and squarely confirms Rebecca's insanity.

Other lesser elements include Billy Zane (who starred in "Titanic" with Frances Fisher, who plays Rebecca's mother). Zane's character feels out of place, and is almost overkill for the overarching direction of showing how insane Rebecca is.

The ultimate fault of the film is that the writers ask the viewer to care about Sara when she isn't even a true main character. Even as the title suggests, this is Rebecca's tale more than it is Sara's, as the latter serves as merely a pawn in the endgame of Rebecca's storied history. The writers portray her as a psycho who not only wants to become her roommate, but ultimately wants to murder her, which offers a twisted question about whether or not she's indirectly trying to kill herself. She isn't scripted to be loved or to be the main star of the film, but she comes off that way superbly. Viewers want to see what she'll do next; they want to see what senseless move she'll pull out of her pocket.

However, this does offer the viewer something other movies haven't. The sympathy for Rebecca falls in line with recent issues with bullying and havoc amongst the young. Rebecca is a tortured soul looking for a release or some sort of escape from reality. Her motives in the film show it's not always the victims who are tormented, but that those who torment suffer most.

Herb Scribner can be reached at hscribne@student.umass.edu.

Although she was not written to be the main character of "The Roommate," the character of Rebecca steals the entire movie with a stunning performance by Leighton Meester.

Spring's sketchy start

University of Massachusetts comedy troupe Sketch-22 kicked off the spring semester with their first performance of 2011 on Saturday night.

By Eleine Fang
Collegian Correspondent

The Sketch-22 crowd was simmering with excitement last Saturday night, as a packed house rushed to find seats in the already-jammed Herter 231 auditorium. The first performance of the year had fans, friends and family alike waiting in anticipation for the comedy troupe.

Sketch-22 is a student-run comedy show under Student Valley Productions in which the members write, produce, direct and perform all of the skits. Performing only three times a year, the group works hard to bring energy to their audiences. To get ready for the show, Jake Goldman, a member of Sketch-22 since last May remarked that they do "warm-ups to get their blood flowing – anything, really, to get us laughing."

The Dynamics, an on-campus a capella group, opened for Sketch-22 on Saturday night with "Take It Easy" by The Eagles followed by "Portions for Foxes" by Rilo Kiley. Both were sung well, however, the best of the numbers had to be their closing song, "I Believe in a Thing Called Love" by The Darkness. The use of their vocals as instruments and the energy they brought to the stage were both funny and invigorating for the crowd.

Another continuous bit the cast did was a series of "Before They Were In Sketch" acts, describing where the cast members were before joining Sketch-22. From being porn stars to old women to carbohydrates, members of the cast were anything but ordinary.

Other hilarious acts included "The Body of Christ," written by Marc Boyd and Ryan Harrington and played by the two along with Madeleine Maggio. With songs like "Let's Get Nailed," their Christian rock band "Come" sought to spread the music of God with subtle and not-so-subtle innuendoes. "Doctor's Visit" portrayed Seth Hapenny as an overly enthusiastic doctor who is actually from the insane asylum. "Hannah and The Real Boy" parodied the movie "Lars and The Real Girl." Both revolved around characters that believed a blow up sex toy was an actual person. "They Call Me Benny" was a jab at a music video from Ke$ha. The show ended with a "Saturday Night Live" inspired music video.

Sketch-22's first show of the year was a big hit. Paige Shea, a freshman at the University of Massachusetts, said, "I loved going to see Sketch-22 because they are hilarious. I enjoyed the video segments about how the members became a part of the sketch."

This group is always looking for more members. Their sister organizations include Mission:IMPROVable and Improv With Attitude, the last of which performs weekly.

Eleine Fang can be reached at efang@student.umass.edu.

Ukes and yo-yos fill afternoon with fun

By Kate Evans
Collegian Staff

Ukes and Yoyos brought floods of families and happy couples to the Academy of Music Theatre in Northampton last Sunday. The tantalizing scent of salty popcorn combined with the warmth from the heaters in the lobby created an immediately positive atmosphere. The beautiful theater was nearly half-filled with bubbly children and smiling adults.

A clip from Tony Coleman's black and white documentary "The Mighty Uke" kicked the event off, touching upon the history of the instrument. The A E I O Ukes and the A2Z Yoyo Team set the stage with a joint opening act.

The group of 40 or so ukulele performers from A E I O Ukes stretched across the stage decked in Hawaiian shirts. The A2Z boys yo-yoed in front of the ukulele players, all donning matching black tee shirts and jeans. One member created a mustache out of his yoyo, giving the audience quite a laugh.

Jim and Liz Beloff performed next with their ukuleles alongside Joe Blumenthal of Downtown Sounds in Northampton. Jim played ukulele, while his wife Liz rotated between playing ukulele and singing. The first song the couple performed was about dating, and the last was about marriage. One of their songs in between, "Magic Island," created a relaxed vibe, generating a feeling that everyone in the venue might actually have been on a getaway. The uke duo incorporated comical lyrics, such as "I'm carrying a tiki torch for you," but "you met another Mai Tai man."

An upbeat yoyo act followed the uke pair. John and Rebecca Higby started off their performance with classic tricks like "Around the World" and "Shoot for the Moon." The couple spiced things up by inviting an audience member onto the stage. John Higby had him hold a match and then lit the match using his yoyo. His second trick consisted of balancing a quarter on the volunteer's ear and then knocking it off with his yoyo, wowing the crowd. With a finale consisting of one unicycle, two hula-hoops, four yoyos, and a slow motion kiss, the couple had the audience laughing and roaring for more.

Ruthy Ungar segued the show into another ukulele act, performing solo with a strong, lovely voice. Ungar impressed with her uke rendition of Nelly Furtado's "Maneater," and even involved the audience by asking them to hum makeshift saxophone sounds while she played. Ungar's dedication to the instrument shined through as she brought three different ukuleles with her, one for each song. This grateful, friendly and talented young woman finished her set with Ella Fitzgerald's "Stairway to the Stars."

On stage next were Greg Hawkes, Tim Mann and Greg Allison of Hawkes' trio Three Guys with Ukes. The ukelele group started off with "Honey Pie" and "Eleanor Rigby" by the Beatles, as Hawkes gets his musical inspiration from Paul McCartney. The third and best song of the set was George Harrison's "Here Comes the Sun," which was touching, peaceful and flawless. Hawkes and his uke-mates finished their set with one of Hawkes' very own songs from his band The Cars, called "Drive."

An intermission at 3:15 pm gave antsy children 20 minutes to stretch and decompress. Joel Eckhaus, yet another ukulele act, started off the second half of the show singing and playing his uke.

Eckhaus' deep voice paired with his soft ukulele strums made for the perfect contrast. Showing his passion for tango not just through the ukulele but also his funky hat from Argentina, Eckhaus performed "Adios Muchachos" by Carlos Gardel. Eckhaus welcomed his former student Ungar onto the stage with him for a duet finale. The two performed the Billie Holiday song "Me, Myself and I," which he taught her 23 years ago.

In a much anticipated yoyo act, Eric Koloski bombarded the stage with pop music and flashy tricks. Yo-yoing to the beat of "You Spin Me Right Round," Koloski displayed his creativity by crafting a star and spider web out of his yoyo string. Koloski moved to the music as the stage went dark and his yoyos lit up. The spiraling toys looked just like the "America's Got Talent" finalist was literally playing with fire. Koloski was only on stage for a few minutes, leaving the audience yearning for more yoyo tricks.

The last and quite possibly the best act of the day was Tripping Lily, a quartet from Cape Cod. Monica Rizzio and brothers Demetrius and Alex Becrelis took turns in front playing instruments and singing together, while fourth bandmate Laird Boles stood behind playing the stringed bass. The band's appearance reflected upon their mixed musical genre, ranging from classical and elegant to laid-back and fun.

Both Rizzio and Demetrius Becrelis had beautiful voices, rotating leading vocals. The band revealed that they lost a close friend a few weeks ago and performed a tribute to him called, "Who's Gonna Laugh Now?" The sadness and genuine feel could have shed tears across the audience. With their talent, style and down-to-Earth attitude, Tripping Lily is guaranteed to be the next great artist.

The concert ended with one final performance of "Down by the Riverside" with all the ukulele performers and Eric Koloski yo-yoing to the side. The performers encouraged members of A E I O Ukes in the audience to stand up and play along with them. Several women donning Hawaiian shirts rose in the balcony and strummed next to their loved ones. The show ended by 4:30 p.m. on a very positive note.

Kate Evans can be reached at kvevans@student.umass.edu.

Cape Cod quartet Tripping Lily performed at the Ukes and Yoyos event at the Academy of Music Theatre in Northampton on Sunday. The event featured musical acts containing ukuleles with impressive tricks by two maestros in between acts.

Xavier's weekend win puts them atop A-10

By Ben Lambert
Collegian Staff

After a back-and-forth contest, No. 24 Xavier took control [illegible] Duquesne, 71-63, on Sunday afternoon. With the win, the Musketeers took sole possession of first place in the Atlantic 10 conference.

With an 8-1 run, the Dukes erased Xavier to take a 53-52 lead with 12 minutes remaining. But the Musketeers battled back and, after a few minutes, junior guard Tu Dickerson and sophomore guard Mark Lyons stuck back-to-back 3-pointers to bring Xavier [illegible] one. A timeout by the Dukes could not stop the Xavier momentum, as the Musketeers took a lead they would never relinquish with a dunk from junior Jamel McLean.

Holloway scored 20 points, grabbed seven boards and dished out three assists to lead Xavier [illegible]. Senior forward Dante Jardine poured in 19 points, tying his career-high and center Kenny Frease added a double-double with 12 points and 12 rebounds. Frease can just missed a double-double as well, contributing 10 points and nine rebounds.

No. 23 Temple Earns Tough Road Victory at Dayton

Behind 26 points from junior guard Ramone Moore, No. 23 Temple earned a 75-61 road win over Dayton on Saturday afternoon. It was the sixth win in a row for the Owls, who improved their record to 19-5 overall and 9-2 in the A-10. With the loss, the Flyers fell to 17-9 and 5-6.

In addition to the hostile environment, Temple was missing their leading rebounder and best interior defender, senior forward Lavoy Allen. He missed the game due to a sprained ankle suffered in the final minutes of the Owls' victory over Fordham last Wednesday. Despite this, Temple held Dayton to 37 percent shooting for the game

Moore helped the Owls make up for Allen's absence in other ways than just scoring. He had a career-high nine rebounds in the contest, as did junior forward Micheal Eric. In addition, junior forward Scootie Randall came up big with 17 points of his own.

Rhode Island Earns OT Win on Wilson's Putback

Despite trailing by 17 points in the second half, Rhode Island managed to come all the way back and knock off Charlotte, 71-70, in a thrilling overtime contest. The game came down to the final seconds, as junior Jamal Wilson scored his first and only basket of the game on a putback as time expired, giving the Rams the victory.

Charlotte looked to have the game in conirol for most of the afternoon. The 49ers held a 32-23 halftime lead and extended it to 17 with an 8-0 run to begin the second half. However, Rhode Island would not give up. The Rams went on a 13-0 run, which included three 3-point baskets, cutting the lead to three with 12:35 remaining.

URI then reclaimed the lead on an emphatic jam from junior Orion Outerbridge, who was fouled on the play. Outerbridge converted his free throw, giving the Rams a 51-48 lead.

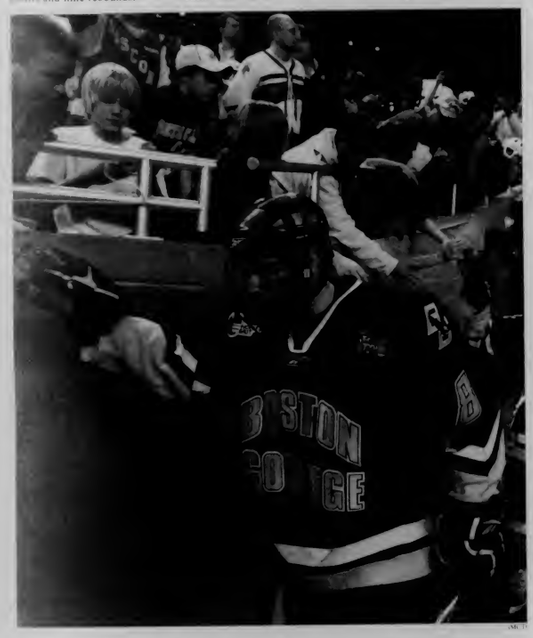
Charlotte did not roll over, though, as the teams battled down the stretch to go into overtime.

Sophomore Akeem Richmond was the top scorer for Rhode Island, scoring 20 points, including six 3-point shots. Sophomore Nikola Malesevic added 19 points of his own.

Ben Lambert can be reached at xlambert@student.umass.edu.

COURTESY XAVIER ATHLETICS

Xavier's Jamel McLean (122) goes up for a jam in a game earlier this season. McLean had 10 points, nine rebounds and a steal in the Musketeers' marquee victory over conference rival Duquesne.



Boston College's Edwin Shea (8), greets a fan as he enters the rink for the Beanpot Championship game against Northeastern. No. 1 BC went on to win the contest, 7-6, in overtime.

BC wins Beanpot as Merrimack, UVM continue surge in A-10

By Matt Strong
Collegian Correspondent

No. 1 ranked Boston College continued its love affair with the Beanpot championship game on Valentine's Day night, defending its title with a 7-6 overtime victory over Northeastern.

The 59th Beanpot, held at the TD Garden, is an annual hockey tournament among Boston's four major college hockey schools that awards the winner bragging rights over its cross-town rivals. Boston University leads the competition, also consisting of Harvard and Northeastern, with 29 championships, their last being in 2009.

The win for the Eagles is their second-straight and third in the last four years. Junior Jimmy Hayes netted an overtime goal to give Boston College the championship. The game sold out, with an attendance of 17,565.

New York Rangers draft pick and Eagles sophomore Chris Kreider scored two goals in the victory and earned an assist, feeding the game-winning goal to Hayes. Halfway through the third period, Kreider, the Beanpot MVP, put BC ahead 6-5 with an impressive goal. Northeastern forced overtime with senior Wade MacLeod's score with just 1:46 remaining in regulation.

Last year's Beanpot MVP and Eagles goalie John Muse recorded 21 saves. The senior has led BC to three championships in his four years at the school.

BC defensemen Tommy Cross and Brian Dumoulin each notched three-point performances in the winning effort, which saw seven lead changes and six tie scores throughout.

Worthy of mention was Northeastern goalie Chris Rawlings, who made 39 saves in the losing effort. Despite the loss, Rawlings was awarded the Eberly Trophy, which awards the goalie with the best save percentage in the Beanpot.

Merrimack resilient in win over UNH

Merrimack continued its great play against Hockey East foes with an overtime victory at home over New Hampshire Saturday night. The victory for the No. 11 ranked Warriors gave them the weekend sweep of the No. 6 Wildcats, as well as their sixth-straight win.

Merrimack (19-5-4, 13-5-3 HE) moved ahead of Boston University into third in the Hockey East with the pair of victories. The Warriors now stand alone in third place just three points behind both Boston College and UNH (17-7-4, 15-4-2 HE).

The Warriors notched their third overtime victory of the season on their first and only shot of the overtime period. Freshman defenseman Jordan Heywood netted the game-winner while adding two assists, giving him a hand in all three Merrimack goals.

Both teams bombarded the net, with the Wildcats out-shooting Merrimack, 40-39. The last few minutes of the third period saw game-saving saves from both Joe Cannata of the Warriors and Matt DiGirolamo of New Hampshire. UNH saw seven power-play opportunities with 14 shots on net, but were able to convert just two in the loss.

The Warriors will next play a home-and-home series with UMass, while the Wildcats will play two in Burlington this weekend.

Vermont not ready to give up

Despite the third-lowest point total in Hockey East, Vermont has been playing especially well of late. Their great play continued Friday night in Maine, as the Catamounts ran away with a 7-2 victory over the Black Bears.

Vermont (7-15-5, 5-11-4 HE) jumped out to an early lead, scoring four goals in the first period. Anthony DeCenzo and Jack Downing each netted a pair of goals for Vermont.

Maine (11-10-6, 8-8-4 HE) came within two goals after a short-handed goal from junior and Sweden native Gustav Nyquist. Vermont had an answer for everything, though, scoring less than a minute later to extend the lead back to three.

The Black Bears were scoreless in eight power play opportunities, while Vermont was able to capitalize three of six times on the man-advantage. Despite mediocre play in other areas of the ice, the Catamounts finished the match with a 39-25 shot advantage on goal.

Matt Strong can be reached at mstrong@student.umass.edu.

No clear No. 1 in A-10

By Matt Catizone
Collegian Correspondent

A desire to be the top seed in the Atlantic 10 tournament has pushed the Xavier and Temple women's basketball programs this season. There is no clear-cut No. 1 yet, though, as both teams boast an 11-0 record.

That will change Feb. 27, when No. 6 Xavier (21-2, 10-0 A-10) visits Temple (19-6, 10-0 A-10). The final game of the regular season for both squads will certainly prove to be the most vital. Assuming both teams remain undefeated in their final three conference games, the top ranking will go to the winner.

Xavier and Temple have faced each other in two of the last three A-10 Tournament finals. Last season, the Musketeers proved they were the best team in the conference by defeating the Owls, 57-55. Three years ago, Xavier again got the best of the Owls, this time winning as the third seed, 47-42.

Coming into Tuesday, the Owls have won 12 consecutive games and 17 of 19. Not to be outdone, Xavier has won 12 straight. The Musketeers' only two losses of the season came in the same week, when they fell to two top 10 teams in Duke and Stanford.

In order for both teams to remain undefeated until the season finale, they will have to defeat some formidable opponents. The Musketeers' toughest foe is Duquesne. The Dukes (20-5, 7-3 A-10), currently sit in fourth place in the A-10, three games out of first. The Owls' toughest challenge will be Dayton. The Flyers (16-9, 7-4 A-10) have played well against the top teams all season, beating a ranked Boston College team and nearly winning two games against Xavier.

No matter how the remainder of the season plays out in the A-10, nothing truly is decided for the top 12 teams, which will qualify for the tournament, until the tournament is all said and done.

Rhode Island looking to sneak in

One could certainly say Rhode Island has not had the 2010-11 season it hoped for.

Coming into Wednesday, the Rams sat at 1-9 in the A-10 and 7-17 overall. However, they still have a chance to qualify for the A-10 tournament. On Wednesday, URI will face Fordham, (10-16, 2-8 A-10) which currently sits one game ahead of URI in the conference. A Rhode Island victory would ultimately place them ahead of Fordham because of their head-to-head advantage.

A win Saturday at Massachusetts will also help secure a spot for URI. UMass (6-20, 2-9 A-10) sits a half-game ahead of the Rams in the conference standings and has not won since Jan. 19 against Saint Louis.

Third seed a charm

As odd as it may seem, third seeded teams have been making some noise in the Tournament in years past. Over the last four years, the team seeded third has made it to the final, winning all but last year.

Potential logic behind this trend could be hold that the three-seed has a lack of pressure placed on im. As a third seed, a teau receives a first round bye and enters the tournament either facing the sixth or 11th seed. Usually, Neither of these teams are as deep and potent as the third seed. Beyond this point, though, the third seed is usually the underdog.

Currently the third team in the conference in Charlotte. As of Tuesday, the 49ers are 8-2 in the conference and 20-5 overall. They have four remaining games, the hardest of which will come from the team directly below them, Duquesne.

In what seems like the best seeding in the A-10 tournament, third is certainly looking like the new first come mid-March.

Strong start seems far away for Minutemen

By Herb Scribner
Collegian Staff

Back on Feb. 1, the Massachusetts men's basketball team was 5-2 in the Atlantic 10 with three relatively easy games against St. Louis, St. Joseph's and George Washington on the horizon.

Winning these games would have potentially put the Minutemen (13-11, 5-6 A-10) at the top of the table among A-10 powerhouses Xavier, Richmond and Duquesne.

They lost all three games.

On Wednesday night at the Mullins Center, things went from bad to worse for UMass, as it lost its fourth-straight contest, 81-63, to the Dukes (17-7, 9-2 A-10), which put the Minutemen further away from the A-10 elite.

UMass	63
DU	81

"[The Dukes] were totally on their game tonight," UMass coach Derek Kellogg said. "I told my guys, if you're going to win the game, you can't turn the ball over and you can't take like really bad shots, and I thought we did both of those at times."

Some of the bad shooting stemmed from guard Anthony Gurley, who went 3-for-13 and scored nine points (19.3 season average). It was Gurley's second-straight contest where he was held to single-digit scoring.

With UMass' top offensive players struggling, freshman guard Jesse Morgan provided relief for the Minutemen in his first A-10 appearance, with 14 points off the bench.

Nicknamed "Takeover" for his ability to shift the momentum of games, Morgan did just that, with drives through the lane and a pair of early 3-pointers which, at the time, made a significant dent in DU's lead.

Forwards Raphiael Putney (10 points, nine rebounds) and Terrell Vinson (12 points, seven rebounds) were right behind Morgan in offensive production.

"I was impressed with Raphiael, even though he was probably the guy I yelled at most during the game, because I think he should get every rebound and finish every play," Kellogg said.

While the UMass offense continued to struggle, its defense was nearly absent against DU on Wednesday. In transition, the Minutemen couldn't rush back to stop the speeding T.J. McConnell (15 points, four assists), who drove down the court to either score on his own or dish out to a fellow Duke.

"As much as I didn't like watching it, because I was coaching against the team, I thought they moved the ball about as good as any team I've seen this year," Kellogg said.

The Minutemen had no rhythm on the defensive end of the floor, which allowed the Dukes to post a 22-point lead in the first half off second-chance opportunities.

UMass added some extra pressure on the offensive end to close out the first half, however, and cut the deficit from 22 to 13 as it entered the locker room.

Morgan's shooting saved the ailing Minutemen from falling too far behind. The Minutemen shot 10-for-30 in the half, with Morgan's 3's serving as the lone UMass outside shots. Gurley was limited to a pair of points in the half.

The Minutemen were ghosts on 3-point defense in the second half, as DU shot 6-for-13 from beyond the arc. Shots seemed to rain down whenever UMass looked to mount a comeback.

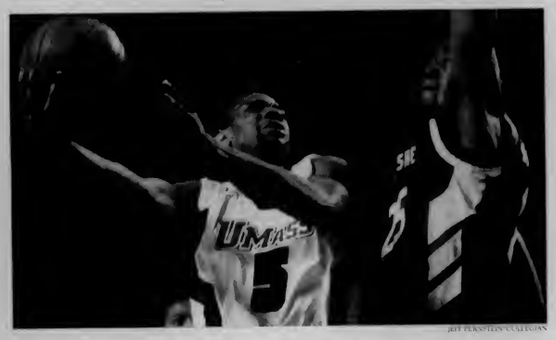
With four-straight losses hanging on their shoulders, the Minutemen travel to face rival Rhode Island in Kingston on Saturday and will look to try and rebuild a season that started off positively.

"I think we worry as coaches everyday, whether you're winning, losing, no matter when it is," Kellogg said. "It's probably just a normal train of thought for a college coach, but I want to make sure that these guys are upbeat and say that the season is still here ... I think every game is winnable if we play well, and let's get our act together and go for it."

Herb Scribner can be reached at hscribne@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Senior guard and leading scorer Anthony Gurley (12) controls the ball in Wednesday's game against Duquesne. The Minutemen went on to lose, 81-63, as Gurley was held to nine points on 3-of-13 shooting.



JEFF BERNSTEIN/COLLEGIAN

Rookie guard Jesse Morgan (5) looks to score against Duquesne. Morgan, whose nickname is "Takeover" for his ability to control games, scored a team-high 14 points off the bench for UMass.

Freshman guard Morgan shines in blowout loss to Duquesne

By Jay Asser
Collegian Staff

Despite dropping its fourth consecutive contest to Duquesne, the Massachusetts men's basketball team received a surprising performance from an unlikely source Wednesday at the Mullins Center.

In 18 minutes off the bench, freshman guard Jesse Morgan tallied a team-high 14 points. Along with Morgan, sophomore forward Raphiael Putney scored 10 off the bench on a night when leading-scorer Anthony Gurley struggled to find his stroke, managing just nine points in the loss.

The absence of sophomore guard Freddie Riley, who suffered an ankle injury last game against George Washington, opened the door for Morgan to get on the court.

"It's just confidence," Morgan said of his outing. "It gives you confidence when you're able to help your team and put in that situation. It gave us confidence as a whole."

When Morgan entered the contest, UMass trailed 32-10 to the Dukes with four minutes, 57 seconds remaining in the first half. To close out the period, Morgan nailed both of his long-range efforts, taking six points into the intermission with the Minutemen trailing, 38-25.

Morgan earned more playing time in the second half, remaining on the floor for 13 minutes. He continued to be aggressive, scoring eight points on 3-for-8 shooting and nabbing two steals.

"He's finally worked hard in practice to where he deserves some time, I'm not sure I was going to play him 18 minutes," UMass coach Derek Kellogg said of Morgan. "I told him before the game, 'If you go in for a minute or two each half, be happy, come in, work hard and give us a little bit of a boost.'"

After biding his time, Morgan's opportunity came after playing 30 total minutes prior to Wednesday. In his limited time, he shot 5-for-17 from the field and 1-for-9 from behind the arc. While he tallied one point off a free throw in his collegiate debut on Dec. 12 against Central Florida, his best performance of the season came against Central Connecticut on Jan. 3, when he recorded five points and hit his lone 3-pointer.

Following his transfer to UMass in the winter of 2009-10 from Seton Hall, where he signed his National Letter of Intent, Morgan beeame eligible to practice with the team on Dec. 19 of last year.

In high school, Morgan displayed his ability to score the ball, averaging 28 points per game for Olney High School in his native Philadelphia. That total was third-best among city-league players, and Morgan was selected First Team All-City.

While Morgan had a breakthrough performance Wednesday, he admitted he still needs to continue working and learning to be a better all-around player, espeially as a freshman.

Nevertheless, his outing showed Kellogg he can trust Morgan for more minutes going forward with his versatility of playing and guarding the three guard positions.

"He gives us one more scoring option and a guy who seems to be able to drive the ball to the bucket and make plays for others," Kellogg said.

After dropping four-straight games, the Minutemen currently stand at 13-11 overall and 5-6 in the Atlantic 10. With five games left on the regular-season schedule, Kellogg said he might switch up the game plan and allow the younger players to play and be more aggressive down the stretch, rather than trying to grind out victories.

"I'm a big fan of energy and guys that play hard," Kellogg said. "I'm kind of at a crossroads a little bit of how I want to play here the last five games."

Atlantic-10 Championships await UM track and field teams

By Stephen Sellner
Collegian Staff

It all comes down to this.

The Massachusetts men's and women's track and field teams are looking to build off of their regular season accomplishments as both prepare for this weekend's Atlantic 10 Championships in North Kingston, R.I.

"Every team would like to have momentum on their side going into a big event," UMass men's coach Ken O'Brien said. "It has to be a plus."

The men are coming off of their most impressive outing of the season at Saturday's Valentine Invitational in Boston. The Minutemen placed a combined 17 qualifiers for the New England and IC4A Championships in the non-scoring affair.

The women's team has received phenomenal performances across the board throughout the 2011 season. UMass women's coach Julie LaFreniere expects her team to put forth its best effort heading into the crucial meet.

"We expect all our athletes...to compete with confidence and to keep their composure during competition," LaFreniere said

Tyler Cotto has been the model of consistency for the Minutemen throughout the season. The Holliston, Mass. native has finished in the top two in his last three races in the 55 and 60-meter hurdles and will look to lead the way along with his fellow seniors in the A-10 Championships.

"Tyler, as well as several other captains, has done a great job for their team, not only in their events but in the locker room," O'Brien said. "We do not want any of them to change a thing."

Kevin Spieler anchors the Maroon and White shot put unit and weight throw units. The senior was one of the many competitors who shined last weekend, as the Attleboro, Mass. native qualified for the IC4As after throwing the third farthest toss in school history in the weight throw.

The women's side will be relying heavily on another breakout performance in the shot put.

Nalis Mbianda has made her presence felt of late in the event, finishing second, third and first in her last three meets, respectively. The sophomore is only scratching the surface of her potential for the future, however another superb outing out of Mbianda will be an important factor for the Minutewomen.

Rachelle Bourque will compete alongside Mbianda, as the two make a dynamic duo in the shot put. Throwers coach Darcy Wilson has been an integral part of the two sophomores' development, helping the pair emerge towards the top of the competition.

Sean Busch will lead the Minutemen in the pole vault over the weekend, hoping to continue his recent streak of strong performances. The senior finished third in Saturday's Valentine Invitational, one week removed from being named the UMass Athlete of the Week after finishing atop the leader boards at the Giegengack Invitational.

Zachary Koncki represents a dual-threat for the Minutemen, competing in both the long jump and the 60-meter hurdles. The junior was phenomenal last weekend in the long jump, emerging on top with a personal best mark of 23-0.75, while also finishing ninth in the 60-meter hurdles.

Providing senior leadership for the Minutewomen is Gina Perno. The mid-distance runner finished 10th in the 800 meters on Friday with a time of 2:12.62.

LaFreniere expects her seniors to excel this weekend, running high on the excitement of conference championships.

"The seniors have remained [focused] and excited for this weekend of challenging [competition]," she said. "They are proud to represent UMass."

The 500-meters will showease a trio of breakout performers on the women's side. Michelle Jenssen, Deanna Julian and Erika Unger each placed in the top 10 on Friday and will hope to recreate similar success this weekend.

Last year's A-10 championships saw the men's team finish seventh of 12 teams, as Charlotte and Dayton tied for first place. The women's team fared better in the standings with a third place showing, finishing behind eventual A-10 champions Temple.

"I will expect they will give everything they have, like they have done the whole season," said O'Brien about his hopes for the men's team. "We'll gladly take whatever comes our way if we do that."

"We expect them to believe in themselves and perform to their abilities," LaFreniere added, commenting that she does not believe the additional pressure will faze her team. "They are prepared to step it up a few notches from the regular season competitions."

Stephen Sellner can be reached at ssellner@student.umass.edu.

IBM's super comp. Watson developed in part by UMass

By Tim Jones
Collegian Staff

Watson, the super computer developed by IBM, recently dominated the game show, Jeopardy, in a three-day tournament Wednesday night, beating previous famous champions, Ken Jennings and Brad Rutter. A project over eight years in the making, Watson was developed by a variety of teams and scholars, with University of Massachusetts contributors among them.

James Allan, UMass alumnus and co-director of the Center for Intelligent Information Retrieval (CIIR), said that, around the year 2000, IBM wanted to develop a technology that could acquire information at a rapid rate. Allan was one among the team for information retrieval.

"We wanted to work on technology that underlies a search engine," he said. "How do you find information quickly?"

Allan never actually worked on the computer; he worked on the technology that was used by the machine.

Pallika Kanani, a UMass graduate student, helped develop the technology while working on an internship with IBM last year.

She said she was personally involved in testing the software.

"I worked on applying logic techniques and to help the AI learn by examples," she said.

"I also helped with practice matches and integrating algorithms."

Multiple UMass faculty members and graduates helped to work on the technology including computer science doctoral alumni Eric Brown, John Prager, Chang Wang, research assistant professor David Smith and graduate student Elif Aktolga.

Watson ended up dominating the tournament, with a total winnings of $77,147. Jennings, whose total earnings over his reign as champion totaled $3,172,700 came in second with $24,000 and won a prize of $150,000. Rutter placed in third with a total of $21,600. Placing first in the tournament earned IBM a $1 million prize, of which, half was donated to World Vision and World Community Grid. Jennings and Rutter donated half of their earnings also.

The tournament saw the three players in a consistent struggle against each other. The two human opponents used the strategy of buzzing before coming up with an actual answer, one that seemed to serve them well.

Allan said Watson's overall win could be credited in part to its rapid buzzer skill, being able to register before the other contestants could get the chance.

Questions seemed to be divided among the contestants, with Jennings and Watson neck-and-neck through the first night and Rutter shortly behind. However, this eventual lead was lost as Watson was able to successfully answer a series of questions as the nights progressed.

Watson noticeably struggled with questions involving a sense of wit and some including politics, but Allan said there are factors that are components to every question.

"Some types of wit can be spotted pretty well. It's all about wordplay," he said. "With every question, there is a restraint word that gives the right clue, but sometimes it's just going to fail."

Kanani said she didn't immediately receive the results of her work, but was happy when Watson won the tournament.

"I haven't seen it since working on it a year ago," she said. "I'm very excited though. I thought it could go either way."

Allan wasn't expecting the total outcome.

"I was surprised, though, I didn't really think it made good television," he said. "Watson had a clear advantage and I'm really impressed it was able to find answers that fast."

Although Watson was able to triumph over his human opponents, IBM has claimed they are not intending to create a super computer that could become a sentient being that could cause chaos, but rather provide answers for questions in need.

In the wake of what seemed to be an inevitable defeat on Wednesday's broadcast, Jennings decided to bring some humor into his final jeopardy answer, following his response with, "I, for one, welcome our new computer overlords."

According to the New York Times, IBM's future plans include a joint project with the University of Maryland and Columbia University to create a cybernetic physician's assistant using Watson's technology.

IBM will also work with Nuance Communications to include voice recognition for the new medical project, which may be complete before the end of 2012.

Kanani is proud of the work her and her fellow colleges put into the project.

"The best part of this was all of these researchers who put everything else on hold," she said. "This was an extremely dedicated team from all over that did this."

Tim Jones can be reached at timothyj@student.umass.edu

Ken Jennings joked with his answer in the final round in Jeopardy, knowing that the supercomputer Watson was most likely going to win.

SGA adds vice president position

By Sam Hayes
Collegian Staff

The Student Government Association Senate voted to create the Office of the Vice President of the SGA for 2012 Wednesday night during their weekly assembly.

The original vice presidential motion was presented Dec. 2 and was tabled and abandoned after vocal opposition from the Residence Hall Association.

Legislation author, SGA Senator Zac Broughton and the Administrative Affairs Committee retooled the motion, taking out parts regarding powers the vice president would have with the RHA and student trustees.

"It is similar [to the original motion]," said Administrative Affairs Committee Chair Nick Barton, "but this is a new motion."

"I'm relieved to finally get it passed," said Barton, who explained that the RHA part was "not passed or popular," so they took it out. The new vice presidential motion passed without debate.

The motion, set to take effect this spring, was amended at the last minute to take effect during the 2012 spring elections with the support of Barton and Broughton.

"It was a timing issue," Barton said about the last-second change.

The 2011 elections are taking place Mar. 8, 9 and 10 and Barton said there was not enough time.

"It's not fair to students to elect a position that did not exist," he said, "it's hard when people are already running for president … and it [would be] very difficult on the election commissioner."

The vice president will replace the former position of chief of staff and will take over the funds allocated to that position.

The vice president will take over for the president if the president is incapacitated or whenever the president empowers the vice president to fulfill his duties. The vice president is also a delegate to area governments, presidential appointment coordinator and chief advisor to the president.

The vice president will be elected with the president, on one ticket, not as an independent candidate.

"The position isn't going to radically change anything," said SGA President Brandon Tower, who was not in attendance for Wednesday's meeting, "but in terms of procedure, it makes sense."

"This will provide for a much smoother transition in [the] event [that the president vacates his office] and ensure continuity in policy direction," he said.,

He added, "Almost all other student governments have at least one vice president if not multiple ones, and there's good reasons for that. We should be no different in that regard."

Also during Wednesday's meeting, the University of Massachusetts system-wide budget was discussed.

Student Trustee Mike Fox explained that with $54 million systems budget deficit, fees will rise either once this year and then again next year or up 14 percent for the next several years.

Fox said, "We need to let the state know that we are an asset … the burden on us is to sell the pitch … this is an investment for the state."

A working version of the textbook swap website was unveiled before the senate with screenshots of various aspects of the site. The site will act as a UMass-only Craigslist for books, requiring a UMass student email address to access.

Senator Nathan Lamb reported there will be a second round of orientation for all freshmen the weekend before school starts. Freshmen will move in on Thursday and have events Fri., Sat. and Sun..

The freshmen will have a common reading book, "A Hope in the Unseen" by Ron Suskind, on which orientation events will be based. The weekend will be structured similarly to the Commonwealth Honors College Welcome Weekend, and will raise fees for orientation from $175 to $300.

Upperclassmen will no longer be able to move in early. They cannot move in prior to the Sunday before class starts.

Sam Hayes can be reached at sdhayes@student.umass.edu.

The Student Government Association recently voted on the the office of the vice president office. The vice president will share power with the president.

Orientation will now have a different style and will have an increased price from $175 to $300. The orientation will now have a second round as well.

Don't fall for 'divide and conquer' tactics

Mike Tudoreanu

It's an old tactic: Get your opponents to fight amongst themselves so that they will get weaker and you can pick them off one by one. Gaius Julius Caesar coined the phrase "divide et impera" – divide and conquer – to describe it. He used it in his war against the Gauls, but in the millennia since then it has also become a very common political strategy. Again and again, the ruling classes of various societies at various times have used this trick to keep the people in line, to make ordinary people fight each other both literally and figuratively and forget about the guys who are really in charge. It continues to be used today all over the world, sometimes with great success. But sometimes people figure out what's going on, and refuse to be divided.

Capitalists and politicians love to use whatever excuse they can find to get different groups of workers to be suspicious, afraid and hostile to each other. In the Middle East, and also increasingly in the West, they are currently trying to instill hatred between Christians and Muslims. They are helped in this task by the existence of real religious extremists who really are crazy. The media gives them excessive attention; they are made to look much more powerful than they actually are and books get published telling the adherents of one religion that everyone in the other group is secretly out to get them. Right-wing talk shows in the United States say that there is a secret Muslim plot to destroy America. Right-wing talk shows in Pakistan say that there is a secret Christian plot to destroy Pakistan. Some people fall for it, angry crowds protest against Muslims' right to free speech in New York City or Christians' right to free speech in Karachi; each side sees the other side's anger as a confirmation that all the people in the other religion really are dangerous and scary. We end up with a self-reinforcing spiral of hate and the capitalists who started it all laugh all the way to the bank as they use the excuse of imminent danger to start profitable wars and cut social spending.

And how do they justify this attempt to roll back the clock to the age of robber barons? They say that public sector workers are overpaid and get too many benefits.

But, fortunately, it doesn't always work like that. Last December, there was a bomb attack on a Christian church in Egypt. One might expect that this would increase sectarian tensions and mistrust between Egypt's Christians (who make up 10 percent of the population) and Muslims. But in fact, the opposite happened. Weeks later, at Christmas, thousands of Muslims flocked to Christian churches and formed protective human shields around them in an impressive display of solidarity. They said they were ready to die for their Christian neighbors in case the fundamentalists tried to stage another attack. "We either live together, or we die together" was the slogan. The fundamentalists were nowhere to be seen that night. They did not dare face the people. A month afterwards, as millions of Egyptians of all faiths took to the streets to bring down Hosni Mubarak, inter-religious solidarity was taken to new heights. Christians defended Muslims during their noon prayers in Tahrir Square when it looked like Mubarak might send his thugs against them at any moment. Muslims attended an open-air Christian service, also in Tahrir Square, a few days later. Signs and graffiti depicting a crescent and a cross were among the symbols of the revolution.

The people of Egypt were not divided, and as a result they were not conquered.

There is a lesson here for America, and it's not just about religion. Our own rulers are trying to divide us in many different ways. Recently, there have been blatant attempts to turn private sector workers against public sector workers (especially teachers). After spending hundreds of billions of dollars to bail out the banks, after extending Bush's tax cuts to the super-wealthy, the American ruling class has apparently decided that the time has come to make workers pay the bill – especially public workers. So Obama instituted a wage freeze and state governments are busily chopping away at the wages, benefits, pensions and union rights of public workers.

The attack on the working class has reached an intensity not seen since the 1920s, with the Republican governor of Wisconsin trying to ram through a law that basically takes away the collective bargaining rights of public sector unions. And how do they justify this attempt to roll back the clock to the age of robber barons?

They say that public sector workers are overpaid and get too many benefits. That's right. Not Wall Street bankers. Not CEOs with their multi-million dollar bonuses. No, no. Schoolteachers are the ones making the real money. They're the reason the government is out of money – not, you know, bailouts for corporate America, tax cuts for the rich, or endless wars. This may sound insane (because it is), but there is a good reason why they're suddenly trying to paint public sector workers as fat cats. The point is to divide the working class. The point is to make workers in the private sector hostile to their neighbors in the public sector.

Whether the wedge being used is religion or employment status, the strategy is the same: divide and conquer. Corporate America knows that it cannot fight all American workers all at once. So they must turn us against each other if they are to win. And if we are to win, we must stand together just as the Egyptians did.

Point-Counter-Point

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

Watson: Skynet or C-3PO?

Big Blue a bringer of death

Eddie Hand

IBM doesn't watch enough movies. If they did, they'd know building a humorless, robotic trivia genius/murder-machine has doomed humanity. That's right, Watson has doomed us all. Good going, Alex Trebek. Your avarice and desire for a more entertaining form of competition pitting man against machine has planted the seeds of destruction for humanity.

Go ahead and laugh. Mock my warning. We'll see who's laughing when the robot overlords have kidnapped you to use as a battery or killed you for some twisted robot reason. You think this is racism? Ha. Robots aren't a race. They are unfeeling, automatons incapable of love or friendship with nothing but malice at their evil, unfeeling core.

You might think that this is absurd and that I've lost touch with reality; after all, how could a robot designed to play "Jeopardy" be a menace to society? This is why you will be the first to be turned into a battery. We'll see who's laughing when the machines show up at your house with a chain saw and a laser gun. Watson is evil and here are a few reasons why:

Firstly, Watson doesn't know how to laugh – after falling victim to a glitch in its programming, probably laid intentionally by a well-meaning programmer, human opponent Brad Rutter cracked a joke. Watson, the cold, calculating monstrosity it is, could not see the humor in this, which leads me to my next point.

It lacks voice recognition; for instance, at one point in their first showdown, human hero and future resistance leader Ken Jennings answered a question wrong. Watson then repeated with the exact same answer, unaware that the suave and debonair Jennings had said it not five seconds before.

Like with the Terminator, this means our pleas for mercy and compassion will fall on deaf ears as it ruthlessly guns us and our families down with some sort of giant death ray.

Thirdly, Watson's wagering strategies are either completely random or very deliberate. It might be toying with us like a cat plays with a mouse before eating it. Watson inexplicably wagered $947 on Final Jeopardy and put down such completely random numbers for The Daily Doubles that it prompted Alex Trebek to say "I won't even ask." These means that Watson is unpredictable: what happens if some error in its algorithms gives it the idea to build an army of homicidal followers and take the president's daughters hostage, or hack into our weapon computers and launch nukes for its own diabolical robot reason?

On top of that, its design reminds me a little of HAL from "2001: A Space Odyssey." That can't be a good thing and it reinforces the unpredictability theory, since HAL was so unstable.

What's next after this? Which hallowed and iconic American institution will fall victim to the legions of soulless machines? Will it be "Wheel of Fortune?" or "The Price is Right?" And then what? When do we start instituting them in dangerous human jobs like mining or oil rigging?

They are already taking over our game shows; the next logical step is the employment of hard working Americans. I, for one, will not stand for this when a communist, Nazi, Muslim, Zionist, conservative, jewel thief, Catholic, incredibly handsome, terrorist, lawyer, author, explorer, charming rogue, goody two-shoes, excellent dancer, Beirut champion like President Barack Obama is already taking away jobs from Americans for his own insane liberal games.

Another worrying thing is that the similarities to Brainiac from the "Superman" franchise are remarkable. For those of you who have no idea what I'm talking about, Brainiac was a super computer that wanted to record all the knowledge in the universe and then destroy the source. As a trivia robot, Watson can and probably will find this appealing.

Moreover, Watson is totally smug when answering. It has no respect for the achievements of its opponents because it is an emotionless bringer of death. It knows no honor and has no integrity. Such arrogance says that it looks down on all humans and considers them inferior.

There are probably more reasons than this. It might be worth pointing out that as it stands, Watson is not self aware so fearing it would be sort of like being afraid of your car. It's only a matter of time before scientists take it too far and we are forced to hide in cities dangerously close to the center of the earth to escape their cold, murderous, clutches.

Be prepared.

AI makes our lives better

Curtis Bloomfield

It's all about the ratings, baby.

"Jeopardy" has always been a good, intense and challenging show. This show gets the audience, the viewers and the participants' minds racing for the answer. "Jeopardy" is a game of speed, wisdom and good old fashion memory where the best person wins. Recently the show has taken the competition up more than a few notches. IBM's super computer Watson has taken the game show by storm. Feb. 14 marked the date that Watson took on two of the best of the best to ever compete on the program, Ken Jennings and Brad Rutter.

This epic event has brought to life what so many of us love to watch and that is man versus machine. What could be more interesting than watching humans compete against a man made supercomputer? Some may have not so positive views but the viewers worldwide beg to differ.

Man versus machine has set records in the history of "Jeopardy" ratings. The first day of Watson racked up a household rating of 8.7 and climbed to an even more astonishing 9.5 for the next day. The people of the world were all tuned in to watch the greatest humans to ever grace the "Jeopardy" stage take on what has to be one of the biggest recent improvements in artificial intelligence history. Not only is Watson a thrill to watch, he is also an example of how far technology has come. It presents a prime example of where our advancements in artificial intelligence can take us in the near future.

How can Watson be seen as a sign for future advancements? Well artificial intelligence is becoming more and more useful in the business world. They are able to perform functions a lot faster and more efficiently than humans can.

According to Referenceforbusiness.com, "Senior managers in many companies use AI-based strategic planning systems to assist in functions like competitive analysis, technology deployment, and resource allocation. They also use programs to assist in equipment configuration design, product distribution, regulatory-compliance advisement and personnel assessment. AI is contributing heavily to management's organization, planning and controlling operations, and will continue to do so with more frequency as programs are refined."

When we take a deeper look at all the possibilities of having artificial intelligence at Watson's level or greater, we can see that they are an immense number of benefits.

Instead of requiring humans to risk their lives mapping out, drilling and searching for natural resources, we could have an artificially intelligent machine perform all of these functions. In addition to cutting back on the human risk factor, artificial intelligence could contribute to the speed at which things are finished. There have been numerous times when someone has fallen asleep at the wheel of a car or taken a nap on the job.

If we had artificial intelligence with Watson's capabilities, all those hard working nap takers could rest knowing that the work they should be doing is being taken care of. Due to movies such as "The Terminator," "The Matrix," many are afraid that if we become too dependent on machines then they will take over the world. This notion is absolutely, positively far-fetched and needs to be immediately dropped. There is no way man's potentially new best friend would ever think of harming anyone. In fact many machines of artificial intelligence have been helping humans stay safer. Humans have acquired many injuries in factories and such, but now we have intelligent machines to take us our of harms way.

According to Referenceforbusiness.com, "Robots are being utilized more frequently in the business world. In 1990, over 200,000 robots were in use in U.S. factories. Experts predict that by the year 2025, robots could potentially replace humans in almost all manufacturing jobs. This includes not only the mundane tasks, but also those requiring specialized skills. They will be performing jobs such as shearing sheep, scraping barnacles from the bottoms of ships, and sandblasting walls. However, there are jobs that robots will never be able to perform, such as surgery. Of course, there will still be a need for individuals to design, build and maintain robots. Yet, once scientists develop robots that can think, as well as act, there may be less of a need for human intervention. Thus, the social ramifications of AI is of major concern to people today."

Watson and his companions are the best things that could possibly happen to the human race. Maybe they are not perfect all the time, but who in this world is? You can only expect a machine made by imperfect beings to make mistakes sometimes too.

'Metropolis' gets new look, sound

By Brian Canova
Collegian Correspondent

Using 13 differently tuned horseshoes, 157 plumbing pipes, pots, pans, junkyard findings, musical saws, as well as accordions, clarinets, keyboards and drums, The Alloy Orchestra will perform live at the Academy of Music Theatre in Northampton. The performers will accompany a screening of Fritz Lang's seminal 1927 film, "Metropolis," on Sunday night.

Filmed during a stable period of the Weimar Republic, "Metropolis" presents a dissuading look into the future at a world where a mechanized society and a rich ruling class preside over an economically enslaved working class.

The Alloy Orchestra, a three-man ensemble from Cambridge, Mass., began performing their "Metropolis" score 20 years ago at the Coolidge Corner Theatre in Brookline, Mass. Since then the unconventional orchestra has written 28 scores for silent feature films and played them at over 500 performances worldwide, including regular appearances at the Telluride Film Festival in Colorado.

When Fritz Lang premiered his harrowing dystopian masterpiece in Berlin in 1927, the film ran approximately 153 minutes. Since then the film has never again been seen in its entirety. By the time Paramount brought the film to the United States, it had been slashed to 90 minutes in the interest of marketability.

Since then numerous efforts have been made to restore the film, and in 2001 a 124-minute version was produced and declared definitive. Then, in 2008 to the shock and awe of the cinematic community, a nearly complete 16 mm duplicate offering 25 minutes of additional never before seen footage was unearthed in the dusty basement of a small Buenos Aires museum. Overseen by the F.W. Murnau Foundation in Germany, scenes from the 16 mm negative were spliced with existing footage and the near complete copy of the film was used as a blueprint for correctly ordering many of the scenes, which until that point had largely been a matter of speculation. Clocking in at approximately 146 minutes, this version will be screened Sunday night.

The viewing community embraced the massive addition to the film with open arms, complete with new scenes, subplots and characters. On the other hand, its reception was bittersweet with the Alloy Orchestra who immediately took to the task of adapting and stretching their score to fit the additional footage. In many instances, the additions amounted to short reaction shots or longer takes, according to Ken Winokur, one of the orchestra's two percussionists.

Winokur explained that the Alloy Orchestra's score puts the film in a modern day context for viewers, bringing the director's idea of the film to the forefront and joining the 1920s viewing experience with one from 2011.

Threading together elements of socialist workers versus capitalist conflicts, expressionist horror of modern machines, romance and mythology, Lang's masterpiece has continued to garner more appreciation with age. Originally critics were divided on the film, and so was Lang himself, calling the film silly, stupid and unbearably trivial and naive, according to Holger Bachmann in an essay on the film. But with time the film has come to mean something much more, both in its profound message and its far-reaching impact on the world of film, inspiring later like-minded films such as Ridley Scott's "Blade Runner."

"Metropolis" represents the archive of all the fears and dreams of a mechanized society," Winokur said. Winokur promised that those in attendance this Sunday will be treated to a musical score informed with more than 80 years of musical development. Winokur's only complaint about the film. The ending is too optimistic.

"Metropolis" plays with the Alloy Orchestra this Sunday, [illegible] at the Academy of Music Theatre in Northampton as part of the Four Sundays in February Series.

Flight of 'The Eagle' fails to soar

By Brian Canova
Collegian Correspondent

"The Eagle" exceeds expectations. It's got adventure, tension, surprisingly picturesque cinematography, and even a solid soundtrack elevating the excitement with a mix of Celtic music and tribal drum lines. But it fails to connect, and, in the end, it is just Channing Tatum prancing around in a toga and a frat boy haircut waxing poetic ry about honor and redemption.

"The Eagle" is directed by Kevin McDonald ("State of Play," "The Last King of Scotland"), and is based on the novel "The Eagle of the Ninth" written by Rosemary Sutcliff.

Circa 200 A.D., Marcus Aquila (Tatum) takes command of a fortified outpost on the northernmost barrier of the Roman Empire's territory. A descendent in a long line of generals and commanders, Aquila enjoys high rank and prestige at a young age, and although never explicitly stated, from the reactions and expressions of his fellow men, this is probably based more on lineage than actual merit. As one might anticipate, the film wastes little time letting Aquila prove otherwise as he risks his life to save his men in an anti-climactic blaze of glory.

The first half of the movie is very hard to take seriously. It lacks any semblance of an antiquated feel, tone or even look in many parts. It's the film's biggest pitfall and it applies across the board, from the set design to the wardrobes, and above all else, the dialogue. The candor of the characters' speech is all wrong, or at the very least, doesn't fit with what we've come to expect from other likeminded films set in this time period. Tatum is mockable in every possible way, from his haircut to his feigned attempts at conveying impassioned emotion and enthusiasm. The highlight of the first 30 minutes is Donald Sutherland, playing Aquila's uncle, who's always a welcomed addition on the screen, even if it's always in exactly the same role.

After his moment of heroism in which he sustains serious injuries, he's brought away from the outermost post to the heart of the empire, where he receives medical treatment and around-the-clock care at his uncle's home. Medals and honors are awarded to him for his deeds, and he's also given an honorable discharge in light of his physical injuries. This doesn't go over well with Aquila, who refuses to accept this impediment to his thirst for conquest, and drives to restore his family's good name (Aquila's father led a legion of men past the northernmost rim of the empire and they were never seen again). Tatum's acting in this scene is particularly laughable although the film makes it past it.

Once Esca (Jamie Bell) is introduced as Aquila's slave, the plot picks up and they venture off past the northern barrier of Rome's territory, trekking through unrelenting rains, heavy woods and snow capped mountain ranges. Their objective is to find and bring back to Rome the prized golden eagle that had been carried into battle throughout Rome's history and was lost with his father's legion. If Aquila can't return to his post as Commander to restore his family's honor, he can restore it with the safe return of the fabled golden eagle, goes the logic.

Their journey takes them across England's countryside and this is where the cinematography is allowed to shine. Wide shots of rolling hills and stretching plains before mountainous peaks dotting the horizon characterize the images of their travels. The last half of the film takes on a feel in stark contrast to the first half, and does better at drawing the viewer in. Conversations between Aquila and his slave add bits of depth to the storyline, although the film chokes on its own lack of morally praiseworthy conventions in the interest of distilling any deeper or greater wisdoms from its plot. But at the same time, it isn't trying to draw them either.

If you're at all allured to the film from its trailers or its advertisements knowing who holds the leading role, it's a fair bet that you'll like what you see. But for fans of Gladiator or the TV series, "Rome," or for that matter, history buffs of any sort, rest assured this is not the film for you.

Barefoot Truth finds themselves on familiar soil

By Amy Larson
Collegian Correspondent

Barefoot Truth will take the Iron Horse stage twice this Saturday night, Feb. 19. They will perform a feel-good, acoustic set first at 7 p.m., then allow Jamie Kent & The Options to open up for their second electric set at 10 p.m. Their stop in Northampton is part of a Northeast tour showcasing their spring 2010 release, "Threads."

The Mystic, Conn. bubbly, folk-rock group recorded "Threads" in both Boston and Amherst ass. Lead guitarist Jay Driscoll stated that one of the goals when recording the album was to "create an album full of songs that work well in a live setting." And they succeeded. Fans embraced the energetic tunes and accompanying positive lyrical messages. "Threads" even passed Dave Matthews Band at one point last year on the iTunes Rock chart.

Barefoot Truth began in 2003 as acoustic duo of current lead vocalist and drummer Will Evans and guitarist Driscoll. Driscoll, who graduated from the University of Massachusetts in 2007, recalled composing some of their first songs in the stairwell of John Quincy Adams Hall, because his "quiet floor" had no tolerance for their rocking. Being at UMass was also a good time for the two to develop their fun, charismatic stage presence. Driscoll's earliest memories of performing were on the steps outside of Berkshire DC playing Britney Spears and Backstreet Boys songs with, interestingly enough, the basketball team. "Usually we would have a crowd," he nostalgically recounted.

The band made the bold, but wise decision to make their act a full-time commitment after graduation in 2007. Upright and electric bassist, Andy Wrba, studied jazz at Westfield State University, where he met pianist John Waynelovich Garrett Duffy got his start on harmonica while attending St. Michael's College in Vermont.

So how did an indie band from humble New England beginnings gain national recognition? The answer is the free Internet radio website Pandora.com. To date, Barefoot Truth's track, "Roll If Ya Fall" has about five million views, while Bob Dylan's famous tune "Knockin' On Heaven's Door" has 1.2 million. Their explosive web-based popularity has snatched the attention of USA Today, The Washington Post and the video game Rock Band.

The quintet cites Dispatch as one of their chief influences, covering several of their songs. They've said that they "really looked up to Dispatch for their music and their journey as an independent band." While recording "Threads," they got to live the dream of touring with Pete Francis of Dispatch. He said that it was a "constant thrill" to be able to play BFT and Dispatch tunes while sharing the stage with one of his musical inspirations.

During their live shows, they engage the crowd with happy melodies and peaceful, uplifting messages. The fact that their lead singer happens to also be the drummer never constrains the power of the lyrics. They blend smooth acoustic guitar lines, excited drumbeats and groovy bass lines to create a high-energy sound.

Barefoot Truth enjoys playing colleges and festivals, including Summerfest and the 10,000 Lakes Festival. In 2010 alone, the group played dozens of cities around the country, but Jay Driscoll described the Iron Horse in Northampton as a "special place" and a "cozy and intimate setting for a live show."

Between Barefoot Truth's two acts on Saturday night will be Jamie Kent & The Options. Jamie Kent is a 23-year old singer songwriter local to the Amherst Northampton area. The Options are his jam band style instrumentalists who offer an upbeat tone similar to that of Barefoot Truth.

Tickets for the show are $12 in advance, $15 at the door.

Amy Larson can be reached at alarson@student.umass.edu.

UM looking for 2-0 start against Hawks

By Herb Scribner
Collegian Staff

On Saturday at Al-Marzook Field in West Hartford, Conn., there will be two undefeated records on the line when the No. 16 Massachusetts men's lacrosse team takes on Hartford.

The Minutemen enter into this weekend's affair with two undefeated records in their hands, the first being their season record of 1-0, which featured an 8-5 win against No. 12 Army, and the other being an 8-0 undefeated streak against the Hawks.

Traditionally, Hartford isn't a strong team, but it has been making the climb in recent seasons as it was ranked third in a tough America East division, which includes top 10 teams Stony Brook and last season's AE champ, Albany.

However, UMass coach Greg Cannella isn't focused on how the Hawks are ranked, instead concerning himself with the mindset of his players.

"We don't ever talk about the rankings because in the way the landscape of how college lacrosse is now … it doesn't matter," Cannella said. "If you're not ready to play, you're going to lose. The theme is we better be ready to play."

With an 8-0 record against the Hawks, including last season's 20-10 victory, Hartford won't be looking to take it easy against the Maroon and White, especially after having its most successful season since 2003 with an AE Tournament appearance.

"They'll want revenge, they've got a lot going for them," Cannella said.

In the Minutemen's season opener against the Black Knights (0-1), UMass scored eight goals, which doesn't sit right with Cannella.

"We want to score 50 goals if we can," Cannella said. "I think in college lacrosse if you're going to be successful day in and day out, [you have to] score in the double-digits."

Offensively, the Minutemen will rely on the same producers as the season opener. Attacker Will Manny will look to build off his goal and pair of assists from last game by continuing to pressure with fellow offensive players including juniors Art Kell, Anthony Biscardi and sophomore Colin Fleming.

"I talked to the offensive guys about the five P's: proper preparation prevents piss-poor performance and that's what we're certainly looking at right now," Cannella said.

UMass has had a week to prepare for Saturday's affair, which will pit them against a Hawks team that boasts Tim Fallon, a second team preseason All-American who is not only a tough face-off player, but also athletic enough to spread the midfield.

"Fallon is a guy that can win it to himself, he's athletic up the field," Cannella said. "Guys like that, you try to minimize their damage [and] what they can do to you the best you can."

Along with Fallon, UMass has its eyes on four of last season's top five scorers in the AE conference, including junior Aidan Genik, who tallied 36 goals.

Hartford's goalkeeper, Scott Bement, who earned second team all-league honors last season, will be in the cage on Saturday and will be a tough force for the Minutemen to overcome.

Junior attacker Mike Fetterly (16) cradles the ball in UMass' 8–5 victory over No. 12 Army last week. The Minutemen hope to start 2–0 this season when they face the Hawks.

Another challenge for UMass will be competing away from home, where it has spent a majority of its time this season. Other than a scrimmage at St. John's, UMass has stayed at Garber Field through attrocious weather and its first win.

"The stadium's a different feel than Garber," Cannella said. "There's a certain comfort level for us most definitely at Garber Field and that's a big challenge for this weekend."

The Minutemen will begin their head-to-head battle with Hartford at 1 p.m. on Saturday. Following the game against the Hawks, UMass will be back at Garber Field for its next two games against Ohio State and No. 20 Brown.

Herb Scribner can be reached at hscribne@student.umass.edu.

Minutewomen play home opener Sat.

By Jackson Alexander
Collegian Staff

On Saturday afternoon, first-year Massachusetts coach Angela McMahon will lead the Minutewomen into their home opener against Vermont.

The game will be McMahon's first home game in Amherst since the 2008 season, when she served as an assistant coach under Alexis Venechanos, who took the head coaching job at Ohio State during the offseason.

"We love playing at home," said McMahon "I think it's a great environment, and being able to play in McGuirk Stadium is awesome, so we're definitely excited to open up at home."

On Wednesday, the Minutewomen traveled to Holy Cross and pulled off a 12-10 overtime victory in their first game of the season against the Crusaders.

The UMass attack was led by Haley Smith and Danielle Pelletier, who each recorded hat tricks. Jackie Lyons contributed two goals and an assist as Nina Sarcona, Lauren Terracciano, Tanner Guarino and Jesse O'Donnell all found the back of the net to round out the scoring.

Coach McMahon was pleased to see a large number of players step up and contribute offensively. McMahon knows that defending Atlantic 10 Player of the Year, Lyons, needs help from others if the Minutewomen are going to make a run at their third straight A-10 title.

"Something that we've been emphasizing is that everyone that goes on attack is a threat," McMahon said. "If we can get people to step up and contribute like that, it definitely makes us a more balanced team and hopefully more challenging for teams to defend us."

UMass was on the verge of defeat when senior Nazy Kerr came up with a turnover and set up Smith for the game-tying goal with 55 seconds remaining. In overtime, Lyons came up clutch scoring the game-winner with 2.7 seconds left in the first overtime.

Junior goalkeeper and captain Katie Florence stopped 15 shots in goal, nine of which came in the first half.

McMahon extracted both the good and the bad from their season opener.

"I think that we did a good job of controlling the draw controls," she said. "That was a key thing for us, especially in the overtime, being able to maintain possession really put us in a good position to score."

McMahon pointed out two major negatives that the Minutewomen could address in preparation for Saturday's game.

"We need to clean it up a little bit in terms of turnovers, especially in our transition game, as well as limiting our opponent's shots. We gave up a lot of shots."

UMass won despite turning the ball over 12 times and being outshot, 43-27.

"We're just trying to focus on getting better and learning from our past game and making sure we make improvements on some of the things that were issues in yesterday's game," McMahon said.

The non-conference matchup this weekend will be Vermont's first game of the season. UVM plays in the America East conference and were picked to finish fifth in the standings. Similar to UMass, the Catamounts feature a slew of underclassman with 11 freshmen and 8 sophomores.

Vermont's struggles have been well documented. They went 4-11 last season and only managed one win in conference play. In 15 years in America East, the Catamounts are 18-67 in conference play.

This will be the first time the Minutewomen and the Catamounts have squared off since the 2007 season. UMass won the matchup 13-8.

UMass has dominated UVM in the past as the Minutewomen hold a 10-2 career record versus the Catamounts and have won the last eight meetings

The game will kick off at 1 p.m. on Saturday at McGuirk Stadium.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

UMass looks to rebound vs. URI Sat.

By Jay Asser
Collegian Staff

With little time in between games, the Massachusetts men's basketball team will face Rhode Island, the team it last defeated, as it looks to break its four-game skid on the road Saturday.

Since topping the Rams on Jan. 30, the Minutemen (13-11, 5-6 Atlantic 10) have gone into a tailspin, dropping their last four games to bring their conference record under .500.

The sudden drop in play is discouraging for both UMass coach Derek Kellogg and his team. Nevertheless, Kellogg is trying to gather any available momentum to encourage his squad.

"I think that would be important," Kellogg said of gaining anything positive. "I'm not even saying go out and win the game, I'm saying, like, let's play the way we need to play to be successful."

In its latest loss, UMass struggled against Duquesne's high-scoring offense, falling 81-63. With leading-scorer Anthony Gurley unable to get going, the Minutemen caught lightning in a bottle with sophomore forward Raphiael Putney (10 points) and freshman guard Jesse Morgan (14 points), who filled in for guard Freddie Riley, who was out with an ankle injury.

Pleased with the performance of his two young players, Kellogg said following the game that he would consider letting his energy guys get more minutes down the stretch. In practice on Thursday, Kellogg was still undecided.

"I need one more night of sleep," Kellogg said with a smile. "I actually feel really refreshed, ready to go and [to] get things straightened out for the last five games of the regular season."

With Saturday's contest being the third this week for the Minutemen, practice and recovery time has been few and far between. However, facing Rhode Island has made preparation easier.

"It's good that we've played them already because our scouting won't be as much as normally," Kellogg said.

"It's not a blueprint for us but just for the fact that we know what they like to do, where certain people like to be, what they do well, what they don't do well," UMass guard Gary Correia said. "In that regard, it helps that we're not starting fresh, but in terms of the game itself, we have to go out there and play."

While the Minutemen have dropped in the standings since the Jan. 30 matchup, the Rams (16-7, 7-4 A-10) have won three of four games, including a thrilling 71-70 overtime victory over Charlotte on Saturday.

After coming back from a 17-point deficit to force the extra period, Rhode Island won on junior Jamal Wilson's put-back as time expired.

Following the win, the Rams have had a week off, another disadvantage for the Minutemen which Kellogg recognizes.

"They've had a week off and now we have a day to prepare for them so this was a strange week for us having three games from Sunday through Saturday and them not playing Saturday to Saturday," Kellogg said of URI. "They've had a week to get ready for whatever we're doing."

In the last meeting between the two teams, UMass received a game-high 21 points from Gurley in the 64-54 victory. The Minutemen dominated the glass, earning a 43-32 advantage on the boards with Terrell Vinson and Sean Carter each recording eight rebounds. The UMass defense held the Rams' top two scorers, forward Delroy James and guard Marquis Jones, to 15 and 10 points, respectively.

The Minutemen will look for a similar result this Saturday when the contest tips off at 2 p.m. at the Ryan Center in Kingston, R.I.

Jay Asser can be reached at jasser@student.umass.edu.

Junior forward Sean Carter (23) goes to the basket in UMass' 81-63 loss against Duquesne.

UM looks for points against Merrimack this weekend

By Steve Levine
Collegian Staff

With three weeks remaining in the regular season and crucial points to be earned, this weekend is arguably the most important for the Massachusetts men's hockey team.

UMass sits seventh in the conference standings and will play a home-and-home set against No. 6 Merrimack (19-5-4, 13-5-3 Hockey East), who sits third in the conference.

The Minutemen know they can't perform the way they did the last time out against Merrimack, when they were defeated, 11-2, at Lawler Arena.

But that was two weeks ago, and UMass (6-16-5, 5-11-5 HEA) has picked up its play since then. Last weekend, the Minutemen welcomed No. 14 ranked Boston University and Providence into the Mullins Center, where the Minutemen skated to an overtime loss against the Terriers and a 3-3 draw against the Friars.

UMass coach Don Cahoon is impressed with the way his team has responded since Merrimack's rout.

"We had a chance to regroup and fight back and show that we weren't going to wilter," Cahoon said. "So far I've taken a couple of good efforts. Unfortunately, the loss to BU [was] a bitter pill. Saturday night [against Providence], aside from the 10-minute letdown, we played 50 minutes of pretty solid, competitive hockey."

Freshman forward Eric Filiou (10) takes a faceoff against Boston University in a game earlier this season. UMass plays a home-and-home set against No. 6 Merrimack this weekend.

The 10-minute letdown came during the onset of the second period, when UMass allowed three unanswered goals to erase their 2-0 lead. The Minutemen showed their resilience with 18 seconds left in regulation, when senior Chase Langeraap scored the game's final goal, sending both teams to a 3-3 draw after a scoreless overtime period.

With two crucial games ahead against the Merrimack, Cahoon knows his team won't play like it the first time against the Warriors.

"If we don't get a better effort from our end of it [then] there's no sense in playing the game," Cahoon said. "It's beyond [what I expect]. I'm going to demand that that doesn't happen again. Respect their opponent but not fear them and just get after it in a big way."

Cahoon said that a successful weekend would be to win both games. In order to do that, the Minutemen need to display consistent focus and intensity – a problem that has plagued UMass' young squad.

Keeping his team focused has been no easy task for Cahoon, who is not afraid to say anything to motivate his players.

"I don't think I can repeat [some things]," Cahoon said, laughing. "But I'll get their attention when they're standing around. The ultimate goal is [to] get them to be responsible for each other … and not need me barking at them."

The Warriors have been on a tear since late December, having won 12-of-13 games en route to their No. 6 national ranking. Much unlike UMass, Merrimack features a slew of big-bodied, veteran players.

Still, Cahoon knows his team can compete so long as it remains focused.

"They're formidable, they're a terrific team, they've won a lot of games and they've proven their worth throughout the season," Cahoon said. "The 11-2 spread and complete shellacking that we took was a result of our own inability to gather our game together … it was just a total breakdown emotionally [and] physically."

The Mass attack is led by freshman Michael Pereira, who has 10 goals and 12 assists in 26 games. Junior forward Danny Hobbs has picked up his play of late, scoring nine goals and 15 assists in his last 16 games played.

In total, the Minutemen have eight players with at least 10 points compared to Merrimack's 14. The Warriors are led by three forwards who average over a point per game (Stephane Da Costa, Chris Barton and Joe Cucci).

The Minutemen will likely start senior captain Paul Dainton in net for both games. Dainton has 2,961 career saves and is 89 away from capturing the UMass all-time record.

The Minutemen will begin the home-and-home series this Friday, when the puck drops at 7 p.m. at the Mullins Center.

Steve Levine can be reached at slevine@student.umass.edu.

Fire in Baker dorm Sunday leaves students in the cold

By Cameron Ford and Herb Scribner
Collegian Staff

Around 11:30 p.m. on Sunday night, Amherst Fire Department and University of Massachusetts Police Department personnel responded to a small fire in the window well outside of Baker Hall. No one was injured.

Baker's residential director, John Nugent, said the fire department stated that the cause of the fire was a cigarette disposed improperly. He said AFD concluded the cigarette was thrown down the window well outside the main entrance to the building and that the cigarette then ignited dry leaves.

He went on to explain that sparks shot up from the window well, and that someone pulled a box inside of Baker to warn security.

ALEX MORCHER/COLLEGIAN

Amherst Fire Department officials responded to a blaze Sunday at Baker Residence Hall. The reported cause of the fire was a cigarette disposed improperly.

Brent Garnett, an off-campus senior who was visiting Baker at the time of the blaze, was shaken up by the commotion late Sunday night.

"There were sparks everywhere," Garnett said. "I thought it was much worse than it was because everyone was yelling at us to move."

People began filing out of Baker almost immediately and stood in the Baker-Chadbourne-Greenough quad as black smoke and crackling embers spewed from a steam vent adjacent to the Baker lobby access ramp.

Shortly after, resident assistants (RAs) came out and shouted through megaphones that students needed to leave the quad and move to the street level in front of Greenough and Chadbourne.

David Haber-Mattie, who was waiting inside the Greenough lobby with about 20 other Baker residents, said he was in his room on the fourth floor when the alarm sounded. He then evacuated with other residents and spotted the fire as he came outside.

"There were some embers coming out from the basement," he said.

Dennis Hacker, who was standing with the group outside Greenough, said he had just gotten back to his room on the third floor when he heard the alarm sound.

At the time, at least one RA said the building was indeed ablaze. Some students sought shelter from the cold by waiting inside Chadbourne and Greenough.

"I kind of moseyed my way out, and as soon as I came out, people were directing us away from the building," Hacker said. "And all we could see was sparks coming out from underneath one of the vents. It wasn't actually flames; it was just sparks and smoke."

Within minutes of the alarm sounding, units from the UMPD, Environmental Health & Safety, UMass Residence Hall Security and AFD arrived on-scene. The fire was quickly contained and extinguished, and students were allowed back into the building around midnight.

After the alarm was shut off, most of the emergency personnel left. However, an AFD ladder truck remained parked in the Baker loading ramp while two firefighters used a long pole to get a closer look at some of the residue left in the bottom of the steam vent.

AFD claimed that lit cigarettes had been carelessly discarded in the steam vent, which had ignited the dry leaves, grass and other debris at the bottom. The two firefighters also told a group of interested onlookers standing nearby that any debris in the bottom of vents can pose a fire hazard.

Northwestern District Attorney David Sullivan will ask area men Wednesday to pledge never to abuse women at a UMass men's basketball game.

Sullivan asks men to stand against abuse

This Wednesday, new Northwestern District Attorney David Sullivan will lead a group of men and boys in pledging to never commit violence against women at the Massachusetts men's basketball game against St. Joseph's at the Mullins Center.

Sullivan will be joined by some 100 men and boys as part of the third-annual White Ribbon Campaign at the University of Massachusetts, according to a Monday morning release from the University's News and Media Relations Office. The group will come together at half-time of the 7 p.m. game featuring the Minutemen, currently in eighth place in the Atlantic 10 conference, and the Hawks, who sit at thirteenth. The effort is part of this year's "Stand Up and Be Counted" theme to the campaign. It asks men to pledge "to never commit, condone or remain silent about men's violence against women" and serves as "a way for men to show their love for the women in their lives," according to the release.

According to its site, the Toronto, Canada-based White Ribbon Campaign is the world's largest push by men to eliminate violence against women. The campaign has made its way to some 45 countries, also according to its site. It began in the early 1990s in Canada when a small group of men "decided they had a responsibility to urge men to speak out about violence against

Kerry talks wars, econ. in visit to NoHo Sat.

By Matthew M. Robare
Collegian Staff

Sen. John Kerry (D-MA) met with a group of his constituents Saturday at a town hall-style meeting at the Northampton Center for the Arts. The meeting lasted for about two hours and saw Kerry address issues raised by concerned residents of western Massachusetts – some of whom were not happy with the recent record of the Democrats in Washington.

The former presidential candidate's record concerning the wars in Iraq and Afghanistan drew the ire of a number of activists in the room. He was also booed several times over the government's response to America's ongoing financial crisis.

Ben Grosscup, a member of the Amherst Town Meeting, challenged Kerry on the war in Afghanistan. He claimed the United States invaded Afghanistan in order to build oil pipelines from Central Asian former Soviet republics, said that the American military is the most reactionary group in the country and asked Kerry to defend his record on war funding. Kerry responded that Afghanistan was invaded for harboring Osama bin Laden, that the Afghan government would fall immediately if American troops were withdrawn quickly and that he feels the war has kept America safe from threats of terrorism.

"We've managed to protect America from several plots over the past several years," said the senator, who was born outside Denver but has lived in Massachusetts for much of his life.

David Moran, of Springfield, said he was a victim of police brutality and asked how the United States could condemn police attacks on peaceful protests in Egypt while police brutality was going on at home.

"I do think by and large that police officers do a good job in a difficult situation," Kerry said. He added that the United States has institutions in place to hold police accountable for their actions and that if Moran felt that local institutions weren't doing enough, he could always turn to him.

"We have to decide what kind of country we want to be," Kerry said. "[The Republicans] are wrong and we're going to fight them."

Kerry said he has been distressed by Americans' lack of understanding of world affairs and disappointed by what he sees as Republicans' lack of willingness to work on environmental issues.

I have been "dumbstruck by the way the United States as a body politic is oblivious to the world," he said, adding about Republican legislators that he would like to stop "these neanderthals from going backwards."

Kerry said recent political maneuvers in Congress have frustrated him, and that he feels the current Congress is acting in a narrow-minded, irrational manner.

"What I saw on the floor of the last 48 hours of the House churned my stomach," he said. "The lack of thought, intellect and consequence . . . I feel a sense of urgency for our country."

A person in the back of the room asked about the alleged torture and solitary confinement of

Using Skype's new "Skype in the Classroom" feature, educators will be able to bring in guest speakers and class members from far-away locations. Some worry, however, that students may ditch classes in favor of Skype-attendance.

Class in your PJ's? New Skype service enables video-schooling

By Meghan Connolly
Collegian Staff

Recognizing the reliance students today have on Webcam technology to communicate, the online video chat service Skype unveiled a new service last month to help integrate virtual technology into the classroom.

"Skype in the Classroom" will afford educators the opportunity to collaborate across great distances and also will create opportunities for invited guest speakers to join schoolchildren and college students in far-away classrooms and lecture halls via Webcams. While Skyping opens the classroom's door to connecting with experts and educators, the new technology also enables students to attend class remotely. Inevitably, educators and academic institutions will be faced with a perplexing question: should students be allowed to attend traditional classes via Webcam?

Sut Jhally, a professor of communications at the University of Massachusetts, said he believes linking distant thinkers to local classes is a wonderful tool, but cautioned that where there is a loophole, students may have a tendency to exploit it.

"The ability to bring [guest speakers] in from the outside is fantastic," he said. However, he said he does not encourage student attendance via Webcam, calling the idea "strange" and warning that this will "encourage absence." Jhally also predicted that student comprehension of Skyped-in speakers will be difficult to gauge.

"Speakers need to see someone to be able to see a reaction," he said.

Similarly, Kalidas Shetty, a professor of food science, expressed his belief that being face-to-face is at the root of learning.

"Personal interactions are critical for the learning experience," he said.

Shetty said there is a high satisfaction rate for students within his department. He attributed this to the effort he and his colleagues make to get to know their students personally and faculty efforts to create what he called a supportive, interactive learning environment. Though he would not encourage students to attend class solely via Webcam for fear of losing the connection within the classroom, he supports "tools that enhance the learning experience, and anything to benefit a positive outcome." He expressed the belief that as new tools are made available, students should have the freedom to decide how to use them.

Students, perhaps predictably enough, said they welcome the opportunity to attend class in their pajamas, if they so choose.

Olivia Johnson, a sophomore biology major, admitted to occasionally skipping class, but attributed cutting out sometimes to mother nature.

"The thought of trekking across campus in these arctic temperatures is daunting," she quipped.

Kerry addresses wars, spending in Sat. visit

KERRY from page 1

Pfc. Bradley Manning, who is accused of leaking a vast amount of information on the war in Afghanistan through the Web-based government watchdog organization WikiLeaks. The question led to a brief chant of "Free Bradley Manning." In response, Kerry promised, "I will join with John McCain and we will make sure it stops," to huge cheers.

Kerry also spoke extensively about government spending and the economy. He said most of the current budgetary fight in Congress is over 12 percent of the entire budget and that most of the budget is composed of social security, Medicare, Medicaid and defense spending, which will not be slashed.

"What is spending, what is investing?" he rhetorically asked. "If we turn around and cut mindlessly, we're going to eat the seed corn of America."

The senator said he believes the economy was over-regulated and over-litigious. He talked about the need for infrastructural investment, such as building a more cohesive national electric grid, reducing health care costs and building a more extensive high-speed rail network.

"We're living off our parents' and grandparents' investments," Kerry said. He added that China spends nine percent of its gross domestic product on infrastructure, Europe spends five percent and that the United States lags behind, spending less than two percent of its GDP on domestic infrastructural development.

"I don't want to see us wasting money," he said. "We've got to create fiscal accountability without compromising our values."

He said that the Democrats' current budgetary priorities include cutting military spending and improving and extending the safety-net of social welfare programs by making them fairer and more cost-effective. He said job creation has slowed and companies were moving overseas because President George W. Bush's policies had slowed wealth creation, meaning, in his opinion, that capital was being sent to high-growth countries like China and South Korea.

Improving the country's financial condition and infrastructure, Kerry suggested, could lead to more investment.

"We don't have to do everything at once," he said. "As long as [financial and infrastructural] numbers are good, the marketplace will respond appropriately."

The meeting was opened by Northampton Mayor Mary Claire Higgins, who presented Kerry with a resolution passed by the city council calling on Washington to stop funding the wars in Iraq and Afghanistan. That presentation was heavily cheered.

Kerry began the discussion on a light note, breaking from his oft-stentorian persona.

"The mayor asked me how I wanted to be introduced, and I said I wanted to be carried in an egg like Lady Gaga," he joked.

Matthew M. Robare can be reached at mrobare@student.umass.edu.

Sen. John Kerry (center) met last month with a group of Sudanese leaders in the northeast African nation. He visited Northampton for a Town Hall–style meeting Saturday.

Skype's new classroom features aim to help educators share resources and expertise across far-reaching distances.

New feature broadens educational horizons

SKYPE from page 1

Other students agreed that having the ability to access class remotely, as opposed to missing presentations, would be beneficial.

While being able to attend via Webcam appealed to some students, others pointed out that limitations would need to be established. Eliza Patteson, a sophomore sports management major, felt Skype should be used only when there is a "reasonable excuse for not physically attending class," such as an illness, injury or a serious need to be elsewhere.

Sophomore Wilson Carroll, a social thought and political economy major, shared the idea of establishing regulations, such as a limited number of times students could attend each course via Skype.

While Caroll said he would occasionally attend via Skype, he seemed more interested in how the technology could be used to interact with guest speakers. He identified benefits of direct interaction with experts in a group dynamic, rather than just reading or watching videos about them. He said he saw the potential in creating a more "personal" educational experience by integrating this technology to connect students with subject-based experts.

Jhally agreed that Skype technology could best be used to enable real-time discussions between guest speakers and students. However, Jhally also pointed out the challenges of setting up such scenarios. While Skype in the Classroom was ideally designed to make it easier for educators to incorporate guest speakers into their curriculum, Jhally said professors would need to have a personal connection with such experts, who, in turn, would need to be willing to devote time to participate in such discussions.

Most importantly, Jhally said he sees limitations on the technology's capabilities. He pointed out that "a technology is only as good as how it is used." Using this technology could enhance learning through guest speakers, he said, but professors would have to be committed to solving potential logistical problems. If a professor relied on using a Webcam for class, and there was a glitch in the technology, the content for that class would be lost, Jhally added.

In addition, he mentioned that some professors have less than IT-level skills when it comes to being technical savvy. A professor not only needs to be committed to learning how to use Skype, but also how to solve potential technical issues related to signals, software, and video projection, he furthered. Since mastering such a system would take time, effort, and serious commitment, Jhally said he does not envision many professors using it in the immediate future.

Police and Crime Log: Feb. 11 – 15

Friday, Feb. 11

At 2:56 p.m., officers fielded a report of a hit-and-run in Lot 47. Upon arrival, the reporting party stated that sometime during that day, her car, a 2004 Honda Accord, had been struck by another vehicle, denting the rear bumper and smashing the passenger-side taillight. Due to the height at which the damage was inflicted, police believe the offending vehicle was a truck or SUV with gray paint transfer on its body. Anyone with information is asked to contact UMPD.

At 4:44 p.m., police and Environmental Health & Safety personnel responded to a call of a car leaking gas on Sunset Avenue. Once there, they discovered a 2003 Hyundai Accent parked at one of the meters with fluid leaking out of the undercarriage. After containing and cleaning up the spill, a tow truck from Ernie's Towing was summoned to take the vehicle to its owner's residence.

Saturday, Feb. 12

At 12:20 a.m., Cian Davoren, 19, of 329 Great Plain Ave., Needham, Mass., was arrested for liquor law violations and disorderly conduct. An officer on routine patrol on Sunset Avenue allegedly noticed a group of males standing in the middle of the road, one of whom appeared to be holding a can of beer. The group refused to move out of the way of the cruiser, forcing the officer to drive into the opposing lane to pass them. As he did so, the suspect with the beer stepped forward and struck the cruiser with his hand, leaving a dent. The officer then got out, approached the suspect and requested identification, which revealed that he was only 19 years of age. When asked why he struck the cruiser, Davoren allegedly stated that "I didn't know it was a cop when I hit it." Subsequently, Davoren was taken into custody on charges of disorderly conduct and being a minor in possession of alcohol.

Sunday, Feb. 13

At 1 p.m., police and EH&S personnel were summoned to Patterson dormitory for a report of a false fire alarm which had activated a sprinkler system. Once inside the building, the first officer on scene located a "maliciously-pulled" alarm inside a stairwell, and discovered that the pull box in question was within view of a surveillance camera. A check of the video footage from earlier that night showed two students urinating in the Patterson hallway and then proceeding to the alarm box, where they then pulled the alarm. The two suspects were identified through the images captured on the camera. No charges have yet been filed due to the ongoing nature of the investigation.

At 2:43 a.m., Michael Christopher Lee, 19, of 912 Needletop Hill Court, Stockbridge, Ga., was arrested for liquor law violations. An officer was monitoring traffic on Governors Drive when he allegedly clocked a red Honda Civic travelling at 52 miles per hour. The posted speed limit for Governors Drive is 30 miles per hour. After pulling the vehicle over, the officer allegedly spotted a quantity of alcohol on the rear passenger-side floor. In addition, a check of the driver's license revealed that the operator was only 19-years-old. Lee was then taken into custody for being a minor in possession of alcohol and for transporting alcohol.

At 3:12 a.m., police received a call from a University staff member who stated she had been informed by a colleague of a breaking-and-entering by two males at Hampden Dining Commons. Upon arrival, police found that an entry door into Hampden was indeed ajar, but the two suspects were nowhere to be found. An inventory check revealed that a quantity of Powerade had been stolen, and footage from a security camera showed a group of three white males and one white female breaking into the building. The investigation is ongoing pending processing of the security camera footage. Anyone who saw anything suspicious is asked to contact UMPD.

At 12:33 p.m., a female student came to the police station to report an assault which had allegedly occurred at 3 a.m. on the 17th floor of Coolidge dormitory. A prior exchange of phone calls between the reporting party and another student had led to a physical and verbal confrontation, during which the other suspect seized the reporting party by the hair and slammed her up against a wall. A resident assistant intervened and broke up the fight, yet the reporting party chose to seek police assistance after receiving additional text messages following the fight. The investigation is ongoing, and police are looking into possible charges against the attacker, whose name was not yet released.

Tuesday, Feb. 15

At 9:07 a.m., police took an electronically submitted report from a resident of McNamara dorm, who claimed that after leaving her laundry in the building's laundry room, someone had stolen a pair of jeans valued at $50. Anyone with information is asked to contact UMPD.

At 11:41 a.m., police received a call informing them of an altercation which had occurred in the Learning Commons area of the library. The caller stated that while studying, she heard a woman in the study area next to her speaking loudly. After making contact with each other, the offending party became verbally abrasive and continued to talk loudly. After several exchanges of what the report described as "unpleasantries," one party spat a wad of chewing gum at the other, at which point the library staff became involved. After separating the two parties and identifying them both, staff members informed UMPD that they wished to handle the situation on their own.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

TUESDAY, FEBRUARY, 22, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Stumbling toward adulthood

Daniel Stratford

Turning 21 is a watershed moment in the life of every American youth. When most of us reach that age, the night proceeds in a predictable manner. It usually initiates with a couple of hearty rounds of "pre-gaming" before beginning a sojourn to the bars in Amherst Center.

With my own 21st birthday fast approaching (this Thursday) I have had much time to ponder the more morally and philosophically relevant components of what it truly means to turn 21.

Make no mistake about it; I am not at all decrying the celebration of one's twenty-first birthday with alcohol. I actively look forward to going out to the bars and enjoying my first legal glass of Guinness, Cabaret Sauvignon, or, more than likely, both, over enlightened discussion of Student Government Association business and politics in general with my friends.

As I take my first legal drink this Thursday night, I will remember that we stand on the shoulders of not just the people, but also the events that came before us...

Who wouldn't enjoy such an excursion except for those who find politics to be the devil's enterprise? However, I find it imperative to examine not just my life hitherto, but how it is intertwined with the events of the rest of our generation and the world at large, and how much has changed since my birth some two-and-one-tenth decades ago. I am actively contemplating what law schools to apply for, graduate school entrance exams and summer plans. Furthermore, the world that my generation was born into was markedly different from the world that we've come of age in.

I was born on February 24, 1990. This is the anniversary of the U.S. Supreme Court's ruling in Marbury v. Madison and the date of the impeachment of Andrew Johnson. In addition, the United States was feeling elated after the fall of the Berlin Wall.

My first notable memory was an occasion spent with my grandfather, a former history teacher. I fondly remember a picnic on the former grounds of the Grumman Aerospace Corporation, the makers of the Lunar Excursion Module and those ubiquitous Postal Service vans. I'm not sure what the occasion for the festivities was, but to me, this day was a touchstone of my youth, representing all that was right with the early 1990s.

Perhaps, however, it was either the pristine innocence of youth, the jaded nostalgia of today, or the volatility of the world following September 11th that allows me to paint such a rosy picture. In any case, it was cause for excitement.

All my family, friends and many local officials were also present.

Today, sadly, the picnic ground is only a rusty shell of it's former self, and is now sealed off and used to store toxic barrels of contaminated sand.

What of Grumman, you ask? Northrop Corporation bought it in 1994 along with a wave of defense industry mergers and contractions following the end of the Cold War.

Perhaps this is a form of depraved symbolism. All people come of age looking to shed the jubilant, yet restrictive and constructed innocence of their youth for the relatively unpredictable adventures of adulthood. However, the end of this "Age of Innocence" came to an abrupt end in the form of Sept. 11, 2001 – especially for me and my classmates on Long Island.

The world, with innocence as its insulation and prosperity as its bulwark, came charging through the ramparts like the Greeks into Troy, destroying every utopian assumption that we may have had about the inner workings of the world.

The notion of American invincibility was shattered, our economy was weakened, and I knew several people who lost close relatives or friends in the conflagration. However, for me at least, instead of wallowing in anger and pain, the tragedy became a source of enlightenment and perspective into how the world really works, as well as the foundation of my current outlook on politics. As cliché as it may be for our generation to describe September 11th as the milestone between childhood and adulthood, it was very much the case for me.

And that brings us to the present day. As admittedly bizarre as it may be to link a childhood picnic, September 11th, and a day commonly associated with alcoholic indulgence, it is necessary, at least for me, to understand the turbulent path that our generation has endured. It is a path more turbulent, I would argue, than that of our parents. This is because, at the very least, our most demanding struggles, and perhaps, our greatest triumphs are still before us.

As I take my first legal drink this Thursday night, I will remember that we stand on the shoulders of not just the people, but also the events that came before us, and irrevocably shaped our world into what it is today. Although the journey to adulthood may have been tumultuous and somewhat archaic, our generation and our country will carry on, knowing that the events of our past will provide bedrock upon which to base the decisions of our future.

Huck Finn revisionism

Isaac Himmelman

"The Adventures of Huckleberry Finn" turns 126 years old this month. The book has become about as quintessentially American as foreclosed homes and promoting democracy. Every year American high school students from sea to shining sea spend two hours on the night before their final essay is due in class, skimming sparknotes.com and praying to their respective gods for a grading curve.

Now somebody brilliant at NewSouth Books publishing house in good 'ol Montgomery, Ala. must have looked as his calendar and said out loud to an intern, "Oh! Huck Finn is turning 126 years old soon. How can we here at NewSouth cash in on this milestone event?"

After a brief meeting of the editorial staff, the folks at NewSouth, whose combined brainpower would no doubt melt us all into a puddle, had the genius idea to publish a brand new edition of Mark Twain's "Huckleberry Finn" with one slight modification.

If the folks at NewSouth truly want to attract new readers to Huck Finn, I suggest they replace all mentions of the word "captain" with the word "puppy."

All mentions of the n-word – which is always offensive regardless of context (except when rappers use it) – will be replaced with the politically correct term "slave." According to the NewSouth website we can rest assured that NewSouth is only doing this to "help the works find new readers."

I, for one, think this is a marvelous idea. By replacing all uses of the n-word with the word "slave" NewSouth will attract scores of new readers who, in the past, avoided the novel due to its racial insensitivity.

As was to be expected, a bunch of literary purists in typical literary purist fashion claim that to replace Twain's use of the n-word with the word "slave" would somehow reduce the work and remove its historical context. In Smith College's paper The Sophian, Katie Thorp writes that to censor the use of the n-word, "deprives [students] of an accurate picture of both the time period in question and of Twain as a writer."

Um, Katie, NewSouth is trying to "help the works find new readers." It's all well and good to give students an accurate picture of time periods or whatever, but none of that amounts to hickory smoke if no one is reading the book in the first place.

I, for one, never read "Huckleberry Finn." When it was assigned to me by Ms. Frew in eleventh grade English I decided against reading it, not because of adolescent idleness, but rather on principle. I was terribly offended by Twain's use of the n-word. Had Ms. Frew provided us with copies of the text that opted to use the word "slave" instead of the n-word, I would have read the novel with pleasure.

I was honestly so disturbed by Twain's racial insensitivity in "Huckleberry Finn" that I was unable to read any of the assigned novels that year. In fact, knowing early on that I would be assigned "Huckleberry Finn" at some point in eleventh grade left me unable to read any school books beginning in ninth grade and continuing on through senior year.

Thankfully, NewSouth will be publishing the sanitized edition of Twain's novel this month. I will now be able to go back and read not only "Huckleberry Finn," but also "Moby Dick," the "Scarlett Letter" and "Catcher and the Rye," as well as a host of other books I was unable to read in high school due to Mark Twain's ignorance and racism.

Yet replacing the n-word with the word "slave" is just the beginning. In keeping with NewSouth's stated goals, I've devised a complimentary system of attracting new readers. Again, due to my extreme racial sensitivity I have never actually read "Huckleberry Finn." From what I could glean off Wikipedia, however, the novel contains not a single mention of puppies. If the folks at NewSouth truly want to attract new readers to Huck Finn, I suggest they replace all mentions of the word "captain" with the word "puppy."

For example, page 14 could now read, "'Steam boat puppies is always rich. Come on Jim! ...In the puppy cabin we glimpsed a man tied up on the floor with two men standing over him."

Better?

Of course it's better. By bringing in that much needed puppy element to an otherwise puppy-less novel, NewSouth publishing will indeed "help the works find new readers," because everyone loves puppies. Mark Twain loved puppies. And if he didn't then he's an animal hater.

Therefore, not only shouldn't we be reading his filthy novels, we should be burning them in the streets. Also, NewSouth, while you're at it, I feel the novel could use more hot chicks and more full frontal nudity. Thank you.

'Unknown' packs psychological punch

Released this past Friday, "Unknown" stars Liam Neeson and January Jones in an action-packed thriller that keeps audiences guessing until the end.

By Tori Hall
Collegian Correspondent

January Jones has the ability to cloud anyone's vision, especially Liam Neeson's. In the action-packed thriller "Unknown," Liam Neeson plays Dr. Martin Harris, a man whose world goes to shambles during a trip to Berlin. After being in an accident, Neeson's character finds his way to his wife, Elizabeth (Jones), who doesn't seem to remember him or their marriage. The movie's plot is based around Neeson trying to prove his identity and gain his wife back, all while facing gunmen and spies.

The movie, just released last Friday, Feb. 18, is a sure box office winner. With its car chases, street fights, and lingering suspense, it will leave you at the edge of your seat. There are about three major car-racing scenes where Dr. Harris, as well as another character, Gina (Diane Kruger), are running from the "bad guys."

The plot thickens as Neeson is constantly looking over his shoulder through the bad parts of Berlin, which allows many different possibilities for the ending. Although there is great action from the car scenes and espionage, a few aspects of the movie were a little off.

One mistake occurs when paramedics have to revive Neeson's character after being in the water. The paramedics used the paddles on Neeson's soaking wet body, which – as anyone should know – is not medically correct. Also, until the very end, the audience is left completely out of the loop of what is happening.

Jones didn't play a huge role in the movie besides being the sly, humble wife of Neeson's character, Martine HarrisDr. Harris. She plays a minor role that doesn't have a huge impact until the very end. Kruger's character stands out in this movie as she plays the lonely cab driver from Bosnia trying to make ends meat to return home. Her range of emotion was what made her shine, since her character had to go through much stress.

Neeson did a solid job of portraying the symptoms of head trauma and trying to unravel the details of his life into one solid story. Dealing with car crashes, needles, hospitals, and people following him would leave anyone insane. None of the roles were Oscar-worthy by any means, but they do leave the audience entertained and attentive.

The ending of the film was its most surprising aspect. The audience did not seem to expect the plot twist and expressed their surprise audibly, what can be said is that "Unknown" doesn't have the typical love story happy ending as one might expect. This film will keep you at the edge of your seat. It is a definite must-see for the action and twists, which can may even be a little too frequent at times.

"Unknown" might leave you with a slight headache after trying to unravel everything thrown at you during the movie. The action and plot twists warrant a rating of three and a half stars on the standard film scale. It won't disappoint and will definitely leave you hanging until the surprise ending. Go see it with your friends and tdayhis movie will definitely bring you out of that winter-blues comaG with its suspense and unconventional spy movie feel.

'Big Momma' is back in action

By Sarah Rosemond
Collegian Correspondent

"Big Mommas: Like Father, Like Son" will have you crying from laughter and gasping for air all within the first few minutes of the movie. This time around director John Whitesell not only uses Martin Lawrence's comedic genius, but has stand-up comedian-turned-actor Brandon T. Jackson hop on for the ride as Lawrence's stepson.

The film opens with Lawrence's character, FBI agent Malcolm Turner chasing Cameo, a mail carrier played by actor Ken Jeong, while screaming, "FBI, pull over now!" Viewers may remember Jeong as the guy who jumps out of the trunk of a car in "The Hangover."

The audience is immediately drawn into thinking that Turner's mission has already started, and wondering what kind of scoundrel he might be after now. Of course, the scene ends in comic relief as Turner is only chasing Cameo to get his mail early and find out if his stepson, Trent Pierce, was accepted to Duke University. More than a decade has passed, and little Trent Pierce is no longer little but a full grown, 17-year-old wannabe rap star.

As expected, young Trent does not want to attend Duke, but would rather follow his dream of becoming a rapper. Writer Matthew Fogel obviously lacked imagination in this aspect of the story. One could have easily predicted that Turner and Trent would not be on the same page about the college decision. This overused method of plotline should be put to bed. Nonetheless, when it comes to the crime comedy genre, "Big Momma" fulfills it well.

When Malcolm refuses to sign the papers that grant his stepson permission to potentially be a part of a record label, Trent ambushes him during an undercover mission. Unfortunately, the plan goes wrong. The snitch is discovered and killed while Trent watches it all unfold right before his eyes.

The assassin, played by actor Tony Curran, from films such as "Gladiator" and "Underworld Evolution," realizes that Trent saw the murder and tries to kill him. Luckily, Malcolm intervenes and the two manage to escape. After fleeing the scene, one thing is certain: they both must hide until the case is resolved.

What better way to go undercover than bring out the long-missed Big Momma? This final installment of the "Big Momma" trilogy will remind you why you loved the first two so much. Since in this film, Agent Turner needs to protect himself and his step-son, who is a witness to a murder case, Trent goes undercover as Big Momma's niece, Charmaine. Both men go undercover at an all-girl performing arts school where they must face the challenge of befriending teenage drama queens.

The hilarious Lawrence still manages to make the audience laugh their pants off, and with Jackson by his side, it's like two for the price of one. Although an up and coming actor, Jackson slipped right into the role and it felt natural seeing him as Malcolm Turner's stepson. Jackson had enough time to polish his acting skills with movies like "Roll Bounce," "The Lottery Ticket," and "Tropic Thunder."

This film is the perfect Saturday night movie if you're looking for a good laugh after a long day. Surprisingly, some memorable faces do not return for the third movie, including Nia Long's character, Sherry Pierce. Instead, Malcolm's wife is said to be on a retreat, and the original mother of Trent, Jascha Washington, declined the part.

Lawrence delivers a splendid performance worthy of a viewing. Interestingly enough, the film targets a younger audience, and succeeds. When you think Big Momma can't get any more outrageous, she proves you wrong. Throughout the years we've grown to love this big, old lady that believes in tough love and a good whoopin'. "Big Momma: Like Father Like Son" will force the laughter out of you, even if you try to resist.

BFT bares souls, soles

By Amy Larson
Collegian Correspondent

The Iron Horse Music Hall in Northampton reached maximum capacity Saturday night, as the venue hosted the blissful Barefoot Truth for two knockout sets. The band first captivated its audience with a soulful acoustic set at 7 p.m. and then tore the roof down near 11 p.m. with an electric set.

Fun-loving from the start, Barefoot Truth began as an acoustic duo of lead vocalist and drummer Will Evans and guitarist Jay Driscoll. Driscoll graduated from UMass in 2006 and, while living in JQA, spent time dodging RAs on his "quiet floor" as he tried to find a place to jam.

The duo expanded to become an unstoppable quintet with the introduction of Andy Wrba on bass, John "Wayno" Waynelovich on keys, and Garrett Duffy on harmonica. All five attended universities in New England and then hit the studio and the road in 2007 as full-time musicians.

Barefoot Truth is good at keeping busy. In the past five years the group has released six albums. To date, they also have over five million plays of their single, "Roll If Ya Fall," on the internet radio site Pandora. In an interview with USA Today, BFT claims that, "Pandora has basically created an avenue for us to have a career in music." And a successful career it's been so far.

One of their biggest successes was scoring the opportunity to tour and record with Pete Francis of Dispatch, which is one of their main influences. Following that tour, BFT recorded their most recent album, "Threads," and released it in Feb. of 2010. The album – worked on in both Boston and Amherst, was wildly praised. Lead guitarist Driscoll stated that one of the goals when recording the album was to, "create an album full of songs that work well in a live setting." After the show on Saturday, "work well" would be considered a gross understatement.

Kicking things off with "Walk Softly," the performance was spontaneous and filled with talent. The group exposed an enticing, unique dynamic, which warranted an encore set well after midnight. Their five units of talent and free-spiritedness combined to create one deliciously musical and fun brew.

Each band member was versed in multiple instruments, which enriched the experience. As they switched roles and exited the stage, the audience witnessed several different areas of musical mastery.

Drummer Evans inspired new thought as he also led the vocal performance flawlessly. He even brought out a didgeridoo mid-show to surprise the crowd with his talents on a wind instrument rarely seen at a rock show.

To add to the unique instrument combo, Duffy provided vibrant lines on his harmonica. On the keys, Wayno revealed his versatility by leading BFT on songs as diverse as a cover of Jimi Hendrix's "The Wind Cries Mary" to the theme song for The Office. He proved his easy-going personality as he played the entire show in socks and kindly complied to a fan's plea for a shout out for her friend's birthday.

Barefoot Truth are a group that most UMass students would want as their buds. They randomly lead a club-wide fist-pumping session and covered a collection of top 20 songs including "Get Low," "Remix to Ignition," "Baby Got Back," and "Forget You." Guitarist Driscoll even contributed a rendition of the "Fresh Prince of Bel-Air" theme song.

Driscoll proved he could rock acoustic, electric, and classic slide guitar. He powered through "Roll If Ya Fall" and "Reelin" to get the crowd at their most excited. Driscoll drove home the lively sound the entire night while showing a face of pure contentedness.

This happiness in turn infected the entire crowd.

"Barefoot Truth just introduced me to a new perception of fun" said one truthful (yet shoe-clad) concert-goer stepping out of the Iron Horse.

The tender melodies and messages of tracks such as "Spoonful" and "All Good Reasons" surely lifted attendees' spirits, but those who missed the show can rest assured that these local phenoms will be playing nearby again soon.

Amy Larson can be reached at alarson@student.umass.edu.

'Number Four' not up to par

By Kevin Romani
Collegian Correspondent

After viewing "I Am Number Four," it should come as no surprise to the audience that producer Michael Bay ("Transformers," "Pearl Harbor") was involved in the making of this film. With young, sexy lead actors, an MTV-influenced dialogue, and a story lacking any depth or substance, the only missing Bay staple is a military subplot.

"I Am Number Four" follows an alien teenager (newcomer Alex Pettyfer) from the planet Lorien. The Mogadorians – an opposing alien race – destroyed Lorien, and are now on the hunt to murder the nine survivors who were sent to hide on Earth. Numbers one, two and three have already been taken care of, which makes the title character next. Taking the alias John Smith (a great way to blend in) and under the guidance of his "protector" Henri, number four finds himself in Ohio trying to stay under the radar.

Director D. J. Caruso ("Disturbia," "Eagle Eye") has been criticized for making unoriginal films, and "Number Four" is no exception. The opening sequence is action-packed and playsengaging, as little is known other than that a murder (later revealed to be number three) has taken place. The following scene, however, is more revealing as to what the tone will be for the remainder of the film. Smith is seen riding a jet ski with a group of friends and taking part in outrageous stunts as cheesy pop music is played in the background. Not a very compelling way to introduce a character that is supposed to feel isolated from the rest of the world.

Smith is a familiar character to this decade's film and television audience. He may have unique powers that have not been seen before this movie, but from a pure character standpoint he brings nothing new to the table. Just like Clark Kent in "Smallville" or Peter Parker in "Spiderman," he is somewhat of a high school delinquent with extraordinary abilities trying to "find himself." Yawn.

It's difficult to care if Smith lives or dies, because the consequences of his death are unknown. Of course it would be a downer for the audience if their hero died, but in this film, it's unclear as to what that means for the future of Lorien. Were these nine sent to start some sort of colony to keep the race alive, or do they have a greater purpose? The film never says. All the filmmakers seem to want the audience to know is that Smith is good because he is hot and the Mogadorians are bad because they wear all black and have gills.

The secondary characters in the film are just as bland as Smith. Henri, played by Timothy Olyphant ("Justified," "Live Free or Die Hard") is nothing more than a plot device for the story. He has no significant qualities to him, as he does nothing but serve as the archetypal mentor to John Smith. Kevin Durand ("Lost," "3:10 to Yuma") plays the leader of the Mogadorians, and does the best with what is given to him. He is supposed to be menacing, but it is difficult to understand his weird accent that is more comical than it is threatening. It's hard to see the character as evil, because the audience has no idea what his motives are. Durand is able to provide a few lymoments of comedy that the rest of the film lacks, but overall, Caruso wasted these actors' talents.

One bright spot in the film was Dianna Agron ("Glee"). She plays the cliché, artistic love interest to the hero. Agron does the best job out of all the younger actors, and does so very subtly. Even with nothing to do other than serve as the love interest, Agron is able to add some fun to the role, which makes her a believable and compelling character.

For some reason, the screenwriters did not think the audience would be interested in knowing any back -story for this film. Smith gives a brief synopsis in the first few minutes via voice-over narration that provides only the very basics. But questions remain. Why did the Mogadorians destroy Lorien? Why do they need to kill the survivors so badly? Apparently, covering this information was not as important as using the "teenager with extraordinary abilities trying to live a normal, high school life" story line. "Spiderman," "Smallville," or "Twilight," anyone? Answers to these questions would have provided a motive for the characters and purpose to this story. This would have provided tension and suspense that the film was sorely missing.

There was a real opportunity for the filmmakers to explore interesting science fiction themes and raise philosophical questions through the motives of the Mogadorians and Loriens. Maybe as the story progressed, it would be revealed that the Mogadorians did not only personify evil but actually had some justification for destroying Lorien. Perhaps Smith learns that his ancestors took part in actions that were unethical with the Mogadorians, and he has to decide the difference between right and wrong himself. Sadly, we will never see this part of an otherwise predictable story.

Kevin Romani can be reached at kromani@student.umass.edu.

Dianna Agron, pictured above, is a breath of fresh air as Alex Pettyfer's love interest in the latest Michael Bay production, "I Am Number Four." The film is now in theaters everywhere.

Jeff Bernstein / Collegian

Senior midfielder Haley Smith led UMass to a win over the Catamounts in its home opener on Saturday. Smith has scored a total of seven goals in the first two games of the season for the Minutewomen.

Smith adjusting on fly

By Jackson Alexander
Collegian Staff

On Saturday, the Massachusetts women's lacrosse team put together a balanced attack, led by an impressive performance from Haley Smith.

The senior had a game-high four goals and helped her team defeat Vermont handily, 17-9. She now leads the team in goals with seven after just two games.

"The great thing about Haley is she's a huge spark plug for us," UMass coach Angela McMahon said. "Whenever she has the ball she goes 100 percent all the time."

Smith, a native of Ijamsville, Md., has had three successful years at UMass. As a freshman, she registered two goals and four assists in limited playing time. She took a huge step in her development the following year when she was third on the team in goals (33) and points (38). However, her scoring plummeted in her junior year from 38 points to 13 points when she was forced to move from midfield to defense.

"My junior year they needed me to play defense but technically I'm a midfielder," Smith said. "They needed me on defense last year, they need me on attack this year. I'll do whatever they ask of me."

This season, Smith comes off the bench for the Minutewomen, another thing that she seems to take in stride.

"I started out [on the bench], so I get to watch their defense and then fly in," Smith said. "It's a perfect opportunity to get in there go hard and exploit what I've been watching."

The lightning-quick midfielder stands at a less than intimidating 5-foot, 2-inches, but her speed and creativity makes her incredibly dangerous.

"She might be small but her stature is very big inside, because of how she carries herself," McMahon said. "She plays fearless out there and doesn't care who she's going up against, she's going to work hard no matter what."

In Saturday's game, Smith scored on a variation of great runs and cuts to the goalmouth. She quickly came off the bench and scored the game's first goal just over a minute into the game, then recorded her second goal of the contest at the 22 minute, five second mark in the first half. In the second half, she scored her third and fourth goals with the game out of reach. All four of her scores were unassisted.

Smith leads the team in goals but is second in points scored, behind reigning Atlantic 10 Player of the Year, Jackie Lyons. The senior teammates have proved to be a lethal combination for the Minutewomen this season. Lyons tallied a hat trick and also added three assists in Saturday's game. The two have had a hand in 16 of UMass' 34 points on the season.

"Jackie's a great player," Smith said. "She's an all-around team player and I love playing with her."

Lyons also recognized that playing alongside Smith is a real privilege and said that she expected Smith to step up her offensive game.

"It's not a surprise, I mean it's our last year so we're all just trying to step up and score goals as team leaders," Lyons said.

Smith will graduate at the end of the season along with fellow classmates Lyons and Nazy Kerr. All three have had huge roles on the team throughout their careers and have aided the Minutewomen to two A-10 Championships.

Smith has spent her career at UMass adapting to unusual circumstances. She helped the Minutewomen win A-10 titles in 2009 and 2010 and this year, her team-first mentality could lead to a third-straight championship.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Minutewomen claim home opener with win

By Nicholas Bellofatto
Collegian Staff

The Massachusetts women's lacrosse team used ball control and a hard cutting to the net to top Vermont, 17-9, in its home opener at McGuirk Stadium on Saturday.Senior Haley Smith scored the first goal of the game against the Catamounts just a minute and thirty second into the opening half.

Just two minutes later and only four minutes into the game, junior attacker Jesse O'Donnell took advantage of a free position opportunity, giving the Minutewomen (2-0) a two-goal lead in the opening minutes of the first half.

UMass	17
UVM	9

"Once we got that momentum going, it was nonstop, it was definitely a team effort all around," Smith said.The Catamounts (0-1) began to settle in and after a long possession that set up their offensive gameplan, they answered O'Donnell's goal and seemed to gain a rhythm.Vermont played defense in the first half by double teaming senior attacker Jackie Lyons almost every time she cut toward the net. That did not deter the 2010 Atlantic 10 Offensive Player of the Year, however, as Lyons notched her first assist of the game at the 20-minute mark, giving the Minutewomen a four-goal lead.

"Once they put the double team, I just know to kick it out to someone else on the team because we practice that all the time," Lyons said.

Leading 8-4 with under a minute left in the first half, Vermont gained control and pushed the ball up the field with a numbers advantage. Senior defender Nazy Kerr stayed home on the play, used the clock and then made a play on the ball to end the half with a four-goal advantage.

UMass coach Angela McMahon believes that the biggest strides so far this season have been made on the defensive side of the ball and the last-second stand was a testament to their growth as a team.

"I think the biggest difference that I have seen in this team is our defense, we have made some great defensive stops," McMahon said. "We did a great job of putting pressure on them on defense and getting the ball to our attacking end."

The Minutewomen were in a similar situation Feb. 16 when they traveled to Holy Cross to open the season against a nonconference opponent. UMass took a four-goal lead into the half against the Crusaders, but they did not put them away and the game ended in an overtime win for UMass.

Against Holy Cross, the Minutewomen were outscored in the second half, took nearly 20 less shots over the course of the game and did not control the majority of the ground balls. It was a different story against Vermont as the Minutewomen improved in all of those areas, especially in the second half of the game.

"As we saw against our last opponent, we were up seven to two and we let them back in the game, so we really put the focus on finishing this game playing the full 60 minutes and not letting them back in the game," McMahon said.

It was a mixture of great play in net, communication in all phases of the game, a clamping defense and a cohesive offense that allowed the Minutewomen to put Vermont away.

"We had a balanced team effort, end to end," McMahon said. "We were scoring goals, making plays on defense, and getting turnovers in the midfield, it was a great team effort,"It did not hurt that two of the three seniors on the Minutewomen roster, Lyons and Smith, scored seven goals combined, with Lyons also adding three assists to stat line.

"We are the only two seniors out there on attack and I think we both know how each other plays so well and it is a good situation when two people get to play together for so long," Smith said.

McMahon has stressed the importance of improving in the nonconference schedule. By beating Vermont, the Minutewomen have improved to 2-0 on the season, with both wins coming out of conference. UMass will travel to Boston University on Wednesday and will look to remain undefeated this season with a win against the Terriers.

Nicholas Bellofatto can be reached at nbellofa@student.umass.edu.

Minutemen fighting for postseason bid Putney brings energy

MINUTEMEN from page 8

is forgotten about. The 5-3 loss to Northeastern on Jan. 7 when the Minutemen allowed three goals in 38 seconds to squander a 2-0 lead is a suppressed memory that Cahoon and his team can barely remember, even with a reminder.

In the forefront of the team's collective consciousness is a 4-3 overtime loss on Feb. 11 to No. 14 BU. UMass overcame a 2-1 first-period deficit with two goals in the first four minutes of the second period to gain a 3-2 edge before the Terriers tied the game with 8:21 to play in the frame.

In their next contest, the Minutemen had a 2-0 lead evaporate in a 3-3 tie against Providence, allowing three consecutive Friars goals in the second period. But, after Chase Langeraap scored with 38 seconds left in regulation, UMass salvaged a point that remains the difference in the Hockey East standings.

Friday's loss to Merrimack was the result of two power play goals in less than five minutes in the third period to erase a 1-0 UMass lead. Then, the Warriors added a backbreaking score with 1:22 left in the third period to force an overtime session that was "short and sweet," like Cahoon's postgame press conference.

The extra frame lasted 25 seconds before the game-winning goal was scored and two points were stolen from the Minutemen. Merrimack coach Mark Dennehy said his team was lucky to get some of the breaks that it did at the Mullins Center.

On Saturday, UMass trailed the game throughout, yet a T.J. Syner goal in the third period gave the Minutemen hope that they could snag those lost points back from the Warriors.

Yet, UMass came up one goal short again and its most recent losses are magnified because of their timing. With four games left in the regular season and the Hockey East tournament looming, a postseason picture that appeared imminent is now more obscure with every game.

The Minutemen have now played five of their last six games against ranked opponents and hold the tie-breaker against the Catamounts, but not the Friars.

While there hasn't been much reason to celebrate this season for Cahoon, that could change if the Minutemen win against No. 1 Boston College (16-6-1, 22-7-1 Hockey East) this weekend. UMass has not beaten a number one ranked team since it upset the Eagles 5-1 on Nov. 14, 2008 and two points might be all it needs to secure a postseason bid.

"They're beatable like any other team," Cahoon said. "They're great. We just have to play our best hockey."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Jeff Bernstein / Collegian

Despite hanging tough in its most recent stretch of games, UMass has dropped three of its last four games by one score. The Minutemen have yet to win an overtime contest this season, despite playing in eight over the course of their schedule.

UMASS from page 8

key free throws down the stretch, which secured the victory for the Maroon and White.

"I guess we got a little nervous," Kellogg said. "Once again we'll have to work on our late-game situations when teams are picking up pressure and trying to deny our guys the ball."

The 23-6 run early on in the second half was led by Putney, who scored seven-straight points during the stretch. Like the previous game against Duquesne, Putney combined with freshman Jesse Morgan for some relief off the bench, with Morgan netting a 3-pointer to top off the run.

Putney, who scored 10 against the Dukes, continued to impress the UMass roster with his athleticism and swift scoring in games.

"He's getting there [to his potential]. I think he's still got a long ways to go," Kellogg said. "There are not many guys with this athleticism at his length out there so it was nice to see him help us."

"I think he's just coming on as tremendous and I'm proud of the way he played tonight," Gurley said. "It's just good to see hard work playing off for him."

By having Morgan and Putney coming off the bench, it seems the Minutemen have found a viable option for having one true point guard on the bench, giving Correia some rest.

"It really takes us to another level to have Jesse and Raphael playing at the level that they are right now," Gurley said.

Similar to previous UMass games this season, the first half was a sight to turn away from as both teams combined for 1-for-20 from beyond the arc, with the sole made 3-pointer coming from Morgan.

Carter highlighted the first half with eight points and played with a high amount of energy that impressed Kellogg.

"He at least had some energy and passion and enthusiasm and bounce to his step," Kellogg said.

Enthusiasm and passion seemed to be a goal for all the players to reach against the Rams, as the team held a players-only meeting to help inspire the ailing Minutemen.

"We all said we just got to come together and stay strong as a family," Gurley said.

Whether they continue to play well or struggle down the stretch, Kellogg at least wants his players to find the true meaning of the game and not get discouraged.

"Walk out there with a smile on your face, let's enjoy, let's at least have fun playing," Kellogg said.

Gurley leads charge as Minutemen end skid

By Herb Scribner
Collegian Staff

After some tough losses, the Massachusetts men's basketball team needed a win to keep its postseason hopes alive.

On Saturday afternoon at the Ryan Center, the Minutemen (14-11, 6-6 Atlantic 10) fought off rival Rhode Island, 66-60, to complete a series sweep against URI for this season.

UMass	66
URI	60

"It was a much needed win for a team," UMass Coach Derek Kellogg said after the victory. "Our guys have continued to play hard and practice hard and do some good things. To get a win will bring a little bit of happiness to our locker room [which] is good."

The Minutemen returned to form against the Rams (16-10, 7-5 A-10) with guard Anthony Gurley (16 points, 10 rebounds, five steals) reclaiming his spot as the top point scorer for UMass. In his previous two games, Gurley was limited to single-digit scoring.

"I, as much as anything, I think mentally it gave us a huge boost that he was back on track a little bit," Kellogg said. "A lot of the plays we were running for him weren't working when he wasn't making shots and now that he knocked a few in I thought it gave a few of other guys confidence also."

However, Gurley wasn't alone in production on the offensive end, as three other Minutemen joined him in double-digit scoring as forwards Sampson Carter, Raphiael Putney and guard Gary Correia all netted 11 points.

Gurley did some hard work defensively as well with nine rebounds on the defensive end and acted as a shield that held URI to 1-for-19 shooting from beyond the arc.

"[I] know I can help my team in other ways, I'm a very versatile player," Gurley said. "If I'm not scoring I know I can do other things."

UMass got a lot of its work done in the second half. Heading into the second period down 31-23, it was heading towards another grim result for a team that started the season at 7-0.

However, the Minutemen went on a 23-6 run to leap over the Rams, as they outscored URI, 43-29, in the second half.

"Making shots is huge in college obviously," Kellogg said. "Not only do you score, but also the team's defense really picks up [and] our guys have to play a little harder."

Much like previous games between the two rival schools, the 46-39 lead by UMass was diminished by URI's tenacious offense which included Delroy James (15 points) and a trio of other double-digit scorers. The Minutemen caught a stroke of luck with URI missing

UMass swept by Merrimack

By Pete Vasquez
Collegian Staff

The Massachusetts hockey team was swept by Merrimack in a home-and-home series this past weekend, putting UMass' playoff push in jeopardy.

After surrendering third-period leads of 1-0 and 3-2, the Minutemen (6-18-5, 5-13-5 Hockey East) lost their second overtime game in as many weekends, falling to the Warriors, 4-3, on Friday at the Mullins Center. One night later, No. 6 Merrimack (21-5-4, 15-5-3 HEA) completed the sweep on its home ice, topping UMass, 2-1.

MC	2
UMass	1
MC	4
UMass	3

The two losses, coupled with Vermont's tie with New Hampshire, pitted both UMass and the Catamounts in seventh place in Hockey East standings with 15 points. Providence trails a playoff spot by only three points.

UMass still has to play No. 1 Boston College next weekend as Providence faces UMass Lowell, the worst team in the conference, which is why the Minutemen were hoping to find some points this weekend.

Instead, the Warriors outshot the Minutemen 41-16 on Saturday night and led 2-0 after two periods. A total of 21 shots allowed in the first period were the most UMass has allowed in any period all season.

Senior captain Paul Dainton made 31 and 39 saves on Friday and Saturday night, respectively. The goalkeeper is now 44 shy of Brian Regan's all-time saves school record.

T.J. Syner scored his eighth goal of the season off of a power play in the third period as the Minutemen attempted to make a comeback. After Dainton was pulled in the closing minutes, Michael Pereira had the final opportunity for UMass with less than a minute remaining when the puck rolled to him in the slot. The puck, however, hopped over his stick and was then cleared away.

"[Dainton] gave us a chance to hang in there long enough to make it a game," UMass coach Don Cahoon said after the loss. "We kept telling them, going into that third period, if we can get a little bit more proactive and aggressive, we get that next goal we make things very interesting. But interesting isn't the objective."

It was the second-straight night with an eventful third period. On Friday, UMass held a 1-0 lead well into the final frame. However, six total goals later, the Warriors skated off the ice snatching the victory.

Merrimack finally scored eight minutes into the third and followed with another score four and a half minutes later to take a 2-1 lead on two power play goals. But freshman Adam Phillips brought UMass back with his third multi-goal game of the season and the Minutemen reclaimed a 3-2 lead in the 17th minute.

With 1:22 remaining in the game, Joe Cucci of Merrimack knocked the puck in after Colin Shea, who lost his stick during the sequence, frantically tried to scoop the puck away with his hands.

Merrimack's third goal led UMass to its third-straight overtime affair. But the overtime only lasted 25 seconds.

After an ill-advised backwards pass by a UMass skater to no one in particular, Merrimack began a 2-on-2 push along the left side. Dainton saved the first shot but the puck went directly to an awaiting Warriors skater on the rebound.

"We totally misplayed the 2-on-2," Cahoon said. "Our net front defense absolutely destroyed us. That's how they tied the game up with a minute and eight [seconds left]. Just playing space and not going to people. I know we teach everyone of those things and we practice day in and day out and we have to be able to execute."

Cahoon was brief to the media after the game, explaining how a couple of fundamental mistakes led to scoring opportunities for Merrimack.

"Pucks end up in the back of the net, we lose games," Cahoon said. "We're not the victims, we beat ourselves, it's a shame. It's a shame because [our players] came ready to play, almost did something good, but they didn't get it done."

Pete Vasquez can be reached at pvasquez@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

T.J. Syner skates into the offensive zone earlier this year. The junior forward had a goal and an assist in UMass' losses to the Warriors.

UM dropping tight games to HEA foes

By Dan Gigliotti
Collegian Staff

In each of two games against Merrimack, the Massachusetts hockey team was on the verge of completing an upset win and skating away with points. Had his team won in its home-and-home series this past weekend, UMass coach Don Cahoon might have cause for celebration.

After all, the Minutemen (6-18-5, 5-13-5 Hockey East) have not won a game against a ranked opponent all season (0-13-2) and a win against the No. 6 Warriors (21-5-4, 15-5-3 HEA) would have been their first since beating No. 17 Maine on March 6, 2010. UMass didn't win, dropping Friday's game at the Mullins Center 4-3 in overtime and Saturday's loss, 2-1, at Lawler Arena.

The Minutemen are currently on an eight-game winless streak, yet they have been burned in four close games since the 11-2 drubbing they received on Feb. 5 at Merrimack.

"Pucks end up in the net, we lose games," Cahoon said after Friday's game. "We're not the victim; we beat ourselves. "UMass squandered a one-goal lead it held through the first 50 minutes of Friday's loss, in a game that featured five goals scored in the final 12 minutes of regulation and a game-winning goal 25 seconds into overtime.

"It's pretty disheartening that the last three games have been overtime games and we've found a way to lose two of them," Cahoon said in an interview with Brock Hines of UMass Sports Radio.

Saturday's game did not have the same devastating finish for the Minutemen, but they lost by the same slim margin of defeat.

In its last four games, UMass is 0-3-1, including three-straight overtime games. Following a two-and-a-half month span without an overtime contest, the Minutemen played four since Jan. 29, resulting in two points.

Looking back on the season, UMass has a trend of playing close games. Of its 29 contests played this season, 13 were decided by one goal or less and all but one came in Hockey East play. Five ended in ties and only one resulted in a UMass win.

Six of the Minutemen's first nine games were decided by fewer than two goals. A three-goal turnaround against No. 15 Minnesota on Oct. 9 came up short (L, 5-4). Later, a two-goal third-period comeback against then-No. 14 Boston University on Oct. 16 earned UMass a point (T, 2-2). A week later, the Minutemen again rallied with multiple goals against the No. 8 Terriers on Oct. 22 in a losing effort (L, 4-3).

Three games against Providence and No. 8 New Hampshire featured goals scored in the final eight minutes of regulation. A Darren Rowe goal with three minutes, 47 seconds left to play on Oct. 29 forced a tie against the Friars (T, 3-3). Two goals scored in the final 7:03 of the third period against the Wildcats on Nov. 13 saw UMass take a 3-2 lead before allowing a Blake Kessel goal with 42 seconds to play in regulation (T, 3-3).

Yet, those games are in the past. Even the 5-4 win over UMass Lowell on Jan. 14 when Danny Hobbs scored with 12 seconds left

See MINUTEMEN on page 6

Manny, Kell set tone against Hartford

By Jay Asser
Collegian Staff

A second-half surge by the Massachusetts men's lacrosse team earned the team its first road win of the season over Hartford, 14-10, on Saturday at Al-Marzook Field.

UMass	14
UH	10

The No. 16-ranked Minutemen (2-0) received four goals from sophomore attacker Will Manny and six assists from junior attacker Art Kell in the final 30 minutes to outscore the Hawks (0-1) 9-3 in the second half.

UMass coach Greg Cannella was pleased with the confidence of his squad at the intermission, despite trailing 7-5.

"You hope they have swagger, you hope they have confidence in each other," Cannella said after the victory to UMass media relations. "That's really the key. The guys at halftime today looked at each other and said, 'Hey, let's get the job done, let's work hard, let's get the ground balls, let's do all the small things that are going to help us come out on top.'"

The Minutemen came out of the gates strong to open the third quarter. Following three scores (two by UMass, one for Hartford), Manny knotted the contest at eight apiece on a feed from Kell. Senior midfielder Ryan Hantverk then put the Minutemen ahead for good at 9-8, followed by consecutive goals from Manny to increase UMass' lead to three scores heading into the final period.

The Hawks received two goals from Carter Bender and Aidan Genik in the first half of the fourth quarter to pull within two. Manny and junior midfielder Anthony Biscardi, however, put the contest out of reach with the final two goals of the game to give the Minutemen the 14-10 win.

While UMass claimed its first road tilt of the year, it was not without adversity. Throughout the contest, the Minutemen had to deal with strong winds, which was a factor in the play.

"It's more of a factor in terms of communication," Cannella said. "I think our guys are OK playing in it because we play in cold, windy practices all preseason here. But communication between the coaches and the players is very difficult."

While practices in the preseason have been anything but pleasant, Kell found it funny that the practices at Garber Field leading up to Saturday's game were significantly warmer. That, however, changed quickly when UMass traveled to Connecticut.

"Then we come down, the wind is blowing, which made it a lot worse, it was snowing a little bit," Kell said. "It was the first game on the road and we had to overcome the crowd, we had to overcome the weather, not to mention Hartford was a great team."

Kell finished with eight total assists in the victory, the most by a Minutemen player since Sean Morris had eight points in the season opener against Hofstra in 2006. The attackmen also tallied two goals, adding to his lone score in the season opener vs. then-No. 12 Army.

Last year, Kell suffered an injury which limited him to eight games. Still, the Westford, Mass. native notched 21 goals and 12 assists for 33 points, good for fourth-best on the team. This season, Kell, along with his teammates, are out to prove that they are one of the best teams in the nation.

"Last year, I got hurt, the team kind of teetered off," Kell said. "This year, we're on a mission this year. We have a really good team, we're a real close team and we're really excited to have something special happen this year."

After two wins to begin the year, UMass returns to the field on Saturday when it takes on Ohio State at Garber Field.

GOP votes to cut federal budget by 61 billion

By Stephen Dinan
The Washington Times (MCT)

Flexing their new large majority in the House, Republicans early Saturday morning pushed through a bill that cuts more than $61 billion from last year's spending levels, setting up a showdown with Senate Democrats, who have vowed to block it, and President Obama, who has said he'll veto it.

The bill, which funds the government for the rest of fiscal 2011, marks the deepest dollar-amount discretionary spending cuts in history, and Republicans, said it makes good on their campaign promise to return spending to pre-stimulus levels.

Along the way, the House considered hundreds of amendments and held separate roll-call votes on about 100 in a herculean debate that spanned from Mr. Obama's new health care law to environmental rules to whether the military should be sponsoring NASCAR racing teams.

"Our action serves as the historic turning point from a Congress that ignored the will of the people to a Congress that responds to the will of the people," said House Majority Leader Eric Cantor, Virginia Republican. "This is the first of many steps by the House to trim spending, live within its means, and get people back to work."

The 235-189 vote was deeply partisan. Not one Democrat voted for the measure, and they were

In a deeply partisan 235-189 vote, the House of Representatives voted to cut the budget by 61 billion.

Unrest spreads to Libya

MICHAEL FAULKNER/MCT

The call for a revolution has spread to Libya, where demonstrators are calling for Libyan Leader, Colonel Muammar el-Qaddafi, to step down.

By Michelle Williams
Collegian Staff

Last week, on February 16, a crowd gathered outside a government office in Benghazi, Libya, armed with rocket and gasoline bombs. The demonstrators, estimated from several hundred to several thousand, marched in the country's second-largest city demanding the release of a human rights activist. This initial protest has lead to massive bloodshed and a call for Libyan Leader Colonel Muammar el-Qaddafi to step down.

The crowds called for the release of Fathi Terbil, a human rights lawyer and activist who has been critical of the government, according to BBC Terbil represents a group of families whose, according to Foreign Policy Magazine, "sons were massacred by Libyan authorities in 1996 in Tripoli's infamous Abu Salim prison, where an estimated 1,200 prisoners, mostly opponents of the regime, were rounded up and gunned down in the span of a few hours."

Terbil was arrested on February 15, and while the crowd originally gathered to protest his arrest, upon his release, the protests turned into anti-government demonstrations. Two days later, on Thursday, February 17, Libyan dissidents participated in a "Day of Rage to challenge Qaddafi's 41-year-old iron rule."

Many western media outlets were surprised by the sudden uprising of the people, and the unrest was not reported

House strikes federal funds for Plan. Parenthood

MCT

Cecile Richards, president of Planned Parenthood (shown above,) said the budget cuts are "outrageous."

By Michelle Williams
Collegian Staff

On Saturday, February 19, the U.S. House of Representatives passed a bill that cut spending by 61 billion. The cuts in spending included an amendment that strips Planned Parenthood of any federal funding for the fiscal 2011 year.

Planned Parenthood said in a statement that it uses federal funding to provide services to 75 percent of its patients at clinics across the nation. The federal funding received over the years has been used to provide reproductive services including birth control, family planning counseling, treatment for sexually transmitted diseases and cancer screening services.

In the statement, Cecile Richards, president of Planned Parenthood Federation of America, said, "in attacking Planned Parenthood, the House Republican leadership has launched an outrageous assault on the millions of Americans who rely on Planned Parenthood for primary and preventive health care, including lifesaving breast and cervical cancer screenings, annual exams, family planning visits, birth control, HIV testing, and more."

The amendment was sponsored by U.S. Rep. Mike Pence, a Republican for Indiana's 6th Congressional District. He has served in the House since 2001. The amendment, it passed,

Looking at the future creatively

By Sahar Ashraf
Collegian Staff

The first thing you notice after walking into Flying Object, a hub of creativity located in Hadley, Mass., is the distinct smell of books.

It is not a particularly overwhelming smell, but it's unique. It's a smell that has been fighting a losing battle against the aroma of coffee in bookstores, new-age odourless e-books, and dust-ridden library shelves.

Despite setbacks in the independent bookstore industry, Guy Pettit refuses to throw in the towel. After overseeing the renovations of a small building across from the Esselon Café, he opened the Flying Object bookstore, letterpress and gallery on Oct. 1, 2010.

"Originally it was made to provide a space for people who are working on their own projects—like maybe they had a small press or they were printmakers or artists or writers—and didn't have the resources that they might want, or even need, to do those things," said Pettit.

These were the people who supported the establishment when Pettit undertook the responsibilities of director, and he's determined to support them back.

But the unfamiliar smell of printed paper and ink is not the only thing to notice. You may look at the walls decorated with paintings by local artists, or see the shelves filled with booklets by local poets. You may go around the back to examine the press equipment, which includes a large letterpress with its associated lead letters. You may glance over at the products of the letterpress lying around everywhere, paper that's printed with raised, inked surfaces— documents that you not only read but feel.

Or you may notice how small the place is.

"Independent publishing is something that's not well-funded by anybody, not locals, or the state or the government," said Pettit. "Providing a space for people and their art and what they're passionate about is marginalized."

The lack of money invested into the arts and its circulation is a problem that goes beyond simply disgruntling locals, however. The University of Massachusetts' English department, which once had around 100 professors, now employs less than 50. To make up for the drastic economic cuts, others have had to pick up the slack.

One such example is Francesca Chabrier, who is simultaneously a student and professor at the university. When she's not teaching English 354, a creative writing course, she is finishing up her studies in the Master of Fine Arts Program, from which she hopes to graduate this May.

But like most people, Chabrier did not always know that she wanted to teach, read and write poetry for a living. As an undergraduate she started off studying journalism. Eventually, her professors convinced her to take creative non-fiction. It did not take long for her to take the plunge into fiction.

"I think doing something that you really love is a wise life

Creative writing programs at universities and high schools have faced drastic budget cuts over several years' time. While the University of Massachusetts English Department once had 100 professors, it now has 50.

Coach arrested for child porn

CITYDATA.ORG

David Castricone coached wrestling at North Andover High School for 25 years, though stepped down after his arrest.

By Charlie Curley
Collegian Staff

North Andover High School Wrestling Coach David Castricone, one of the most successful coaches in Massachusetts, has been arrested and charged with possessing child pornography.

Castricone, 60, was arrested last Monday and entered a not guilty plea in Lawrence District Court the following day. He was released on $1,500 bail.

According to the Associated Press, police received a tip the week prior to his arrest, which lead to a search of Castricone's home.

In the subsequent search of his home, a police report filed in court shows that 77 pages of personal photos of females, who appeared to be unaware of the pictures being taken, were found, along with at least eight child pornography photos and child erotica, according to the Boston Globe.

Citing court documents, The Boston Herald says that Castricone "got nervous" as police searched his attic and eventually waived his rights and told police he had pornography in the attic.

The police report also shows that Castricone was caught entering the girl's locker room at North Andover High School at least nine times in the past month, staying two to seven minutes each time. A witness told police she had seen an older man in the locker room on February 7 with his hands inside a locker, which had holes in it, and a black

"Don't play with me, cause you're playing with fire"

ALEX MAJOR/COLLEGIAN

Around 11:30 p.m. on Sunday night, Amherst Fire Department and UM Police Department responded to a small fire in the window well outside of Baker Hall. None were injured. The fire department stated the cause of the fire was a mis-disposed cigarette which was thrown down the window well outside the main entrance and ignited dry leaves.

PORN from page 1

bag next to him. This led to the review of surveillance tapes by administrators, who were able to identify the man as David Castricone.

The report observed that "the holes in the locker door were large enough for a camera to shoot through", according to the newspaper.

The Globe also reported that he told authorities he went into the girls' locker room to look for an expensive scale used to weigh competitors in wrestling matches.

Castricone, who owns a roofing and siding business, has coached wrestling in Massachusetts for 38 years, with the last 25 being at North Andover. Over that time, he has amassed a career record of 681-142-3 and two state championships. He was the Boston Globe's Division 2 wrestling coach of the year in 2010.

The coach has since resigned, citing health and personal reasons.

A pre-trial conference is scheduled for March 30.

Creative writing reaps future career benefits

WRITING from page 1

PHOTO COURTESY OF FRANCESCA CHABRIER

"The writing program here is a strong program with a great reputation," said Francesca Chabrier, a student and teacher in the English department.

choice," said Chabrier. "The writing program here is a strong program with a great reputation, and the people in it have a lot of energy and heart and dedication. The funding we have by the MFA programs is okay. I don't know about fun."

The importance of creative writing in the job market, let alone in the world of academia, incites a lot of debate. The Association of Writers and Writing Programs held their annual conference in Washington, D.C., where the issue of the future of the discipline was addressed in a panel on February 4.

In the face of financial limitations, an increasingly consumerist society, and administrative instructions to enrol more students into the small classes, the speakers still seemed optimistic. The subject of creative writing itself, as one that is accredited and taught in educational institutions, is fairly new.

"People think anyone can write," said Pettit. "But it takes a lot of work and practice and craft."

Moreover, Pettit and Chabrier argued that honing your writing skills enables you to be successful in almost any other professional field. Conversely, being employed in any profession may still allow you to write in your spare time.

"I've had jobs that had nothing to do with poetry or creative writing," said Chabrier. "But the fact that I could write better than the average person helped me get further in those professional fields because I could present myself."

Creative writing does not always need a backup plan, however. The Beinecke Rare Book and Manuscript Library at Yale recently agreed to buy the work produced at Flying Object to document contemporary culture.

The establishment is not alone in its endeavours either. Places like it exist all over the country, though usually in larger cities. They bring in the creative work of locals, give them a voice, and allow a place for the community to come and engage with each other.

"It's not common for something like this to exist in a small town and still survive," said Pettit. "We're able to do this here because there's a history of writers and printers, and the five colleges bring in a lot of people, too."

While addressing debates that question the existence of creative writing as a discipline, artists also face the problem of the people's demand for an easier, faster, and cheaper means to get their creative fix. Amazon book sales have increased, e-books have become popular, and Borders has declared bankruptcy. In the midst of all of this, Flying Object and its sister establishments emerge in defiance.

"Physical objects, like printed matter, is so much more seductive to me than reading off a computer screen," said Chabrier. "I like the way, too, that poetry and design can be married."

Suhar Ashraf can be reached at sashraf@student.umass.edu.

Revolution, Libyan-style

Anti-government protests continue in Benghazi

CRETHI PLETHI/FLICKR

Demonstrators are calling for Libyan leader, Colonel Muammar el-Qaddafi, to step down. Protesters shout in the streets "Libya is free!"

LIBYA from page 1

by Libya's state-run media, that instead focused on rallies held in Tripoli, the nation's capital, in support of Colonel Qaddafi.

Libya is country about the size of France, Germany, Italy, and Spain combined with a population of approximately 6.5 million. It has been ruled for 42 years by Col. Qaddafi.

Oil is the main source of revenue for the African nation and while its oil revenues make it one of the wealthiest nations in Africa, the revenue often doesn't reach the general public. There is massive unemployment in the nation, estimated at 30 percent by the New York Times. Those with jobs, are often only able to find part-time employment.

More than half the population is under the age of 18. Malnutrition and anemia are among the most common health problems in the country, especially affecting youth.

Qaddafi, now 62, came to power when he was 27 years old when he held the position of junior military officer. He took power in September of 1969 by overthrowing King Idris, a leader supported by Western leaders following World War II. Since then, Qaddafi has ruled with an iron first, and has attempted to expand his influence through Africa.

Internationally, he is thought of as an irrational and often bizarre leader. In the 1980's President Reagan gave him the nickname "the mad dog of the Middle East." In Libya, many fear to speak his name.

The crowds that began to gather last week were inspired by the revolutions of the Tunisian and Egyptian people, and much like those protesters, used Facebook and Twitter to organize and call for change in their country.

Demonstrations spread across the nation, and protesters were met by riot police officers and confrontations led to many deaths. According to the BBC, witnesses reported that the police used rubber bullets, water cannons, and tear gas. On February 18 alone, 24 were reported dead, according to a report by the Human Rights Watch. Others that survived struggled to breathe while encapsulated in a fog of smoke and tear gas.

According to the Human Rights Watch, the death toll is up to at least 233 since February 17.

On February 19, the witnesses reported that riot police were using more brutal tactics. "Accounts of the use of live ammunition by security forces, including machine gun fire, against protesters near the Katiba in Benghazi, resulting in dozens of deaths and injuries, raise serious concern that the authorities are using unjustified and unlawful force," stated the report.

One demonstrator told the Human Rights Watch, "I could see the men with yellow berets shooting at us with live gunfire, and dozens fell to the ground. This went on for a long period of time, and I left with the injured to the hospital."

The following day, as protests continued, the government shut down nearly all forms of communication beyond the country, including internet and cell phone use. The New York Times reported on Tuesday, February 22, that access to international journalists is constrained, and information from inside the country has remained very limited.

"A potential human rights catastrophe is unfolding in Libya as protesters brave live gunfire and death," said Sarah Leah Whitson, Middle East and North Africa director at Human Rights Watch in the report. "Libya is trying to impose an information blackout, but it can't hide a massacre."

On Tuesday, February 22, international leaders condemned the violence as it continued to build.

Secretary of State Hilary Rodham Clinton condemned the actions of riot police and the brutality against anti-government demonstrators in Libya. She said in a statement for Qaddafi to "stop this unacceptable bloodshed."

United Nations Secretary General Ban Ki-moon, said on Monday that he spoke to Qaddafi and pressed him to put an end to the attacks immediately.

In addition to international leaders speaking out, an increasing amount of Libyan embassies have flown the flag of the era before Qaddafi, a flag now considered the banner of the revolt.

Despite international backlash, Qaddafi vowed "to fight to the last drop of blood," as violence between his followers and anti-government protesters intensified, according to the New York Times.

"In the long rambling address, he said those challenging his government "deserved to die." He blamed the unrest on 'foreign hands,' a small group of people distributing pills, brainwashing, and the naïve desire of young people to imitate the uprisings in Egypt and Tunisia."

Without acknowledging the gravity of the crisis in the streets of the capital, he described himself in sweeping, megalomaniacal terms. 'Muammar Qaddafi is history, resistance, liberty, glory, revolution,' he declared."

The leader's son, Saif al-Islam al-Qaddafi, also spoke against the protesters. According to Foreign Policy magazine, "he described the protests as part of 'a plot against Libya,' and warned of 'rivers of blood' if the rebellion continues."

Michelle Williams can be reached at mmwillia@student.umass.edu.

CRETHI PLETHI/FLICKR

Libyan protesters were inspired by revolutions in Tunisia and Egypt, and organized demonstrations on Facebook and Twitter.

GOP strips Planned Parenthood of funding

DAILY

Planned Parenthood said the money it receives from the government does not directly fund abortions that it is against the law. They also added that abortions only account for four percent of services utilized nationwide.

PLANNED PARENTHOOD from page 1

would prohibit Planned Parenthood specifically from receiving any federal funds.

On Saturday, after the bill passed, Pence published a statement on his website about the amendment and his feelings towards Planned Parenthood. "This afternoon's vote is a victory for taxpayers and a victory for life. By banning federal funding to Planned Parenthood, Congress has taken a stand for millions of Americans who believe their tax dollars should not be used to subsidize the largest abortion provider in America."

In response, Planned Parenthood said the money it receives from the government does not directly fund abortions because that it is against the law. Planned Parenthood also said that abortions only account for four percent of services utilized at their more than 800 clinics nationwide.

"This policy of attempting to undermine Planned Parenthood, the organization in the United States that does more than any other to encourage the use of contraception for those wanting to avoid pregnancy, certainly guarantees an increase in the number of unintended pregnancies. It is difficult to understand why people who say they are opposed to abortion would do so much to undermine the family planning and contraception that helps prevent the need for it," said Richards in a statement on the Planned Parenthood website.

The vote on the bill was extremely partisan. In a 235-189 vote, not a single Democrat voted in support, and they were joined by three Republicans in voting against it.

In addition, 100 members of Congress have signed a letter in support of Planned Parenthood continuing to receive federal funds. A section of the letter stated, "We are writing to strongly oppose efforts designed to undermine women's access to basic, preventive health care and the women's health providers they rely on in their communities. In particular, we are deeply concerned about the impact that H.R. 217, the 'Title X Abortion Provider Prohibition Act,' [Rep. Pence's companion, standalone bill] would have on American women and their families. H.R. 217 is aimed squarely at Planned Parenthood health centers."

Many Americans across the nation have expressed outrage over the amendment. On Saturday, February 26, a rally in support of Planned Parenthood will be held in Foley Square, in New York City.

Organizers are calling on all who are upset by amendment to take action. On the Facebook event page, organizers stated, "Right now Congress has one agenda item: take away your access to reproductive health care. The U.S. House of Representatives has just voted to bar Planned Parenthood health centers from all federal funding for birth control, cancer screenings, HIV testing, and other lifesaving care. It is the most dangerous legislative assault in our history, and it cannot go unanswered. IT'S TIME TO FIGHT BACK!"

The rally is being supported by dozens of women's health organizations including Family Planning Advocates of New York State, New York Civil Liberties Union and Women's Media Center.

The Mayor of New York City, Michael Bloomberg, has also expressed his support of Planned Parenthood. On Tuesday afternoon, he joined with Connecticut Gov. Dan Malloy and Vermont Gov. Peter Shumlin in a conference call in an effort to prevent the bill from passing in the U.S. Senate.

Michelle Williams can be reached at mmwillia@student.umass.edu.

House cuts the budget

BUDGET CUTS from page 1

joined by three Republicans who voted against it, including some conservatives who had wanted to see deeper cuts.

Democratic leaders said they, too, want to rein in the deficit, but said cutting spending now, and so deeply, would be to "jam on the fiscal breaks."

"It will slow economic growth, increase unemployment and thereby increase the deficit," said Rep. Norm Dicks, the ranking Democrat on the Appropriations Committee. He and other Democratic leaders said they would rather have a spending freeze at current levels, and wanted to offer that plan as a substitute for Republicans' bill, but the rules for debate prevented them from bringing it to the floor.

Earlier this week the Social Security Administration warned employees that if the cuts are signed into law, it will have to furlough some employees.

But Republicans, pointing to a projected record $1.6 trillion deficit looming this year, said a freeze is not good enough to get the country onto a sustainable path.

During the freewheeling, four-day debate the House repeatedly voted -- often with bipartisan support -- to overturn some of Mr. Obama's policies of the past two years: They voted to block implementation of last year's health care law, to prevent the administration from enforcing global warming rules and, in one overwhelming vote, to stop new limits on for-profit schools.

The House also voted to stop any federal funding from going to Planned Parenthood, a network of abortion and women's health clinics; killed some pet projects that top leaders had protected for years; and voted to block the Federal Communications Commission from issuing "net neutrality" rules.

All told, 67 amendments passed.

The spending bill is already nearly five months overdue, since the fiscal year began Oct. 1. Democrats, who controlled all the levers of government last year, failed to pass a budget or any of the dozen regular spending bills, instead using a stop-gap measure to fund the government through March 4.

Republicans' bill would spend at a rate of $1.2 trillion per year, which is $61 billion less than 2010 levels, and at least $100 billion less than what Mr. Obama had called for spending this year.

Now, that March 4 deadline looms ever larger, Congress is on a week long vacation in honor of George Washington's birthday, and when it reconvenes, Senate leaders have said they will tackle the thorny issue of patent law, leaving the fate of the spending bill in limbo.

Without a new spending bill, the government would shut down.

Congress could pass another short-term stop-gap bill, but even there, Republicans and Democrats disagree. House Speaker John A. Boehner has said any such bill would also have to include spending cuts, and Democratic leaders accused him of taking an antagonistic line.

GOP's big cuts

House Republicans want to chop more than $60 billion from domestic spending over the next seven months. Some of the biggest cuts, in billions:

EDITORIAL@DAILYCOLLEGIAN.COM

Labor unrest in Wisconsin

Matthew M. Robare

The current situation in Wisconsin, where Republican governor Scott Walker has proposed a bill that will strip almost all government employees of their collective bargaining rights, has profound implications for the future of the Republican Party. After all, the very first Republican president, Abraham Lincoln, fought the Civil War to preserve unions.

That's the kind of attitude the Republicans should have towards unions, that they will fight the bloodiest wars in American history for them and not strip away their rights. Like Madonna said, as Eva Peron in "Evita," "Why commit political suicide, there's no risk, there's no call for any action at all when you have unions on your side."

Starting in the late 60s the company started reformulating their flagship product and like New Coke in the 80s and other "new" products introduced around that time, such as New Jersey, no one liked it and the company lost a lot of money.

So all the conflict coming out of Wisconsin – wait a moment, I'm getting a correction handed to me: it turns out the Civil War was fought to preserve the Union, not unions. My bad.

In that case, let Scott Walker do what he wants to them. They were never his core constituency and benefits for public employees eat up huge portions of government budgets, considering that they never bothered to fund them in the first place, apparently banking on permanent prosperity despite recessions and stock market collapses occurring like clockwork, but crucifying federal economists would only make us feel better, it wouldn't actually solve any of the problems. Walker is merely trying to correct the responsibilities of his predecessors in the Wisconsin governor's office by doing what all politicians do: raising a stink about a small group and praying the economy improves in time for re-election.

And why shouldn't he attack unions? I mean, aside from public schools, weekends, the 40-hour work week, sanitation, overtime, minimum wage, workplace safety, preventing totalitarian communism from taking hold in this country, administration, public transportation, social services, wrongful-termination, abolishing debtors' prisons, universal male suffrage, Weingarten rights, fair contracts, arbitration, abolishing child labor, eight-hour work days, social security, Medicaid, Medicare, welfare, job security, anti-racial discrimination work laws, anti-gender discrimination laws, the Americans with Disabilities Act, medical leave, vacations, mental health services and equal opportunity employment, what have unions ever done for us?

My parents went to college in Milwaukee and one of the great beers made there was Schlitz. Back in the day Schlitz was to people then what Budweiser is to us today – cheap and available everywhere – but Schlitz actually tasted good. Starting in the late 60s the company started reformulating their flagship product and like New Coke in the 80s and other "new" products introduced around that time, such as New Jersey, no one liked it and the company lost a lot of money.

Naturally the unions decided that it was a good time to go on strike and demand higher pay. With sales and revenue already on the decline and then suddenly no product being made at all, Schlitz went bankrupt and died.

The railroad industry in Vermont experienced something similar. My hometown of Rutland, Vt. was once home to the Rutland Railway. It employed hundreds of people and connected Vermont to Boston, the St. Lawrence Seaway, Montreal and Albany, N.Y.

Like most railroads it was never financially secure and the lack of heavy industry in Vermont meant that it mostly transported agriculture-related items for dirt-poor farmers (the farmers having chased away federal anti-poverty workers in the 1930s at gunpoint) so with an interstate highway coming to Vermont in the 50s and looking like it would take away the remaining rail traffic, another strike was an excuse to shut down the company.

So there are times when Unions aren't so hot. In these trying times their supporters should draw on the example of the great 19th century labor leader Samuel Gompers, who had one of the greatest-sounding last names in American history. It sounds like an old-timey curse word from the "Leave it to Beaver" era: "Gompers, Wally, what does 'Restrictive covenant' mean?"

Unfortunately we don't know yet what the situation in Wisconsin will bring. The Democrats in the legislature have skipped town and are being rounded up, schools have closed as teachers have headed to Madison to protest and union workers around the country are holding rallies to show their solidarity. But we really haven't considered the consequences of increased union activity in Wisconsin – they have a lot of cows, who have bad working conditions and as a Vermonter I know that cows are impressionable creatures.

The government of Wisconsin needs to get its act in gear before the cows start getting ideas about organizing.

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.

Albus Percival Wulfric Brian Holub

Brandon Tower

As President of the Student Government Association, I know it's not politically advantageous to give high praise to any administrator, let alone the head of the campus. When campaigning for SGA elections, we talk about the administration as the evil boogeyman of student life and "holding them accountable." I know this because I did it. I didn't do so disingenuously; there really are administrators who have very little interest in working with students and need to be held to account. But throughout my tenure working with the SGA, I've come to learn that most people in the administration are regular folks who didn't get into the business of university affairs just to screw over students.

So what the hell was I doing saying that Chancellor Robert C. Holub is like Hogwarts headmaster Professor Albus Dumbledore in a video interview with The Collegian three weeks ago?

Now I'm not trying to make myself Harry Potter here, far from it, but to explain what I meant, I think it's best understood in the context of JK Rowling's famous character's relationship with his school's headmaster. (If you haven't read "Harry Potter" you might as well check out now, but I have a feeling that won't be a problem for most of us). If we ask, "Why did Harry look to Dumbledore for guidance and advice?" I think it's fair to say part of it was practical. He respected his knowledge base and professional acumen. I also think Harry understood that Dumbledore told him what he needed to hear, not what he wanted to hear, even if that was a hard truth. More than anything though, I think Harry felt a deeply rooted sense of security with Dumbledore at the helm; as long as he was the headmaster at Hogwarts, everything was going to be okay.

Now trust me when I say I'm not doing this to line myself up for a job. My plans for the fall are already set. When I listen to our chancellor talk about his vision for the University of Massachusetts, I imagine the feeling I get is similar to that of the fictional Harry Potter when he listened to Dumbledore. True, Holub has yet to send me off searching for horcruxes, so maybe the stakes aren't quite as high. But the future of our school, the residual value of all our degrees and the $30 million budget shortfall to come are all serious issues.

When I listen to our chancellor talk about his vision for the University of Massachusetts, I imagine the feeling I get is similar to that of the fictional Harry Potter when he listened to Dumbledore.

When I came to UMass as a freshman, this campus suffered from an inferiority complex, a condition exacerbated by the prestige of eastern rivals and dwindling state support. I almost felt as if I had to be ashamed to come here. Now I can say unequivocally that those days are gone, and I can trace when I started to really believe in the potential of UMass directly back to my first meetings with Holub.

The chancellor's corner of the administration building is an oasis of Whitmore, and I'll admit, I was a little intimidated. Working up the courage, I asked him every tough question I could think of about the budget, the direction of the school, the crumbling student union and of course a host of other student issues. Never once did he duck a question and he never spoke to me in a way that was condescending or patronizing. Yes, the budget situation was (and still is) ridiculously difficult. But what further endeared me to the chancellor was his refusal to make excuses for this university. But beyond that, it wasn't just excuses for not maintaining the status quo; he wouldn't accept excuses for this university not being exceptional.

I'd always believed that students had the ideas that could make this university better. That's why I ran for the office of SGA President in the first place. I have to say though, my faith in administrators outside of Student Affairs didn't extend very far up until that point. After meeting with Holub, I really believed. I believed that as long as he was in charge, this university would always be strong, and more importantly, would always be getting stronger.

So now, I too play the expectations game. Expectations are powerful, as what is expected of us tends to dictate what we expect of ourselves. Chancellor Holub expects this university to be great, and so do I. We're still going to have disagreements. I think we're giving up too easily on pursuing state appropriations for UMass. Ultimately though, the same way Harry trusted Dumbledore is the same way I trust our Chancellor, and as long as he holds that position, I know UMass is moving in the right direction.

Brandon Tower is President of the Student Government Association. He can be reached at btower@student.umass.edu.

Deficit talk is political theater

Harrison Searles

Austerity is inevitable. It is simply impossible for any person or organization to live beyond their means for any period of time without having to compensate for that in the future. The longer one waits to face the problem of unsustainable consumption and spending, the more critical the problem becomes, the harsher austerity measures must become. Recently, President Obama has released his budget for the new fiscal year and has called for $1.1 trillion in spending cuts and tax increases over the next decade.

Though this is certainly a step in the right direction, the president's budget, as well as most Republicans in Congress, are ignoring the 800 pound gorilla in the room and their plans will therefore fail if they do not take it into consideration.

In his foreword to the 2011 budget, the president claimed that his budget contained a "blue print for the work ahead" and that a major mission for solving the problem of the deficit was streamlining programs and getting rid of those that did not work. He noted that it included 120 programs for either reduction or termination and that for the sake of "a fiscally sustainable path" a freeze on non-defense discretionary spending was outlined for the next three years. Obama even follows that by saying: "This freeze will require a level of discipline with Americans' tax dollars and a number of hard choices and painful tradeoffs not seen in Washington for many years. But it is what needs to be done to restore fiscal responsibility as we begin to rebuild our economy."

Furthermore, the Pentagon's budget would be reduced by $78 billion in the next five years and the spending on the wars in Afghanistan and Iraq reduced. As a result of all this, discretionary spending will reach 5.6 percent of GDP, the lowest that it has been in around 40 years. Even though this may seem to be an earnest attempt to solve the problem of the federal deficit before it grows into a full-fledged crisis, a basic analysis of the situation shows that it is simply a farce.

Many seek to protect entitlement spending and have instead suggested cutting funding for programs like the war on terror and pork-barrel spending, but this is simply not enough.

The proposed budget is entirely focused on the discretionary spending approved by Congress, but herein lies its weakness because the rampant deficits facing the federal government cannot be solved simply by trimming it. Instead, any viable solution must also take into consideration the role that entitlement spending will have now and in the decades to come. In 2010, discretionary spending only constituted under half of the budget of the federal government, $1.375 of the total $3.618 trillion, with the rest being entitlement (i.e. spending that is on auto-pilot and does not require congressional approval) and payments on the interest for the debt.

Furthermore, in the past two years alone, there was been $2.7 trillion added to the federal debt and yet Mr. Obama is speaking about reducing the deficit by $1.1 trillion over the next ten years as if it is a Herculean challenge that will require a great feat of will power. Of course, the new budget has taken into consideration a prediction that the American economy will quickly bounce back from the Great Recession and produce income for the government to tax, but this rosy picture must be considered cynically after the administration's repeated prediction failures.

However, it will not even undo the damage of the orgy of spending that has marked his first two years without even considering the debt accumulated by his predecessor and it does not even come close to putting the federal government back on stable ground financially.

The new budget manages to leave unaddressed the so-called "mandatory," entitlement spending from Social Security, Medicare and Medicaid that will drive the deficit in the future. An aging population and healthcare costs will propel this part of the budget to around 14 percent of GDP by 2021 and that percentage will only accelerate at a greater pace after that. Many seek to protect entitlement spending and have instead suggested cutting funding for programs like the war on terror and pork-barrel spending, but this is simply not enough. All discretionary spending could be cut with the federal government would still be running a deficit with 2010 conditions holding, but this sidesteps the real issue: there are around 77 million baby-boomers who will retire soon and put a strain on those welfare programs that cannot be withstood if their current course remains static. There must be some reform of how these programs operate so that not only are they able to provide what has been promised to that generation and so that they can do the same for the promises given by the federal government to the subsequent generations. All that Obama's budget has managed to say is that these issues need to be addressed.

However, to blame the president alone would be unfair and to even blame Washington alone would be passing the blame. When there are heated debates over cutting programs as inconsequential to the government's duty to its citizens as Planned Parenthood, it should surprise no one that politicians, who more often than not follow their own electoral self-interest, steer clear of pursuing those issues more deeply. Speaker of the House Boehner spoke the truth when he noted on NBC's "Meet the Press" that the reason Washington has yet to tackle entitlement reform is that most Americans do not recognize it as a major issue yet. All three programs have not only strong interest groups that would be able to mobilize great resources against any attempt of reforming them and they have also created a class that is very much dependent on them thus making easy fodder for appeals to emotion. Any attempt to reform them will result in a political battle that will require that the self-interest of politicians be aimed at solving these problems and until then pathetic attempts like the president's recent budget should be all that is expected from Washington.

'Metropolis' gets a standing ovation

By Brian Canova
Collegian Staff

Eighty-four years ago in Berlin Fritz Lang's "Metropolis" debuted to lousy reviews and poor reception from audiences and critics alike. This past Sunday at the Academy of Music Theatre in Northampton, screened with the accompaniment of the Alloy Orchestra, Lang's seminal 1927 silent film played to a standing ovation.

What has changed in 84 years? Well, aside from the cultural context and mythical lore surrounding the restoration of this film long thought to be lost under the rubble of time, the Alloy Orchestra - an unconventional three man ensemble boasting two percussionists, a keyboardist, some pots and pans and a bunch of junkyard hoardings - bridged the gap between 1927 and today with their galvanizing original score.

"Metropolis" is as much a sci-fi dystopia as it is a timeless romance. Freder (Alfred Abel), son of city leader Joh Frederson, falls for Maria (Brigitte Helm), who has been preaching reconciliation between the workers and the capitalists.

Seeing her for the first time in the Eternal Gardens, Freder follows after her into the workers underworld where he's exposed to the worker's horrific plight. When an enormous machine explodes and kills many of the workers, Freder envisions the workers ritualistically feeding themselves into the mouth of the machine.

After confronting his father at the New Tower of Babel over what he's seen, Freder joins the cause of the workers enlisting the help of his father's old clerk Josaphat and a worker named George #11811.

While spying on a secret sermon between Maria and the workers, Frederson learns of their plans and advises the mad scientist Rotwang to bring his Machine-Man to life in the image of Maria. Rotwang consequently kidnaps Maria and unleashes the "Maschinenmensch," her robotic doppelganger, in order to provoke the workers into violent rebellion.

Compared to the original score composed by Gottfried Huppertz, the rich, mechanized score's tight interactions with on-screen visuals bring new depth to the viewing experience, and make accessible the director's original vision. According to Alloy Orchestra percussionist Ken Winokur, this has been one of the orchestra's primary focuses in the twenty years they've been playing this piece.

Based in Cambridge, Mass., The Alloy Orchestra is comprised of percussionists Terry Donahue and Ken Winokur, and keyboardist Roger Miller, better known as the guitarist for Boston-based post-punk band "Mission of Burma."

Each member of the ensemble brings something unique to the table, and it certainly showed Sunday afternoon. Winokur's African and Latin influences, Donahue's fondness for Hank Williams, and Miller's avant-garde punk rock proclivities emerged in fleeting moments and occasional improvisational rifts from within the predominantly industrial "junk rock" musical accompaniment.

While Miller procures a wide scope of sounds, instruments and samples from the keyboard, the percussionists' focus rests between typical drums and the hanging array of junk to bang on. It seems a fitting complement. In one such instance, the orchestra kicked off the film with the gritty and unpleasant screeching of a plumbing pipe to represent the opening and closing gates of the rusty elevators which haul the workers back and forth to the machines they labor over deep underground. The workers march in rows to and from the elevators during a shift change as a lone bass drum beats to their steps.

Filmed during a stable period of the Weimar Republic, "Metropolis" has to be understood in the post WWI context, where technology by and large served to kill; according to Joseph McVeigh (Ph.D.), Professor of German Studies at Smith College, who introduced the film on Sunday.

When the film was first released one of the chief complaints was that the film is difficult to take seriously. Some went as far as to call the film naïve and trivial. Since then the film has come to be taken quite a bit more seriously, if not only for its shrewd warnings, but also for its striking expressionist visuals of cityscapes and working-class underworlds, and what they introduced to the world of cinema. Its themes and imagery have been echoed in futuristic dystopias such as "Blade Runner," "The Fifth Element," "Dark City," and even the 1984 Queen music video "Radio Gaga."

The Alloy Orchestra's score benefits from this perspective on the film, especially in moments where the film is hard or even impossible to take seriously. In Winokur's words, the score has been informed with over 80 years of musical development. And maybe that was the problem in 1927. Perhaps it just wasn't ready yet.

McVeigh explained that the film remains immensely relevant today. "We live in a world of shifting centers of gravity and economic and political uncertainties not unlike those of Weimar Germany in the 1920s. Let's hope things don't end the same way," said McVeigh.

Nearly restored to its original form, running only six minutes shorter than it at its premiere, "The Complete Metropolis" is available from KINO International on DVD and Blu-ray. Due to conflicts with the distributors the Alloy Orchestra's score is not included on either copy, but is available on CD from the orchestra's website, alloyorchestra.com.

The recent re-release of "Metropolis" recently played at Amherst Cinema. But this past week the Alloy Orchestra performed an updated version of its dynamic soundtrack at a screening at the Academy of Music.

Bright Eyes shines

Conor Oberst has brought a somewhat sunnier approach to his latest album "The People's Key." Although there still is a certain amount of melancholy, there is little of the sheer anguish that fills some of his earlier work.

By Acacia DiCiaccio
Collegian Staff

It is a rare opportunity for fans to be able to track the emotional progression of a musician merely by listening to their discography. However, this is exactly what occurs with Bright Eyes's lead singer Conor Oberst.

Looking back at his albums, one can track the songwriter's emotional progression. While the first few Bright Eyes albums consist of Oberst's typically introspective pondering and wailing, the theme of depression really culminates with the 2002 album, "Lifted, or The Story is in the Soil, Keep Your Ear to the Ground," with many tracks relating to feelings of worthlessness. In 2005, Bright Eyes released it's most critically acclaimed album, "I'm Wide Awake, It's Morning," and continued demonstrating an all-surrounding sadness.

With the release of Bright Eyes' previous album in 2007, "Cassadaga," the music possessed a noticeably brighter, more upbeat sound to it. It appeared that Conor Oberst's depression was finally lifting.

"The People's Key," released on February 15th, is another breath of fresh air for Bright Eyes fans as the theme of happier songs continues. However, it is not totally devoid of sadness, as a Bright Eyes album would not feel real without it.

With a science-fiction theme to the album, "The People's Key" may at first appear to be an odd title. However, with a closer listen to the lyrics, Bright Eyes manages to stay true to the plight of the common man while still making references to Jules Verne. Oberst clearly understands the wonderment and tribulations of being a human being. He contrasts the idea of "The People's Key" with the image of a huge arena with a machine pumping out sound, illustrating that he prefers what he considers to be an honest style of music.

The album begins with a somewhat-bizarre sample of a man stringing together ideas regarding aliens and Hitler. "The People's Key" frequently experiments with samples. The album is broken up by spoken-word clips that sound like the rambling of drugged-up philosophers. By using these odd recordings, Oberst seems to be demonstrating that he no longer takes himself quite as seriously as he did during his previous angsty years.

Oberst had taken a hiatus from Bright Eyes between "Cassadaga" and "The People's Key". Perhaps this break from his most famous music project has given him the perspective he needed to create an album that both laments and rejoices in a way that reinvents Bright Eyes with a "universal elegance." The song "Beginner's Mind" perfectly illustrates the starting-over that Oberst has done again and again with his new projects, while ultimately nursing his inner child until it can burst into what has become "The People's Key."

'Biutiful' a smashing success

By Brian Canova
Collegian Staff

After 2006's "Babel," a discouraging and overcomplicated cinematic miscarriage, Alejandro Gonzalez Inarritu returns to the caliber set by his fantastic earlier films with "Biutiful," a melancholy film as much about dying as it is about living. Heart-wrenching for all of its 148 minutes, you'll walk out of "Biutiful" ready to live life.

Javier Bardem ("No Country For Old Men", "Vicky Christina Barcelona") stars as Uxbal, a divorced father, noticeably tortured from the first moment we meet him. When he's diagnosed with terminal prostate cancer and given but months to live, Uxbal must wrestle with the decision of whose care to place his two young children in. Unable to entrust them with his estranged wife Marambra (Maricel Alvarez) a late night masseuse with a history of drugs, alcohol, and untreated manic depression. Uxbal juggles this dilemma throughout the film while at the same time balancing the daily hustle of the Barcelona underground in order to pay the rent and put food on the table.

The Barcelona of "Biutiful" is not one of glamour and enchantment, as it was in Bardem's last on-screen appearance before the backdrop of this city in Woody Allen's "Vicky Christina Barcelona." Rather, it is shot in the gritty underbelly of Barcelona's tenements, sweatshops, and apartments. The filmmaker's contrasting use of oceanside vistas, shots of glassy rolling waves, and a woodsy dreamlike sequence that opens the film round out the familiar feel of Rodrigo Prieto's cinematography whom Inarritu has used on his last four projects.

The camera is turned on Bardem for almost the entire film, but the audience never tires of his dark and enigmatic Oscar-nominated performance. Bardem's performance is raw and heartbreakingly real as Inarritu effectively captures Uxbal's city through the eyes of a dying man. It's the little things Inarritu uses to embrace his ambitious attempt at capturing the beauty, fragility and meaning of life that set this film apart and strike a resounding emotional chord, such as when Uxbal, an otherwise tight enforcer of dinner table etiquette joins his daughter, son, and ex-wife in eating melted ice cream with their fingers.

Most every element of the film is tragic, and even in fleeting moments of excitement and celebration the film's somber tone always lingers close at hand. Every scene and every shot is rich with emotional detail offering constant insight into the subtle nuances of each of Inarritu's characters. The film, which from it's original conception, writing process, and to the end of filming took all of three years to complete, is reflective of this in the attention the director pays to his characters, the layered intricacy, and sophisticated multiple-narrative technique viewers have come to expect from Inarritu.

The juxtaposition of Uxbal's line of work and the tender loving care he provides for his children temporarily ameliorates his morally bankrupt day to day work of middle-manning between indentured Asian sweat shop workers and the construction site that employs their cheap labor, and coordinating African immigrants in the street-side peddling of knock-off handbags. The audience is able to let this slide for the better part of the movie until a deeply disturbing catastrophe changes the entire perspective.

The film is not without its flaws. While the lens is for the most part focused on Bardem, supplemental story lines of a family of African immigrants and a romance between two gay, Asian men feel out of place and distracting, notably the latter. In addition Uxbal's ability to on occasion speak with ghosts adds an additional metaphysical layer of complexity that may be difficult to digest with everything else that's going on in the film.

While Inarritu will redeem himself in the eyes of many with "Biutiful," the film owes much of its quality to Bardem's gripping and jaded performance. From Bardem's calm and cool drag off a cigarette in the opening scene to his quiet departure later on, he gives himself completely to the role of Uxbal, embodying this character in a manner few others could have come anywhere close to.

Brian Canova can be reached at bcanova@student.umass.edu.

Alejandro Gonzalez Inarritu previously earned acclaim for his twisting multi-layered films such as "Amores Perros." His recent film "Biutiful" is driven by a spectacular performance from Javier Bardem.

JEFF BERNSTEIN/COLLEGIAN

The Minutewomen will take on non-conference opponent Boston University after opening the year with two wins.

Striving to defeat top teams

By Dan Gigliotti
Collegian Staff

Success in Atlantic 10 play is not foreign to coach Angela McMahon and the Massachusetts women's lacrosse team, but the next week could blaze a path that has evaded the Minutewomen to date.

UMass (2-0) embarks on a three-game non-conference road trip this afternoon, its longest of the season. Beginning with No. 18 Boston University at 3 p.m., followed by Siena on Saturday and New Hampshire on March 2, the Minutewomen are out to prove something – that they deserve to be discussed as one of the top college lacrosse programs in the nation.

"It's a tough test, but it's a great test for us," McMahon said. "Not only to prove to ourselves, but prove to everyone else that we deserve to be in the top 20, as well."

If back-to-back conference titles are not evidence enough of Atlantic 10 success, UMass is 50-29 (.633 percent) all-time with the second-most regular season wins in conference history (Temple, 62).

The consistent success of the Minutewomen in conference play is what makes their non-conference record such an anomaly. UMass has won or finished second in the A-10 tournament in six of the last 12 seasons since 1999. In at least as many seasons (UMass media relations provide yearly results through 1999 only), they have failed to post a winning non-conference record (41-74, .366 win percentage).

UMass had two seasons in that span in which it finished .500. The remaining 10 seasons represented the struggle that the program has had in being considered one of the top teams in the nation.

"One of the biggest things in our non-conference schedule is proving that we should be one of the top teams in the Northeast," McMahon said. "In order to prove that, we have to play everyone around here and beat everyone around here. That's kind of our mentality and our goal right now is to really prove that we belong as one of the top teams in the area."

The Minutewomen finished 5-5 in 2007, McMahon's last season as an assistant coach. Since then, UMass is 10-20 outside of the A-10, including a five-game losing streak in 2008, a 23-6 drubbing against Northwestern to end the 2009 season and consecutive losses to No. 1 Maryland (14-4) and No. 15 Stanford (15-12) in vying for an NCAA tournament berth to conclude 2010.

Back-to-back victories to begin this season are an encouraging sign for the Minutewomen. A 12-10 victory on the road against Holy Cross in overtime last Wednesday suggests that the UMass players have the mental fortitude to win a close non-conference game on the road. It's dismantling of Vermont, 17-9, in Saturday's home opener is also a welcoming sign for McMahon, who is now 2-0 as head coach of the Maroon and White.

Still, both opponents were picked to finish fifth in their respective conferences (Holy Cross, Patriot League; Vermont, America East) and the Minutewomen entered last weekend's contest winning 10 of their 12 total meetings with the Catamounts.

On the other hand, the Terriers represent the type of opponent that UMass is striving to be – nationally ranked.

"That's been a goal of ours, to be one of the top programs and sort of take that next step as a program and hopefully break the top 20," McMahon said. "If ever there's an opportunity to do it, tomorrow is it."

The Minutewomen have not beaten BU since 2007, when they won 10-8 at Nickerson Field. They are 10-8 overall against the Terriers, including a 10-8 loss on Feb. 24, 2010 when they were ranked No. 10 nationally.

National recognition is enough to light a fire under UMass and yet the rivalry that comes with playing an in-state opponent adds additional fuel to the figurative flames.

"When you face similar teams as you, you kind of have a chip on your shoulder, where you really want to prove that you're better than them," McMahon said.

Out of the 27 players on the roster, 20 Minutewomen are from Massachusetts, New York or New Hampshire. Many of the players carry a personal attachment to in-state competition while playing against former high-school teammates.

The styles of play between Northeast opponents induce a more competitive atmosphere, one that McMahon characterizes with grittiness, hustle and a "blue-collar mentality."

With elite status in the works, UMass will carry a workman's mentality into Boston tomorrow.

"I think we can really beat anybody, if we're playing as a unit and playing well together," McMahon said.

Dan Gigliotti can be reached at dgigliot@umass.edu.

Perfect record on line

UMASS from page 8

game against Vermont.

"We've definitely been seeing some other people step up which is great for us," McMahon said. "I'm just really pleased with our balanced team effort, I think that everyone is contributing right now."

Meanwhile, BU has established itself as one of the most successful women's lacrosse programs on the East Coast.

Their resume includes nine America East Championships and eight NCAA appearances over the past decade.

In 2010, the Terriers finished at 11-9 and 5-1 in America East play. They advanced to the NCAA tournament after defeating the University of Maryland, Baltimore County for their sixth-straight conference championship. In the NCAA tournament, however, BU fell 14-9 to Penn.

After graduating 10 seniors, 2010 could prove to be a rebuilding year for the Terriers. Not only did BU lose over 50 percent of its scoring, the Terriers also lost six starters from last year's squad including goalkeeper Rachel Klein.

Despite the massive rollover this season, BU has still been selected as the pre-season favorite to take the America East.

The in-state rivals are no strangers to one another. UMass has opened up for the Terriers eight-straight years. Their last victory for the Minutewomen versus the Terriers dates back to the 2007 season.

Nevertheless, McMahon relishes the opportunity to take on a successful lacrosse program like BU.

"It's a great test for us to really prove to not only ourselves but everyone else that we deserve to be in the top 20," McMahon said. "If there's ever an opportunity to do it tomorrow's it."

She had one wish in particular for her team when they battle the Terriers: composure. "I think composure is going to be key, because they're very aggressive, very physical and we can't let that distract us from our game," McMahon said.

Wednesday's game will be played at 3 p.m. at Nickerson Field.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Senior Haley Smith maintains possession as she attacks the Vermont defense. So far this season, the midfielder leads the Minutewomen in goals scored with seven after scorching the Catamounts for four last game.

JEFF BERNSTEIN/COLLEGIAN

Pitcher Sara Plourde suffered the defeat at the hands of Michigan on Sunday in the finals of the 2011 FAU Kickoff Classic. Plourde allowed four earned runs on eight hits in six innings of work in the loss.

Wolverins top UMass

MINUTEWOMEN from page 8

field fence to give them a 1-0 lead.

After a pitching duel between Plourde and Taylor yielded zero runs between either team for a while, it was Caitlin Blanchard who gave Michigan some insurance, leading off the sixth inning with a solo home run before Nicole Sappingfield hit an RBI single, to drive Bree Evans in for the victory.

UMass outlasts Owls

The fourth game of the weekend pitted UMass against Florida Atlantic, the host school of the Kickoff Classic. Behind strong performances from Plourde and Bettencourt, the Minutewomen took down the Owls, 6-1, on Saturday afternoon to improve their record to 2-2 on the weekend.

Plourde pitched a complete game, giving up one earned run on three hits and striking out 12 to earn her second victory of the season and improved her overall record to 2-1.

Leading 2-1 going into the seventh and final inning with two runners on base, Bettencourt came to the plate and blasted a three-run homer to blow the game open and lead UMass towards the 6-1 victory.

Carta, Magill and Stephanie Mayne each contributed in the win with multi-hit games to help UMass past FAU.

Wolverins win finals

After winning a three-way tiebreaker between 2-2 teams by allowing the fewest runs in their first four games, the Minutewomen earned a rematch with Michigan on Sunday afternoon in the Kickoff Classic finals.

Plourde stepped onto the hill for the fourth time on the weekend and went six innings, giving up four earned runs on eight hits as the Minutewomen dropped the championship game to the Wolverines, 5-1.

After each team put up a run in the first inning, it remained 1-1 until the fifth when the Wolverines began to break things open with a Shaw sacrifice fly that drove in Evans for the go-ahead run.

After UMass went scoreless in the top half of the sixth, Ashley Lane led off the bottom of the sixth with a solo home run to extend the lead to 3-1.

Then, with a runner on base, Amy Knapp took Plourde's 3-2 offering and blasted it over the center field fence for a two-run homer to make it a 5-1 game, which it would stay as Michigan won the 2011 FAU Kickoff Classic.

"I thought that we did a lot of things well," UMass head coach Elaine Sortino said to UMass media relations as she reflected on the weekend. "And I thought that we learned a lot about ourselves and what we need to do better, which is what you would hope to find out in your first weekend out."

Next up for the Minutewomen is a weekend trip to Cathedral City, Calif. where they will compete in the Cathedral City Classic against the likes of such national powerhouses as Washington, Texas and California.

Redshirting helped Putney adjust at UM

PUTNEY from page 8

the bench," Putney said. "I'm just working my way up. I bring a lot of energy and motivation off the picks to help my team on the run, so I guess just keep bringing it at practice and work hard."

The 6-foot, 8-inch forward stands tall and slim at 180 pounds. While it may be difficult to see, Putney has continuously worked at putting weight on his slender frame. That was one reason why redshirting in his first year as a student at UMass made so much sense.

"You get stronger and just grade-wise, you keep on top of your grades," Putney said. "Important thing for me was to get stronger."

"A lot of times at places like UMass and other places that have been successful at this level, redshirting guys is kind of the way to do it," Kellogg said. "Sometimes that can make up for not being able to get some of the top 50 or 25 or 30 or 40 recruits."

One player in a similar situation as Putney was last year is freshman Maxie Esho. Despite entering this season as UMass' top recruit, the forward has not seen game-action and is redshirting the year.

The 6-foot, 8-inch, 200-pound forward has similar abilities as Putney with great athleticism and length. As a recruit, Esho was given a 90 grade by ESPNU, which analyzed him as having "a ton of potential and upside," but needing "to get significantly stronger."

That analysis sounds equivalent to what many have said of Putney. As someone who has been in that situation and redshirted his first year, Putney can relate to Esho.

"He's having a tough time [but] I'm going to talk to him and tell him it's going to be good," Putney said. "It helped me."

Jay Asser can be reached at jasser@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Raphael Putney extends to make a block in a game earlier this year. In the past two games, the forward has a total of 21 points and 14 boards.

JEFF BERNSTEIN/COLLEGIAN

Senior guard Anthony Gurley dribbles up the court in a game earlier this season. Gurley and the Minutemen will face Saint Joseph's on Wednesday at the Mullins Center as UMass looks to win its second-straight contest.

Minutemen set to take on Saint Joe's

By Herb Scribner
Collegian Staff

The last meeting between the Massachusetts men's basketball team and Saint Joseph's is one that many Minuteman fans would like to forget.

Playing at the home of the Hawks (7-19, 2-10 Atlantic 10), the Minutemen (14-11, 6-6 A-10) were stunned, 67-64, by a SJU team that had yet to win a conference game. To make matters worse for UMass, its prolific scorer, Anthony Gurley, was held to 10 points which at the time was his season-low.

However, this Wednesday's game against the Hawks will feature a Maroon and White side that is coming off the heels of an impressive 66-60 win against rival Rhode Island.

After snapping its losing streak and back to their winning ways, the Minutemen will try to erase this season's earlier contest with SJU.

"Honestly, I thought they played a really good game," UMass coach Derek Kellogg said on the Feb. 5 affair. "I don't think we played so well and that can be attributed to them or just a road game on a Saturday night that [was in] a sold out arena after we had a tough travel week, so there were a lot of things in their favor."

Whether it was the travel issues or the road game itself, the Minutemen were caught off guard by freshman Langston Galloway, who went 8-for-12 from the field, 6-for-6 from beyond the arc and was a large part of the SJU offense that dictated the game.

"We can't let them control tempo and really can't let them control the pace of the game," Kellogg said.

Other than Galloway controlling the pace, the Hawks' top scorer Carl Jones will likely take the court after missing the last game between the two sides. Jones has scored in double digits in 23 of the team's 25 games and will be a fast-paced weapon that UMass will look to maintain.

In order to control the tempo against the Hawks on Wednesday, the Minutemen have been practicing at a faster pace, which includes getting the ball down the court in transition. UMass has struggled with scoring on the break at times this season, which is something it's looking to correct.

According to Kellogg, increasing the tempo is only half the battle.

"You don't want to play so crazed and wild that they're able to get easy open shots because you're trying to speed up the game," Kellogg said. "So it's kind of a middle ground on how fast you can get it but staying in the context of how we want to play."

The Minutemen's context of play will include Gurley, who came out of his slump against the Rams on Saturday with 16 points. Before the game at URI, Gurley scored a total of 26 points in his last three contests.

"I've been putting in work all season so a little two, three-game slump really isn't going to phase me like that," Gurley said. "I come here and do the same thing I've been doing. Every player goes through a slump. Kobe goes through slumps, Ray Allen goes through slumps, I'm only human."

While the slump seems to be over, Kellogg is still looking for his top scorer to put in the effort to score down the stretch.

"I think if the game gets a little faster he'll be able to get some more plays in transition," Kellogg said. "And then in the half court he needs to make some of the shots that are available."

Speaking of shooting, guard Freddie Riley was on the practice court on Tuesday after dealing with an ankle injury which he suffered against Duquesne. While nothing is certain, Kellogg seemed extremely positive on Riley competing against SJU.

"I guess it's going to be a game-time decision, but I think he'll play and especially if they go into their zone, he's valuable because he can make jump shots," Kellogg said.

With Riley on his return and freshmen Raphiael Putney and Jesse Morgan stepping up in his absence, this could be the corner that many Minutemen fans were hoping UMass would turn.

"We need this game, we need every game for the rest of the season," Gurley said.

Herb Scribner can be reached at hscribne@student.umass.edu.

Putney makes big strides

Lanky forward energizing UMass as redshirt freshman

By Jay Asser
Collegian Staff

Skinny or not, Raphiael Putney has become a weapon late in the season for the Massachusetts men's basketball team.

The redshirt freshman has turned himself into a viable option off the bench for UMass coach, Derek Kellogg, after proving his development over the past two games.

"Sometimes it takes a little longer than we all want, but he's starting to come into his own," Kellogg said of Putney. "We saw flashes of it against Central Florida and a few other games, but he's starting to put together back-to-back practices and games one after another which is definitely benefiting the team and I think it's going to benefit him as an individual as he matures here."

In a loss against Duquesne on Feb. 16, Putney, along with freshman guard Jesse Morgan, sparked a Minutemen (14-11, 6-6 Atlantic 10) comeback which eventually fell short. Nevertheless, Putney recorded 10 points and tied his career-high with nine rebounds, just missing his first career double-double.

The following game, with UMass trying to break its four-game losing streak, Putney once again injected energy with 11 points in 19 minutes to help the Minutemen win 66-60 over conference rival Rhode Island. Nine of Putney's points came in the second half, including a stretch of seven-straight during a 23-6 run by UMass to take a 49-39 lead after trailing by nine at halftime.

More so than his overall numbers, Putney's value lies in providing energy. On several occasions this season, Putney has done just that with exciting alley oops and plays which draw the crowd's attention.

"When he's playing energized and coming up with some of those plays that he comes up with, I think the whole team gets energized and everybody feels a little bit better," Kellogg said.

"I think I bring a lot of positive energy to the team off

Jackie Lyons looks to attack on the offensive end earlier this year. The senior attacker has five goals and four assists in UMass's two wins.

UM travels to play Terriers

By Jackson Alexander
Collegian Staff

The Massachusetts women's lacrosse team began the season with two impressive victories, but its perfect record will be put to the test Wednesday when it faces Boston University on the road.

First-year UMass coach Angela McMahon has been content with her team's fast start, but realized the BU game would be a challenge.

"They're well coached, they're always one of the top programs in this area," McMahon said. "It's going to be a huge test for ourselves to see where we're at."

The Minutewomen have kicked off play this year with victories versus Holy Cross and Vermont.

UMass needed overtime to sneak out a 12-10 win against the Crusaders in their season opener, but had less trouble with Vermont, winning comfortably, 17-9.

Much of the success in the first two games was contingent on UMass' ability to take advantage of scoring opportunities.

"We haven't taken a ton of shots but we have been capitalizing on the shots we've been taking," McMahon said.

Through two games, the Minutewomen have gotten off 54 shots and converted them into goals 53.7 percent of the time. To put that number in perspective, last season they converted 43.5 percent of their shots taken.

While Jackie Lyons (five goals, four assists) and Haley Smith (seven goals) have been the offensive stalwarts, McMahon has been pleased with the production of freshmen like Sam Rush and Tanner Guarino.

"Tanner Guarino had a great goal the other day against Vermont, then we had Sam Rush come off the bench and score two goals, which is great to see that people are ready to step in and capitalize," McMahon said. The balanced attack doesn't stop there as nine different Minutewomen found the back of the net in last Saturday's

Minutewomen kick off season with loss to Michigan in finals

By Stephen Hewitt
Collegian Staff

The Massachusetts softball team got its 2011 season underway this past weekend, posting a 2-3 record at the FAU Kickoff Classic in Boca Raton, Fla.

UMass throttles Penn.

Junior All-American pitcher Sara Plourde picked up right where she left off in 2010 on the first day of action on Friday. Plourde struck out 15 batters and gave up just one hit in six innings of work to help the Minutewomen to a 10-0 shutout victory over Penn State.

Katie Bettencourt carried the offensive load for UMass, going 2-for-3 in the contest, including a grand slam in the sixth inning that put the game out of reach.

Meghan Carta went 3-for-4 with a double and drove in two runs, while Kyllie Magill added a 2-for-3 effort and scored two runs in the opening victory.

UM suffers first loss.

After the convincing victory, the Minutewomen were right back at it later in the afternoon to take on Tulsa in Game 2 of the weekend.

Despite freshman Lindsey Webster giving up one earned run in nine innings in her first career start, it was not enough as UMass fell to the Golden Hurricane, 3-1.

"She didn't look like a freshman out there at all," Plourde said to UMass media relations following the game. "She held her own out there, she was very tough, and she didn't let the tough situations get to her head."

Even with the gutsy performance displayed by Webster, the UMass offense was unable to get the same type of production from earlier in the afternoon, scoring just one run on a sacrifice fly by Magill that evened the score at 1-1 in the third inning.

An error in the ninth inning let a Tulsa runner score and Samantha Cobb hit an RBI single soon after to give the Golden Hurricane a 3-1 lead.

Tulsa would not relinquish the lead as the Minutewomen were unable to match the scores in the bottom half of the inning.

Wolverines edge UMass

Plourde was back on the mound on Saturday as the Minutewomen took on No. 10 Michigan in the third game of the FAU Kickoff Classic.

Despite only giving up two earned runs, four hits and striking out 12 Wolverines in the game, Plourde was outdueled by Jordan Taylor, who led Michigan to a 3-0 victory with a one-hitter, 10-strikeout performance.

Michigan's Dorian Shaw scored the eventual game-winning run for the Wolverines in the top of the first inning, when she blasted a solo home run over the center

See MINUTEWOMEN on page 6

JEFF BERNSTEIN/COLLEGIAN

Katie Bettencourt makes contact on a pitch in a game last season. The junior outfielder went 2-for-3 with a grand slam in the sixth inning to lead the Minutewomen to their first win of the season against Penn State.

Pride and Color posters vandalized in town

By Tim Jones
Collegian Staff

Local Amherst-based book shop Food for Thought Books has plastered its front window with posters showing images developed by Amherst College's Gay, Lesbian, Bisexual, Transsexual, and Queer Racial/Ethnic minorities (GLBTQREM) group.

The group, known as Pride and Color, has recently been the target of defamation and vandalism, as the group has recently discovered an unknown person or persons has been covering its images of homosexual partners across town with duct tape. The group is dedicated to promoting ethnic and racial diversity among homosexuals, and is based in the five-college consortium.

Robert Thompson, president of GLBTQREM, said Pride and Color is trying to break the boundaries present in the minds' of those who have preconceived notions of what defines a normal relationship.

"We're trying to fight the stereotype that homosexuality is a white phenomenon," Thompson said.

GLBTQREM's most-recent campaign is called "No Normal," which seeks to inform and educate local residents and college students of the falsehood of such a stereotype. The "No Normal" campaign idea was developed after Thompson had spoken with his mentor about his homosexuality for the first time.

"My mentor told me that there is no such thing as normal," he said. "There is no standard by which you should hope to conform."

The posters' images, which depict homosexual and ethnic couples kissing and holding each other, have been covered by duct tape several times since they were hung up in December of last year. Group members are unsure of who the responsible party is, but said this isn't the first time they have encountered resistance and opposition to their campaign.

While tabling in Amherst, the group encountered a person who wrote on their signs "straight is normal."

Mitch Gaslin, collective owner of Food for Thought, said the taping has been somewhat sporadic over time.

"This is the first time someone has been so persistent," Gaslin said.

"It's really not a big deal taking the tape off, and I think it's not having the effect they want. If anything, it's drawing more attention to the campaign," he added.

A member of the group who wished to remain anonymous said she believed ethnicity played a part in the vandalism.

"A part of me feels that the image of two members of the same gender acting intimately wasn't the only reason people wanted to cover it up," she said. "I think that the individuals' races made the images even more shocking to some people."

She continued, "In the end, the disturbing duct tape incident actually brought people together and made us all the more committed to celebrating our identities."

Sentamu Kiremerwa, a member of the group, said he wasn't expecting this type of behavior in Amherst.

Dave Zirin lectures to UMass about hidden politics in sports

By Thomas Barnes
Collegian Correspondent

As a sportswriter, commentator and host of his own radio show, Dave Zirin is at the forefront of politicizing sports and has written numerous books on the subject. Produced with the Media Education Foundation, Zirin screened his film "Not Just a Game," which highlights the hypocrisy of assuming sports as a politically neutral zone, and gives evidence to the hidden political side of sports, on Tuesday evening at the University.

When the weather didn't cooperate and his flight was canceled, Zirin was forced to cancel his afternoon discussion but managed to make the screening to field questions and talk about the film. Zirin spoke at the Student Union Ballroom as part of the Feinburg Family Distinguished Lecture Series.

"Sports are political whether we want them to be or not," Zirin said in an interview, discussing the trends of consumerism, nationalism and militarism embedded within the sports world. "Not Just a Game" argues the presence of military pressures in sports are a form of propaganda, naturalizing ideologies and beliefs about how we see ourselves, each other and our country.

Driven by his love for the incredible dramas inherent in sports, Zirin started as a sports columnist in a small-town newspaper where his editor encouraged him to combine his other interest of politics in his writing. For Zirin, "It's never easier than to write about politics and sports," and when his brother-in-law published his sports article online, Zirin was approached by the publisher Haymarket Books.

The film outlines the inverses to the assumption that sports should be a-political, with athletes like Muhammad Ali standing up for the Civil Rights Movement and protesting the war in Vietnam. Other athletes include Billy Jean King and her struggle against sexism and homophobia, and Jackie Rohinson's breaking into the white-dominated major league baseball. The examples shown in the film illustrate the relationship between sports and the political world, and the interplay and reflections between them.

Zirin spoke of his recent trip to Wisconsin in support of the labor protests taking place there and the six Green Bay Packers that have shown their support for the movement. Locally, the Red Sox's new first baseman Adrian Gonzalez refused to participate in the All-Star game

Obama pulls support and defense of DOMA

MCT

President Barack Obama recently announced that his administration would no longer support the Defense of Marriage Act.

McClatchy Newspapers (MCT)

WASHINGTON — In a significant change of course, President Barack Obama has decided that a federal law against gay marriage is unconstitutional and will no longer defend it in court, the White House announced Wednesday.

Obama's decision will not have an immediate impact. Attorney General Eric Holder said the president will continue to enforce the Defense of Marriage Act until it's either clearly struck down by the courts or repealed by Congress, which he's urged.

That means that an estimated 1,140 laws and policies regarding marriage will remain in place and enforced, and that gay couples who are married in the states where they live will still be denied the federal benefits of marriage, in matters such as Social Security survivor benefits and taxes.

But it signaled a change of tack for the administration, and underscored the evolution of the issue over recent years.

The law, passed by a Republican Congress and signed into law by Democratic President Bill Clinton as he sought re-election in 1996, defined marriage as between one man and one woman.

"Much of the legal landscape has changed in the 15 years since Congress passed DOMA," Holder said in a statement.

"The Supreme Court has ruled that laws criminalizing homosexual conduct are unconstitutional. Congress has repealed the military's 'don't ask, don't tell' policy. Several lower courts have ruled DOMA itself to be unconstitutional."

The political landscape also has changed. Gay marriage was broadly unpopular when Clinton signed the law, but is much less so now.

The ranks of Americans who think gay marriage should be illegal have dropped from 68 percent in 1996 to 53 percent in 2010, according to a Gallup poll. At the same time, the total of Americans who think it should be legal has risen from 27 percent to 44 percent.

As public opposition has eased, five states have legalized gay marriage since 2004: Massachusetts, Connecticut, Iowa, New Hampshire and Vermont, as well as the District of Columbia. Maryland may soon join them.

Obama's view also has evolved.

As a candidate in 2008, he endorsed civil unions to guarantee rights for gay couples, but said, "I believe that marriage is the union between a man and a woman."

In December, he told The Advocate, a gay and lesbian magazine, that "like a lot of people, I'm wrestling with this. My attitudes are evolving."

On Wednesday, White House press secretary Jay Carney said Obama is still debating the question personally. "He's grappling with the issue," Carney said.

While the law's supporters criticized Obama's decision, he didn't initiate it. Lower court challenges to the law required his response. Indeed, Holder and the Justice Department announced the decision, and the White House spoke only about it when asked, and then only briefly.

Regardless of his personal opinion of marriage and the politics of the issue, Carney said, Obama agrees with Holder that the law's definition of marriage, excluding gay couples, is unconstitutional and no longer can be defended in court.

Holder said the Justice Department had a long-standing practice of defending the constitutionality of laws as long as "reasonable arguments" could be made for them. But he said the department also has refused to defend laws when the president has concluded they're unconstitutional.

In a letter to House Speaker John Boehner, R-Ohio, Holder said Congress could defend the law itself. But he said the law was intended to discriminate against gays and lesbians.

He said the Congressional Record includes "numerous expres-

Students demand sex ed. changes

By Haleigh Finch
Collegian Correspondent

On Feb. 16, hundreds of Massachusetts high school students gathered together in Boston's City Council building to share their concerns with sexual education in their schools.

That day, students engaged in a two-hour hearing during which they discussed their desire for more sexual education and greater condom accessibility. According to several students at the hearing, the students wanted adults to listen to their suggestions for in-depth education on sex that involves information that teaches students more than how not to be sexual human beings.

The students involved in this hearing said that they need a greater knowledge of sex because "sexual identity is part of their lives."

Hope Keenan, a sophomore at the University of Massachusetts, agreed with the students.

"I think sex ed. should be more up-to-date with how teens and young adults interact with each other sexually rather than teaching older ideas about sex, because teenagers these days are going to have sex even if teachers tell them not to," she said.

The students voiced that it is important to many students to learn about all aspects of sex, transmitted diseases and protection. The students believe that only teaching them the idea that "sex is bad," or having abstinence-only sexual education, does a disservice to young students embarking on adulthood.

Elizabeth Bertone-Johnson, an associate professor in UMass' public health department said, "I fully support comprehensive sex ed. and condom distribution."

John Clark, a senior, agreed with her and emphasized the importance of being taught safe sex.

"I think it's really important that highschoolers learn about protective sex. If someone were to become pregnant in high school their lives can come to a standstill," Clark said.

Many adults who were at the hearing seemed skeptical about changing the sexual education programs or distributing condoms to teenagers because of their concern with teens' hookup culture. However, some believe it may be necessary based on their views of the current culture among teenagers. A UMass student who wished to remain anonymous said today's culture is highly influential towards the minds of younger people.

"The media has a huge influence on the image of teen moms being "cool," because of all the shows about teenage pregnancy these days and sex education is necessary for this very reason," she said.

Haleigh Finch can be reached at hffinch@student.umass.edu.

Hundreds of high school students met at Boston's City Council building to discuss their views on sex education. The overall consensus was that abstinence-only teachings do not work.

Amherst gay rights group targeted

POSTERS from page 1

"I am shocked that such an incident happened in Amherst. Our posters were taken down at Amherst College, which was sort of expected," he said. "However to encounter the same behavior in downtown Amherst, that was a surprise. It is sort of dispiriting."

TK Turchez, former collective member of Food for Thought, said this particular campaign was unique.

"It's obviously incredibly offensive, but it's unclear if this is just a homophobic statement or just plain racist," she said. "We have had other posters with gays on them, but nothing like this has ever happened."

These types of incidents, in which members of the gay community have been targeted, are not the first in the Amherst community. In 2007, Hampshire students who were attending a Gay and Proud (GAP) function on the Amherst College campus were allegedly harassed by several Amherst College students. The students reportedly threatened the Hampshire students with homophobic slurs, threw water balloons and poured beer on them as they attempted to leave.

Again in 2007, a student was allegedly assaulted by a couple of University of Massachusetts students in the Southwest Residential Area. Several friends of the alleged victim claimed he was targeted because the alleged attackers believed him to be gay.

A similar event occurred in 2008, where posters from the Radical Student Union depicting two homosexual men engaging in sexual intercourse were removed from the UMass campus. The UMass Republican Club considered the posters "gay pornography" and scheduled a "Rally for Public Decency" on the campus to protest the posters.

Justin Thompson of the UMass Republican club denied any affiliation with this event.

"No one from the club two years ago is left and the board has changed completely," he said. "In my own opinion, it's in poor taste, and we are supportive of all race, age and sexual identity."

Robert Thompson wants to leave these incidents behind and said his group stands firm in their activities.

"I wasn't surprised by it, and for me it was just another obstacle," he said. "You just keep on moving forward with the goal, and at least I know our goal is having some effect."

"Pride and Color" will continue their poster campaign and have other events planned for fund raising for future dates.

Tim Jones can be reached at timothyj@student.umass.edu.

Employees of Food for Thought Books have repeatedly removed duct tape from Pride and Color posters on their front window.

Zirin lectures sports are actually political by nature

ZIRIN from page 1

Dave Zirin's film "Not Just a Game" looks at the political aspects of sports as well has the other influences they hold.

because it is being held in Arizona, the state home to Orwellian security checks and racial profiling against Latinos.

"There's an obligation to understand politics and pressures on athletes," Zirin said. He examined the mix of sports and culture, including the role of commercial sponsors promoting rebellion and edginess while stripping it of any substance. He discussed his beliefs on Lebron James's conflicted identity, desiring to be both the richest athlete and another Muhammad Ali.

Outlining some of the resistance to politics and sports, the film discussed the reinforcement of militarism and masculinity in sports leagues. The film gave examples of grand displays of military strength and superiority being the norm at stadiums and naturalizing ideas about nationalism and imperialism. The controversy around Pat Tillman's death was examined, where his death was misrepresented by the FOX and the Pentagon. One viewer in the back of the audience uttered loud expletives during mention of Pat Tillman, and then exited the room before he could be reached for comment.

According to the film, sports are used to define masculinity and those that don't fit into the "jockocracy," and the film also illustrated resistance to women and homosexuality in the sports world. Only 1.6 percent of sports aired on television are women's sports, demonstrating the struggle for equal representation across genders is ongoing even after such advances as Title IX.

"It took people willing to break the rules to change them," said Zirin about the contributions of athletes to changes in the sports and political worlds, including the impacts of black athletes showing society as a whole that they couldn't be stifled. Another example the film gave of athletes using their spotlight to inspire social change was of John Carlos and Tommie Smith in their famous black power salute on the podium at the Mexico City Olympic Games.

Presently, sports are considered by many to be free from any political themes, and Zirin explains that despite these conceptions, corporations use sports as a medium to move product and the government utilizes sports to instill nationalism and militarism. Possibly afraid to lose sponsors or risk banishment from the league, athletes could be afraid to speak out for what they believe in.

Zirin argues that "we ruin sports by ripping them out of their political and cultural context," and encourages everyone to speak out in the face of injustice.

Examples of sports changing the political landscape have risen in Egypt in the days leading up the protests, according to Zirin. Though meetings to discuss the government were illegal in Egypt, a crucible for revolution occurred in the country's soccer clubs. Considered to be a safe outlet for aggressive impulses and able to be redirected away from the government, the soccer clubs provided a meeting place for political discourse to occur and served as a brewery for ideas on rebellion. Several days into the rebellion, the government closed the soccer clubs. Emphasizing the relationship between sports and politics, Zirin pointed out the examples of the Packers siding with the labor protestors along with the Egyptian soccer clubs.

Zirin found working with the University and the Feinburg Family Distinguished Lecture Series to be "amazing. Umass has done a terrific job," and is "grateful for UMass to approach someone off the beaten path and grateful for the professionalism and intellectual curiosity."

To find out more about Dave Zirin and his combination of sports writing and politicization, check out his blog at edgeofsports.com

Colleges losing grip of minority students

McClatchy Newspapers
(MCT)

BETHLEHEM, Pa. — Lehigh University did a good job wooing Nezy Smith here. A Lehigh admissions officer met the African-American honor roll student at her high school in Lebanon, Pa., then kept in touch for a year, urging her to visit the campus and helping her to fill out complex financial aid forms.

Smith arrived at Lehigh in 2008, elated to experience college life and dismissing cautions by some upperclassmen that as a minority student she might sometimes feel unwelcome on the 146-year-old campus and in its social scene, including parties on the hilltop fraternity houses.

A few months into her freshman year, though, Smith and a group of black friends waited in van outside a frat house while a member waved others in. And at times she felt uneasy being the only black face in the classroom, despite doing well in her business and German courses.

By the next winter, she was gone, joining the roughly 25 percent to 40 percent of black and Hispanic students who start at Lehigh but don't finish, depending on the year. The institution that had worked so hard to attract Smith hadn't done such a good job of keeping her, spotlighting a problem seen at colleges nationwide.

A lot of attention has been given to the push to make higher education more diverse, with colleges trumpeting their enrollment of underrepresented students. But black and Latino students are, on average, far less likely to graduate in six years than their white and Asian peers.

Some colleges, however, defy the trend, graduating all students at the same rates, according to a 2010 report by the Washington-based Nonprofit Education Trust. Using these schools as an example, the Education Trust concludes that a graduation gap is not inevitable.

When a student drops out of high school, the tendency has long been to blame the school. But when a student leaves college, people typically blame the individual. But many experts now argue that even at the post-secondary level, institutions must shoulder responsibility for their completion rates – and that their practices matter a lot.

Another way to look at it: While Lehigh lost Nezy Smith, might a different institution - such as the University of Notre Dame - have kept her?

Like Nezy Smith, Dominique Higgins distinguished herself in high school - in her case, Bonita High, south of Los Angeles, where she served in student government, tutored others and was a shot-putter.

Last March, before its official letters went out, Higgins was among a group of minority students invited to one of three, all-expenses-paid "diversity weekends" at Notre Dame's South Bend, Ind.campus. They arrived on a Thursday evening and assembled in La Fortuna Student Center, where their host went over the agenda for the weekend before casually announcing, "Oh, by the way, you've all been accepted." After two seconds of stunned silence - Was it a joke? - the room erupted into cheers.

The extraordinary attention didn't end when Higgins arrived last August. There was an event at the campus restaurant, where she was invited to a lunch with several political science professors speaking that night on the future of the Latino vote. Not long after Higgins got settled, a man in a yellow vest came over to ask how she was keeping up with her studies amid all the distractions of campus life like pep rallies and football games.

"I'm working on it," she promised, bobbing her head.

"That's good," said Amel Bulaoro, who monitors the academic performance of minority students on campus. He's keeping files on 421 this year.

Notre Dame is larger than Lehigh, 8,400 students to 4,700, but both are selective private institutions with high price tags and solid student test scores. (In Higgins' class at Notre Dame, incoming students in the 25th to 75th percentile on the reading and math sections of the SAT scored between 1315 and 1480, while students in the same percentile range at Lehigh scored between 1270 and 1410.)

The two institutions also have similar combined black and Hispanic enrollments - 11 percent for the latest class at Lehigh, and 14 percent at Notre Dame.

But where Lehigh reported a 10-point gap in graduation rates between whites and their black and Hispanic peers in 2008, Notre Dame's black and Hispanic undergraduates completed their degrees at a rate only 1.1 percentage points lower than the overall rate of 95.8 percent, according to the Education Trust.

At Notre Dame, Bulaoro is one of two assistant directors of Multicultural Student Programs and Services. The other concentrates on the social side of things. The office also has a director, services coordinator, program intern, graduate student assistant and three undergraduate interns.

"We can't just make speeches," said Don Pope Davis, Notre Dame's vice president and associate provost, who has led a campaign to recruit more minority faculty members.

Feeling snubbed at frat parties wasn't the worst part for Nezy Smith. She'd watch white students drive around campus in their cars and see the slender girls trek up and down the hill on which the campus sits. Her family couldn't afford for her to have a car. And she had curves.

"That's when color came into play. I couldn't accept the fact that I was black," Smith said, recalling how this grew into a full-blown identity crisis by the start of her sophomore year. "I started to not like myself because I wanted to be like other students."

Lehigh does pay special attention to minority students, but its Office of Multicultural Affairs is much smaller than Notre Dame's and doesn't have the luxury of branching out into academic programming or formal mentoring.

Smith did try one outlet for black women, the "Circle of Sisters" meetings held every other Friday. But while she vented her frustrations there to a handful of staff members, she never got the one-on-one pep talks perfected by an African-American faculty member, Kashi Johnson, who often attends the meetings.

Johnson, a native New Yorker, graduated from Lehigh in 1994 after "floundering" to the point of crisis. Starting in the university's marquee engineering program, Johnson barely survived the first weed-out classes such as Calc 21 and Chem 21, which left her with a 1.1 grade-point average. Like Nezy Smith, she also felt isolated from the larger Lehigh community.

Johnson's alienation lingered for more than a year until her mother studied her transcripts and suggested she go into theater.

At first incredulous, Johnson ultimately followed her mother's suggestion and, after graduation, did everything from "King Lear" to hip-hop as a professional actress and director before returning to her alma mater in 1999 to teach theater.

Once she decided to study theater, she said, "I went from feeling like I didn't belong in certain places to knowing I belonged everywhere."

When Johnson encounters minority students thinking of dropping out, she sizes them up and gives them one of two recycled speeches about surviving life on campus. The first is "you do your time." The second is more upbeat - what she calls her "Lehigh-is-what-you-make-it" talk.

That basic tenet of self-help - that, in the end, you're responsible for your own happiness - has worked for many minority students here. Greg Martin, a Coast Guard kid who grew up in New York, Michigan and Connecticut, also wondered at first whether he'd made the right choice. He hung around mostly with other black students until he was named a residential adviser in a largely white dorm. "It opened my horizons," said Martin, who became active in step-dancing and other campus events and will graduate this spring with a double major in political science and Africana studies.

But "a lot of students have left," he acknowledged.

One was Nezy Smith, who took nearly a year off to "recover" before officially withdrawing from Lehigh in November 2009. This past fall she enrolled at Temple University in Philadelphia, where 17 percent of the student body is black. "There are a lot of people who look like me," she said.

It's tough to imagine Dominique Higgins not getting her diploma after four years at Notre Dame.

Even before she arrived, the multicultural office suggested she join Building Bridges, a program that connects incoming minority students to faculty and peers with similar interests and invites them to many different networking opportunities. In her first semester, Higgins had gone to dinner twice at the home of her mentor, a business professor.

Building Bridges is inspired in part by research suggesting that social and academic success in college is intertwined. The multicultural office also offers other academic programs, sets students up with research opportunities and internships, reaches out to parents and - as at Lehigh - works with social groups.

Although life isn't perfect at Notre Dame, many students report that racial tensions are minimal there and say they appreciate the efforts by its administration to tackle diversity issues.

An emphasis on dormitory life, where students of all races are mixed, also helps to guard against an unhealthy degree of self-segregation.

For Higgins, the biggest issue on campus so far has been the allure of socializing in the common room of her dorm. At Bulaoro's urging, she finally devised a firm schedule to ensure she doesn't neglect the reading for her sociology and marketing classes.

Her solution: no letting loose after classes end on Fridays. That time would be dedicated to studying. She'd make herself earn the right to join hall-mates outside her room, sprawled over those inviting sofas and chairs.

Lehigh administrators are well aware of the Education Trust's graduation-gap study. But Dean of Students Sharon Basso said the statistics are deceptive because Lehigh's small minority population means that a few departures can skew the numbers.

Still, Lehigh formed a committee on minority retention last year, and this fall it announced the creation of a new position, vice provost for academic diversity. "We've tried to redouble our efforts," said John Seaton, the vice president of student affairs.

Johnson, the theater professor and unofficial mentor, wants to see the numbers improve before she buys into such talk. "They always seem like they're taking steps," Johnson said.

Johnson sees much of herself in Fatima O'Connor, a fellow Brooklyn, N.Y., native who dreams of becoming a civil engineer. O'Connor attended a high school devoted to architecture, where she discovered a passion for math. She finished fourth in her class and entered Lehigh as a first-generation college student totally unprepared for what lay ahead. Her earlier success had been grounded in regurgitating information, she realized, which didn't cut it when trying to figure out hydraulics or thermodynamics.

When her grades started to slip, O'Connor sought out her professors after class. But it didn't help to hear the same person explain the same concept the same way she hadn't understood the first time. She partly blames herself for "not paying more attention to all the opportunities for help," such as tutoring. By last year, her junior year, O'Connor had lost her scholarship and was put on academic probation. Then she took a semester off.

But O'Connor wondered whether others face the sort of life burdens she does, like having two campus jobs so she can send money to her older brother, who's caring for an infant son.

O'Connor calls this her "second junior year," and it's make-or-break time if she is to graduate from Lehigh. She meets regularly now with both Johnson and her dean.

"I want it badly," she said.

The tutoring, mentoring and late nights in the computer lab paid off in grades that got her off probation this semester and back on scholarship. O'Connor is now thinking that her training in Lehigh's best-known specialty should be a ticket to graduate school in engineering.

"To graduate with that type of degree from here," she said, "is a real statement."

Although some universities may find luck with attracting minority students, some have found keeping that charisma among accepted students is proving more difficult.

Obama no longer supporting the Defense of Marriage Act

DOMA from page 1

sions reflecting moral disapproval of gays and lesbians and their intimate and family relationships, precisely the kind of stereotype-based thinking and animus" that the Constitution's Equal Protection Clause was written to stop.

Holder also said that "a growing scientific consensus accepts that sexual orientation is a characteristic that is immutable."

House Judiciary Committee Chairman Lamar Smith, R-Texas, criticized the decision as an abdication of duty.

"The Justice Department has a responsibility to defend the laws passed by Congress regardless of the personal political views of the president or the attorney general," he said.

The law's supporters weren't happy either.

"DOMA is the law of the land, whether he (Obama) personally likes it or not," said Penny Nance, the chief executive of Concerned Women for America, a conservative group. "For him to circumvent the will of the American people, once again, to impose his latest personal fad into federal law is simply disgraceful."

But gay rights advocates hailed the decision.

"This is a monumental decision for the thousands of same-sex couples and their families who want nothing more than the same rights and dignity afforded to other married couples," said Joe Solmonese, the president of the Human Rights Campaign, a gay rights group.

Gay rights advocates hailed the recent decision to pull support from DOMA. The act disables same-sex marriages from receiving marriage benefits in certain states.

Puerto Rico police force not reflective of U.S. democracy

Severe police brutality, constitutional violations and government sponsored propaganda are rampant and currently destroying civil liberties in Puerto Rico. Though nearly everyone is aware of the recent uprisings in Egypt and throughout the Middle East, the injustices being suffered by Puerto Ricans, who are U.S. citizens, are hardly mentioned in mainstream media.

Jacqueline Hall

Students and faculty at the University of Puerto Rico (UPR) have been holding "civil disobedience" strikes since Dec. 14 in protest of a recently imposed $800 fee. Approximately 50 percent of the population in Puerto Rico is living at or beneath the federally declared poverty level. The flat fee combined with a dissolution of fee waivers, previously available to honor, athlete and low-income students, will prevent thousands of students from studying this semester, ruining graduation dates and courses of study.

This past December I tried to research the current manifestations of problems in Puerto Rico. Since most information is in scholarly articles a few years old, in Spanish, or seemingly incomplete, I traveled to Puerto Rico for the month of January to meet with students and learn about what is unfolding there. Nothing I read, certainly nothing in mainstream media, prepared me for the horrific violence I witnessed.

The way in which these peaceful protests have been met with violence and destruction of civil rights should demand the attention and concern of the U.S. and the world. The lack of media attention isn't due to a decrease in news-worthy issues. When the crises in Puerto Rico are considered, the lunacy in claiming that Egypt is following U.S. leads in democratic pursuit is obvious. The U.S. must be held accountable for the democratic failings in its last colony.

When the increase of fees was announced, student representative committees immediately requested, as is the democratic practice, a dialogue with the administration and Board of Directors at the University of Puerto Rico flagship campus in Rio Piedras. However, the administration, which has strong ties to the current pro-statehood Partida Nueva Progresista (New Progressive Party, PNP) government headed by Governor Luis Fortuño, has denied opportunity for a dialogue, publicly denied that there is a strike or any negative reaction to the fee and ordered an overwhelming police presence which has effectively turned the campus into a militarized zone.

The administration also successfully pushed a bill through the legislative body drastically limiting the areas where it was "legal" to protest to places marked with an "area of expression" sign. This is a drastic and unwarranted violation of the First Amendment, freedom of speech and expression. It is a more serious issue that the bill orders police to "subdue" and "arrest" anyone whom they suspect to be protesting outside of the areas of expression.

Subdue, as I observed, is a gross understatement, just as it is absolutely unwarranted. On Jan. 12, students, with the permission of professors, were handing out fliers which explained the nature of the protest. Within the hour they were beaten and arrested. Although most students are held briefly and let go without charges after being arrested, the police have been targeting the student leadership and these students have now been charged and must deal with extensive prosecution.

Students, some faculty and members of the community have been meeting each morning at several of the entrances to the campus at Rio Piedras. There, around 40 students sit cross-legged with arms linked across the entrance while the other protesters stand or sit behind them holding signs and singing a revised version of the campus' theme song.

Generally, a group of students are arrested by 12 p.m. and the demonstration dissipates. Protesters then meet, usually in a church's basement, to plan further events; demonstrations then resume around 2 p.m. and can last into the evening. To reinforce the peaceful nature, the protesters refer to these demonstrations as "civil disobedience." The repercussions, however, are not civil by any means.

When the crises in Puerto Rico are considered, the lunacy in claiming that Egypt is following U.S. leads in democratic pursuit is obvious. The U.S. must be held accountable for the democratic failings in its last colony.

There were four kinds of police on the Rio Piedras campus; the "regular" police, civilian police (police in street clothes), the horse brigade and the Tactical Police Unit. All units are heavily armed, especially the Tactical Police.

The Tactical Police, who look more like soldiers, wear full protective gear, including helmets, and the officers carry shields, batons, pepper spray, two or three guns (one of which is strapped to their leg) and extra ammunition either slung around their bodies or in a t-belt pack. The Tactical Police Unit is the body of law enforcement which makes the arrests, beats the students and are anxious to fire pepper spray into students' faces.

The brutality with which the Tactical Police make arrests is horrifying. First they march in lines to surround the line of students sitting, forming a first wall of separation between the sitting students and the rest of the crowd. Then, additional Tactical Police form a second circle around the individual student whom they are arresting. The walls of police bodies usually prevent onlookers from photographing the violence. However, these makeshift barricades do not stifle the anguished screams of students as they are beaten, cuffed and violently thrown into vans.

The worst display of violence I witnessed was on Jan. 27, when students, some faculty and members of the community met in front of the state capital building. After six hours of demonstration, the Tactical Police made 50 ruthless arrests. I witnessed a student be purposefully dropped head first onto the pavement then intentionally kicked in the temple by a police boot. Throughout the arrests, a large crowd of employees from the capitol building literally cheered the police on.

After the arrests remained approximately 170 protesters who began walking down Constitutional Ave., away from the capital building and place of protest, re-grouping in an intersection near the capitol. About 250 Tactical Police and 50 regular police followed.

Completely unprovoked, the Tactical Police began to fire pepper spray out of guns which resembled bazookas directly into the faces of students who were less than three feet away. Several students collapsed from the spray while all the others began to run down the street, stopping to congregate in front of a church to discuss what to do. In the midst of negotiations came the sound of more guns.

The Tactical Police were chasing the students. They advanced shoulder-to-shoulder in a line blocking the whole street. The students began to run again only to find that about 80 other Tactical Police had crept up the alleys surrounding the church encircling the students. The students were no longer protesting, were not and had never been armed, and were frantically running away from the capital building as Tactical Police maneuvered to intentionally entrap and hurt the terrified students. The police chased the retreating students almost two miles that day.

The fee, which the students are protesting, was supposedly implemented to replenish a $40 million UPR budget deficit. However, proposals submitted by UPR law school students and by faculty, which present alternative and pragmatic means of satisfying the budget crisis, have been completely ignored by the administration and by the government.

For the students, this struggle is about their right to education and their understandable desire not to attend school in a militarized zone. For the government, this is about power. It is unfortunate that students' education is being used as a proxy and a means of desecrating civil liberties. It is devastating that the United States government dares to congratulate itself for serving as an example of democratic virtue for the rest of the world while atrocities being suffered by U.S. citizens in Puerto Rico are completely ignored.

JACQUELINE HALL/ COLLEGIAN

Same-sex marriage debate is stupid

On Wednesday, the Obama administration established a new precedent by no longer backing the Defense of Marriage Act, the 1996 federal law that barred same-sex marriage from being recognized. The law acted as a defense against lawsuits deeming the ban on same-sex marriage unconstitutional and its repeal will stop the Department of Justice from blocking those lawsuits.

Nick O'Malley

In short:

Why? Because, why not?

The idea that people have decided that marriage in same-sex couples is the final straw for morality is just stupid.

Do you think it's "soiling the name of marriage?" Well, people get accidentally married in Las Vegas all the time. My friend Jess and her friends in Boston became ordained ministers of the Universal Life Church and marry each other when they're bored and then annul them so they're not legally binding.

Don't think same-sex couples create a positive family environment? Too bad. Same-sex couples exist everywhere and function in every capacity except that they lack the legal rights of married couples. That means that same-sex couples often don't have hospital visitation rights or the ability to share health insurance. It's just mean at this point.

It's about titles and whether or not all people are allowed the title of marriage for their relationships

Massachusetts residents should also be particularly aware of how prevalent same-sex couples are. This state has both Provincetown and Northampton. Same-sex couples aren't going away and people should stop ignoring them.

Believe couples not being able to produce children is wrong? We're not running out of children in foster homes any time soon. Callously speaking, we have too many kids. Having same-sex couples as a major market for adopting children even helps try and combat the other thing that people who oppose same-sex marriage also hate: abortion. This way, there's no argument over whether somebody dies in the process.

The prolonged banning of same-sex marriage in America is the most absurd policy enforced by the United States government since Japanese-Americans were put into internment camps in 1942 following the attack on Pearl Harbor. It's one of those things that 90 percent of grandchildren will look back upon and think that we were all homophobic, the same way we think all old people are racist. Or, as a convenient article in The Onion put it: "Future U.S. History students: 'It's pretty embarrassing how long you guys took to legalize gay marriage.'"

It's confusing. Are there people fully expecting that there will never be gay marriage? Are there really people who are seriously pleased to go through life knowing that people who already participate in same-sex relationships aren't allowed to marry?

Again, it's just mean at this point.

People have marked social conservatives as on the wrong side of history, in the same way they were on the wrong side of history during the civil rights movement. That is, openly protesting that takes nothing away from those who oppose it. There's no real point other than the fact that they don't like it, find it icky and are religiously opposed. That is, they call same-sex marriage an "abomination," citing a passage from Leviticus in the Old Testament, which, in fact, doesn't mention marriage at all.

Leviticus, of course, still remains legally binding in the United States Constitution, which explicitly separates the powers of church and state, banning the following things: tattoos, touching a pig's skin, shellfish, divorce, wearing blended fabrics and fortune telling. So, we've got to make sure all divorced, shellfish-eating football players wearing polyester shirts and calling fortune telling hotlines are faced with the harshest punishment.

It's either that, or stop the absurdity that is the legal restrictions on same-sex couples. Congress did something right with the repeal of "Don't Ask Don't Tell," which, like bringing in African Americans or women into the military will cause some issues.

But people will get over it.

This isn't an issue of love, religion or family. It's about titles and whether or not all people are allowed the title of marriage for their relationships. People can be opposed to same-sex relationships all they want. That is their right. But to legally bind citizens from being married because others don't like it is absurd.

It's just mean.

No, I do not drink, yes I go to ZooMass

The University of Massachusetts is obviously notorious for its reputation as a party school, and many treat it as such. Simply mentioning that you're a student at this school can come with certain disadvantages. Just being a college student or a young adult can have disadvantages as well. But there is one assumption that is largely incorporated into student life at UMass, which frankly gets on my nerves. This assumption I am referring to is one involving the consumption of alcohol.

Tim Jones

To set the record straight, I don't drink, I'm straight-edge and I'll never touch the stuff. If others want to, that's their own choice – to each their own. When it comes down to it though, I don't appreciate when people assume that I drink. It's a label I don't want.

I don't want people to assume I drink because many people think of the extremes involved with alcohol consumption, such as drunk-driving or violence.

And this isn't only college culture, but even worldly culture. Many people have it programmed in their heads that almost everyone drinks, but this is a dangerous and ignorant idea. It seems to me that everything has to relate back to alcohol, like it's something that everyone can relate to.

I don't think I'm better than anyone else. I just don't like the label associated with college students and drinking.

Doctors don't ask me whether or not I drink, but rather how much I drink. When people heard that I was coming to UMass, they told me that I was going to start drinking and partying no matter how much willpower I had. After a trip to Cape Cod over the summer, people asked me how much I drank with my friends and how much partying we did in the house we had to ourselves. For the record, we didn't touch any alcohol. Around my 20th birthday, people were commenting on how I only had to wait a year until I could legally get my 'drink on.' At this point, I stopped telling people I don't drink.

Is it really so difficult to grasp the concept that some people in this world don't drink under any circumstances? I'm not even going into the entire effects of consumption, but just the idea of the act of drinking. My frustration with this largely untrue assumption isn't applying to those who simply ask if I want a drink, but to those who assume I do on a frequent basis.

There are those who are honestly surprised that I don't drink and several people have checked on me to make sure I haven't started.

But who can really blame people? I'm a 20-year-old white college student. I suppose to some that means I'm in a fraternity and I drink a full pack of Natty Light every day of the week, and I just have to go clubbing. Bold claim, I know, but I have encountered many who actually think of me and most others like this.

The media doesn't help either. Commercials for alcohol are always showing people having the best time of their life with Bud Light, and if these people really have fun like this, great, but people need to get it through their heads that this isn't the lifestyle of every person in the world.

Shows that portray disgusting people who can't do anything without alcohol in their system (I'm looking at you Jersey Shore) are essentially brainwashing naïve people who don't know any better to be able to distinguish that a lifestyle of boozing isn't hip. You're not going to see a TV show about a bunch of people in a house who play board games or watch movies together completely sober.

If you want to drink with your friends, cool. If you want to party once in a while, that's not bad. But if you want to get completely smashed every day, show up to classes drunk and talk about how drunk you are or will be all day, please grow up.

I don't think I'm better than anyone else. I just don't like the label associated with college students and drinking.

What we really need are people who just understand. The people who ask if I want a beer, and then don't pry into why I don't drink with such disbelief and horror are few and far between. It should not be revolutionary, and yet a large part of today's culture consists of people who do not have anything in life going for them besides their liver capacity. This makes it difficult for those trying to transcend at label.

When it all comes down to it, I just want people to stop assuming. Come on, I know this is America and I'm in college, but you know what they say about people who assume.

Beat the winter blues with simple tricks

By Emily McLaughlin
Collegian Correspondent

The cold winter months leave many people depressed and lethargic, but following a few simple suggestions can beat the blues in no time. Doing a few easy things such as exercising, taking time to yourself for personal reading and dressing up for a day of classes can help ease the stress.

It is easy to sink into what many consider the "winter blues" as winter continues to crawl on, and the snow refuses to melt. Everyone is tired of walking on sheets of ice, bundling up just to get to class and barely seeing any daylight. Most people let these "blues" get the best of them and diagnose themselves with what their trusty friend, WebMD calls SAD: Seasonal Affective Disorder.

As days become shorter and colder people become more depressed. They turn to vices such as eating more, indulging in carbohydrates, sleeping in and letting moodiness take hold of them. The negative effects of all of this include weight-gain, fatigue and overall unhappiness.

Now that February is well underway, in addition to the fact that Punxsutawney Phil did not see his shadow, there is that glimmer of hope that springtime is on the way. But why wait for the season to change for your mood to change with it?

Here are some tips for keeping the glass half full while everyone in New England continues to freeze their butts off and chip away at ice and snow piles:

Smile

Smiling will make you feel better. A number of research studies conducted at the University of Alberta in Canada (where its pretty freakin' cold) have shown that making a facial expression such as a smile can produce effects on the body that are similar to those that result from the actual emotion. Look for positive things to grin about (the following tips might help).

Exercise

Staying active will help burn off all of those extra carbs you are taking in. Physical activity is also proven to help the immune system, improve sleep habits, boost energy and reduce stress.

Let There Be Light

Sunlight makes people happy, so take advantage of as much natural lighting as possible by opening up those blinds. When sunlight is limited as it is in the winter months, it is important to find alternatives. Before it gets dark, turn on some lights in your room or apartment. That way, when darkness falls, it will be barely noticeable. The light will help you keep energy up and stay motivated through the evening.

Avoid Binge Drinking or Eating

This is hard to do, especially since there is often nothing better to do while sitting around inside all day but try to occupy your mind and body by other means. If the temptation to snack arises, choose healthy, energy-boosting snacks like almonds, whole grains, yogurt and fruits.

Stay Busy

This will also help keep snacking to a minimum. Find wintertime hobbies, whether they are indoors or outdoors. Draw, knit, learn to ski or even find fun in shoveling.

Keep Your Sleeping Pattern

Maintaining a consistent sleeping pattering is important to overall health. In the winter it's easy to sleep late and want to stay cozy in bed because it is so cold. College students tend to sleep late, skip class, and are then up into the wee hours of the morning until they fall asleep again. Get up, get energized, jumpstart that metabolism, and winter life will be more manageable.

Get Dressed

Don't lounge around in sweatpants all day. Put on some jeans, cute boots and a bright top. You will feel better knowing you are one of the best-dressed people on campus just because you didn't wander to class in your pajamas.

Ditch the Depressing Winter Playlist

In November and December, it's all about the upbeat holiday jingles. Come January, the holidays are over, and there seems to be little to look forward to until the spring flowers bloom. Put on something a little more upbeat than your indie/emo/rainy-day playlist. Check out The White Panda, Ingrid Michaelson, Guster, and anything Top-40 to get the blood pumping.

Stay Motivated

Plan things to look forward to on weekends so you have something exciting to do after a week of school and work. This will make time fly and the rest of winter more bearable.

Relax, Read and Take a Deep Breath

Winter only lasts a fraction of the year. Embrace it and find the joys it brings. Find time to finish that book you started over the summer or watch those movies on your must-see list.

UMass will see green grass again soon, but for now, maintain a healthy and balanced lifestyle for ultimate happiness. Following these tips will boost your mood and jumpstart you spring-time energy.

'Somewhere' a beautiful but boring work

By Austin Dale
Collegian Staff

Sofia Coppola confuses you. The 39-year-old director's films are gorgeous, yet boring. You can wander around on Tumblr looking at her images until midmorning, because they're full of these ethereally beautiful adolescents who seem so tenacious and full of potential. However, with the exception of her weakest work, "The Virgin Suicides," her films are lackadaisical and leave audiences watching loose ends that never seem to come together or bring anything about them. Within Coppola's adolescents' worlds people observe girls of privilege handle issues without any real response other than to submerge their emotions with their own blank, wet stares.

Coppola's latest film, "Somewhere," is both no different and a complete turnaround from her usual products. This time, she focuses her film on a bad-boy protagonist named Johnny Marco, played by Stephen Dorff, as if he's playing Stephen Dorff. He's living at the Chateau Marmont in Hollywood between action movies he hates, but doesn't complain about. His daughter Cleo, played by Dakota Fanning's little sister Elle, comes for a visit. She's a younger and more innocent version of Marie Antoinette from Coppola's film by the same name and Scarlett Johansson's character Charlotte in the director's "Lost in Translation," just as Johnny is basically a watered-down Bob Harris.

They don't do much. They love each other. They relax by the pool, and they play Guitar Hero. The topic of Cleo's mom is brought up and chucked out. They go to Italy. They order room service. They ride around Los Angeles in a limo. Cleo ice skates to Gwen Stefani as Johnny texts. Nothing happens, and yet, everything happens.

First of all, the primary word that can be used to describe this movie is voyeuristic. We see the part of fame we never really think about: Johnny is really just another guy who got lucky. He shouldn't be worth caring about. He's boring. The great cinematographer Harris Savides focuses for minutes at a time on static and simple compositions filled with vapid characters, failing to comment on the non-action.

However, Johnny doesn't have to do anything special, and Fanning and Dorff don't really have to act. Instead of wrapping her film in the visual splendor of Tokyo or Versailles, Coppola makes a film in which embellishment is a dirty word. She simply looks at these characters doing their thing in their world and viewers look at what she sees for long enough to read the underlying pathos so clearly it can take your breath away. "Somewhere" is a film about looking and, without the constraints of a narrative, it forces us to look really, really closely.

After a while, viewers don't wait for anything to happen. They're just happy to be given a private peek into a private world. Johnny and Cleo are just like us. They do what we do. We relate to the pretty blonde girl because she hasn't come to grips with the reality of her situation yet, and if she does, she tries to ignore it.

This doesn't exactly set "Somewhere" apart from the rest of Sofia Coppola's films. But at the same time, it feels like a massive step forward. It's as if Sofia is looking back at the girls in her last three films, which hid everything and tried to keep calm. This is why her films are so hard to read most of the time, but with "Somewhere," we're finally allowed in.

Austin Dale can be reached at aadale@student.umass.edu.

The latest film from Sofia Coppola, "Somewhere" is a beautifully made, yet strikingly boring work and is not unlike several of the director's previous films. The cinematography continues to impress in a similar fashion, but the lack of depth in the story does not.

Grandage sheds new light on 'King Lear'

By Kate MacDonald
Collegian Staff

It is certainly a tragedy when one's father spirals slowly into insanity. In Michael Grandage's new on-stage adaptation of Shakespeare's "King Lear," daughters Goneril, Regan and Cordelia discover the slow spiral of insanity becomes even more complicated when daddy is the king.

Most Americans are familiar with the story of "King Lear." The senile king decides to divide up his kingdom between his three girls, based on how much love they profess to him. The selfish Goneril and Regan use their sharp tongues to secure their land, while sincere daughter Cordelia refuses to play the game and is banished.

In a fit of rage, Lear banishes his dear friend Kent. Meanwhile, Lear's other friend Gloucester is also being fooled by his unworthy offspring. Staying with his two "faithful" daughters, who try to rid themselves of their father, Lear slips deeper into insanity, eventually forgetting his identity and wandering the country, while the girls plot and scheme.

Shakespeare's "King Lear" makes it clear which characters are good and which are bad. However Grandage's version makes things a little less crystal clear for audiences as he delves deeper into characters' psyches.

The "King Lear" that's currently being shown at Amherst Cinema is a recording of a live performance at London's Donmar Warehouse, filmed on Feb. 3. It stars Derek Jacobi as Lear, who is well known for other Shakespearian roles and his recent work on "Gladiator" and Oscar-nominated film, "The King's Speech."

Most notably, the roles of Goneril and Regan, played by Gina McKee and Justine Mitchell respectively, were deeper than the original playwright made them out to be. Audiences don't necessarily see them as the ungrateful daughters they're meant to be. It's a testament to Grandage's directing and the ladies' emotional acting that they come off as troubled women caught in a bad situation, who only turn sinister at the play's end.

Jacobi shines in the lead role. He succeeds in acting out the full spectrum of Lear, from his role as a parent being taken advantage of, to a man afraid of his own mind, to finally, a now-defunct, insane king. In perhaps the best scene of the play, when Lear realizes he's becoming mad, Jacobi's emotions are almost tangible.

Despite the great lead and supporting performances, it is Alec Newman, as Gloucester's evil, bastard son Edmund, who steals the show. Newman plays Edmund as sneaky and cunning in a nearly crazed manner. His performance, from beginning to tragic end, is positively captivating. Even those who have read "King Lear" were on the edge of their seats, waiting in suspense for Newman's next move.

At the end of the performance, the audience in London gave actors a long standing ovation, and the entire cast took bows twice. The play could have easily been out-of-touch and uninteresting, giving audiences a look at a completely foreign time without securing anyone's interests. However, the actors' performances were enchanting, even funny, and at no point did a scene lag.

The set designers' minimalistic approach – a nearly bare background – allowed the actors to control the audience's focus. The plain setting was built with aged timber. The absence of buildings, platforms or essentially, all props other than the occasional sword definitely contributed to the actors' successes without taking away a single scene's effect. Lighting is used effectively to show different settings, and a very neat lighting trick involving lighting the area between the boards made them appear to be trees.

The different dark and sepia tones of light paired with loud horns and drumbeats enabled audiences to follow the change of settings or acts without strain.

There are some parts and roles that were not played well. Cornwall, for instance, came across as a loud frat boy instead of the duke he was supposed to be. Pippa Bennett-Warner as Cordelia could have portrayed her character differently – it seemed like she just tried too hard. During the death scene, in fact, she made little effort to appear dead, instead panting onstage.

Many times Regan was portrayed as an emotional, almost shriveling woman, instead of the strong-willed sister she was originally written to be.

Despite a few odd character flaws, there wasn't much that took away from this play. This installment shows "King Lear" isn't just some seventeenth-century dramatic play, but it is an understandable, funny and relevant story which remains a classic.

NT Live will also be featuring other recorded plays at Amherst Cinema. Danny Boyle's (director of "Slumdog Millionaire") "Frankenstein" will appear mid-March through mid-May, while "The Cherry Orchard" will be its summer feature. Those interested in "King Lear" can catch it again on Feb. 27 and Mar. 2. Tickets are $24.

Kate MacDonald can be reached at kaitlynn@student.umass.edu.

UMass heads to west coast for slew of games

By Stephen Hewitt
Collegian Staff

Fresh off of its opening slate of games last weekend, the UMass softball team will continue to round the country this upcoming weekend as part of the Cathedral City Classic in Cathedral City, Calif.

The Minutewomen are coming off a weekend in which they posted a 2-3 record in the FAU Kickoff Classic – including close losses to then-No. 10 Michigan and will have their hands full again this weekend when they compete against national powerhouses such as Washington, California and Texas.

Head coach Elaine Sortino is aware of the challenges that await her squad, but also knows the team's difficult early season schedule will pay dividends for the team come May.

"Obviously we're going there to play to win," Sortino said. "We deliberately scheduled these teams because it's really, really important in our out-of-conference and out-of-region schedule that we go out and play teams that hopefully allow us access to the NCAA Championship."

Leading UMass on the pitching mound will be junior ace Sara Plourde, who will be called on many times this season by Sortino.

The 2010 national strikeouts leader started four out of the five games last weekend, going the distance each game and earning a 2-2 record, 42 strikeouts and a 1.88 ERA through 26 innings pitched. Her performance this weekend will be a strong indicator of the Minutewomen's success against the nation's elite teams.

"I felt very, very encouraged that she was able to have as many strikeouts as she had," Sortino said. "And to hold a Michigan team on Sunday – and she was pretty tired – I thought she held an extremely explosive offense pretty tight for six innings without her best pitch all weekend."

On Friday, the Minutewomen are likely to go head-to-head with one of the best pitchers in the nation – No. 14 California's Jolene Henderson.

In six games this season, the sophomore ace is 5-1 with 34 strikeouts and a 0.80 ERA. Her efforts have already earned her Pac-10 Conference Pitcher of the Week honors twice.

Following its meeting with the Golden Bears, UMass will return to the field Friday night for a date with No. 7 Washington.

The unbeaten Huskies are not led by an ace pitcher, but by a very explosive offense that boasts 20 home runs and 109 total runs in its first eight games. UW has scored at least 17 runs in four games this season, including 23-4 and 22-3 thrashings of UC Riverside two weeks ago.

The schedule doesn't lighten up for the Minutewomen on Saturday night as they will face off with No. 19 Oklahoma State.

The Cowgirls are led by a tandem of pitchers in freshman Simone Freeman and sophomore Kat Espinosa. Together they have combined for seven of OSU's eight victories and have totaled 57 strikeouts, while giving up only 18 earned runs (Freeman – 2.00 ERA, Espinosa – 2.23 ERA).

UMass will take on its fourth straight ranked opponent on Sunday afternoon against No. 11 Texas, the first game of a doubleheader that day.

Leading the 10-0 Longhorns are one of the best pitching duos in the nation in sophomore Blaire Luna and freshman Rachel Fox.

Luna, who earned Big 12 Pitcher of the Week honors this past week, leads the team with a 6-0 record, 1.48 ERA and 56 strikeouts. Fox is no slouch either, recording a 4-0 record and 1.62 ERA.

The Minutewomen will close out the weekend in their second game of the double header against Fresno State. Although the Bulldogs are unranked, they are earning votes in the latest polls. At 3-0, they will pose as a formidable foe for UMass.

Michelle Moses will likely engineer the offense for Fresno State, as she leads the team with three home runs in three games and seven hits in 11 at-bats.

Although Plourde and the rest of the UMass pitching staff will be monitored this weekend, the offense will be just as important.

Despite scoring 10 runs to open the weekend against Penn State last week – which included a Katie Bettencourt grand slam – the Minutewomen offense has spiraled since then, mustering just eight runs in the following four games.

"Everbody's got to step up," Sortino said. "The thing is you don't want one kid to always carry the burden. Katie Bettencourt doesn't always have to have the big swing to get the big runs. That's a bad way for a team to be. They all need to be able to step up and deliver."

The first pitch for UMass is scheduled for Friday at approximately 6:30 p.m. at the Big League Dreams Sports Park against California.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Junior outfielder Katie Bettencourt (23) connects on a pitch last season. Bettencourt capped off UMass' 10-0 victory over Penn St. last weekend with a grand slam in the sixth inning.

Gurley, strong defense key Minutemen win

By Herb Scribner
Collegian Staff

Anthony Gurley's slump may be over.

On Wednesday night at the Mullins Center, Gurley returned to his scoring ways with a game-high 22 points, but also moved into 17th all-time in UMass scoring history (1,259 points). Gurley passed Doug Gruthcfield with 17:54 remaining in the second half with a layup.

Gurley's 22 points came on 9-for-14 shooting, which was achieved with open shots and backdoor passes from the rest of the Minutemen (15-11, 7-6 Atlantic 10).

"I felt pretty comfortable that he was going to get some baskets tonight," UMass coach Derek Kellogg said. "He earned over what he did in the second half against Rhode Island and played a good game."

Despite the recent slump, Kellogg still had confidence in his top scorer to rise from the depths.

"I'm confident in Anthony," Kellogg said. "He's worked so hard. Guys won't go into slumps for too long when they work hard and get in the gym."

Gurley started right from the get-go with 12 points in the game's first 12 minutes, which was three points less than SJU had as a team in the first half.

With 3:06 remaining in the first, Gurley nailed a 3-pointer that not only energized the Minutemen and their fans, but also extended the Maroon and White's lead to 17 points.

Though Gurley wasn't as electric in the second, he still managed 10 points to help close out the victory over the Hawks. Other than being the go-to guy for scoring, Gurley contributed on a lot of other plays.

Gurley had a hand on one of redshirt freshman Raphiael Putney's electrifying moments. Despite having an open look from the perimeter, Gurley tossed the ball over to Putney on the wing and watched as he put away the 3-point basket.

On top of his 22 points, Gurley grabbed six rebounds en route to a stat-filling performance.

His rebounding and defensive presence falls in line with what Gurley said he wanted to do in upcoming games. Rather than being UMass' traditional scorer, Gurley wanted to work on other little things, such as rebounding and defensive plays to help his team. His six rebounds and constant pressure on the SJU side accomplished just that.

Other than moving up the scoring list of former Minutemen, Gurley returned to the form that was seen for the majority of the season. Though signs were shown against Rhode Island on Feb. 19 with his 16 points, Gurley's swift stroke and stimulating plays reappeared on Wednesday night before a home crowd of 3,641.

Before the game against the Hawks, Gurley showed signs of a slump that began in the last contest against SJU, when Gurley scored his then-season low of 10 points.

Following the loss to the Hawks on Feb. 5, Gurley scored 16 total points in his next two contests against George Washington and A-10 elite Duquesne. His lack of offensive ability coerced the Minutemen into finding less conventional ways of scoring in Jesse Morgan and Putney.

While normally ill-shooting nights would plague a player, Gurley found solace in another shooter's inability to score, which gave him the confidence to move forward and continue to work hard.

"After one of my games, I had a tough game, and I had also seen that Paul Pierce had also went 0-for-10 so it made me feel a little better about myself," Gurley said. "It's all a part of the game. I've been in this situation before where I've had a couple bad games in a row so it wasn't nothing I wasn't used to."

With two straight wins and Gurley's return to form, the final games of UMass' season could produce brighter results than seen as of late.

However, neither Kellogg or Gurley are willing to admit the slump is over.

"Let's see how he does at La Salle and we'll roll with it," Kellogg said.

"I'm very hard on myself so I wouldn't even say I'm completely out of my slump right now," Gurley said. "I definitely feel like I got it back a little bit tonight and I've still got to continue to fine-tune some things."

Herb Scribner can be reached at hscribner@student.umass.edu

Sophomore forward Javorn Farrell (10) drives past a Saint Joseph's defender. Farrell notched four points and five rebounds in the win.

Minutemen cruise to victory over Hawks

MARIA LYMNIOTIS/COLLEGIAN

Junior forward Sean Carter (23) shoots a jumper in a game against Duquesne earlier this season. Carter registered four points, eight rebounds, a block and an assist in UMass' 69-51 victory over Saint Joseph's.

By Jay Asser
Collegian Staff

The Massachusetts men's basketball team used defense and a balanced attack to win its second-straight game, 69-51, against Atlantic 10 foe Saint Joseph's on Wednesday at the Mullins Center.

The 51 points were the second fewest scored by the Hawks this season and the second fewest allowed by the Minutemen against any opponent this year.

UMass	69
SJU	51

"I thought we were tough on the defensive end of the floor, especially in the first half," UMass coach Derek Kellogg said.

Senior and leading-scorer Anthony Gurley led the way for UMass, scoring 22 points on 9-for-13 shooting from the field and 3-for-4 shooting from 3-point range. Gurley also chipped in six rebounds to the 41 total boards for the Minutemen (29 defensive, 12 offensive) in the contest. The performance marked the first time the guard recorded over 20 points in a game since scoring 21 in a win over Rhode Island on Jan. 30.

"I felt pretty comfortable that he was going to get to the basket tonight, especially when he started making, what you would say, those flip shots or floaters," Kellogg said of Gurley. "He carried over what he did in the second half of Rhode Island and played a good game tonight."

Coming out in the second half, Gurley poured in a 3-pointer, a floater in transition and a layup to score in UMass' first three possessions, picking up where he left off in the opening period. With 17 minutes, 54 seconds remaining in the game, Gurley (19 points) was outscoring Saint Joseph's (17 points) on his own.

The Minutemen, however, went cold after a Hashim Bailey layup with 13:55 left in the contest, not scoring again for nearly seven minutes until the 7:14 mark. Gurley broke UMass out of the slump with a connection from deep, but not before the Hawks scored 10 consecutive points to cut the deficit to 15 points.

Nevertheless, the Minutemen maintained their lead down the stretch to earn the victory.

"Our guys showed a little bit of maturity to where we didn't cave in or fold in the second half," Kellogg said. "I thought we fought all the way to the end."

The first half proved to be an ugly one for Saint Joseph's as it managed only 15 points on 4-for-23 shooting from the field and 1-for-13 from long range. UMass clamped down on defense in the paint, allowing six points to the Hawks while scoring 22 on the offensive end.

After a slow start, the Minutemen scored 22 points in the final 10 minutes of the opening half to take a 34-15 lead into the intermisston. After back-to-back and 1's by Gurley and Vinson (on a dribble and dish from Gary Correia), UMass built a 20-4 lead to create separation between itself and Saint Joseph's. The ball movement was encouraging for the Minutemen, who dished 10 assists on their 13 made field goals for the period.

The Hawks finally converted their first field goal with eight minutes, 38 seconds remaining in the opening half after misfiring on 13 consecutive shots.

With the victory, UMass improves to 15-11 overall and goes over .500 in conference play to 7-6. Saint Joseph's, meanwhile, drops to 7-20 overall and 2-11 in the A-10, making them the only team in league with 20 losses.

The Minutemen aren't looking at Wednesday's win as any special achievement, as Gurley sees a lot of change that needs to happen.

"We're not satisfied yet, we still have a lot of improvement to do," Gurley said.

With three games left, Correia isn't putting his money down on one result or another, and that UMass' season is totally up in the air.

"Hopefully we can play these last three games, make a run at it and see what happens from there," Correia said.

UMass will return to action on Sunday on the road against La Salle before returning home for its final contest at the Mullins Center against Temple.

Turnovers prove too costly for Minutewomen against Rams

By Michael Counos
Collegian Staff

On Wednesday night, the Massachusetts women's basketball team battled it out with Fordham, looking to win its second-straight Atlantic 10 conference game.

The Minutewomen (7-20, 3-9 A-10) were looking to climb up in the conference standings as they began the evening tied for 10th with the Rams (11-17, 3-9 in A 10) as well as George Washington.

UMass	52
Fordham	61

Fordham began the night honoring its seven seniors in their final home game including senior manager Adrienne Pesce, guards Kristina Bell and Kyara Weekes and forwards Katie Vican, Tiffany Stokes, Caitlin Shadbolt and Alexandria Zamora.

Action got under way at 7 p.m. for the Minutewomen's final road game of the regular season at Rose Hill. UMass entered the game as underdogs, considering its 1-11 road record. However, the Minutewomen had won the last five meetings against Fordham, with their last loss dating back to Jan. 30, 2005.

UMass found itself in a hole in the first half, taking a 34-18 deficit into halftime. The Minutewomen jumped out to an early 14-6 lead, but were outscored 28-4 to end the half.

Turnovers were a problem for the Minutewomen, ending the half with 14, compared to Fordham's two. The Rams scored 19 points off UMass mistakes including six fast-break points. UMass finished the half with 6-for-17 shooting while Fordham was 13-for-29 shooting. Jasmine Watson led the Minutewomen in the half with nine points, four rebounds, two assists and two steals. For the Rams, Arielle Collins chipped in with six points and four helpers.

UMass struggled to close the deficit in the beginning of the second. The Rams continued throughout most of the period with a 15-point lead and even stretched it to 19 points with less than five minutes left. The Minutewomen did make a push but it was not enough as the game ended in a 61-52 loss. Watson had a double-double despite the losing effort.

Watson's double-double wasn't the only strength on the offensive end for the Minutewomen. Shakia Robinson and Cerie Mosgrove combined for 26 points in the losing effort. Additionally, the duo each had seven rebounds to compliment their scoring.

This top scoring by the Minutewomen was displayed in their 3-point shooting. After a dismal 1-for-5 start in the first half, UMass went 5-for-11 in the second half to up its shooting percentage.

JEFF BERNSTEIN/COLLEGIAN

Junior guard Emily Teuscher (2) pulls up over a defender in a game earlier this season. Teuscher has averaged 5.5 points and 2.8 rebounds per game this season.

Other than scoring, the Minutewomen added some swift passing to their repertoire with freshman Kelly Robinson dishing out six assists to the Maroon and White.

While the Rams took over sole possession of 10th place in the conference standing, UMass remained tied with GW (8-18, 3-9 A-10) as it dropped its game to top-ranked Xavier, 67-41. UMass ends its regular season against La Salle on Saturday at the Mullins Center. Action tips off at 2 p.m.

Michael Counos can be reached at mcounos@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Senior attacker Jackie Lyons (20) is UMass' best offensive player. Lyons led the way for the Minutewomen in their most recent victory over Boston University, scoring four goals and adding an assist.

Women's lacrosse battles back, upsets No. 18 Boston University

By Nicholas Bellofatto
Collegian Staff

The Massachusetts women's lacrosse team and head coach Angela McMahon headed to Boston University on Feb. 23 for a match against the No. 18 ranked Terriers for another non-conference game. The Minutewomen used a full team effort and a last second goal to beat the Terriers, 13-12, at Nickerson Field.

UMass	13
BU	12

The game got off to a quick start as the Terriers gained possession of the ball and scored just 38 seconds into the first half.

Twenty-eight seconds later and only 1:06 into the game, UMass senior midfielder Haley Smith answered with a goal of her own, tying the score at one. Senior attacker Jackie Lyons followed Smith's lead and scored another goal to give UMass a 2-1 lead with 25 minutes remaining in the first half.

In a five minute span following Smith's goal, the Terriers scored three unanswered goals, taking a two-goal lead over the Minutewomen. UMass would continue to battle with BU throughout the first half before ultimately taking a 6-5 lead into halftime.

Statistically speaking, the first half was just as close as the score would indicate. While the Minutewomen won the ground ball battle, 11-7, they were beaten 13-11 in shot opportunities. UMass was in a similar situation in their first game of the season against Holy Cross when it had a chance to put the Crusaders away leading 7-2, but could not do it in regulation.

On Feb. 19 after the Vermont game, the Minutewomen overcame that issue by gaining an early lead on the Catamounts and never letting it slip away.

On Wednesday against the Terriers, the Minutewomen trailed early and were forced to rally from behind in order to take the one goal advantage into the second half.

BU began the second half just as they began the game, by scoring, and scoring in bunches. The scoring was answered by an UMass goal, but it was not enough as the Terriers opened up a 9-8 lead with 20 minutes left in the second half.

"They just went on a few runs, and we had a tough time getting some stops while they were making their runs," McMahon said.

Coach McMahon has preached playing the full 60 minutes of every game, which in turn would put them in the best position to win. However, playing the full 60 minutes does not always mean having a cushy lead. Sometimes it requires battling back from a deficit.

With just seven minutes left in regulation, the Minutewomen did just that, overcoming a 12-10 disadvantage to ultimately win, 13-12.

"I just think we focused on chipping away," McMahon said. "That was our goal, to try and just focus in on what we were doing with every possession, not the bigger picture."

UMass netted three goals from Cori Murray, Lyons and Katie Ferris in the final five minutes, with Ferris' game-winner coming with just five seconds left.

Jackie Lyons led the way for the Minutewomen (4 goals, one assist) as Murray, Smith and Jesse O'Donnell each added two goals of their own. Junior goalkeeper Katie Florence picked up the win in the cage, registering six saves."I think that our girls really wanted to win, and they wanted to prove that they were one of the top teams in the area, and in order to do that you have to beat the top teams in the area," McMahon said.

Local Sen. seeks to reform signature gathering process

(MCT)

A bill pending vote in the Massachusetts House would increase the number of signatures required for a referendum to reach the ballot.

By Shane Cronin
Collegian Staff

State Sen. Stan Rosenberg (D-Amherst) and four state representatives have recently filed legislation to amend the ballot initiative process in the Commonwealth of Massachusetts.

If enacted, Rosenberg's bill would require those proposing bills to gather double the amount of registered voter signatures than current requirements stipulate. Although the exact number of verified signatures needed for a ballot question to ultimately make its way to the polls fluctuates, in 2010 it was 66,593. Under Rosenberg's proposed legislation, an initiative would require roughly 130,000 signatures to be approved. Ballot initiative bills are routinely proposed in the state legislature.

Other amendments to the process being floated in the House include requiring signature gatherers to wear buttons stating how much they are being paid, outlawing the practice of paying signature gatherers entirely and limiting individual contributions to ballot initiative campaigns to $500 per year.

The U.S. Supreme Court has ruled on some of these ballot initiative-related issues in the recent past. In the 1999 case "Victoria Buckley v. American Constitutional Law Foundation, Inc., et al," it found that several signature-gathering laws in place in Colorado were in violation of individuals' right to free speech under the First Amendment. Outlawing pay for signature-gathering and requiring gatherers to wear name badges were found unconstitutional in that same case. The Supreme Court also determined there was insufficient evidence to support the charge that paid signature gatherers are more likely to commit fraud than volunteers.

Senator Rosenberg said his chief goals for his ballot amendment are to curb the activities of out-of-state special interest groups, to reduce signature-gathering fraud and to "return [the referendum process] to the democratic grassroots movements."

Rosenberg said he believes the Commonwealth's ballot referendum process has been co-opted by out-of-state interests with financial stakes in Bay State law, and he hopes his legislation will place more power back in citizens' hands.

"Massachusetts is a relatively small state which has been captured by special interests who have learned how to manipulate the ballot process," he said.

He also noted that he feels the current initiative amendment process is somewhat anachronistic.

"The [voter ballot initiative] system is 100 years old," he said.

In addition to increasing the number of signatures required for a proposal to reach a vote, the senator would also like penalties levied on corrupt gatherers and campaigns. Although he is not opposed to the practice of paying signature gatherers, he would like them, as well as firms paying them, to be required to register with the state.

The nonprofit Ballot Initiative Strategy Center (BISC) claims it has received numerous complaints in recent years from across the country regarding questionable signature gathering practices. On its website, BISC now ranks 24 "voter referendum" states using a report card system. States can be awarded a maximum of 21 points in categories such as "Greater Transparency (up to 4 points)," "Accountability (up to 6 points)" and "Oversight and Enforcement (up to 8 points)." In 2010 no state achieved "A" status by the institute's standards. Colorado received the highest mark and the only "B." Twelve states received "F's" including Massachusetts, California, Utah and Florida.

Despite charges of escalating levels of fraud, relatively few petitions make it through the state's current checks and reach a vote. Last year in Massachusetts, 25 ballot initiatives were approved to circulate. Of those, only five gathered enough signatures to reach the polls, and just three were ultimately on the ballot in November. One of the three, a question which would repeal the sales tax on alcohol, was approved by voters. Furthermore, only one case of major fraud regarding ballot initiatives is known to have occurred in Massachusetts in the last decade, according to the BISC.

In 2005, the anti-same sex marriage organization Massachusetts Family Institute hired Arno Political Consultants, which specializes in qualifying ballot initiatives nationwide, to gather signatures for a question propoging a gay marriage ban to go before voters. However, a signature collector working for APC was exposed for using the now illegal "bait-and-switch" tactic to lure voters. The college student who allegedly deceived voters reported at the time she could make up to $1,200 per day tricking voters into signing the petition to ban gay marriage by disguising it as an initiative to permit all grocery stores in the state to sell wine, according to a recent Boston Herald editorial on Rosenberg's proposal.

Signature drive organizers hold that these situations are rare, and that the majority of signature gatherers are involved in ballot initiative campaigns because they are dedicated to the respective cause.

Associate director Chip Faulkner of the Massachusetts-based anti-tax group Citizens for Limited Taxation has coordinated at least seven signature drives throughout his career.

"I've been doing this for 30 years; I find very little evidence of fraud," he said. "They're making an issue out of a nonissue."

Faulkner also disagreed that signature gatherers should have to register with the state. "Why should they? All they're doing is holding a clipboard," he said, mentioning that his group works with volunteer signature gatherers only.

Shane Cronin can be reached at scronin@student.umass.edu.

Amherst state Sen. Stan Rosenberg believes the ballot referendum process is controlled by out-of-state "special interests."

Controversy in the SGA: Sen. asked to leave Weds. meeting

By Ashley Berger & Sam Butterfield
Collegian Staff

Wednesday's Student Government Association (SGA) meeting opened with an unexpected bang.

The gathering commenced with Speaker Modesto Montero asking Senator Bill Cody to leave the meeting due to another senator, Lindsay Vitale, feeling uncomfortable in his presence. Cody was allegedly intoxicated and has allegedly appeared in such a state at SGA meetings before. He reportedly began to taunt and verbally attack the female senator, who, according to Montero, has been the target of Cody's ire before.

"[Similar behavior] happened last year and earlier this semester," said Montero. "It happened with Bill Cody and this same student, and my feeling is it's just gone too far at this point."

When Cody refused to leave, Speaker Montero called for a recess during which he called in members of the University of Massachusetts Police Department to escort Cody out of the meeting.

Montero then addressed the rest of the Senate body, explaining that he felt this type of behavior from senator to senator was unacceptable and saying he would try to personally handle the situation.

Reached by phone late Thursday, Montero said that, as Speaker, he has the power to prevent individual senators from attending meetings and, calling the situation unfortunate, that he would invoke that privilege against Sen. Cody.

"My personal take on it is that I don't want him in any of my senate meetings until this whole thing is clear," he said. "I'm going to assert that power for the safety of my senators and myself, as well."

Reached by phone late Thursday as well, Cody said he plans to remain on the SGA and will not be attending tonight's Ways and Means Committee meeting. Though he would not be quoted on specifics, he said he did not understand what prompted the altercation and that, while he had been at the Campus Center's Graduate Lounge bar prior to the meeting, he had not had a drink for more than two hours before the start of the meeting. He said he was speaking with Vitale about the Collegiate Readership Program, which provides newspapers to the school, and that he did not understand why she felt uncomfortable with his actions. Cody said he will attend next week's SGA session.

During his committee update, Josh Davidson, chairman of the SGA's Ways and Means Committee, stated that the committee would not hold meetings again until Cody was removed from the Senate.

From there, the meeting moved forward and President Brandon Tower introduced the UMass EMS Club, which hopes to introduce a new Quick Response Service but whose leaders said the group needs more funding to do so. The service, its leaders said, would help alleviate some of the pressure that the Amherst Fire Department faces in regards to the volume of calls they must address, namely on Friday and Saturday nights. Dave Peltier, the executive director of UMass EMS, told the Senate body the club needs more funding to purchase more equipment.

"We're looking for a lot of support," he said. "We have a lot of supplies, but we need more of them in order for the system to work and to help out UMass Police Department and Amherst Fire."

Tower clarified for the Senate that he feels the club could help augment the professional department's services, not replace them.

"This service would be a supplement to the current efforts of Amherst Fire, not a service in lieu of it," he said.

Marissa Razzante/Collegian

SGA Speaker Modesto Montero (above) asked Sen. Bill Cody to leave Wednesday's meeting after Sen. Lindsay Vitale was offended by his behavior. When he did not, he was escorted out by UMPD.

UMass EMS currently staffs campus events at locations such as the Mullins Center and the Fine Arts Center, but the organization is looking to expand its services to assist more members of the student body.

In keeping with the SGA's recent theme of attempting to better-fund various student groups, the alpine ski team, Habitat for Humanity, and the men's club volleyball team were among clubs Senators discussed increasing allocations to at the meeting. Both the ski team and the volleyball team needed money in order to participate in competitions and Habitat for Humanity needed money for its spring break trip to Florida to help build houses. All groups were awarded the funds they had motioned for.

In the giving spirit, Senator Jarred Rose sponsored a motion to formally thank the UMass Motor Sports Club for helping residents dig out their cars after the recent snowstorms. That motion passed.

The meeting took a sentimental turn when a motion was called that would formally wish outgoing Associate Vice Chancellor of Student Affairs and Campus Life Byron Bullock luck as he leaves the University to accept a leadership position at the American University of Nigeria. Bullock has been a part of the SGA for the past five years.

At the request of SGA members, Bullock gave a short speech beginning with the fact that he was humbled by the display of gratitude. He then gave a quick anecdote mentioning that at the first SGA meeting he ever attended he was given a standing ovation, because he was the first administrator to ever attend an SGA meeting, yet he felt his presence was a job requirement.

Though not actually a requirement, his job description did not stop Bullock from attending meetings.

"Over the years, I've seen a remarkable turnaround in terms of [the] SGA; an active engagement of SGA in the UMass community. I am excited to work with you all, I think that there is so much more to be done and it is up to you to lead the way, and I am excited to see what you can and will do."I will miss UMass and particularly the SGA," Bullock continued. "My work has always been about the students, because the role of any university should be about the students. I have always been an advocate for the students, because without the students, there would be no UMass Amherst. I'm excited about what will continue to happen. I hope that you will continue to be active and proactive and engaged," he concluded.

At his final SGA meeting, Bullock was once again treated to a standing ovation. A motion was called to proceed with a roll call vote. The Senate voted unanimously to formally wish Bullock the best as he continues on to Africa.

The SGA will hold its next meeting March 3, but will host a debate for next year's president and student trustee next Tuesday, March 2.

Why I stand with Planned Parenthood

Lauren Vincent

A piece of legislation was passed in the House of Representatives last Friday that will cut federal funding for the Planned Parenthood Federation of America. According to ABC News, there was a majority of 240-185, with just seven Republicans voting against the measure and 10 Democrats voting in favor.

The name Planned Parenthood is synonymous with abortion in the minds of many. And yes, that is a major part of what they do – providing a legal surgical procedure to women of different backgrounds and incomes. But this is totally and completely irrelevant from an objective standpoint, because this has already been denied by a previous law.

Title X of the Public Health Service Act provides federal funding for family planning services, but Section 1008 says that no Title X funds can be used "in programs where abortion is a method of family planning." Since Title X forbids the government to provide money to organizations like Planned Parenthood for actually providing abortions, this withdrawal of funding will not directly affect that part of what they do.

Planned Parenthood is a viable alternative for low-income individuals to have equal access to contraceptive care and health treatment, as well as a place where young women of any income can go for sexual health assistance without judgment.

It is a trusted organization that also lobbies against the inequality of care in this country with regard to gender and income.

The federal funding through Title X mainly provides birth control. Planned Parenthood not only prescribes and provides various means of birth control, its staff of medical professionals assists in choosing the best method for each individual. Birth control prevents unwanted pregnancies, which reduces the amount of abortions sought and performed.

Planned Parenthood is a health center, one which happens to provide and support the practice of abortion–which are also performed at hospitals.

According to the Guttmacher Institute, advocates of sexual and reproductive health, "46 percent of women who have abortions had not used a contraceptive method during the month they became pregnant. Of these women, 33 percent had perceived themselves to be at low risk for pregnancy, 32 percent had had concerns about contraceptive methods, 26 percent had had unexpected sex and one percent had been forced to have sex."

Not to mention that safe sex is helpful in preventing sexually transmitted diseases and infections, which Planned Parenthood also deals with.

The health centers provide testing for diseases like gonorrhea and herpes as well as for HIV/AIDS. These inconvenient medical problems exist. Denying a trusted treatment center funding to deal with them will not change that.

Also, Planned Parenthood assists those who wish to carry pregnancy to full term with their prenatal care.

It also provides women with breast cancer screenings as well as HPV tests, vaccines and other gynecological issues. It even offers services dealing with men's sexual health.

They have a Latino Outreach Program which attempts to address the disproportionate amount of STDs in Latino communities, and offer advice on such issues as healthy body image and relationships.

Planned Parenthood is a health center, one which happens to provide and support the practice of abortion, which is also performed at hospitals. It is absolutely absurd to randomly pull government money from a hospital, so why do it in this case? Obviously there is an ulterior motive to this which is to find any way possible to make obtaining an abortion more difficult for women.

Many behind this bill have cited the scandals linked with the organization in its recent history. There have been videos released of men claiming to be pimps coming into centers asking for help providing abortions for the teenage girls in their sex trafficking rings and Planned Parenthood managers have complied and assisted these people in covering up their crimes. These people have been fired and the PPFA has investigated the allegations of sex trafficking and reported to federal authorities, according to their press release and to the Washington Times. These were individuals showing irresponsible behavior, not the actions of the organization itself.

During the three-hour-long debate over this vote, Representative Jackie Speier not only shared her personal experience with abortion but also pointed out that energy corporation Halliburton has been linked to many illegal scandals but still receives government money. The moral high ground is not the position which those against Planned Parenthood stand upon, it is simply an agenda pushing bill which will do nothing but harm.

I'm not arguing in favor of abortion here by any means, though I am pro-choice. It's legal and will undoubtedly stay that way. I'd just like to see the government officials elected to act in their constituents' interest actually do so, instead of wasting time fighting ideological battles that they've already lost.

Who doesn't love an old fashioned dictator?

Since we lynched Saddam Hussein, there's been a dearth of entertaining tyrants gracing our television screens. Sure, Mahmoud Ahmadinejad comes out once and a while with a new wacky comment about Israel, homosexuals or how Western values lead the pious to worship the flesh in various grotesque rituals, but his shtick is starting to get stale, if not down right predictable.

He's also boring to look at. Same shirt, same blazer, no tie – Ahmadinejad looks like your associate professor who thinks differential equations are a fun way to spend a Friday night.

Same shirt, same blazer, no tie – Ahmadinejad looks like your associate professor who thinks differential equations are a fun way to spend a Friday night.

But all of a sudden, there's this guy wearing Italian sun-glasses and camouflage fatigues who looks like North Africa's Danny Trejo calling himself a "warrior" and stuttering such comic gold as, "Libya wants glory, Libya wants to be at the pinnacle, at the pinnacle of the world," while he orders bloody massacres of his people. If you haven't figured it out yet, we're talking about the Leader and Guide of the Revolution of Libya for three decades and Fox News ratings blessing, Muammar Gaddafi.

Let's face it, no one really cared about Libya until its population decided to follow the current regional fad of overthrowing its oppressive, semi-totalitarian leaders. Well, that's not really fair because a lot of countries are doing the same thing and not getting the same media attention. What really makes Libya stick in the headlines is the mix of bloody massacre, social upheaval and a man determined to be more fanatical and quirky than Kim Jong-il – currently No. 1 in the global super-villain list. But as entertaining as this whole debacle is, the media – as per usual – is missing the real story.

Okay, so, imagine a teeter-totter. On one side is Saudi Arabia, representing its Sunni allies, and on the other Iran and the Shiites. Now, assuming the perspective of the United States, we find our token friends on one side and the playground bully and his gang on the other. Right now the seesaw is – or was, depending on how you look at the whole Egypt thing – relatively balanced. Iran, Hezbollah and Syria caused trouble and played pranks and we gave our buddies slingshots that our mom bought us so they could keep giving us candy on the cheap.

An important part of the way this whole playground scenario works is that our friend – Saudi Arabia – is secretly bullying all of the other side's friends by virtue of the playground commandment, "power in numbers." Less allegorically, this means that in certain countries, Sunni governments aren't exactly being fair to their Shiite constituents.

For Saudi Arabia this isn't much of a problem as their population is primarily Sunni and they only have to contend with a Shiite minority that's easily swept under the rug. The same cannot be said for Bahrain.

Inspired by Tunisia and Egypt, over the past couple of weeks, Bahrain's Shiite majority has taken to the streets demanding an end to Sunni rule. Initially met with government-sponsored violence, the hubbub in Bahrain has quieted down to Egyptian level social unrest and so isn't nearly as entertaining as the Libyan blood bath or Gaddafi's sunglasses.

But hold on. The U.S. Navy's Fifth Fleet is headquartered in Bahrain, not to mention that the little gulf country is attached to Saudi Arabia's eastern, Shiite-and-oil-dense border. So any successful revolution in Bahrain could be taken as a symbolic victory for the historically oppressed Saudi Shiite minority and Iran, et al.

This isn't alarmism. I'm not saying that Bahrain is going to be the first piece of the sky to fall on our foreign policy heads and that we should all start panicking because this is Iran's opening to stage an Islamic takeover of the world – that's ridiculously stupid and misinformed. When it comes down to it, geo-political developments aren't as simple as playground grudge analogies.

That said, it's undeniable that Bahrain poses a much trickier foreign policy puzzle for the Obama administration than Libya does. Depending on how this scenario plays out, we could witness a complete reversal of U.S.-Saudi relations. The House of Saud is already more than a little ticked off at Obama's handling of the Egypt issue – they and Mubarak were buddies after all – so the longer Barack Obama puts off taking a stance on Bahrain the better, status quo-wise that is.

So then what happens if the Bahrain revolt succeeds?

I'm willing to bet that there're a lot of people who could do this question justice and would love to be talking heads on our TV screens. The problem is that networks found out televising the revolution boosts ratings – especially when there's a Gary Oldman-level villain involved.

Try helping, not invading

Matthew M. Robare

I've been following the Libyan revolution very closely for the past several days and frankly I'm disgusted. Not with the Libyans, who have shown the world how brave they are as they continued their fight to overthrow Muammar Gaddafi's government despite attacks by his mercenaries and soldiers, nor am I disgusted with the members of the Libyan armed forces who refused to fire on their own people and defected to the side of the revolutionaries.

I'm disgusted with the coverage in the American media and the response to the revolution by the international community; a few hours ago I was watching CNN in the Journalism Department office and amid all the usual TV-vapidity they reported that the Obama administration was putting together military options to use against Libya.

I do not trust the American military to be like the Libyans and desert the government if they were ordered to attack the people.

Oh. My. F***ing. God.

All I can say is that the United States government must be run by a gang of murderous psychopaths and no, I'm not exaggerating for comedic effect. For hundreds of years the first reaction of the government to practically anything has been to send in the troops, or drop hundreds of tons worth of bombs on an area. In fact, we know from history that presidents have never shied from ordering the military to attack American citizens – it happened during the Civil War, during Reconstruction, against labor unions in the late 19th century, against the Bonus Army – peaceful protesters made up largely of World War I veterans demanding that the government pay them what it owed them – and in the 1960s when the National Guard was called out to college campuses and bayoneted or shot several students. After the Kent State massacre, Nixon had the 82nd Airborne Division stationed in the basement of a government office building because around 100,000 people protested in Washington, DC. I do not trust the American military to be like the Libyans and desert the government if they were ordered to attack the people.

The greatest problem with our government's foreign policy is that it has been built around naked force in the service of often abstract goals.

For decades, the Marines were constantly invading Latin American countries to enforce the dominance of companies like Dole and Standard Oil. Later in the 1980s the Reagan administration shipped money and weapons (in violation of several federal laws) to anti-Communist forces in places like El Salvador, aiding and abetting political repression on a scale that can only be considered genocidal. One Latin American dictator the Marines installed and Congress provided with "aid," was Rafael Trujillo of the Dominican Republic. As a measure of how much of a monster he was, Dominican-American author Junot Diaz called him "[The Dominican Republic's] Sauron."

Other dictators supported by American cash and political clout include the Shah of Iran, the Kings of Saudi Arabia, Bahrain and Oman, Hosni Mubarak, Francisco Franco (Hitler's pal from before World War II), Syngman Rhee of South Korea, the Somozas of Nicaragua, Chiang Kai-shek of Taiwan, Ngo Dinh Diem of South Vietnam, Mobutu Sese Seko of the Democratic Republic of the Congo, Suharto of Indonesia and probably dozens more. All that repression, murder and torture for freedom and democracy makes me ashamed to be American.

Just as bizarrely, some European leaders have called for the imposition of sanctions on Libya. This is just as insane as invading them. Everything I've seen suggests that the best thing the West could do right now is airlift in food and medical supplies to the revolutionary-controlled East.

Sanctions will exacerbate the situation by preventing food and medical supplies from being brought in. The United Nations – which elected Libya, Uganda, Saudi Arabia and China to the United Nations Human Rights Council – is holding hearings. By the time they write a stiffly-worded note of protest with all the truly condemnatory language removed so that it reads, "Dear Mr. Gaddafi, While, in no uncertain equivocations we find specific aspects of a small number of instances in your 42-year service to your country to be somewhat distasteful to our normative and unique cultural perspectives conditioned by our respective sociopolitical developments in regions far removed from Libya's on the role of police tactics that some may find violate those norms, but which may possibly be justified where the public safety is at great risk, and therefore we ask you to please reconsider your recent actions. Sincerely, the United Nations General Assembly," he'll have been forced out already. The Obama administration, the UN, the European Union: They should recognize the revolutionaries as Libya's legitimate government.

The mainstream media coverage of the revolt has been equally repugnant. With on-the-ground coverage largely restricted to Al Jazeera English, CNN and other news sources have been devoting a substantial amount of coverage to the effect it's having on oil prices. This is so selfish and close-minded. Look at what it says about us: We prefer cheap gas to freedom in the Middle East. I know we're not like that, but that's how it looks.

There are many positive things we could be doing for Libya, but instead the government is talking about invading them and the media is obsessed with money. No wonder the world hates us.

The Oscars 101

By Melissa Mahoney
Collegian Correspondent

This Sunday, the most sought-after man at the 83rd Academy Awards will not be Colin Firth or Jeff Bridges, but rather a short, bald, and unabashedly nude gentleman named Oscar. He never speaks – natural for a man of metal – but his very presence signifies the highest honor in the motion picture industry.

Artfully crafted in the art-deco style of the 1920s and 1930s, Oscar is a knight holding a crusader's sword and proudly standing on a reel of film. According to the Academy of Motion Picture Arts and Sciences' website, the reel has five spokes, signifying the five original branches of the Academy: actors, directors, producers, writers and technicians. Officially named the Academy Award of Merit, it is unclear exactly how Oscar received his appellation. A popular story claims that upon seeing the statue, Margaret Herrick (the academy librarian and eventual executive director) claimed that it resembled her Unele Oscar. Though the nickname was not officially adopted by the Academy until 1939, it had appeared in public use (most notably in the New York Times) as early as 1934.

Oscar is crafted from britannia metal, a pewter-like alloy, according to the Academy's website. This core is then covered in nickel silver and plated in 24-karat gold. During the World War II metal shortage, the Academy notes that he forsook his dazzling duds for a humbler suit of painted plaster. Through the course of the war, many soldiers may have received a piece of Oscar without ever knowing it. Nevertheless, Oscar has remained present at all Academy Awards in fine form since their inception in 1929. While it is safe to say that he has never walked the red carpet, his shining visage brings Hollywood royalty together annually.

A far cry from today's glittering event of nearly 2,700 seated guests and countless paparazzi, the first Academy Awards were held completely out of the public eye. According to the Academy, 270 people paid five dollars to attend the Academy banquet, which consisted largely of lengthy speeches and brief award presentations. By the next year public interest was piqued, and a Los Angeles radio station broadcast the event. Ever since, the Awards have been publicized, transitioning to black-and-white television in 1953 and then to Technicolor in 1966.

Founded largely by MGM's studio chief, Louis B. Mayer, the Academy says, the first Academy consisted of seven board members who dispensed only 12 awards. This too has grown in size with the growth of the motion picture industry. Today the Academy says that it consists of approximately 6,000 voting members that are categorized into different branches. Members may only nominate individuals of their same branch; for example, actors may only nominate actors, and directors may only nominate directors. However, all members are eligible to vote for the Best Picture nominees. Members then mail nomination forms into PricewaterhouseCoopers, an international, secure accounting firm, who tabulates the nominations into a final ballot. The final ballot is then mailed out to members, who must return it by the Tuesday prior to the Awards. Once the final ballots have been tallied, only two partners of PricewaterhouseCoopers know the results until the sealed envelopes are opened onstage.

This secrecy was not always the case. According to the website, at the first Academy Awards, nominees knew their success (or failure) three months in advance. By the second Academy Awards, the Academy attempted to keep the results secret. However, to make sure the Awards were thoroughly publicized, they mailed a copy of the winners list to local newspapers to publish at 11 p.m. on the night of the Awards. This continued without a problem until 1940, when, according to the Academy, the Los Angeles Times published the winners in its evening edition, which was easily available to the arriving guests. Thus, the Academy developed the suspenseful sealed-envelope system that is still in use today.

The Academy Awards have come a long way from their origin in the Blossom Room banquet hall of the Hollywood Roosevelt Hotel. What was once a private affair is now a staple of pop culture and public tribute to some of the greatest film figures of all time. It is no longer simply an American event as in the early years; the Awards are broadcast into over 200 countries. The Academy Award for Best Foreign Language Film is even considered an achievement for a country as a whole; each country chooses its best film to submit for consideration, according to the eligibility rules of the Awards. However, in the 83 years of growth the Awards have seen, one thing has remained the same – the ineffable stoicism and sparkling charm of Oscar himself.

No matter how many countless actors, directors, writers, producers and technicians come and go, he remains standing upon reel after golden reel. This Sunday, many will walk the scarlet carpet, but none will have the quiet style and timeless grace of Oscar.

Review: Radiohead

By Kate MacDonald
Collegian Staff

It's no big secret that lead singer Thom Yorke's band Radiohead is a little unconventional. In their newest album, "King of Limbs," this isn't a bad thing.

The British band has gone through different genres and reinventions. The boys have been everywhere from grunge to 90s rock, with successful single "High and Dry," up to a sort of techno/indefinable genre with their previous album's "15 Step." Yorke also ventured out on his own and released two solo CDs.

Radiohead is back making music as a band again. But their latest installment often sounds a bit like their previous work and doesn't always bring something new to the table.

"King of Limbs" was released in digital download form on Feb. 18 and is available for purchase on Kingoflimbs.com. It will be released in CD format on March 28, while a special edition will makes its appearance on May 9.

The album is deep; it's one of those CDs that, listening to it the first time around, it probably won't capture a lot of fans. But upon a second or even third listen, the deeper meaning in Yorke's lyrics will shine through in many songs.

"Little By Little" is a good example of this. The percussion and guitar riff, though they don't conventionally go together, seem to blend well on this track. From the beginning, however, Yorke's usually effective and haunting falsetto seems to fail him, as he becomes almost unintelligible. But again, upon second listen, many will take this song to be one of the best on the mediocre album.

Of course, there are always those tracks that stand out from the beginning. For example, "Morning Mr. Magpie," with its catchy beat and guitar riff, probably should have been the lead track on "King of Limbs."

It features a short interlude in the middle of the song that sounds almost creepy, deep and foreign, and will leave listeners wanting a release.

The first song, "Bloom," doesn't do anything to help the album. From its annoying, computerized background music to odd lyrics, it's a track that will leave listeners just plain confused after its five minutes are up.

It's "King of Limbs" first single, "Lotus Flower" that truly steals the show. Everything from the synth sounds to the drum beat to the lead singer's voice combines to form something new that everyone who's ever enjoyed Radiohead should enjoy. It's a captivating track, although the music video is lacking – Thom Yorke should probably never be filmed dancing again.

"King of Limbs" is a relatively short album in comparison with their other works. At less than 40 minutes long and featuring only eight tracks, it's unfortunate that some tunes like "Bloom" and the instrumental "Feral" can easily be skipped without detracting from the record.

The other songs on the album are decent, particularly the haunting and memorable "Give up the Ghost" which showcases the band's talent. While reception so far has been somewhat mixed, this track proves that whether Radiohead is evolving or falling back on old music, they definitely haven't lost their touch.

This is not the sort of album that would probably attract people who aren't already fans of Radiohead. "OK Computer" or "The Bends" would be a better introduction to the often complex band. True fans, however, have been waiting for a new Radiohead album to drop since the release of the last record, "In Rainbows," in the fall of 2007.

"King of Limbs" is not a bad CD, but it's not anything particularly special from such a band. However, it is definitely worth a listen, or perhaps a second or a third. Radiohead can do better, but at least it's a respite from the last three and a half years of near silence.

Kate MacDonald can be reached at kathynm@student.umass.edu.

KIX 97.9 throws concert for kids

By Alexandra Lowder
Collegian Correspondent

St. Jude's Children's Research Hospital will benefit from the musical likings of some of today's most inspirational country artists at their Third Annual Concert for Kids, hosted by KIX 97.9 FM.

Headliner Josh Turner as well as Steve Holy, Brett Eldredge and Ashton Shepherd will come together to perform at the Calvin Theater in Northampton on Friday, Feb. 25.

Although he enjoys notoriety on the big stage of the Grand Ole Opry, Turner has roots in smaller venues. A devout Christian, Turner sang in church choirs as a youngster, and participated in a number of gospel singing groups in his home town of Hannah, S.C. However humble his beginnings, Turner's career went big after his attendance at Belmont University in Nashville, Tenn., where he trained in classical vocals.

Turner's freshman album, "Long Black Train," was certified platinum. The title track spent over 40 weeks on the Billboard country charts in 2003. The track itself was certified gold. The single speaks a lot of his Christian upbringing. The lyrics warn of the devil's temptations and the "victory in the Lord." During their Inspirational Country Music Awards, the Christian Country Music Association deemed the track worthy of their Song of the Year, while also granting Turner the title of Songwriter of the Year and best Mainstream Country Artist.

Following his second album, "Your Man," Turner continued to release singles like "Me and God" on Christian radio. While these singles were successful on their own, they did not compare to the height on the country singles charts that "Your Man" and "Would You Go With Me" reached. In 2006, both tracks eventually topped the country singles charts, and held that position for several weeks at a time.

Turner's third Top 10 hit would come on his third album, "Everything is Fine." "Firecracker," the album's lead off single, peaked as the second most popular song on the country music charts in 2007. This album was also certified gold featuring another track entitled "Another Try," a duet with fellow country music star Trisha Yearwood.

The country star earned his fourth Top 10, and third No. 1 hit on the country music charts on his most recent album, "Haywire." The lead single, "Why Don't We Just Dance," spent four consecutive weeks at the top of the country charts in February 2010.

Turner was inducted into the Grand Ole Opry on Oct. 27, 2007 by Vince Gill.

Turner's co-star at this event, Holy, has enjoyed his share of success with two albums, "Blue Moon" and "Brand New Girlfriend." At its initial release, "Blue Moon" sold very poorly. Only after it was re-released 2001 with the track "Good Morning, Beautiful" did the record experience success in retail. The track was originally featured on the soundtrack to the film, "Angel Eyes." "Good Morning, Beautiful" spent five weeks at No. 1 on the country charts.

"Brand New Girlfriend," the album's titled track, was Holy's second No. 1 hit. However, the track reached No. 1 in its 36th week on the charts, second slowest to reach No. 1, only behind Tracy Lawrence's single, "Find Out Who Your Friends Are." Holy has enjoyed a number of non-album singles like, "Love Don't Run" and "Baby Don't Go."

The two other stars of this event, Shepherd and Eldredge, are both up and coming country music artists.

Shepherd, whose career launched as a result of winning a talent contest, released her first album in 2008 titled, "Sounds So Good." Her debut album features songs like "Takin' Off This Pain" and the album's namesake, "Sounds So Good." Her most recent single, "Look It Up," reached the Top 40 of the charts in its third week.

Eldredge, who has yet to release an album, released a single this year called "Raymond," which is a song about an elderly Alzheimer's patient. Country Weekly has named Eldredge an artist to watch in 2011.

Turner's notoriously deep voice is sure to please a crowd into the Calvin Theater where they will also enjoy performances by Holy, Shepherd and Eldredge.

Josh Turner, Steve Holy, Ashton Shepherd and Brett Eldredge will perform for the KIX and St. Jude's Children's Research Hospital "Concert for Kids" at the Calvin Theater in Northampton at 8 p.m. tonight. A limited amount of tickets are still available at www.kix979.com.

Alexandra Lowder can be reached at alowder@student.umass.edu.

Minutewomen travel to face Saints

By Jackson Alexander
Collegian Staff

After upsetting No. 18 Boston University on Wednesday, the Massachusetts women's lacrosse team now has the less-daunting task of defeating Siena, a team that was just pulverized 18-2.

UMass (3-0) will hit the road again Saturday for the third time this season as they travel to face the Saints (0-1).

The Minutewomen won a thriller on Wednesday against in-state rival BU that went down to the final seconds.

Freshman Katie Ferris was the hero, scoring her first collegiate goal with 5.2 seconds remaining, and leading her team to a 13-12 win.

At the start of the season, UMass coach Angela McMahon was expecting big things from the freshman out of Carthage, N.Y., but Ferris could not play her first two games due to injuries. McMahon was thrilled to see the freshman make a clutch play down the stretch of her first game.

"It was a great finish to a great game," McMahon said.

Jackie Lyons added four goals and an assist, while Jesse O'Donnell, Haley Smith and Cori Murray each added a pair of goals for UMass.

Junior goalie Katie Florence improved her season record to 3-0 as she stopped six shots in the cage.

McMahon has been particularly impressed with the play of the bench thus far.

"Depth is really important for us, especially with it being such a long season in terms of our game turnover," McMahon said. "When we have two games in a week, depth is crucial for us."

Production off the bench has certainly been there this season as the bench has combined for 16 goals so far this season.

Another factor playing into the Minutewomen's early success has been their efficiency on offense. On Wednesday, UMass scored on 13 of its 19 shot attempts.

"Going forward I would like us to get ourselves in position to shoot a little bit more, but the fact that we're capitalizing on the opportunities we take is great," McMahon said.

McMahon has enjoyed instant success in her first year as a head coach at UMass. McMahon said most of the early success is due to the team's unselfishness and understanding of team unity.

"You can have great players on a team, but unless you're cohesive and have team chemistry, you just have great players that still can't win games," McMahon said.

However, she recognizes that her team can't get ahead of themselves as it's a long season and plenty of work must be done.

"It's still early," McMahon said. "We still have five more [non-conference] games to go so we have to make sure that we're not content with where we are."

The Minutewomen may have an unblemished record, but McMahon mentioned a few areas where her team could still improve.

"We had a lot of turnovers, and we had some shots we shouldn't have given up yesterday," McMahon said. "We definitely have some things we need to improve on."

Despite suffering a 16-goal loss to Albany in Siena's first game, the Saints are still a dangerous team as they return 10 starters from a 2010 team that went 7-9 and 3-3 in the Metro Atlantic Athletic Conference (MAAC). That 3-3 record in MAAC play followed a season where they failed to win a game in the conference, finishing at 0-6. Also, 80 percent of their scorers from last year return for this season.

"Siena is a great team, I know that they were a much improved team last season; they're in a pretty competitive conference," McMahon said.

McMahon said that Saturday's game could be a battle against the Saints.

"It's tough to play your first game on the road against Albany who I think in some polls are Top 20," said McMahon." I expect them to rebound off of this and come ready to play Saturday."

Jackson Alexander can be reached at jtalexan@student.umass.edu.

UMass nears postseason

By David Martin
Collegian Staff

With a trip to the Atlantic 10 tournament lying just ahead of them, the Massachusetts women's basketball team will look to close out the regular season on a strong note against La Salle in the Mullins Center on Saturday afternoon.

The Minutewomen (7-21, 3-10 A-10), who officially clinched at least the 12th seed in the A-10 playoff bracket with their win against Rhode Island last Saturday afternoon, will try to put themselves in position to take the 11th seed on the last game of the 2010-11 regular season.

In addition to the win, UMass would need conference opponent George Washington (8-19, 3-10 A-10) to lose its bout at home against the No. 8 seed Saint Joseph's (17-10, 7-6 A-10).

Things are in favor for the Minutewomen as its their last home game of the regular season (where they hold a 6-7 record, as opposed to a 1-12 mark on the road), the senior staff will certainly come out of the gate with their best game faces ready to roll and they have a loss from Wednesday night to fuel the drive they need to win.

UMass' 61-52 road loss to Fordham (12-17, 4-9 A-10) was not without its silver lining. Though the Minutewomen found themselves trailing the Rams throughout most of the game, the team shot for 43.5 percent (20-for-46) from the field, with Jasmine Watson leading both teams in scoring with 18 points and 11 rebounds for the sole double-double of the game, her eighth of the season. Cerie Mosgrove followed close behind with 14 points and seven boards, with Shakia Robinson adding 12 points and seven rebounds.

It should be duly noted, however, that the opposition is not going into the game without the same goal in mind.

The Explorers (9-19, 5-8 A-10) are coming into the Mullins Center hot after nearly coming back from a 12-point against Richmond(17-10, 8-5 A-10), ultimately losing 69-65. The loss, which came on the Blue and Gold's Senior Night, certainly left a bitter taste in their mouths that they will try to erase against the Minutewomen.

Not surprisingly, senior starters Mosgrove and Megan Zullo will be the biggest factors in defeating the Explorers' closing efforts. The two guards have had prolific seasons shooting behind the arc and are almost perfect when given the right amount of time and space. Throughout the season, the Minutewomen have relied on their 3-point shooting in to keep the team in contention when the offense has struggled.

Combined, the duo has 681 points and 139 completions from beyond the arc. They have also scored the most points for the Minutewomen in a game a combined 17 times and have a total of 265 rebounds. They each have started in every game played this season and average at least 33 minutes a game.

To say the least, their performances are a quintessential part of the team's game plan going into Saturday's showdown. They are not, however, all UMass needs to pull off the win.

As always, the victory is going to require a 100 percent team effort from all areas of the court. The Minutewomen have to be sure that they start strong out of the gate, a hindrance that has hurt them throughout much of the season.

As the last game draws near, the Maroon and White know they are playing for something bigger than just a win. Saturday's game is one of home court fulfillment, senior pride, and most importantly, another spot up in the playoff race.

David Martin can be reached at dmmartin@student.umass.edu.

UM prepares for Eagles

By Pete Vasquez
Collegian Staff

The Massachusetts hockey team has faced a ruthless schedule this season, particularly throughout the last third of the season. However, only once have the Minutemen run into No. 2 Boston College. That is, until this weekend.

BC comes to Amherst on Friday night as the Minutemen (6-18-5, 5-13-5 Hockey East) play their second home-and-home series in two weekends. The two teams face off the next night in Chestnut Hill.

It's no stretch to say UMass and BC come into these weekend games feeling differently about their recent runs, despite both teams coming off a loss.

The nation's top team just a week ago, the Eagles (22-7-1, 16-6-1 HEA), before a 2-1 loss at Northeastern last Saturday, had not lost in eight previous games. In fact, they were 14-1-1 in their previous 16 contests.

Despite the streak, BC is tied for second place in HEA with Merrimack at 33 points apiece.

UMass, on the other hand, has not won a game since Jan. 22, when it handed Vermont a 6-0 loss. Although the Minutemen have reached four overtime games within that span of eight games, they have a 0-6-2 record to show for it.

Consequently, UMass is tied for seventh in the conference with UVM with Providence three points behind.

However, UMass coach Don Cahoon wants his players to focus on the game at hand, something the Minutemen had trouble doing the last time they played the Eagles.

On Feb. 4, UMass faced then-No. 1 BC and was defeated, 5-0. While the score reveals a distinct conclusion, so does the 43-16 shot advantage the Eagles held.

"We were on our heels most of the night," Cahoon said. "We played a great second period. The first period, we stood around and watched. In the third period, they scored a goal to make it 3-0. That really broke our spirit. You can't allow that to happen. We've got to come out of the gate and not stand around and watch; play like we did in the second period and not allow our spirits to be broken and stay with it."

While the Mass Attack held BC to 1-for-4 on the power play, they themselves were 0-for-4. Senior captain Paul Dainton had 35 saves in that game.

Still, Cahoon insists that his club has gotten better throughout the elapsed 20-plus days. The results just haven't been there.

Besides the 11-2 loss at Merrimack on Feb. 5, the Minutemen have played to two ties and a pair of one-goal losses.

While UMass has been challenging its opponents more recently, BC is shaking off a bizarre three-game battle with Northeastern. The Eagles won the first game 7-6 in overtime, tied the next game 7-7 also in overtime and lost 2-1 in the finale. The first two games were the first times BC had allowed more than five goals in a game all season.

"These are young, well-conditioned athletes on both sides of it," Cahoon said, speaking of both his players and those on BC. "I don't think anything that happened last week is going to affect them this week."

The Minutemen hope their history with the Eagles doesn't influence this weekend's affair either.

UMass is 10-45-3 all-time against BC. The last time the Minutemen came out victorious was on Nov. 22, 2008, a 4-3 overtime win at the Mullins Center. Their most recent win at Conte Forum came on Nov. 17. 2007.

The Eagles are 7-0-0 in their last seven meetings with the Minutemen.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Minutemen yearn for 3rd–straight

By Jay Asser
Collegian Staff

With postseason implications involved in every game from here on out, the Massachusetts men's basketball team will go for its third-straight win against La Salle on the road Sunday.

UMass (15-11, 7-6 Atlantic 10) is currently in a three-way tie with Dayton and St. Bonaventure in the conference standings. After claiming back-to-back victories against Rhode Island and Saint Joseph's, the Minutemen have pulled themselves over .500 in A-10 play and in position for a postseason run.

Nevertheless, UMass coach Derek Kellogg feels more progress needs to be made if his team is planning on making any noise outside of the regular season.

"I'm not really satisfied with it," Kellogg said after Wednesday's win over the Hawks. "I still think we can do some more things. We have three games left in the regular season, hopefully a tournament game or two or however many we can go with."

In the 69-51 victory on Wednesday at the Mullins Center, the Minutemen played well on the defensive end, limiting the Hawks to 15 points in the first half and 30.8 percent shooting from the field for the game.

Guard Anthony Gurley led the charge, scoring 22 points on 9-for-13 shooting, breaking the 20-point mark for the first time since Jan. 30. The win not only gave UMass back-to-back wins for the first time since January, but it assured a winning season, the first in Kellogg's three-year stint.

That accomplishment, while showing the progress of the Minutemen under Kellogg, is no cause for celebration in the eyes of Gurley.

"It definitely feels good to have more wins than we did last year, but coming into the season, we didn't tip our hat or hold our hat on, we were going to have 15 wins," Gurley said after the game. "We're not satisfied yet."

The Explorers, meanwhile, enter Wednesday's matchup in the bottom third of the A-10 with a 4-9 conference record and a 12-16 overall record.

Following a stretch of three-straight victories against A-10 foes, including a 91-86 win in double overtime against Charlotte, La Salle has dropped five of its last six contests.

In its latest loss, the Explorers were dominated by No. 25 Xavier, which had six players score double figures in a 100-62 victory. La Salle seemed to fare no better than UMass did earlier this season, when the Minutemen dropped their matchup with the Musketeers, 79-50, on Jan. 12.

The last game between UMass and the Explorers resulted in a tightly-contested battle, which the Minutemen won by a slim margin, 74-71, at the MassMutual Center on Jan. 15. UMass received double figures scoring from a quartet of players, including Gurley (20 points), center Sean Carter (15), forward Terrell Vinson (11) and guard Javorn Farrell (13).

After two missed free throws from Farrell with 22 seconds remaining in the contest, the Explorers' Ruben Guillandeaux misfired on a potential game-tying 3-pointer as the Minutemen escaped with the victory.

That win, however, came early in the conference schedule, before UMass went on a four-game losing streak and had its struggles. Kellogg though, feels that his team might be better off now after facing that adversity.

"I don't think the guys want the season to end and that's the most important thing," Kellogg said. "There are teams out there that they're just ready to call it a year and this team, having that little kind of stretch where we didn't play so well, might not have been the worst thing because you fight your way out of it and the guys responded."

The contest will tip-off at 2 p.m. on Sunday at the Tom Gola Arena in Philadelphia, Pa.

Jay Asser can be reached at jasser@student.umass.edu.

Forward Terrell Vinson prepares to slam the ball down against Saint Joseph's.

UMass returns to Garber for Ohio St.

By Stephen Sellner
Collegian Staff

The No. 12 Massachusetts men's lacrosse team continues to face tough competition to start the 2011 season on Saturday, welcoming No. 15 Ohio State to Garber Field at noon in a battle between two NCAA tournament contenders.

The Minutemen (2-0) will look for their second win over a ranked opponent this year, but UMass coach Greg Cannella knows this will not be an easy task.

"Top to bottom this is a good team, a very strong team and obviously they're coming off a great win so they're [going to] be fired up," Cannella said.

The Buckeyes (3-0) upset No. 3 North Carolina last Saturday, 13-8, in a back-and-forth affair.

OSU features a high-energy, well-coached and emotional style of play as it prepares for its first road game of the season. The Buckeyes defeated Detroit, 4-3, and throttled Mercer, 20-2 in their first two tests of the season.

The OSU offense features a potent attack, highlighted by sophomores Logan Schuss and Jeff Tundo. Schuss torched the Tar Heels last weekend with three goals and two assists, while Tundo added a goal and assist. Cannella believes the tandem make up "two of the better attackmen we'll see [this year]."

Both possess great skills and have a tremendous knack for getting to the net. Schuss led the Buckeyes with 31 goals and 25 assists a year ago, thanks in large part to his size and toughness. Tundo, meanwhile, was second on the team with 20 goals and 15 assists.

The Orchard Park, N.Y. native's quickness and strong left hand make him a tough matchup; Cannella referred to him as a "bull."

The sophomore has ties to the UMass lacrosse program, as his brothers, Gene and Matt, played for the Minutemen in the early 2000s.

However, the firepower does not end there. Freshmen Tyler Frederick and Michael Italiano, along with senior Mike Pires, help complete an offensive cast that has posted an average of 12.33 goals per contest this season.

UMass will be coming off its triumphant second half at Hartford last Saturday, where the Maroon and White dug themselves out of a 7-5 hole to emerge victorious, 14-10.

Cannella stressed the importance of getting off to a fast start in this matchup, as well as every game this season, in order to prevent having to mount another comeback as they did last Saturday.

"You hope that you can put [together] 60 minutes out there," Cannella said, hoping his team can match the Buckeyes' intensity for the entirety of the game.

Junior Art Kell was instrumental in the Minutemen's win on Saturday, as his eight-point effort earned him the CAA Lacrosse Co-Player of the Week and New England Lacrosse Player of the Week honors. The only returning attack from the 2010 season had six assists in the final 30 minutes to help propel the Maroon and White over the Hawks.

Will Manny kicked it up a notch in the decisive second half as well, tallying four goals in the frame. The sophomore, along with the rest of the UMass attack, will have their hands full against an experienced Buckeye defense.

Junior Keenan Ochwat and red shirt junior Matt Kawamoto anchor the defensive unit for the visiting squad, limiting the opposition to 21.3 shots and 4.33 goals per game thus far.

Freshman Greg Dutton will stand in between the pipes for Ohio State. The Timonium, Md. native was an All-American coming out of high school and was named the Defensive MVP of the Maryland State Lacrosse Coaches Association Senior All-Star Game. Cannella spoke very highly of the goalkeeper, calling Dutton "one of the top goalies coming out of high school."

Saturday's matchup will mark the first time the two teams will play in the histories of both lacrosse programs. Last year's contest was called off after UMass could not make the trip to Columbus, Ohio due to poor weather conditions. Weather should not be a problem this time around, as forecasts are calling for clear skies on Saturday.

Stephen Sellner can be reached at ssellner@student.umass.edu.

Three new candidates prepare for SGA presidential elections

SGA presidential candidate Dave Robertson and trustee candidate Tina Kennedy plan to give students more of their money's worth.

BY ASHLEY BERGER AND SAM HAYES
COLLEGIAN STAFF

As the Student Government Association (SGA) presidential election quickly approaches, the SGA has welcomed three new candidates to the campaign. The candidates include a current senator, the current secretary of University policy, and an active member of the Center for Education Policy and Advocacy.

Junior political science major Nathan Lamb is running on the platform that he will better help students. Originally a chemical engineering major and a current member of the Republican Club, Lamb has experience on both the inside and outside of the SGA, which he feels are invaluable additions to his candidacy.

Lamb summed up his motivation for running in an email succinctly.

"I am running for SGA president simply because I want to help students," "Everything I will do as president will have a direct impact on the everyday lives of students, making their lives on-campus easier, safer, and more enjoyable," he went on. "I believe the SGA should begin reaching out more to students and organizations with how we can best help them, rather than wait for them to come to us for help."

One of the current projects Lamb is working on is the sober driving program called UMass FreeDD, which will be a free, no-questions-asked taxi service to be run by student volunteers.

"I would like to see UMass FreeDD covered," he said. "It is the proposal that is most revolutionary, the only proposal that will literally save lives and protect futures from dangerous alcohol-induced behavior, and everyone reading this most likely knows someone who has driven drunk before, so it affects literally every student at the University. This is what I am most passionate about, and this is my number-one priority."

Junior David Robertson is running on a platform that plans to give back to the students in many relevant and unique ways. The self-proclaimed "Meal Plan Guy," Robertson hopes to work with Dining Services to implement either a dining dollars-based or roll-over swipes plan. Robertson believes either one of these choices would allow students to save money.

Another key component of Robertson's platform is to continue to work on and expand the textbook swap market. Ambitiously, Robertson plans to expand the electronic selection at the W.E.B. Du Bois library.

An intriguing part of Robertson's campaign is that he and his running mate, current Associate Speaker of the SGA House Tina Kennedy, "believe that it is unacceptable that students should get penalized just for attending the flagship campus of UMass." Rumors have circulated that, to counter a current budget shortfall, UMass' administration may be considering adding a flagship fee, in addition to increasing other student fees.

"Together, Tina and I can use our extensive statehouse experience to make certain that the state understands that the University is a blessing to the Commonwealth, not a nuance," said Robertson.

Similarly, Robertson wants to try to change the stigma that UMass is a safety school for college applicants.

"Dollar-for-dollar, our education at this campus is fantastic, and we have top-notch world programs here," he said. "We have great professors and faculty here, and we should be proud of our public school education." The third presidential candidate, junior public health major Yevin Roh, says he is running "because the students I have worked to serve since my first year put their faith in me."

"Various [Registered Student Organizations (RSOs)], co-workers, students, and even faculty said that I could bring the change they wished to see in the SGA," he said. "That change [is] a student-centric approach that doesn't just accept but truly embraces cultural diversity on campus. I hope to bring about awareness to underrepresented students, and work on student issues to make UMass more affordable, accessible, and accountable to every single student."

A current member of the Catalyst for Campus Culture Change and an active member on the Code of Student Conduct Review Committee, Roh is also passionate about changing the judicial system at UMass.

"We are a school, not a prison; we must treat students like learners and not

See SGA on page 3

Scientists and UMass prof. say BP oil remains on Gulf floor

Nearly one year after the Deepwater Horizon blowout, oil from the spill is still lingering in the Gulf of Mexico.

BY NANCY PIERCE
COLLEGIAN STAFF

At an annual meeting of the American Association for the Advancement of Science in Washington, D.C. Saturday, Feb. 19, scientists revealed that oil from last year's British Petroleum (BP) Deepwater Horizon spill still remains on the ocean floor.

Curtice Griffin, a professor in the department of environmental conservation at the University of Massachusetts, explained that the natural degradation of oil takes many years, because few organisms have the ability to biologically break down the particles left by the oil. Furthermore, he said the oil is very persistent, in that it doesn't convert to other types of compounds. He cited the 1989 Exxon Valdez oil spill in Alaska, which, even after 22 years, still has left oil lingering in Alaska's waters.

He said the oil has affected birds the most because it covers their feathers, preventing them from insulating themselves from the elements and, more importantly, flying. He also explained the oil can be ingested and even transferred to eggs during breeding season, causing mortality to chicks.

Griffin said studies have found less than 10 percent of animals affected by the oil have been determined.

According to Griffin, not only are animals being negatively affected by the remnants of the spill, but the oil is also contributing to the depletion of coastal marshes. He said coastal marshes provide a buffer from storms

Acclaimed filmmaker screens latest work at Student Union

BY STEPHEN CANNING
COLLEGIAN CORRESPONDENT

The critically-acclaimed documentary "The Two Escobars" was shown Thursday in the Cape Cod Lounge at the University of Massachusetts, with director and producer Jeff Zimhalist participating in a question-and-answer session after the film.

The viewing was arranged by the UMass journalism program and sponsored by alumna Elisa Thomas.

"The Two Escobars" was directed and produced by Northampton natives Jeff and his brother Michael Zimbalist. The film investigates the relationship between soccer and crime in Colombia during the reign of Colombian drug kingpin Pablo Escobar. It was originally produced for ESPN's "30 for 30" documentary series to celebrate the station's 30th anniversary. The movie has been shown in festivals and screenings spanning the entire globe, including the Tribeca Film Festival, the Cannes Film Festival and the Los Angeles Film Festival.

"My brother and I had been working in Latin America for a long time, and we were making another film in Colombia at the time that ESPN approached us for the 30th anniversary series. They wanted to do more diverse stories to celebrate their anniversary, but also to comment on the intersection of sports and society," said Zimhalist.

The story of "The Two Escobars" focuses on the Colombian national soccer team and its captain, Andres Escobar, in the years leading up to and surrounding the 1994 World Cup in the United States. Andres was shot and murdered on July 2, less than a month after the World Cup, in which Colombia fared poorly. Escobar scored a goal in the loss against the United States that sealed their elimination.

"As soon as we got down there, it ended up being a much bigger story than expected," said Zimbalist. "Who pulled the trigger that night on Andres was not nearly as interesting as what kind of society would allow for an athlete to be murdered for a mistake that he made on the playing field." "So that was the central question that we went after to investigate," he said, "and in order to understand that, we had to understand Narco-foothall, which was this whole phenomenon that had never been exposed as far as mainstream international media is concerned.

"Nareo-foothall referred to the concept that during this time, organized soccer and the drug trade were sometimes joint ventures in Colombia. Drug lords such as Pablo Escohar bought soccer teams because they saw soccer as an avenue to make money. The soccer teams were funded by the drug cartels' excessive wealth, and, as a result, soccer teams in Colonhia became some of the best in the world"We went into that [with the question:] how is a U.S audience, how is an international audience going to understand all this if they don't understand narco, if they don't understand Pablo Escobar's influence on Colombia," said Zimbalist.

Zimhalist said he often encountered reluctance when he interviewed Colombians about the topic, because some of his interviewees felt it was still dangerous to talk about Pablo Escobar and that time period. They feared that if they said the wrong thing to the wrong person, there could be severe consequences, Zimbalist explained. Many Colombians lost somebody they loved during that time period. Zimbalist claimed, and getting victims' friends and family to talk about Pablo Escobar's reign was not something some were willing to do at first, said Zimbalist. "It was very emotional, but when people did open up, they found it therapeutic to sit down and talk about it," he said."In general, it was more challenging than other projects we've had, but ultimately I think it was healthy for people who participated," he added.

'Don't Ask' repeal in legal limbo

BY CLAIRE REID KISS
COLLEGIAN CORRESPONDENT

Last December, Congress voted to end the 17-year-old "Don't Ask Don't Tell" policy against gays serving openly in the military.

According to a recent Gallup poll on the subject, 67 percent of American citizens approved of this decision, including 47 percent of Republicans. On Dec. 22, President Barack Obama signed the repeal into action.

It's been three months since the repeal was signed, but according to some, nothing has changed. According to the Log Cabin Republicans — an organization of gay, lesbian and transgender Republicans fighting for equal treatment — the discharging panel tasked with enforcing the ban is "still in place."

So the question that is now being faced is why is this policy possibly still in effect?

Lee Badgett, director of the Center for Public Policy and Administration at the University of Massachusetts said such a panel could still exist as the legislation overturning the ban works its way through various appeals.

"The changes are playing out in a tough context, since the repeal efforts took two different paths: courts have been involved and both the executive and legislative branches of the federal government have been involved," she said.

"That provides lots of opportunities for insiders to slow things down, even though some insiders and many outsiders would like implementation to be speedier," Badgett added.

Badgett also stated that the repeal process would take a while for "political reasons," something that most Americans don't understand, she contended. Policies are Congress' responsibility to sign into effect and repeal if they have failed, she explained.

President Obama signed repeal Dec. 22, in the process giving his administration authorization to take a range of measures to cement the repeal. The Pentagon is currently conducting research on what the effects of repealing the policy would be on the military's composition and how to "train" troops for potential experiences in the military with openly gay soldiers.

President Obama signs the DADT repeal into law on Dec. 22, 2010. Appeals challenging the legality of the move are ongoing.

The research has gone a long way, according to Genny Beemyn, director of the Stonewall Center at UMass.

"Articles that I have read have indicated that the LGBT awareness training of military leaders is going very well," she said. "The head of the Marines, James Amos, who was openly opposed to repeal, now says that it is not a big deal and does not anticipate a loss of troops when the policy goes into effect. This is an important shift that demonstrates to me that education can have an important effect."

In 1993, President Bill Clinton signed the "Don't Ask, Don't Tell, Don't Pursue" law into action. This law was put into place in response to mounting opposition to the law that preceded "Don't Ask," which did not allow gays to serve in the military at all.

Under the "Don't Ask, Don't Tell" policy, military personnel were not to be asked of their sexual orientation and thus could not be discharged for being gay. However, should they be open about their sexual orientation, they could be discharged. According to The Washington Post, 3,660 troops were discharged on this foundation from 2004-2009, which reportedly cost the military about $193.3 million to replace the discharged troops.

This policy has been criticized by gay rights activists since it was signed into law. In 2004, the Log Cabin Republicans, filed a challenge to "Don't Ask," which contested whether or not the policy was constitutional. The trial began last July 13 in the Ninth Circuit Court of Appeals in San Francisco, Calif. before Judge Virginia Phillips. This case was the start of the repeal process of the DADT policy.

President Obama pledged he "will end Don't Ask. Don't Tell," during a speech to the Human Rights Campaign in 2009. The Obama administration has opposed the DADT policy as it has sought to make equal protection for gays

Research shows spilled BP oil lingers

OIL SPILL from page 1

Without these marshes, he said, storms could hit harder on land.

Griffin noted that the oil spill has not only had a great ecological impact, but also economic and social impacts, as well. He gave examples of the tourism industry and shellfish industry losing their much of its source of income.

Frank Csulak, a scientific support coordinator at the National Oceanic and Atmospheric Administration (NOAA), said the remaining oil at the bottom is not recoverable, due to lack of suitable technology. Csulak said the only measure that can be taken is to wait for the natural degradation of the oil by bacteria and microbes.

Debbie Payton, an oceanographer with the NOAA emergency response division, said the oil at the bottom of the Gulf has mixed with debris and sand and is widely dispersed throughout the ocean. She also said that because it is so widely dispersed, there is no way to measure its volume at this point.

Payton also said going down to where the remaining oil is would cause more damage to the ecosystems, with what she said would be an invasive process to the life at such depths. The oil on the surface of the ocean was easier to recover, since it was much more concentrated, she added.

"This is a massive spill; people want answers and restoration and everything right away," she said. "It's going to be a while before people really understand what the restoration will be," Payton said.

The natural degradation of the oil at the bottom of the Gulf could be delayed due to two factors, Payton said. She explained that the deeper the body of water and the colder the temperature becomes, the lower the degradation rate from microbes. She also attributed slower degradation to oil being mixed in with sand and debris which she said makes it more difficult for the ocean's microbes to break down the oil.

Csulak said there is no official estimate on how long the breakdown of the remaining oil will take.

"This is the first time we've had a spill of this magnitude," he said.

According to the Operational Science Advisory Team (OSTAT-2), there are three types of remaining oil residue which are not only challenging to remove, but the removal could be damaging to the ecosystem. These types include supratidal buried oil, small surface residue balls and submerged oil mats. Both Csulak and Payton noted the submerged oil mats pose significant problems in that oil mixed with sand becomes heavier and sinks to the bottom.

Csulak mentioned that hundreds of miles of beaches near Florida, Alabama, Mississippi and Louisiana were affected by the oil spill. He said a priority with oil near the shore now is to make sure beaches are clean not only for tourists but also for migrating birds and turtles laying eggs. He said March 1 is a deadline for cleanup on the beaches, since that is when migration activity starts.

According to Csulak, there are two phases at work for responding to a disaster such as the BP spill. The first phase is the response phase, which involves the cleaning of the beaches and the removal of the recoverable oil. He said recovery teams are currently in the second phase, which is the natural resource damage assessment phase responsible for examining the extent of the damage and how to restore the injured resources.

Csulak said crews are currently in the pre-assessment phase of the natural resource damage assessment phase. In this phase, state and federal agencies, along with BP, are collecting data from dead mammals and water samples to attempt to uncover the extent of the impact and how long it will last. He also said the pre-assessment process will attempt to find how long it will be until the resources and services return to pre-oil spill conditions.

Csulak added that the cost of the process will be paid by the party responsible for the accident, BP, and the restoration implementation stage might take five to six years to commence.

Research shows that tar balls from the Deepwater Horizon oil spill like this one are still destroying life at the bottom of the Gulf of Mexico.

'Two Escobars' screened at UM

ESCOBAR from page 1

The pervasive societal disorder during this era in Colombia played a major role in the film. The story was told through the characters closest to both of the Escobars, giving the film a feeling of intimacy.

"I just liked the complexity of the situation.," said Zimbalist. "I liked that there was no obvious good guys and bad guys. I liked the irony of the president of the country investing a bunch of money into a soccer team as the poster children of a new Colombia that was pure and clean and not connected to narco. Those forced alliances, and what is said in public versus what is done in private, all of that was fascinating."

Stephen Canning can be reached at sccanning@student.umass.edu.
